The period 1000-12 has not been marked by any great or revolutionary development in either metallurgical science or practice or rither if any of the developments which have taken place should be destined to carry important changes in their train no striking signs of such changes have as yet become visible. In general terms progress here as in most industries has been in the direction of increased production increased economy of labour and more efficient utilisation of raw materials and of by products and in some cases this has led to the installation of plant on an astonishingly large scale. In other directions, the systematic and scientific exploration of the available materials and their products has led to the evolution of new and valuable materials principally in the form of novel alloys. The developments of metallurgical practice in reference to the scientific ispects of metallurgy in general.

Iron and Steel (L B xiv 801 t seq)—Ore resources are being further developed and the beginnings of iron and steel industries have been made both in South America and Australia. Progress has also been made in the utilisation of finely divided ores and such materials as blast furnace flue dust by improved methods of briquetting in the Schumacher process the addition of a small percentage of magnesium chloride solution to the flue dust serves to release a latent power of setting while in the Dwight Lloyd system the material is sintered by mixing it with finely divided carbon which is caused to burn thus partially reducing the ore and producing a porous sintered mass

In blist furnace practice the use of thin lined and water cooled furnaces has in creased while the drying of the blast is becoming universal. For this purpose several new methods have been used including refrigeration by the use of ammonia without the intervention of brine and the use of calcium chloride as a drying agent is used for six or eight hours and is then regenerated by drying in the heat of the flue The former process has been used in Wales and the latter in Luxemburg while gases at one Belgian plant the use of blast enriched with oxygen has been tried and if the price of oxygen can be further reduced this may prove to be an important improvement this connection the use of an oxy acetylene torch for burning out tapping holes may also The utilisation of blast furnace gases has been pushed further so that be mentioned these furnaces now constitute important sources of power the use of the gas in open hearth furnaces has been contemplated but its calorific value is too low to allow of its Mixed with producer gas or with gas from coke ovens however success has use alone Quite recently the utilisation of the waste heat of blast furnace slag has been attained been accomplished by running the molten slag into water and allowing it to generate steam for driving turbine engines

In steel making the general progress of the open hearth processe as compared with the Bessemer is the most prominent feature especially as regards the basic open hearth process In America even for rail manufacture the open hearth has largely supplanted the converter The open hearth furnaces themselves are steadily increasing in size the 50 and 75 ton furnaces of previous years being replaced by 100-ton units increase in size is accompanied by devices for prolonging the life of the furnace principal ly by the more extensive use of water cooling and the introduction of removable furnace The importance of maintaining the shape and position of the ports having been recognised water cooling has been employed on the other hand the use of removable ports makes the life of the furnace independent of the life of the ports. Thus a basic open hearth furnace which formerly had a life of 350 to 500 heats now runs up to 1 000 heats with three changes of ports

Rolling mill practice (E B xxiii 468) has developed concurrently with the develop ment of the furnaces in America particularly the tendency for obtaining very large outputs by installing plant of great power and speed has been strongly marked rolling mill installed at Gary Indiana may be taken as an example. This mill is driven by a 6,00 horse power electric motor working on a circuit at 6000 volts three phase current at 25 cycles a 1 inch ingot can be broken down in this mill and rolled into a 1 inch plate in 2 passes in approximately two minutes. It is however doubtful whether the market can dispose of the enormous full power output of these very large mill and the question of the quality of the resulting products is also a serious one. It is claimed however that there is now a strong tendency for American steel makers to pay greater attention to the quality of their products than has hitherto been the case The serious troubles experienced with steel rail fractures in recent years have no doubt produced some such effect. The mill just reterred to is typical also of the tendency towards the increased use of electric motors for driving rolling mills

An important feature in recent development in siderurgical practice is the steady progress of the electric furnice. At Trollhattan in Sweden electric from ore smelting has been in on the rectification of the claimed that under the favourable conditions as to water p were which prevail there the process is profitable. More frequently the electric furnace is employed imply for refining or rather super retning steel which has been reughly freed from its impurities either in the converter or the open hearth. For this purpose one or two American feel works have installed combined open hearth and electric furnaces in which American teel works have installed combined open hearth and electric furnaces in which teel it first rouched d wn under ga heating and electric heating is employed inly for the final tages. The u e of electricially melted steel for the production of steel custing has developed considerably and a steel foundry working entirely with his sano electric furnaces his recently been put down in England. The advantages of electriciated in regard to freed im from gases oxides etc are now widely admitted but excessive and ludiciated in the steel in the ste use for the electric furnace has recently been found in melting the ferro mangane cor terro siluon prior to it addition to the molten steel in the ladle or the furnace considerable ad vantise are claimed for the practice of making these additions in the molten state

The difficulties experienced with steel ruls in America and elsewhere have drawn attention to the question of soundness of ingots and the effect of blow holes. In regard to the latter stead has shown that deep-scated blow holes certainly and even superficial ones probable wild up completely when the ingot is rolled provided the the holes are not associated with sulphide enclosures. Hadfield on the other hand regards complete treedom from ble wholes as essential and prefers a steel which settles well and pipes but he counter acts the piping tendency by supplying, the ingot during cooling with hot liquid steel from a feeding head placed on top of the ingot mould in which the steel is kept molten by a layer

of charcoal kept in active combustion by the aid of an ur blast. Talbot again consolidates his ingots by giving them a few passes through the cogging null while their interior is still liquid thus claiming to produce in a simple and inexpensive manner the same results as the Harmet compression process. Goldschmidt claims that soundness may be insured by the introduction of a cartridge of thermit into the bottom of the solidifying ingot and quotes examples from an extensive practical trial in support of his claim

The use of alloy and special steels has extended very considerably notably in the case of steels to which vanadium and titanium have been added during manufacture. In the case of vanidium this has become possible by the fact that the price of vanidium alloys at one point dropped to one half of the former naure and the use of vanadium teels has increased considerably. The use of titanium steels has however increased—particularly in America - more widely than that of any other special steel. American metallurgists regard transum as a cleansing addition which removes oxygen introgen and other impurities rather than as an actual alloying element. The value of titanium was first established in the case of rails but its use has since extended to other classes of steel. As regards alloy steels proper the use of nickel inickel chrome and chrome variadium steels has call rails through the growth of the automobile industry. The use of manganese steel and of nickel rails has also been tried.

The question of the corrosion of iron and steel has continued to receive much attention apart from the general controversy between the electrolytic and the chemical (carbonic acid) theories of corrosion the electrolytic theory has received a scrious check from the researches of Henn who has shown that while the existence of local cells determines the rapidity with which corrosion commences it does not affect the ultimate rate of corrosion. In America a new material known under the name of American ingut iron or open hearth iron has been produced for the purpose of resisting corrosion it is claimed that the metal is the nearest practical approach to chemically pure iron and that it resists corrosion better than mild steel. The material however has an approach content of copper—it is even suggested that copper is intentionally added to it and that its non corrodibility is due to the copper. The addition of copper to steel for this purpose has also been introduced some progress has also been made in the production of actually acid resisting varieties of cast iron—uch as the high silicon iron of Jouve and the material known as—tint iron. The use of approximately pure silicon metal for this purpose is also contemplated.

The subject of the comentation of iron and steel has received much attention the most notable advances being probably those made by Giollitti and his collaborators at Turin by the use of charcoal and a mixture of carbon dioxide and carbon monoxide gases under pressure in a furnace where both temperature and pressure can be varied these workers obtain a wide power of regulating both the intensity and depth of cementation and also the

width of the transition zone between carburised and non-carburised material

Copper (F B vii 102 et seq) — The most marked feature in the metallurgy of copper during the past three years has been the great development of basic converting causing a radical change in equipment durability and tonnings of converters and in Even standard shells of the older type have been re fined with basic Apart from this feature progress has also been made in the handling of ores as regards transport troughed conveyor belting has proved eminently successful as compared with the electric car even for distances of four miles. The u-c of fine ores flue dust etc. has also been advanced, so that ores for the blast furnaces are now general ly screened so that the coarse charge can be worked at a higher rate. One intere ting development is that of blowing fine material into the converter through the twices by means of a jet of air at higher pressure than the blast. In the treatment of metallic copper itself the use of boron sub-oxide has been introduced. Boric anhydride is reduced by metallic magnesium yielding magnesium borate and boron sub oxide. The latter acts as a very satisfactory reducing agent on the copper and for castings intended for electrical purposes removes oxygen so well that conductivities up to o have been obtained The use of the boron sub-oxide to replace poling has also been tried but although the results are satisfactory there are practical difficulties on the ground of expense and attack on the furnaces

Among the alloys of copper. Monel metal—a natural alloy of copper and nickel—have covered extended use owing to the remarkable combination of strength with resist ince to corro non which it presents. It has been used for screw propellers in bittleships (U.S.S. Dakota.) and for roofing large buildings (I i nos) Ivania terminal in New York). A remarkable test at 1000 f. has shown the alloy to retain 80 per cent of its normal strength like test at 1000 f. has shown the alloy to retain 80 per cent of its normal strength like alloys of copper with aluminium and manganese have also been studied very closely limit Report Alloys Research Committee) one of these attains in the form of rolled and drawn rod a tensile strength of 52 tons per sq. in with 10 per cent clongation on two inches. These alloys are remarkable for their resistance to corrosion and to abrasion. Another special bronze is that of Rubel which contains 58 per cent of copper 41 per cent zine and to per cent chromium and possesses remarkable mechanical properties.

Aluminium (E B 1 76, et seq)—The production of this metal has increased and a steady improvement in quality is being obtained when the metal is excessively purchowever, difficulties arise in working it. Its uses have developed considerably principally in the direction of cooking utensils and of large tanks for breweries and similar purposes. The latter development has been facilitated by the established success of methods of joining aluminium sheets by autogenous welding. Latruded aluminium where the sheet metal are also extensively used in carriage construction

Light alloys of aluminium have received much attention and marked progress has been made. In the Ninth Report to the Allov Research Committee the alloys of aluminium with manganese and with copper plus manganese have been studied. Derived from the best of these alloys is the metal known as duralumin developed in Germany by Wilm this alloy contains from 3 to 4 per cent of copper and from 4 to 13 per cent of manganese together with 4 per cent of manganesium. This latter addition gives the alloy the remarkable property of undergoing a gradual spontaneous hardening after suitable heating and quenching—at first the mechanical properties are unchanged but in the course of four days the tensile strength is doubled while the ductility is only slightly affected. In this hardened condition the alloy combines mechanical properties similar to those of mild steel with a specific gravity slightly is than, but these properties are destroyed by even moderate heating. This alloy was used in the construction of the ill fated British navil air ship of the rigid type at Barrow in Furness. Quite recently a detailed study of the alloys of aluminium with zine and with zine plu copper has been published in the Tenth Report to the Alloys Research Committee. One of the alloys there described containing 25 per cent of zine and 3 per cent of copper attain mechanical properties similar to those of of duralumin but entirely without any pecial quenching or other heat treatment this alloy however has a specific gravity slightly higher thin duralumin (3 25). The demand for materials combining trength with lightness arising from aeronautical construction has given a fresh impetus to the study of light allevs, and further important developments are to be anticipated.

Gold and Silver, Platinum etc.—Apart from the general tendency towards perfection in detail resulting in greater efficiency and increased output few remarkable developments are to be recorded with regard to the precious metals. The cyainde process (E. B. ni. 199) has received increased application and is becoming standardised to some extent. A novel proposal was that of Clancy to replace the expensive alkaline cyaindes by the cheap product of atmospheric nitrogen fixation cilcium cyaniamide coupled with the application of electrolysis. No large practical developments of the process appear to have taken place as yet. Efforts are being made to render the cyanidation process truly continuous but the resulting gain is somewhat doubtful. On the other hand the method of agitating slimes by means of air jets is now wide spread and successful. The treatment of sulphide ores by this process is also receiving greater at ention and as the chemistry of the process is better understood simplifications have become possible

In regard to the metallurgy of the remaining metals similar general tendencies have

manifested themselves and only a few special matters need be referred to here. In connection with the use of lead for accumulator plates or for any purpose where large reacting surface area is de irable, the process invented by Hannover for producing porous metals becomes of importance. Hannover utilises the fusibility of the eutectic allow by casting an alloy consisting for instance of lead and tin in such a way that the metal consists of lead crystals whose interstices are filled up by cuteric at a suitable temperature the eutectic is fluid and can be expelled by such means as centrifuging when porous lead a left behind. Lead tin and especially zinc as required for the evaluate process can not be obtained in the form of ribbon metal produced by allowing a jet of the molten metal to fall upon a rapidly rotating cooled fron drum the metal runs off as a continuous flat ribbon. By the use of very wide juts sheet metals can be produced in the same way. More remarkable still is the process of Schoop in which a jet of molten metal meets a jet of high pressure gas and is atomised so as to form a metallic cloud. This finely divided metal can be sprayed upon any object which it is desired to coat and yields a strong coherent deposit which can be made either to adhere firmly to the matrix or to leave it in the form of a cast. The metallic spray does not burn or injure even delicate articles, so that silk or wax can be readily coated. Quite recently it has been found that finely divided solid metal (powder) can be similarly made to adhere and to cohere by a spraying process.

can be similarly made to adhere and to cohere by a spraying process. In recard to zinc the efforts at electric smelting are still being continued in Sweden, and although it is considered in most quarters that the process is still in in experimental stage definite success particularly in the production of spelter of high purity is claimed. Extremely pure spelter said to be of electrolytic origin is at present produced in small quantities in England but the demand for very pure zinc appears to be increasing. Fifforts to meet a are taking the direct in of improved method of refining and although much secrecy is observed it is probable that vacuum processes of distillation are being introduced.

Some reference must also be made to the advance in the metallurgy of the very refractory metals, such as chromium molybdenum and tungsten. The latter metal is now produced in approximate purity by the electric furiace and for the purpose of electric incandescent lamps drawn tungsten wire is now used in place of the agglomerated filaments formerly employed. Both tungsten and molybden find increased uses in high speed tool steels while chromium is finding a wider application in the production of new alloys. Among these an alloy of nickel with chromium and manganese known as michrome has achieved

considerable success as an electric resistance heater at high temperature the newest grade of this alloy is claimed to withstand continuous heating at 1100 C. An alloy of chromium and cobalt is described as having a white colour and being practically incorrodible being unattacked even by intricacid. It is said to have the hardness of steel and to take a cutting edge. Its incorrodibility indicates that the material would be particularly useful for such purposes as fruit knives and table cuttery. Its use for razors is also suggested but it remains to be ascertained whether it shares the tendency of modern high speed tool steels to produce undesirable symptoms in any small wounds inflicted.

Physics and Physical Chemistry — The period under review has been particularly rich in scientific investigations on metals and alloys which come under the heading of Metallography in the wider sense of that word but this sense has now become so wide that Physical Metallurgy is a preferable name for the rapidly expanding science which now embraces the study of all the physical properties as well as the physico-chemical relations of metals and alloys. Typical of this development is the existence since 1911 of an International Journal of Metallography published in Berlin and the rapid rise of the Institute of Metals founded in England in 1910. The wide spread activity in this subject is also typified by the fact that in a report on progress presented by Heyn to the International Association for Testing Materials, references are given to over 500 papers bearing dates later than 1900.

The equilibrium diagram of the iron carbon system has been the subject of continued research and controversy on minor points but the main features of the diagram are now accepted by all except a few extremists. Among researches bearing upon it the work of Gutowsky may be mentioned which indicates the necessity of revising the position of the solidus curve for the low carbon end of the diagram Rosenhain and Humfrey have demonstrated the existence of a relatively hard modification of iron above the critical points while Baykoff has shown by means of etching with gaseous hydro chloric acid at high temperatures that stiel is a homogeneous solid solution at those temperatures as required by the accepted diagram. Controversy and difficulty still centre around the true relations of graphite and comentite and the names of Ruff and Goerke Ruer and Illyn and Hanemann are associated with important work on this question. Another important step in the metallography of steel is denoted by the adoption at the recent New York Congress of the International Association for Testing Materials of a uniform nomenclature for the microscopic constituents of iron and steel The fact that Howe and Sauveur have been able to prepare such a report indicates that a substantial agreement has now been reached by the majority of the world's leading Increased attention has also been given to the foreign bodies such as slag sulphides and silicates of manganese and iron etc. which are met with in sicel research is summarised in a report to the above named Congress by Rosenhain

Copper and its alloys have received much attention. In the copper zine series (briss) Carpenter has drawn attention to a thermal point at 470° C and has demonstrated its nature as a decomposition of the β into the α and γ phases in an elaborate series of The constitution of copper arsenic alloys (Hudson) and of the phosphor bronzes (Law) has also been studied The Ninth Report to the Alloys Research Com mittee of the Institution of Mechanical Engineers (London) contains in elaborate study of the ternary group of alloys of copper with aluminium and manginese, and a detailed metallographic study of portions of the system (Rosenhun and Lantsberry) attack on the problem of the constitution of ternary systems of allovs is typical of a very large amount of work which has been undertaken principally in Germany during the past two years. Most of this work, however although of great interest as yielding a first rough idea of the constitutions of these systems must be regarded as strictly preliminary, since the methods and apparatus used are in many cases in adequate for the complete study of such complex problems The manner in which early investigations of alloys are apt to be maccurate has recently been illustrated in the aluminium zinc sys tem where a research carried out with the greatest available reinfements has led to a complete revision of the formerly accepted diagram (Rosenhain and Archbutt)

Many other fields of enquiry which have begun to yield important results can only

FUELS 395

be mentioned These include the study of the gases dissolved or occluded in metals and removed by heating or even melting in vacuo, of the behaviour of metals in high vacua especially in the light of the theory of an amorphous inter-crystalline cement in metals of the magnetic properties of alloys both of iron and of copper aluminium manganese and of the electrical resistance of alloys and its variations with temperature

For these and allied researches reference should be made to the original publications many of which exist only in foreign languages. In English many original papers and bitract of miny others including most of the more important foreign ones will be found in the Journal of the Iron and Steel Institute the Journal of the Institute of Metals the Proceedings of the Fauday Society and of the Institution of Metals cal Engineers and in the page of Science Abstracts devoted to physical chemistry. In French the Revue de Metal lurgue and in Cerman Stahl u Eisen Metallurgue and the Internationale Zeuschrift für Metal lographie may be consulted as well as the more recent text books upon this subject.

(W. ROSENHAIN)

SOLID LIQUID AND GASEOUS FUELS1

I Solid Fuel

Coal —In the middle of the 19th century a large amount of scientific work was done concerning the composition of coal and the view was held by many observers that the variations in the properties of coals were dependent as much upon the character of the vegetable matter from which they had been formed as on the com position of upon the conditions of formation These views however were more or less coal lost sight of until the last couple of years when they have again been brought to the front and are now shown to give a far more satisfactory explanation of many obscure points with regard to the thermal value and chemical decomposition of coal than was possible before In 1911 M J Burgess and R V Wheeler published the results of a cries of experiments on the distillation of coal at various temperatures which led them to conclude that coal contained two types of compounds of different degrees of case of decomposition the one a degraded product of cellulose the other derived from the gums and resins of the coal plants and that the character of the coal is determined by the proportion in which these two types exist in coal

V I ckes puts forward the general theory of the formation and composition of coal Carbon is prictically non existent in the primary rocks constituting the crust of the globe hence all the free carbon and compounds containing carbon that we now find have been produced by secondary actions from carbon dioxide in the atmosphere the amount present showing that the atmosphere in times prior to the carbon iferous period consisted of a high percentage of carbon dioxide nitrogen oxygen and water vapour Human life under these conditions was impossible but as the crust of the cooling globe reached a sufficiently low temperature a vegetable life of a low order started and grew with a luxuriance and rapidity that could never again be equalled owing to the conditions of moist heat and plentiful carbon dioxide As the vegetation grew it absorbed the curbon dioxide and moisture and under the influence of the sun's rays built up the plant structure and evolved oxygen thus in the course of geological age creating an atmosphere titted for lower forms of animal life which gradually be came of a higher order is the necessary oxygen increased in percentage. Owing to the proceed and dilution of oxygen in the earlier periods decay as we now know it could take place only to a very limited extent and this with the rapidly growing flora of the carboniferous period gave rise to the enormous vegetable deposits and drifts from which eventually all fuel was formed

All the plants of which there are fossilised records in our Coal Measures consisted of sedges and reeds, tree ferns club mosses or lycopodia, and trees akin to the pine but in these prehistoric days the conditions of growth were such that the plants grew with a succulent freedom and rapidity since unknown and this later rendered their tissues an easy prey to fermentation—an action which left only the more resistant unchanged. The work of Morris Carruthers Fleming and Huxley has shown that the bituminous

¹ See E B x1 274 et sea

396 COAL

matter in coal is derived largely from the spores of fossil mosses akin to the lycopodia, and spores of this character from the giant growths of the carboniferous period, to gether with the more resistant portion of plants akin to the pine are the substances which have best resisted the actions taking place during the ages that have elapsed in the formation of coal

The vegetable matter consisted chiefly of a basis of celluloses and lignose, together with the extractive matters rich in resin and as these were unable to undergo rapid decay owing to the low oxygen content of the air fermentation became the chief factor of change, and the mass being overlaid gradually by sedimentary and other deposits pressure and heat added their forces to the actions taking place the celluloses and lignose becoming converted into humus bodies having the general percentage composition—carbon 63 hydrogen 5 oxygen 52. During these periods the resins—which have the general composition carbon 70 hydrogen 11 oxygen 10—underwent but little change but in the long ages that have passed some of the resin bodies have been converted into such hydrocarbons as retene and hexalighted while the humus bodies have undergone general degradation, resulting when completed in residual carbon. All these constituents are tound agglomerated in the coal—the humus bodies and residual carbon being luted by the resin bodies and hydrocarbons the properties of the coal being dependent upon the proportions in which they are present.

The lignites or tertiary coals being of younger age were formed at a period when the air contained a higher percentage of oxygen so that direct oxidation played a more important part and as the resins are the bodies most affected by this they were reduced in quantity but the great difference between the lignite and true coal is that the humus bodies have undergone a minimum of degradation so that the free carbon is lower than in any other class while the humus bodies still retain their attraction for water which is always present in considerable quantity in the Tertiary coal

During the formation of coal the gases evolved are carbon dioxide methane and water and where the roof of the seam has been impermeable to gas methane is found occlude i in the coal together with some carbon dioxide but the bulk of the latter gas had dissolved under pressure in water and formed blearbonates in the sedimentary deposits and has then helped in such other changes as the dolomiting of limestone

Many classifications of coal have been suggested some based on their chemical some on their physical and others on their coking properties. Of the latter the most generally adopted is that of Gruner in which he tabulates bituminous coals into five classes. Although M Schondorff F Muck and others have shown that it is not applicable to all kinds of coal still this criticism applies to all classifications that have been proposed.

			Carbon	Hydrogen	Oxygen
1	Dry coal	Long flame and non coking	75 8 0	4 3-5 5	13 0-18 5
	Fat gas coal	Coke porous and brittle	80 – 8 ₅	50-58	10 0-13 2
3	Semi fat or furnace				
	coal	Good coke but porous	84 89	50-55	5 5-10 0
4	Coking coal	Best coke	89 91	45-55	45-55
5	Lean coals and an				
	thracite	Non-coking	90-93	30-43	30-45

This arrangement shows not only the coking properties but also the changes in composition which the coal undergoes the concentration of carbon and reduction in highly oxided bothes. In the first class there are the dry coals yielding large volumes of gas and liquid products on distillation—and these—as might be expected—most resemble the lightest and share with them the property of non-coking or binding together of the residue on carbonisation. This is due to the fact that the humus like bodies are still present in much larger quantities than the resinic compounds and hydrocarbons and as on distillation they have no binding material in the residue the resinic bodies cannot supply enough to give more than a friable mass. In the second class of coals altered conditions of temperature pressure and time have led to further decompositions of the humus bodies and the resinic constituents and hydrocarbons having increased in ratio by concentration a point is reached at which coking takes place although not of a really satisfactory character. In the third class the action has continued with further concentration of the resin bodies hydrocarbons.

COKE 397

and residuum with the result that the former bodies are so increased in comparison to the the fourth class the proportion of resin and hydrocarbon bodies has reached the right ratio as compared with the humus and residuum and the best coking coal is obtained Bituminous coals of the kind classified by Gruner may therefore be looked upon as an agglom erate of humus and the degradation products of these bodies down to carbon luted and protected by resin bodies and their derivatives steam coal and anthracite as the degradation products of humus which has nearly completed its decomposition owing to the small quantity of resin bodies in the original vegetation cannel coal as consisting mainly of resin bodies derived from accumulations of seed spores which having been brought down by streams have mixed with sedimentary earthy matter and are therefore often high in ash

Such a theory has an important bearing upon the consideration of the thermal value of

Effect of composition on thermal s alue

coal as well as its other properties as it is manifestly the ratio of the coal constituents and not the percentage of the elements in the coal that governs these. In all attempts to calculate the calorific value from the percentage composition it is found that with coals poor in oxygen such as steam coal or anthracite there is a very fair agreement between the calculated value and the value as deter mined in a bomb calorimeter but that directly the coal contains much over 5

per cent of oxygen the value as determined rapidly rises above that calculated.

This is due to the humus bodies in the coal still retaining the endothermic character of the cellulose and he nose from which they were derived and it is found that whilst the calcu lated heat values for the carbon resin bodies and hydrocarbons in the coal are in close agree ment with the determined values an artificially prepared pure humus will have its calorific value a determined 16 or 17 per cent higher than when calculated from its percentage composition. It is clear therefore that direct determination in a bomb calorimeter is the only accurate method for determining the thermal value of coal

The proportions of the constituents in the coal also govern the nature of the products when it is subjected to carbonisation. The human bodies during carbonisation yield a

Effect of composition on products of carboni sation

large proportion of the gaseous products and under the influence of heat show no sign of melting but begin to break up at about 300 C. The decomposition become more tapid as the temperature rises. Water distil over in the early become more tapid as the temperature rises what is used to stages the tari thin and poir in quantity and the gase up to four C censit of hydrogen methane and carbon dioxide with smaller quantities of carbon monoxide and traces of other saturated hydrocarbons. The decomposition

can be completed below 800 C but if the temperature is run up to 1000 C the carbon dioxide is reduced in quantity by the action on it of the red hot carbon. Carbon monoxide

increa es cerrespondinely while the drogen and methane are still evolved

The decomposition of the humus 1 also largely affected by the rate of heating. If slowly heated a large proportion of the oxygen is given off in combination with hydrogen as water vapour whilst if quickly raised in temperature more combines with carbon to form carbon dioxide and monoxide. The residue shows no sign of caking whilst like the naturally formed resultue—mother of coal—it requires a large proportion of cementing material to make the particles cohere. The resin bodies and hydrocarbons which form the cementing portion in the coal melt between 300 and 3.0 C and it a coarsely powdered sample of the coal becomes party or semi fluid at this temperature it is a strong inference that the coal will roke on carbonisation—a fact noted by C. Anderson. About these temperature also the resin bodies and hydrecarbons begin to decompose

The resin bodies at low temperature yield saturated hydrocarbons unsaturated chiefly hexahydrides or naptheness together with some oxygenated compounds whilst the hydro carbons yield parafins and liquid products—all these primary constituents undergoing fur thir decomposition at slightly higher temperatures. The liquid produced begin to distill out as tir vapours and leave behind with the residuum pitch which at 500 C forms a mass already well coked together if the residuum from the humus is not too great. The coke formed 1 soft but if the heat be raised to 1000 C the pitch residue undergoes further decomposition yielding gas and leaving carbon which binds the mass into a hard coke.

Coke and smokeless fuels - The efforts of the Smoke Abatement Society in England have led to many attempts being made to introduce smokeless fuels like coke for domes tic consumption and there is no doubt that if a fuel of the character of easy to light and burning with a bright cheerful combustion—could be produced economically and sold at a reasonable price it would not only command an enormous sale but, in conjunction with gas fires would go far to solve the problem of smoke prevention The combustion of bituminous coal as a national domestic fuel brings in its train consequences so objectionable that every effort should be made to bring about a more rational state of things

In order to overcome the trouble of smoke whilst using solid fuel many forms of grate have been suggested the most successful of them being dependent upon the principle of 398 PEAT

feeding fresh fuel to the bottom of the fire instead of to the top so that as the tar hydro carbon vapours and steam distil out from the coal they have to pass through a mass of incandescent carbon above which decomposes the complex tar vapours into simple hydro carbons. These are then completely burnt up on reaching the fresh air supply at the top of the fuel. The fact however that any special form of grate would require the removal of the old type and introduction of the new has been sufficient to prevent any success in this direction, and what is really needed to make smoke prevention a practical possibility is the introduction of a fuel which could be treated in every way like coal which would be as easy to ignite would burn with a chearful flame, and would in reality commence its combustion just at that period when in a fire, the smoke has ceased and the fire has burnt clear

Coalite was a fuel which fulfilled these conditions exactly and consisted of coal car bonised at 420 C instead of at 1000 C it was in fact a hilf-coked coal of uniform composition with enough volatile matter left in it to give it the needed properties. For various reasons unconnected with the nature of the fuel riself coalite has not so fir proved a commercial success but it has convinced everyone who has used it that it is infinitely superior as a fuel to any bituminous coal and has created such a demand for a mokele s fuel that some imitations which differ from gas coke only in name have been alle to find a market. The best known of these is Coalexld made by mixing a very mall proportion of ilkaline nitrates with the coal before carbonisation. These evolving small trace of oxygen on their decomposition give small areas of high temperature during destructive distillation and so give a slight increase in the gas yield. Another is made by cooling the hot coke when it i drawn from the retort by smothering it with a liver of coke breeze instead of quenching it by water in the usual way and is known is. Charco. Both these cokes contain about the same amount of volatile matter as ordinary or ke made from the same ceal.

Ordinary gas coke is not a popular demestic fuel it i often over quenched at the gas work and sent out too wet whilst its ignition point if made at a high temperature i nearly double that of coal so that it is difficult to light and kincs a dull fire unless the chimnes draught is exceptionally strong. With the introduction of continuous curb in attoin in sertical retorts (see under (As MANIFACTIRE) the quality show distinct imprisement in dryness and it would be easy for the gis maniger of to regulate the heat of carbonisation as to have 3 or 4 per cent of volatile matter in the coke to but it for dome the use

Pett—The vast area of the recorded peat bogs existing in the world, which in C reat Brit in alone amounts to 800,000 acres and the fact that dry peat especially in the ferm of briquette. Is a pleasant and efficient form of fuel, have led to many attempts being made to utilise this enormous store of latent energy. So far all attempts to solve the problem have been commercial failures, as the mass of raw peat exiting in the bogs contains approximately go per cent of its weight of water most of it so held in a condition of feeble combination that it cannot be pressed out mechanically, whilst if held is employed to drive it off as much is needed as remains in the residual sold and the attempt ends in a loss equivalent to the money expended on labour

In countries where coal has been abnormally expensive and the climatic conditions good, cutting and stacking the peat in such a way as to allow air drying to reduce the moisture to about 50 per cent, and then driving off some more of the remaining moisture by artificial heat and briquetting the product with 10 to 0 per cent of moisture still in it has yielded small profits but the enormous area needed for the air drying the amount of labour needed to cut the peat, and the fact that it is possible to do so only for a few months in the year have prevented anything like commercial success, whilst in most countries the humid climate of the peat districts renders such a process impossible.

In 1906 Dr M Fkenberg discovered that peat consisting as it does of pirtially decomposed vegetable matter contains cells which are filled with and coited by a slimy substance which he called hydrocellulose and that this jelly like compound held the water in such a way that mechanical drying of the peat by pressure was not possible but that when heated to 150-200° C the slime became 'hydrolised and went into solution and that the peat so treated could be made to part with its water under hydraulic pressure. Starting from this point the Fkenberg process of 'wet carbonisation' was elaborated, and works have been erected on a peat bog near Dumfries the working of which has been designed to obviate both the climatic and labour difficulties.

In this process the peat i mixed with sufficient water to render it fluid enough to pump through tubes and with a dry bog extra water would have to be added—at Dumfries however the bog is sufficiently wet for the purpose—fine peat is dug by an ordinary mechanical digger of the type used in civil engineering operations—mounted on a pontoon which floits in the

space excavated by it on the bog This digger raises the material special design whence it is pumped through pipe lines to the works This digger raises the material into a disintegrator of

The power required at the peat getting station is supplied by generating electric current in the works and transmitting it to the plant at the bog. The peat pulp is then passed through the carboniser which may consist of an arrangement of two concentric tubes such as is found in the Nichlausse boiler heated in a gas furnace. The raw peat is pumped continuously into the space between the outer and inner tube and the carbonised peat continuously into the space of the the other and that the and the carbonised pear flowing back in the reverse direction through the inner tube thus parts with its heat to the entering raw pulp. Under the pressure callting in the carbonising plant the pulp passes into the filter presses which squeeze out much of the water leaving the peat in a condition ready to go into the producer for ammonia recovery or after further drying by the wa te heat of the gases from the producer to the briquetting press

One of the chief points in the process is that double the quantity of peat is treated that is required as briquettes one half being taken as press cake and u ed in producers of the (rossley type for conversion into producer gas which after the ammonia in the gas has been absorbed by sulphuric acid is then partly employed in a battery of gas engines to give the nece sary power for working all the apparatus used and bringing the peat from the bog and also for supplying the heat for drying the remaining half of the peat that is to be briquetted

down to about 5 per cent of moisture

Peat contains nitrogen in amounts which vary from 1 to 5 per cent and theoretically for every one per cent of nitrogen present it should be possible to obtain 105 lbs of ammonium sulphate per ton but in practice with gas producers of the Crossley type about 75 to 80 per cent of this quantity is recovered

The calorific value of the peat blocks made in the briquetting press is about 5 490 calories or 9 882 B Th U and a the amounts which can be carbonised for ammonia recovery or can be briquetted are very elastic the output can be arranged to meet local requirements proces is undoubtedly far more promising than any that have been before attempted

Liquid Fuel

During 1911 and 1912 the use of liquid tuel has again received an impetus from the successful results obtained with it in practically all the naval services in the world American Government are safeguarding the supply for naval purposes by taking con trol over an area of the Californian oil fields which will be field in reserve. In Great Britain the shortage of fuel oil supply due largely to difficulties in transport will prob ably disappear when the large number of new tank vessels now building are completed and these will allow of the utilisation of the large supplies of fuel oil which will be avail able from Mexico the Dutch East Indies and Burma as well as from Texas and (ali The price of liquid fuel limits its use to a great extent, as it is only where the advantages to be gained by its employment are so great as to overshadow the question of cost that it can possibly compete in Great Britain with coal and the factor which pre vents its adoption in very many directions is the impossibility of getting any guarantee as to constant supply Freights have recently been so high as to make the price of the oil in England almost prohibitive and the question is whether the carriage can be so reduced as to bring the price down The great hope of the fuel oil market at the end of 1012 rested in the enormous demand for petrol, which during the next few years promises to lead to the development of all possible sources of oil after the portion possible to use for motor-car fuels has been distilled off the residuum which is the portion of the oil available for fuel purposes will be correspondingly large but it must be remembered that in most of the countries on which Great Britain relics for oil supply the use of liquid fuel is advancing rapidly In America Russia Austria and other countries producing oil or close to the oil fields liquid fuel is now replacing solid tuels in the locomotives on the Government lines as well as for manufacturing and other purposes so that the supply from these sources for export is only what is left over after the home consumption has been satisfied. This of course does not apply to the Indian and Mexican fields from which large supplies of fuel will probably be available

Oil Fuel Burners - Most of the earlier burners used for the consumption of oil in place of coal in marine boilers rely on the principle of injecting the oil as a fine spray into the furnace by means of steam air or pressure. These burners answered well when the combutton space was large but where a considerable amount of oil had to be burnt in a small space their action of driving forward the oil supplied rendered the passage of the burning oil through the combustion space too rapid to allow of complete combustion and large quantities of smoke were formed. Further trouble arose because steam had to be supplied and as

on a Service vessel this would mean extra boilers this was a great drawback

Of the burners which sprayed the oil under pressure without the use of either steam or air the Korting and Swensson had already proved successful in many cases but a great improvement was introduced by I I Kermode who designed a burner in which the oil under pres are issued from the nozzle in a swirling cone of mist the particles not being driven traight forward as in other types by the spraying and the rate at which it traverses the combustion space is thus reduced. Air injection for the oil although on theoretical grounds it might be expected to be the most advantageous has never found much favour for marine work as auxiliary power has to be provided to drive the pumps for the air compression but where an intense temperature is required it has been used largely and especially in furnace work on land has proved very successful. One of the most successful forms of burner for this purpose has also been designed by Kermode and may be used with either steam or air

At the present time the use of liquid fuel direct in the internal combustion engine has occupied a large amount of attention and the Dissel engine has already shown itself well adapted for marine use where the power required has not been very high. The successful installations in the tank steamer Vulcanus and in the Selandia have demonstrated its great possibilities, whilst the fact that one B HP can be obtained with a consumption of something like 0.45 of a pound of liquid fuel of much the same character as that used for

The first British destroyer fitted with Diesel engines for propulsion was the Hardy launched in October 1912 in which for full speed turbines fed with sterm from boilers fred with oil fuel are used whilst the Diesel engines are employed for cruising speed at which the turbine shows a marked falling off in efficiency

In Germany where there is a heavy import tax upon oil the use of tar and tar oils in the Diesel engine has attracted considerable attention and for the last ten years tar and creosote oils have been satisfactorily used. The treubles that at first arose with the oils were that the pipes and nozzles of the burners were found to become choked with mudly deposits of solid hydrocarbons consisting mainly of napthalene which formed a cru t ilso at the mouths of the burners. These deposits made the working of the feed pumps difficult and the solid hydrocarbons increased the temperature of ignition. The crude tar oils varied in composition and quality with differences in the temperature of carbonisation, even when the same coal had been used which necessitated con tant alteration in the feed and air adjustments of the engine. Of recent years however improved methods of fractionation and refining the tar oil together with careful selection of the material have ensured a supply of fuel of constant and regular quality without the drawbacks incidental to the use of crude tar oils

3 Gascous Fuel

The most important development in the use of gas as fuel that has taken place since the invention by Bunsen of the atmospheric burner promises to arise from the so called principle of 'surface combustion'. Although a mixture of hydrogen and oxygen in the proportions in which they combine to form water has an ignition point of about 550° C at ordinary atmospheric pressure yet the two gases will combine in contact with cert iin metals at lower temperatures but the rate of combination is so slowed down that the ignition point may never be reached This power of inducing combination between gases at comparatively low temperatures has been known to be possessed by metals of the platinum group, since Sir Humphry Davy first established the fact in 1816 whilst Dulong and Thenard afterwards proved that all solid bodies possess in varying degrees the power of accelerating combustion below the ignition point. It is only within recent cars that the study of this phenomenon has been revived by the researches of Professor W A Bone and the phenomenon of surface combustion is now receiving a considerable amount of attention and promises to lead to most important commercial developments

If a mixture of coal gas and air in the explosive ratio of 1 to 6 be directed on to the surface of red hot nickel gauze or incandescent fireclay and asbestos, it is found that the acceleration of the combustion is not confined to low temperatures only but flameless combustion ensues on the incandescent refractory surface producing there a more in tense combustion with the result that the material is raised to a high degree of incan descence, and a much greater proportion of the heat energy of the gaseous mixture is converted into radiant heat

There are two possible conditions under which gaseous combustion may take place -the first, homogeneous combustion, in which the velocity of the chemical change is

dependent on the order of the reaction, and combustion occurs equally throughout the system as a whole and secondly, heterogeneous combustion in which the combustion takes place in layers immediately in contact with a hot surface. This second condition constitutes what is known as 'surface combustion and is governed by the rate of combustion, the diffusion factors of the components of the gaseous mixture and the products of combustion the effect of the 'activity of the refractory surface, the physi cal texture of the surface and the retarding effect of films of mert gas

The 'activity of a given surface can be varied by special treatment within wide limits but the nature of the causes of the variation is still somewhat obscure instance using a mixture of hydrogen or carbon monovide with oxygen in conjunction with a non oxidisable metal or non reducible oxide if the surface be previously treated by contact with the combustible gas the activity of the surface is considerably The activity of a surface stimulated whereas if treated with oxygen it is diminished also increases rapidly with rise of temperature, the difference in activity possessed by various substances being reduced until at bright incandescence it disappears

Diaphragm Process — If an explosive gaseous mixture be forced under pressure through a porous refractory incandescent body combustion in a greatly accelerated form takes place within the pores and the heat developed by this combustion keeps the surface in a state of incandescence without the formation of flame

This principle may be employed in two ways The first is to fit a slab of porous refractory material in the front of a fuel chamber into which the gas and air in proportions necessary to give complete combustion are forced under the pressure nece sary to drive them through the purpur plate the mixture i then ignited on the outer urface which rapidly becomes heated and the mixture burns within the pores of the slab and close to its exterior surface which being raised to incandescence emits great radiant heat. The degree of porosity and size of the pores of the labs can be arranged to suit the quality of the gas fine pores being used with rich gases while a coarser grade is necessary with gases of low calorific power the pre-sure also being regulated to ensure the rate of flow of the gas being sufficiently high to prevent any risk of back hrings or explosion. This method of applying the principle is generally known as the Diaphragm proces, and as being flamilies the slab can be fixed in any position it can be used to throw the radiant heat on the surface of evaporating liquids

for the concentration of acids and for many forms of industrial and domestic heating Granular Bed Process —The second method known as the Cranular bed process consists in making a grunular mass of the refractory material and blowing the mixed gases on to it or through it under pressure so that the combution takes place on the surface of the grunule and a temperature of a 000 C can be obtained. The granules can be packed into tube directly immersed in water for steam raising into the space round crucibles in processes for the melting of metals or formed into a bed for furnace work. In a special form of boiler designed for this process an efficiency of 95 per cent has been attained that steam can be raised from cold in 20 minutes and that the normal evaporation is _0 lbs per square foot of combustion surface per hour which can be increased to 30 with a slight loss in efficiency Gas Stoves—Ever since Bunsen in the middle of the last century gave to the world his

time phenic burner the u e of gas for heating and power has progressed more and more until nearly is much gas is now used for these purposes as for illumination.

The earlier forms of gas stove had many defects which created a strong prejudice in the

minds of the public against them more especially as custom and comfort had created a

minds of the public against them more especially as custom and comfort had created a firm affection for the open coal fire. In the modern gas stoves however due regard has been paid to overcoming the drawbacks found with the older forms, and their improved efficiency together with the absence of smell. &thave resulted in a steadily growing popularity. The greatest objection raised against the use of gas for domestic heating is that of cost. If the open fire and the gas stove be compared on the price of fuel and the number of heat unit present the use of gas is shown to be about five times as costly as coal but if the question of efficiency to taken into consideration, the difference between the two methods. question of efficiency be taken into consideration, the difference between the two methods With a coal fire in an open grate only about one fifth of warming is found to be but slight of the heat units are utilised in warming a room whereas with a modern gas stove nearly four times as great an efficiency can be obtained. Moreover in favour of gas one can place cleanliness absence of dust and labour and convenience of lighting and extinction

Heating by radiation is the only true and hygienic method of warming a room as in this way the temperature of the air is not directly raised but the walls furniture and other solid bodies in the room absorb the radiated heat and in turn slowly give off a portion of this heat to the jur around them—consequently the walls &c are at a higher temperature than the air If however the room he heated by hot water pipes steam or any other such system the temperature is raised by convection the air around the pipes or radiator is heated expands and sets up convection currents until the whole mass of the air is at the one tempera

ture The solid bodies in the room however are not raised in temperature to the same extent with the result that a sensation of chill is experienced by a person sitting near a wall

owing to the heat of the body passing by radiation to the wall

In the modern gas fire a large percentage of the heat is converted into radiant heat and the convection heat is reduced to a minimum whilst the efficiency has been so improved that a large proportion of the heat in the gas is utilised. Provided that the stove be fitted in a proper manner the ventilation of the room is effected quite as thoroughly as with open coal fire but to do this the space between the stove and the fireplace must not be filled in with a sheet of metal as was the old accepted procedure but the exit pipe should be carried for some little distance up the chimney when the outrush of hot gases will be drawn up with them by a sort of injector action and nearly as large a volume of air can be withdrawn from the room as with an open fire

Hygienic Effect of Gas Heating—Careful researches have demonstrated that the use of gas in meandescent burners and stoves is by no means detrimental to health but is a value

able adjunct to ven ilation owing to increased circulation of the air

In the old forms of gas stove convected heat was relied on for raising the temperature of a room but this decreased the percentage of humidity to such an extent as to produce rapid evaporation from the plants and occupants in the room the results being drooping in the former and discomfort to the latter. This is always the case where convected heat is the sole method of warming but if a combination of the two systems be adopted it will be found very useful in the case of large spaces where enough radiant heat could not be given by an epen grate or gas stove. With a factory or schoolroom for instance radiators or hot water pipes could be fixed below the windows and inlet ventilators, and in this way the entering current of air would be warmed up two or three degrees and the fire would then be able to complete its work of warming the solids in the room by radiation in a much shorter time.

(Vivian B. I ewes)

ILLUMINATING GAS MANUFACTURE'

In no large industry have such fundamental changes taken place during the past few years as in coal gas manufacture a complete revolution of the old ideas upon the carbon isation of coal having led to the introduction in Great Britain of vertical retort processes while on the European Continent and in America carbonisation in bulk or chamber processes have made rapid headway

The beginning of the present form of vertical retort in which gravity is brought into full play to aid the filling and discharging of the retort was in 100 when at the Exeter

gasworks a retort on this principle was erected and worked by T Settle and W A Padfield and in the same year vertical retorts begin to be experimented on in Germany by Dr. J. Bueb who by 1904 had got a good sized installation at Mariendorf working successfully. In July 1903 however Messes. H. W. Woodall and A. M. Duckham had patented in Fingland a form of vertical retort on a totally different principle to the German retort, inasmuch as they embodied the principle of working continuously so rendering possible the uniform treatment of coal during carbonisation instead of putting in a full charge of coal carbonising drawing the coke and recharging as is done in the Continental type of vertical.

Messrs William Young and S Glover in 1905 patented a continuous vertical process which differed from the Woodall Duckham. In the latter the principle is adopted of a continuous column of carbonising material, the inlet of fresh coal at the top being dependent on the withdrawal of coke from the bottom, the retort being so proportioned with regard to time and temperature that the carbonisation of the coal was completed by the time the bottom was reached whilst in the Young and Glover system the discharge of coke was independent of the coke feed, and a space was left in the top of the retort above the coal so as to form a chamber in passing through which tar vapour might be gasified and fixed by radiant heat in this respect resembling the procedure adopted by Settle and Padfield

In 1909 the Glover West retort took the place of the Young and Glover a cooling chamber for the coke being constructed at the bottom of the retort and the heat utilised for raising the temperature of the secondary air supply to the flues whilst the empty space at the top of the retort was done away with, and the coke withdrawal made to govern the feed, thus reverting to the principle introduced by Woodall and Duckham

¹ See E B ni 483 et seq

The transition from the experimental to the practical stage proved fatal to the Settle Padheld system whilst the Young and Glover became merged in the Glover West process but since 1909 the three remaining systems have been working continuously and with later improvements are so successful that there is no doubt as to their gradually largely supplanting the older forms of retort in English practice

The German intermittent verticals or Dessau retorts have been at work at Sunderland since 1909 where at the Ayres Quay works there is an installation of a bench of six beds of ten retorts each. The retorts are 13 feet 1½ inches high tapering from 9 inches by 22½ inches at the top to 13½ by 27½ inches at the bottom. The bench carbonises 400 tons of coal per week and yields between 12 000 and 13 000 cubic feet of gas per ton. The coal is charged into the retorts from an overhead hopper each taking a little under half a ton which requires twelve hours for complete carbonising and during the last two hours steam is passed at a slow rate through the charge partly to increase the volume of gas, and partly to prevent any sticking of the charge due to carbon deposited on the inner face of the retort which might interfere with the discharge of the coke when the bottom door of the retort was opened. The use of steam naturally increases the amount of fuel used in the carbonisation this amounting to 13 96 per cent of the weight of coal carbonised when no steam is used and rising to 17 8 per cent when steam is employed the

overage of fuel used being about 15 per cent. Of the two continuous price ses the Woodall Duckham has been the longest at work and there are numerous installations in Creat Britain and other countries. The retorts are properties of feet in height with a sufficient taper to ensure the slip of the charge. The

time occupied in the travel of the coal from the hopper to the coke extractor at the bottom of the retort is seven or eight hours. The coke is removed by an extractor actuated by a ratchet and pawl arrangement on a grooved wheel and driven by a racking shaft and the coke then falls into a watersealed hopper which is large enough to take the amount drawn out during three revolutions of the extractor or about three hours discharge. The coke can be quenched if necessary by a small spray of water in the storage happer but the amount of water is limited so that the coke i ejected in practically i dry state and at a temperature of 140 F. The passage of the coal through the retort is giverned by the speed of the extractor the supply of coal at the top of the retort being arranged to keep the retort full with the exception of a small pace at the top where the gas is led off and which can be regulated in ize by a shding partition. The top of the built up retort is closed by an irin casting carrying the coal feed the gas exit type and the hiding partition. The coal feed is a cast right hopper hand eccuntrically to the retort and closed by a gas-tight valve through which the hopper can be filled from another store hopper above. The expression takes a very short time and is necessary only once in three hour the size of the lower hopper being so calculated as to hold the coal to give the charge of coke removed by the three revolutions of the extractor at the bottom of the retort

In any proces, where automatic and continuous action is arranged for the working parts of the apparatus are apt to become rather complex, but in spite of the objections raised from time to time against continuous carbonisation the system is an e-tablished success, being at work allo in America and on the European Continent.

The other process based on the continuous carbonisation of coal is the Glover West. In this vistem an economy is obtained by utilising the heat from the cooling hopper for the cook to regenerate the air for the secondary combustion in the flues this making a slight learne in the fuel consumption which is given as 10.5 per cent. Complete installations have been at work for some time at St. Heleus and at Droyl den the latter con isting of two settings of eight retorts can be setting being subdivided into two sections of four retorts for convenience in working. The output of the relation is rated at 500,000 tubic feet of gas per twenty four hours.

I litt is rated at 500 000 cubit feet of gas per twenty four hours.

The retorts are 20 feet long oval in section and with a slightly increasing taper from the top to the bottom. The coke falls into a cast iron chamber at the bottom of the retorts and round it the secondary air supply is led. Beneath the coke chamber is the extractor is lowly revolving vertical series driven from a small gas engine by means of an arrangement of levers and ratchet wheels. The coke is discharged into a bottom hopper from which it is removed about every two hours. The top of the retort is similar to that of the Woodall Duckham being provided with the coal feeding hopper gas exit pipe and partition.

Extended experience with these systems has shown that in spite of their apparent completity they work smoothly and noiselessly with complete absence of smoke and strain which is in shurp contrast with the old methods of carbonication. The wear and tear allocate very small. A great advantage of the process is the uniformity in competition of the gas whereas in the old horizontal retorts the composition of the gas evolved at the commencement and at the end of the carbonisation varied enormously and uniformity in composition was left to the mixation of the gas from many benches in the hidder

Intermediate between the old proces es of carbonisation and coke oven recovery plant comes what is known as chamber carbonisation. By this method charges of three to

eight tons of coal can be dealt with at a time and it has met with considerable success especially on the European Continent where a number of installations have been erected. The first chamber setting was erected in 1901 at the Munich works by H. Ries and E. Schilling who converted an old setting for inclined retorts by building into it three chambers each taking a charge of one ton of coal the floors of the chambers being at an angle of 35° to facilitate charging and discounted to the chambers were enlarged and later on 1905. This plant was so successful that the chambers were enlarged and later on in 1906 charging

an installation of fifteen chambers in groups of three per setting was erected Lach chamber takes a charge of two and a half to three tons and the carbonisation is continued for 24 hours A regards results Dr Bunte in 1907 reported that he obtained 11 342 cubic feet per ton of Saar coal having a gross calonfic value of 626 B Th U per cubic foot

The success of the Munich plant was followed by the erection of a larger installation

at Hamburg The chambers consisted of ten settings of three chambers each the chambers being 24.6 feet long by 7.4 feet high the width varying from 1 foot 8 inches in the outside chambers to 2 feet in the central chamber Carbonisation takes 24 hours and the capacity of the three chambers is 175 tons. A still larger installation of twelve settings of three chambers each was erected at Moosach the length of the chamber being increased to 28 7 feet At many other places on the European Continent chamber ovens were erected by H Koppers. A Klonne and Knoch and the Koppers system is now to be tried at Birming ham. Horizont il vertical and inclined chambers have all been tried, and each has its advocates, but the tendency seems to be to revert to the horizontal chamber with mechanical coke pusher

The great advantage of chamber carbonisation is that it reduces the cost of handling and labour and it has been stated that a labour charge of 9d has been reduced to 4d on the other hand the candle power of the gas is below the English standard although the

calorific value is satisfactory and the initial cost of erection is very high

Mr Charles Carpenter at the South Metropolitan gas works in I ondon carried out some experiments with ordinary horizontal retorts by filling them full of coal as had been suggested by kunath in 1885 instead of only partially filling them an operation Full charges Full charges which became a possibility only with the perfecting of charging and discharging machinery. He found that a considerable improvement was effected in the make and quality of the gas as well as in the tar. This is no doubt largely due to the elimination of the large space that was left above the charge of coal in the old practice which led to the degradation of the gas and tar vapours owing to contact with the red hot crown of the retort and the fully charged horizontal is being adopted at many works not vet prepared to instal verticals.

All the various systems of carbonisation in general use—fully charged horizontal retorts.

intermittent vertical retorts and continuous carbonisation retorts—show but little variation in the amount of gas they yield per ton of coal carbonised but if the fuel consumption be taken for comparison the continuous vertical retorts show a decided gain the following figures giving the amount of fuel consumed per 100 lbs of coal carbonised —

Horizontal	Intermittent vertical	Continuous Woodall Duckham		
14	15	I3 I	10 3	

The low figure obtained in the Glover West system is accounted for by the regeneration of the secondary air supply by the waste heat from the coke

In the ordinary gas The continuous vertical retort also has other minor advantages works practice and with intermittent vertical installations the surrounding air i periodically rendered offensive by outbursts of steam and smoke from the charging and discharging of the retorts and the quenching of the coke but in the continuous vertical there is none of this annotance the plant works with perfect cleanliness and absence of nuisance whilst the toke owing to being cooled before exposure to the air requires no spraying with water. The quality of the coke and tar and the yield of ammonium sulphate also are improved so

that continuous carbonisation in vertical retorts offers the most advantages

The great improvements in gas and residuals alike brought about by the introduction of the vertical retort and the fully charged horizontal are due to the elimination of the over decomposition of the hydrocarbon gases and vapours that used to take place with the old practice of only about half filling a horizontal retort with the charge of coal to be carbonised. Under these conditions as the heat began to penetrate the charge the gas that was evolved passed up into the county space in the crown of the retort and was there subjected to radiant heat from the retort wall which are at a temperature of upwards of 1000 C and also to contact with them the latter being destructive to the more easily decomposed hydrocarbons breaking them up into simpler hydrocarbons hydrogen and free carbon the latter forming deposits of retort carbon on the interior of the crown of the retort and soot found as free car bon in the tar. As the heat penetrates the carbonising mass, the outer portion of the charge becomes redhot coke and the gas distilling from the inner core has to force its escape through this so that not only contact but catalytic action of the carbon surface adds to the destruction of the hydrocarbons as this action increases with the thickness of the red hot envelope of coke the gas gets poorer and poorer as the carbonisation proceeds so that for the last hour during which gas is coming off it is practically non luminous. In the vertical retort and full horizontal the space above the coal is done away with and

In the vertical retort and full horizontal the space above the coal is done away with and as the heat penetrates the charge gas tar vapour and steam distil inwards from the exterior portions and the vapours condensing in front of the zone of heat form a pasty tube through the cool coal core of which the gases escape without undue degradation to the mouthpiece. In this way about two thirds of the charge is distilled under conditions favourable to the formation of good gas and tar whilst a larger proportion of ammonia escapes destruction but as soon as the central core gets tar logged the remaining gas and vapour are forced back through the red hot column of coke and undergo complete degradation.

During the last few years no very marked improvements have taken place in the purifica tion of coal gas but a very interesting revival of an old process under new conditions has taken place at the Cheltenham gasworks which may prove of great value.

Coal Ilming

About thirty years ago the Cooper process of mixing lime with the coal before carbonisation in order to increase the yield of ammonia was extensively tried but abandoned on account of the increase in ash it gave in the coke. J. Paterson and Twycross have now tried moistening the surface of the coal after crushing with a small steam jet and dusting 2 per cent of lime over it which adheres uniformly to the moistened surface and shows a marked result not only in the amount of ammonia obtained but in the purification of the gas from bi ulphide of carbon the sulphur compounds other than sulphuretted hydrogen being reduce to 20 grains per 100 cubic feet instead of being double that amount while the increase in the ash of the coke is practically negligible.

Attempts are also being made to introduce direct processes for the recovery of the ammonia a sulphate by wa hing the ga after removal of the tar with dilute sulphuric acid as is done in some coke oven plants, whilst a very interesting system of recovering the ammonia a sulphate and at the same time utilising the sulphur of the sulphuretted hydrogen in the crude gas is also under trial. This is known as W Burkheiser's proce's and consists of removing the tar and passing the gas with the ammonia and sulphuretted hydrogen in it through porous hydrated ferric oxide warmed to 60. (which removes the whole of the ulphuretted hydrogen but not ammonia, when the purifier is saturated with sulphide a current of air and steam is led through it, the sulphur burns forming sulphur di, and tri oxide mixed with the residual nitrogen of the air, these gases are then passed in small quantities into the gas containing ammonia flowing from another purifier of the same kind, and the sulphate and sulphite of ammonia so formed is washed out of the gas in a scrubber with a dilute solution of ammonium sulphate which is used until concentrated, when a mixture of two thirds ammonium sulphate which is used until concentrated when a mixture of two thirds ammonium sulphate and one third ammonium sulphite crystallises out.

(Vivian B Lewes)

THE COAL-TAR INDUSTRY1

The history of coal tar and its utilisation has undergone an interesting phase during the past few years. It is well known that the quality and value of coal tar is as dependent upon the temperature at which the coal is carbonised as upon the character of the coal whilst the amount of heating and contact with red hot surfaces that the tar vapours are subjected to after their formation also influences its composition as a result the tar has shown distinct changes with every alteration in gas manufacture these changes affecting the amounts of the products that can be obtained from it on distillation

These changes are best seen by the percentage fractions obtained from the tar -

Period	1820 to 1850	1850 to 1898	1898 to 1911
Process of carbonisation	Iron retorts	Fireclay retorts	Fireclay retorts
Temperature of carbonisa	800 C	1 000 C	1 050 C

¹ See E B vi 595 et seq

The results show that higher temperatures seriously diminished the amount of the more volatile distillates upon which the value of the tar largely depends

In the first few years of this century the reduction in England of the Parliamentary standard of illuminating value and the introduction of the No 2 standard Argand as a test burner led to a further pressing of temperatures in order to obtain a large volume of gas and brought about such a deterioration in the quality of the tar that the market price fell to 1d a gallon and had it not been for the enormous demand for tar that arose at this period for preparing the surface of roads tar would have fallen probably still lower as it contained the minimum of valuable products and anything up to 30 per cent of free carbon which deteriorated the pitch

Luckily for those industries that are dependent upon tar products a marked improvement in the quality of the tar has taken place with the introduction of vertical retorts fully charged horizontals and chamber carbonisation (see under (48 MANUFACTURE) as is

Road Terring -The use of tar for road surfaces now occupies so much attention that a

short description of the methods employed will be of interest.

The tar used should be coal tar either from gas works or coke ovens and hould be partially distilled before use in order to get rid of water and volatile oil the period gravity should be 1.2 to 1.25 and high temperature tar containing much napthalene and free carbon should be avoided as these bodies have no binding effect and lead to disintegrate n

Crude tar should never be used for surface work the complaints which arise from the contamination of water in tream. As from tar treated road nearly all arise from this source as the trace of water and ammoniacal figuor together with the volatile oil prevent rapid drying and if rain falls horthy after the tar has been used slight could from of this surface take place and the water that flows into the gutters and stream become continuinated and shows itself by films on the water. The presence of water in the crude tar also a serious drawback because the porous road material absorbs water more quickly than tar not this weaken the adhesin of the tar and leads to crumbling of the surface. Where partially cistilled tar cannot be obtained the best way to prepare the crude tar in the left in copper to a temperature of 65 C (150 1) for several hear when most if the water will be driven off but great care must be taken in doing this a fithe temperature rice of the tar and ignition from the fire below is very apt to take place.

There are three methods by which the far may be used in preparing the urbice of the road—1) Simply tarring the surface as is done in most rural districts (2) Making the urbice of the road with tar macadam (3) Grouting the meadem while making the road with tar method is the one employed to the large textent and depends for it success on choosing a period of dry weather to carry it out the surface of the road must be dry and all dust removed the far is then run on preferably but from a tark on wheels with involving of sprayer that will give an even distribution or it may be applied by hand which allow of more attention being paid to local conditions in the road surface and sand or tone secones, may be dusted sparingly over the surface of the tar and all excess support of which the it santages of this system are low cost support sion of dust increased life of roadway eron my in watering and good surface while the disady integer in this title give a slippery road for horses with frost and if the tar contains too much free curbon and nightly lene i black much in wet weather. The second system con it is in mixing the mixidam with the prepared tar before making the road. Limestones absorb a very much larger pre-prition of tar than grantes and make a more idherent mass when rolled but grante road me allowed to stand for a week or ten days and a layer of the 23 inch meal and inch sizes these are well dried and are mixed with the prepared tar and made up into heap hat are allowed to stand for a week or ten days and a layer of the 23 inch meal input down and relied the operation is repeated with the 14 inch metal and the surface is made of the 3 inch size. The third or grouting system is to put down the macidim in the usual way but dry and after light rolling to mix hot prepared tar with sand and floit it over the surface. The great demand for coal tar for this purpose has created shortage in the supply but the improvement in price will probably lead to a rapid extension in the use of coke oven recovery plant thousands of

GAS LIGHTING 1

The incandescent gas mantle both in its upright and inverted forms has made steady headway during the past few years and the great increase in light that can be obtained by increase of the pressure under which the gas is supplied to the burner has been taken advantage of in constructing lamps for the illumination of large spaces

The most important outcome of the last few years with regard to gas lighting is the change of opinion that is gradually taking place with regard to its hygienic effect on the air of enclosed spaces When the electric light was first introduced as a domestic illuminant the fact that it took no oxygen from the air and gave off no products of com bustion led to the assumption that it must be more healthful in a dwelling room than gas which not only abstracted oxygen but evolved as products of combustion water vapour and carbon dioxide the amount of which latter gas in the air of a room had al ways been taken by the sanitary authorities as an indication of its hygienic condition The researches of Dr S Rideal and others have shown conclusively however that the air in the breathing zone of an inhabited room lighted by the incandescent gas mantle is always fresher and less oppressive than with electric incandescent burners and that the increase in carbon dioxide and humidity which one would expect is not to be found whilst a large decrease in the organic matter takes place. This is explained by the fact that the uprush of heated air and products from the burner draws up the emanations from the skin and lungs of the occupants charring and sterilising any germs and organic matter that are present and reaching the ceiling at a temperature 1. C higher than when electric light is used diffuses so rapidly through the plaster as to draw in fresh air below the door of the room and whilst so diffusing filters off the carbonised organic mat ter and dust on the surface of the plaster, so giving the blackening that is always found above a gas burner which is often erroneously attributed to imperfect combustion

Air movement coolness humidity and reduction in the mass action of pathogenic bacteria are now recognised as being of tar greater importance to health than the chemical purity of the air and the convection currents and change of air set up by the heat of the incandescent gas burner lead, it is held to a fulfilment of these requirements far better than the electric light (VIVIAN B LEWES)

OIL LIGHTING²

There has been but little change in either the construction of oil lamps or the use of oil for lighting during the past few years and the production of a successful lamp using ordinary lamp oil and an incandescent mantle still awaits solution

In lighting by oil gas a marked improvement has been made by Messrs Pintsch in railway carriage lamps. Attempts were made for many years to devise oil gas burners fitted for use with incan lescent mantles but whilst upright mantles only were available no great success was achieved as the shaking of the train rapidly destroyed them and no anti vibration device seemed to have any effect in preventing this. When however the inverted mantle was introduced it was found that the method of suspending it by its steatife base from lugs on the burner nozzle rendered it far more resistant to shock, whilst in case of the mantle breaking the tabric was suspended in a fine platinum wire basket which kept it in position until it could be renewed. Using the ordinary Pintsch compressed oil gas in small inverted atmospheric burners a consumption of o 6 of a cubic foot per hour gives with the mantle a light of 24 candle power or three times the amount of light for half the gas consumption with small flat flame burners

An interesting development of compressed oil gas for portable use buoys, motor lamps etc is the introduction on the European continent of what is known as gas ' When ordinary oil gas is compressed as in a Pintsch cylinder a considerable amount of liquid hydrocarbons, which were present in the gas as vapours separate out, the liquid consisting of benzene toluene hexane heptane etc and the gas suffers considerable reduction in illuminating power. The gas thus freed from vapours con tains hydrogen methine of little or no illuminating power and the higher gaseous 2 See E B XVI 651 et seq

1 See [B XVI (55 1 sed

members of the paraffin and ethylene series such as ethane propane butane ethylene propylene etc of high illuminating power, and by cooling and compressing these under high pressure in a steel cylinder they are liquened whilst the hydrogen and methane remain gaseous and pass on This liquid gasifies entirely when the valve of the cylinder is opened and constitutes the 'Blau gas,' and is largely used when high light values are needed from jets or flat flame burners

Of late years there has been a great influx of so-called air gas or petrol air gas ' machines on the market intended for the lighting of country houses where coal gas or electricity is not available. In nearly all these the principle first introduced by Hooker of adding only enough petrol vapour to the air to make it combustible and not enough to make it explosive has been adopted so that any leakage of the gay instead of forming an explosive mixture as would be the case with coal gas becomes non combustible from over dilution The principle of all the machines is to evaporate a given weight of petrol into a definite volume of air and to bring this about a large number of automatic devices are employed driven by water power hot air engines or falling weights. The gasso formed consists of a mixture of about 98 per cent of air with 2 per cent petrol vapour and burns in specially constructed burners as a non luminous flame which is used with an incandescent mantle A gallon of petrol in a good machine will make from 1400 to 1500 cubic teet of gas having a heating value of between 80 and 90 B Th U per cubic foot (VIVIAN B LEWES)

ACETYLENE¹

The progress of the past two year in the use of acetylene has been chiefly in the direc tion of oxy acetylene welding and cutting As an illuminant the number of new instal lations in Creat Britain keeps a steady average. In other countries, where central in stallations for the lighting of small towns and villages are more often met with the in crease is more marked. Welding and cutting by me ins of the oxy acetylene blowpipe however is advancing with great rapidity. America leading the way both in quantity, and quality of the work done. Germany occupies the second place. France the third, and the United Kingdom a bad fourth A school of acetylene welding has however been started in England and more rapid progress is expected

A noticeable feature is that in France and Germany nearly two thirds of the oxy acctylene welding done is in manufacturing work while in America the extreme value of the proce

for rapid repairs habeen fully reals ed and nearly three quarters of the work done is of that character. The size of the work which can now be undertaken acetylene has enormously increased with extended knowledge of the requirements and welding two examples will suffice to indicate the saving that can be effected by the rapidity with which the work is done. A section of the frame of a steam hammer weighing about four tons was fractured and by means of the oxy acetylene torch new metal was filled into the break the whole of the welding completed and the section delivered within The Commonwealth a large passenger steamer wa in collision with a warship and had her bows badly crumpled up but by the oxy acetylene cutting torch the damaged portion was removed the repairs executed and service resumed within a week

In the early days of welding by the oxy acetylene blowpipe many cases occurred which seemed to point to the steel being rendered hard and brittle in the neighbourhood of the heated portion Investigation however has shown that this is due to careless adjustment of the ratio of acetylene to oxygen in the blowpipe flame which with any excess of acetylene increased the carbon in the steel and so hardened it and that if a properly designed and adjusted blowpipe is used the tensile strength of test pieces cut from a plate with the oxy acetylene flame is higher than when sheared Some recent Austrian experiments on two mild steels however show that when a chrome nickel steel hardened for armour plate is cut by the flame a softening of the steel takes place this being most noticeable close to the cut and gradually diminishing as the distance became greater whilst a nickel steel un hardened wa perfectly unaffected

The American Naval Department was one of the first to adopt the oxy acetylene process and in building one of the recent battleships expended over \$70,000 in welding and cutting by it. The system has also been adopted widely at many European ports and at Marseilles Genoa and Antwerp has been in use for several years. The use of acetylene dissolved in acetone under pressure the acetone being contained in porous material packed into strong steel cylinders has largely extended the scope of autogenous soldering as both acetylene

¹ See E B 1 137 et seg

and oxygen under pressure can be obtained in portable cylinders and repairs executed in the

confined space of a ship's hold or even in the boilers themselves

The trade in cylinders of dissolved acctylene has as might be expected expanded rapidly both in G eat Britain and elsewhere this being due partly to the advance in oxy acetylene welding but more largely to the enormous increase in the number of motor vehicles the headlights from which are most conveniently supplied with acet Dissolved acety lene ylene from a cylinder of dissolved gas which does away with the trouble incidental to a portable generator

Inother direction in which the use of acetylene has made enormous strides in America is for self tarters for motor cars of which some fifteen different kinds are in u e in the United States In one class of self starters the pressure existing in the acet Self starters ylene cylinder 1 used to force a harge of gas and air into the explo ion cylinders of the motor engine where it is fired by the spark and starts the engine the automatic self starter being one of the best of thi clas while the Prest O Disco Starter may be taken as the type of a econd class in which low pressures only are used

In 1896 it was shown that when acetylene is passed through a red h t tube it undergoes instantaneous decomposition with deposition of carbon and liberation of hydrogen the carbon being rendered incandescent by the exothermic decomposition and that the temperature at which this takes place could be raised by d lution with tion of hydrogen when this was done the acetylene underwent condensation into bonzene and other hydrocarbons. R. Meyer has now repeated these observa acety lene benzene and other hydrocarbons tions on a larger scale The apparatus con isted essentially of two vertical tubes electrically heated and a mixture of a eet lene and hydrogen was passed slowly through them the tem perature being o arranged that separation of carbon was to a large extent avoided. The first tube was bested to 650 C and the second to 800 C when it was found that a quantity of a light brown tarry liquid was formed and that the gases leaving the apparatus contained methane In some cases the yield of liquid was about 60 per cent of the weight of acetylene u ed and centained nearly so per cent of its weight of benzene. Other hydrocarbons identified were toluene napthalene anthracene indene diphenyl fluorene pyrene and chrysene and further experiments with acetylene and hydrocyanic acid confirmed Sir Ramsay's observations that these bodies condensed to firm pyridine bases

A considerable amount of work has been done in utilising calcium carbide for the fixation of atmospheric nitrogen In order to do this crushed calcium carbide is heated to a tempera ture of 800 1000 C in an electric furnace and nitrogen generally obtained Fixation of by liquifying air by the Linde process and allowing the nitrogen to distil off nitrogen is then passed through the red hot mass and converts the calcium carbide into calcium cyanamide CaCN This is now recognised as an extremely valuable manurial matter 1 it lowly evolves ammonia under the influence of moisture according to the equation (12CN + 3) HO = CaCO + 2 NH. There is a large installation at Odda in which 190 electric turnaces are employed and about 30 tons of calcium evanamide containing 16 per cent of nitrogen made per 24 hours while the world's production for the past year (VIVIAN B LEWES) amount to nearly 200 000 tons

THE PETROLEUM INDUSTRY

The winning of petroleum in regions of proved productivity and concurrently the discovery of new sources of supply are being greatly stimulated by the rapidly increas ing employment of oil fuel for power purposes both as a substitute for solid fuel in steam raising and through the medium of the internal combustion engine

Since its inception half a century ago the petroleum industry has advanced to a posi tion of great importance mainly in supplying a cheap convenient and efficient light and an excellent lubric int for machinery During the past few years it has also furnished the motor spirit which drives our automobiles motor boats submarines hydroplanes and aeroplanes Now however it is entering upon a new era in becoming a great fuel industry and its further expansion promises to be far more rapid for it is evident that if there is to be any large substitution of oil for coal as a source of power the output of oil At present the world's production of petroleum does will have to be greatly increased not amount to much more than 5 per cent of the output of coal even allowing for the higher calorific value of the liquid combustible The general employment of motor spirit has of itself contributed largely to the present profitable character of the business though the high price at which this product is now sold is leading to the use of distillates of higher specific gravity and lower volatility, of which a far larger percent

¹See E B xx1 316 et seg

age can be obtained from the crude oil Probably the owner of the private motor car will always prefer to have the product which he has been accustomed to use even if he has to pay a high price for it but for use in public service and commercial motor vehicles an increasing substitution of the less volatile product may be looked for and it i desirable that this should be so for the supply of motor spirit may otherwise become inade quate to meet the increasing demands though at present the United States and the Dutch East Indies which are the chief sources show no signs of tailure in this respect

In regard to the industrial use of oil for power purposes it is instructive to consider the remarkable changes which have been effected in the United States within very recent years by the provision of liquid fuel. As was pointed out by Dr. David T. Dav. in an instructive article published in The Times (London) for June 28 1912 the supply of oil fuel has been a potent factor in State development. It has made Oklahoma a state abundant in prosperous cities and has developed the railroads and manufacturing industries of Texas. In Louisiana it has made the sugar industry ready for the free list and corresponding changes are in progress in Illinois and further west in Wyching Oil fuel has completely revolutionised (alifornia so that the state is in the midst of it star lingly rapid transformation from a mining and agricultural community to a manufacturing centre, and the keynote of the Panama Pacific Exposition of 1915 in San Trancisco originally intended to be a tribute to the extension of commerce through the opening of the Panama Canal, will be the change of San Francisco from a future Liver pool to a future Birmingham.

I or marine purposes as well as in industrial establishments, the most potent factor in the replacement of coal by oil is however unquestionably the Diesel engine which possesses great acconomic advantages over other type of internal combustion engines. Not only can a much greater amount of power be obtained with this engine from a given quantity of oil but in addition the less volatile hydrocarbons of which petroleum is chiefly composed and even the crude oil itself can be used with it

I or use on rulroads the Diesel engine has not as vet been substituted for the steam locomotive but the employment of oil fuel which for many years has been common in Southern Rus 11 has been extended to other countries especially the United States

According to the figures compiled by Redwood and Eastlake the world's production of crude petroleum amounted in 1909 to 40 070 832 metric tons and in 1910 to 45 986 551 metric tons while in 1911 (from Day's figures) it was 46 5 6 554 metric tons. Details of the production in different areas for 1909 and 1910 (Redwood and Eastlake) and 1911 (Day') are shown in Table 4

It will be observed that the United States continues to occupy a predominant position in the industry having contributed in 1911 no less than 6, 8 per cent of the world's output the next in order being Russia with 1916 per cent of the total. During 1911 the production of Mexico increased so largely as to bring that country into the third place and as soon as there are adequate transport facilities the increase will probably be far greater. Other countries of very considerable commercial importance in the industry are the Dutch East Indies Rumania and Galicia. To the aggregate output of the United States. California contributed far more largely than any other state and may be expected to provide sufficient oil for the industrial needs of the whole I wither slope for many years to come. The similar requirements of the Atlantic coast will probably be met by the importation of the surplus production of Mexico.

The older oil fields of Russia in the Baku region which in the past have produced immense quantities of oil from a comparatively small area are showing signs of exhaustion but other districts are being actively exploited with highly promising results. In the Ural Caspian region lying east and west of the Ural river there are over 30 000 square miles of territory where already some very productive wells have been drilled and a large proportion of which may prove to be richly petroliferous. The island of Cheleken has also become commercially important as a source of oil. The sanguing anticipations expressed in regard to the Maikop oil field have not been fulfilled but its prospects will be better understood when we know the results of the deep drilling

operations recently in progres. Attention has also been directed to exploratory work on the Taman Peninsula

Among other countries which may be confidently expected to add largely to the world's supplies of petroleum in the near future 1. Persia, where there 1. an immense area of presumably petroliterous lands, a portion of which has already been proved by the test of the drill to be highly productive. Drilling operations in Egypt, on the Gulf of Suczinary also been attended with results which are regarded as sufficiently promising to justify the provision of a large capital for the development of the industry. The island of Trinidad is being systematically examined in indistilient has been done to lead to the brief that large stores of oil exist there in 1011 it produced 1.01 metric tons. Among other potential sources of supply, which have attracted the notice of the prospector are Turkey (Mesopotamia). Nev Zeiland New Brunswick Newfoundland Canada (north west). Alaska, Venezuela, Barbados, Midagascar, China, Argentina, Algeria, Nigeria, Colombia, Ecuador and Bohyia. There are also ources of oil in the bituminous shale deposits of France, Servia, Spain, South, America, New South, Wales, New Zealand, New Brunswick, Nova Scotia, and Newfoundland.

AGRICULTURE

PROGRESS OF SCIENTIFIC RESEARCH

During recent years notable advances have been made in agricultural science and especially in the application of chemistry and biology to agricultural practice

The perennial question of the source of the combined nitrogen utilised by vegetation has received fresh light from the discovery by Beijerinck of a group of bacteria

The question of nitrogen living free in soil and water and possessing the power of bringing the free mitrogen of the atmosphere into combination. These organisms known as $A_{motobacter}$ are powerful oxidisers of carbohydrate material from which process they derive the energy necessary to effect the fixation of the mitrogen

and they have been identified in cultivated and virgin soils from all parts of the world. They are however only practically effective in soils containing carbonate of lime, though they have been found in all the steppe soils where black soil rich in nitrogen

has accumulated to a considerable depth, such soils for example as are found in Man itoba the Russian steppes and the Pampas of South America. Despite the fixing action of the bacteria associated with the leguminous plants it has always been difficult to regard the enormous accumulation of nitrogen in virgin soils as the result only of past vegetation since the higher plants are only capable of taking already combined nitrogen from the soil and restoring it again as they die down. When however the vegetation falls back to the soil carbohydrates are added which have been manufactured by the grein leaf from the carbon dioxide of the atmosphere by the help of light and it is by the subsequent oxidation of this non nitrogenous material by 4 cotobacter that free nitrogen is drawn into combination and the stock in the soil is added to

The examination at Rothamsted England of the soil of a wheat field under arable cultivation for more than half a century shows a steady decline in nitrogen content approximately equivalent to the removals in crop any recuperative actions ROTHAMSTER at Work being only sufficient to balance casual losses by drunage weeds A portion of the wheat field was however, allowed to go to wiste some thirty years ago and became covered with a natural vegetation of weeds and grasses which are never cut but allowed to die down each year in situ. The soil of this portion was found to have gained nitrogen at the rate of nearly 100 lbs per acre per annum the greater proportion of which must have been fixed by Azotobacter working on the carbonaceous matter of the dead vegetation. With this clue we can interpret the accumulation of nitrogen in virgin soil carrying a grassy vegetation similarly forest soils which annually receive carbonaceous matter from the fall of the leaf become en niched in nitrogen though in both cases the process will only be effective if the soil con tains carbonate of lime Again when land is laid down to grass for a period there will be a regeneration of the nitrogen stock by the action of 1.otobacter utilising the carbona ceous matter in the roots and stubble of the grass

The last decade has also seen the resources of agriculture enriched by two new nitrogenous fertilisers in which the nitrogen is derived from the atmosphere by artificial Sir William Crookes had drawn attention to the possibilities of the Artificial fixation of nitrogen by means of the electric spark but the process only *fertilisers* attained commercial realisation through the methods devised by Birkeland & Eyde now worked on an enormous scale at Notodden in Norway In this process an alternating current of about 5 000 volts derived from water power is set to form an arc between U shaped copper electrodes water cooled. The arc is spread out into a broad flat flame by means of a powerful magnetic field and through it is blown a current of air at gentle pre sure The issuing air at a temperature of 600-700°C contains about 1 per cent of nitric oxide which after cooling combines with more oxygen from the air and is dissolved out by water and finally by milk of lime The final products are nitric acid and nitrate of lime which latter with about 13 per cent of combined nitrogen is now be ing sold as a fertiliser. The lime base gives it certain advantages over nitrate of soda on heavy soils deficient in lime and as the nitrogen is equally effective unit for unit intrate of lime forms a valuable addition to the stock of nitrogenous fertilisers

The other fertiliser depends upon a different principle the combination of nitrogen with bodies of a metallic nature to form compounds which will give rise to ammonia on decomposition with water. A metal is not however the starting point but calcium car bide now manufactured on an enormous scale for the generation of acetylene. At a temperature of about 700 C it combines with free nitrogen to form calcium cyanamide which by the action of water becomes converted into calcium carbonate and free ammonia. The process is now extensively carried out in conjunction with various calcium carbide works situated where water power is available as at Odde in Sweden in Savoy and at Piano d Ortenear Rome. The roughly ground carbide is heated in tubes through which is passed pure nitrogen obtained by the fractional distillation of liquefied air. The product contains 18-20 per cent of combined nitrogen with about 20 per cent of free lime it is sold under the name of nitrolim or kalk-stickstoff and forms an effective nitrogenous fertiliser, especially valuable on soils poor in lime

Another series of investigations that may have considerable outcome in practice deal with the results of the partial sterilisation of soil \ \arious observers had noticed from time to time that a soil which had been heated to the temperature of boiling Sterilisation water was thereby markedly more productive than before A similar in of soil crease of fertility follows treatment with volatile antiseptics such as chloro form toluene, etc Russell & Hutchinson working in the Rothamsted Laboratory arrived at an unexpected solution of the problem. They found that the increased productivity was due to the rapid rate at which the soil developed ammonia after the treatment the ammonia did not change further to nitrates because the nitrifying or ganisms had been destroyed but the plants utilised the ammonia directly ment moreover did not completely sterilise the soil a small number of organisms capable of decomposing the nitrogenous residues in the soil into ammonia are left and multiply with great rapidity until within a few weeks the numbers of bacteria within the soil are far in excess of those prevailing in the untreated soil. These bacteria account for the increased production of ammonia and therefore fertility of the treated soil investigation led to the conclusion that normal soil contains agencies restricting the development of bacteria and therefore the rate of ammonia production and consequent fertility which negative agencies are wholly removed by the heating and treatment with antiseptics and these agencies were identified as protozoa amoebae etc. living in the soil large organisms which feed upon living bacteria. They are killed off by the partial sterilisation and on the removal of this check the bacteria are enabled to increase their numbers to an extent previously impossible thus raising the rate of production of plant food from the otherwise unavailable nitrogenous material in the soil. It has been found practicable to apply these principles with commercial success to the treatment of green house soils which rapidly degenerate and have to be replaced because the conditions of warmth and moisture are especially favourable to the development of protozoa the soil of sewage farms rapidly deteriorates and becomes ineffective towards the puri fication of sewage from the same causes but can be restored to its proper character by partially burning the soil or treatment with antiseptics. Much progress has not been made with the treatment of ordinary farm land as heating is out of the question the desideratum is a cheap antiseptic of the right degree of volatility

The rediscovery and extension of the Mendelian theories of inheritance have placed the question of breeding new varieties of domesticated animals and plants upon a new basis insomuch as they offer a method by which the attainment of a particular desired result can be foreseen. While animals present certain special difficulty.

culties because of the complexity of the factors involved in such characters as meat milk or wool plants are simpler and considerable progress has been made in the application of breeding on Mendelian lines to the production of new varieties of cereals which afford particularly easy material for work because they are naturally self fertilised The English and West European varieties of wheat for example are distinguished by their capacity for heavy cropping but they do not command the higher range of prices because flour made from them is not strong is e it does not make large loaves and is starchy rather than nitrogenous in comparison with the wheats grown in the east of Furope Manitoba Kansas etc Some of the latter wheats preserve a considerable measure of their strength and high nitrogen content on English soils but the yield is too low to enable them to be profitable even at the higher price per bushel Biffen at Cam bri lge has shown that this high nitrogen content and strength is a Mendelian character that segregates in the offspring of cross bred parents and has succeeded in breeding one or two varieties which combine to a marked degree the cropping powers of the English wheats and the strength of other varieties and one at least of these new cross breds is now being grown commercially in England Other experiments that promise success on a working scale deal with the breeding of wheats proof against rust, a disease which seriously affects the yield of wheat in many of the warmer countries and may indeed prohibit their growth as over much of S Africa A rust proof species had been found, and though its miserable yield deprives it of all commercial value it transmits its

immunity on Mendelian lines when crossed with other varieties hence by suitable cross ing and selection a rust resistant variety yielding normal crops has been obtained Another line of attack has led to considerable improvement among existing races of cereals and that is the process of selection of pure lines 'associated with Nillsen and the experimental station of Syalof in Sweden If a field of any variety be examined putting aside accidental admixtures a considerable range of variation will be observed in such characters as the length of ear the stiffness of the straw the size of the grains etc The majority of these differences are due to accidents of nutrition and are not inherited but by selecting a number of ears from plants possessing the desired character istics and growing the corn from each separately a few will be found to transmit the variation and by raising a stock of seed from the best a permanent improvement in the Moreover such a pure strain will be found to possess a great variety can be effected uniformity in the time of ripening and similar factors, which alone may make it of more value than the composite out of which it originated The success of such breeding along pure lines is in marked contrast to the failure of many attempts to improve crops by mass selection ie by picking out a large number of the best ears or the heaviest corns and raising a stock of seed from this aggregate. So large a proportion of the improved material owes its character to nutrition alone and falls back in the next generation that the resulting mixture of strains is very slightly better than the unselected mass

The scientific advance in the theory of the nutrition of animals has been of too technical a nature for discussion here especially as it has resulted in no modifications of practice but the advent of a new and valuable feeding stuff into Europe Sova This is the sova bean which has been long grown for both may be noted bean human and cattle food in China and Japan At the close of the Russo Japanese war when Manchuria was opened up to Japanese traders it was found that large quantities of this bean were obtainable and the firm of Witsui embarked on its importation into Furope I he bean contains up to 1, per cent of a neutral tastcless oil valuable for food soap making and other purposes to which vegetable oils are applied and this oil is extracted by pressure in the usual way. The residual cake forms a valu able food for all classes of stock containing about 6 per cent of oil and over 40 per cent of proteins. Its advent has been particularly fortunate in that it occurred at a time when linseed cake for which it is almost an equivalent was rising to an exceptional (A D HALL) price

ACRICULTURAL ORGANISATION IN THE UNITED KINGDOM

The increasing demand for state assistance for agricultural research and education improvement of live stock furtherance of co-operation etc. led Mr. Lloyd George work of British as Chancellor of the Exchequer to introduce the Development Act in 1900 under which a Commission was appointed to make recommendations Development to the Treasury of grants for the promotion of rural industries. The grants are to be made either to a government department or to a university or other association not trading for profit and a sum in the first instance of $\frac{1}{2}$ 500 coo has been set aside for the purposes of the Commission. Under this Act schemes have already been approved and grants made for the furtherance of research and education, for the promotion of co-operation for the improvement of live stock and horses for experiments in the cultivation of tobacco flax hump etc.

Up to 1011 the Board of Agriculture was charged with the administration of agricultural affairs in England Scotland and Wales. In 1911 a separate Board was created for Scotland to which were transferred the duties appertaining to the old Board as regards Scotland higher agricultural education and the administration of a scheme of land purchase for the creation of small holdings. To this Scotch Board of Agriculture an annual grant of £200 000 is made.

Owing to the increased grants derived from the Development Commission the organisation of agricultural education and research has been considerably advanced of late years in the United Kingdom and very shortly it will possess a complete system

making provision for all grades of instruction The schemes to which effect is now being given deal with research higher and intermediate agricultural education Provision for research is being made by the foundation of a number of institutes as a rule attached to a university, each dealing with one branch of agricultural science

As regards higher agricultural education England and Wales are divided into 12 provinces in each of which an Agricultural College or Department of a University is located where long courses of instruction are given leading to a degree or diploma in agriculture colleges receive grants from the Board of Agricultur of about £1000 each for education and in addition grants of £1000 each to provide a staff available for advisory work and local investigation within its area together with a further grant for a Live Stock officer charged with the organisation of certain schemes for the improvement of live stock

As regards intermediate agricultural education all forms of agricultural education below the colleges were formerly under the supervision of the Board of Education the county being the unit of area and the County Council the authority but in 1911 the control was transferred to the Board of Agriculture who administer a grant from the Development Commissioners for the setting up of Farm Institutes A farm institute may be established by a single country or a group of counties and may take the form of a Farm School receiving uppl for a year or less a winter school giving hort courses of instruction in the winter months or an institute serving as a centre for short courses of in truction in special subjects and for the itinerant lecturer comployed in the county. Travelling dairy schools and similar practical instruction also form part of the programme of the institutes

In Scotland the whole of the agricultural education is supervised by the Scotch Board of Agriculture and is carried out under Colleges of Agriculture associated with the Universities of Edinburgh Glasgow and Aberdeen These colleges possess in addition to heir resident staff which gives in truction leading up to the degree of B. Sc. a large extension staff of whom one or more is resident in each county included in the province appropriated to the college. These is structor give lectures conduct experiments and generally advice the farmers within their area. Many of the primary schools have developed a strong

agri ultural ide to their teaching but no farm institutes exist in Scotland

The provision of agricultural education in Ireland is administered by the Department of Agriculture working as regards intermediate and lower education in conjunction with the County Councils. A three years course of instruction in agriculture and the applied sciences is given at the Royal College of Science Dublin and a one years course of a m re immediately practical character at the Albert Agricultural College Glasnevin to both of which institutions the Department grant scholarships. The Munster In titute Cork and the Ul ter Dairy School provide in truction in dairy work and creamery management, while at Athenry Co Galway Ballyhause (o Cavan and Clonakilty Co Cork are agricultural station at which short courses of instruction chiefly practical are annually given. In addition the Department maintains a service of itinerant instructor in agriculture working in conjunction with the county councils

The most notable movement of late years has been the revival of interest in small holdings The returning prosperity of the agricultural industry consequent on the rising prices of farm produce became noticeable about 1004-05 a demand Small began to spring up for farms until about 1908 it was rare to find farms in Holdings hand in any parts of the country and a year or two later so numerous were the enquiries that increased rents could be obtained for all land that fell vac int rents were in some cases raised to the sitting tenants and despite the fact that ioni and 1019 proved bad seasons in certain parts of the country there are still more applicants for farms than can be satisfied and rents are everywhere rising This demand for land on the part of working men resulted in 190, in the passing of the Small Holdings Act amending the previous Act of 180 The new Act gave county councils the power not only to buy land and resell it to small holder but to take land on lease and let it on such terms as would repay the councils for their expenditure The county councils were given compulsor, powers for both purchase and hiring of land and a number of commissioners were appointed to stimulate and assist the councils the Board of Agricul ture being given powers to put the Act in operation wherever it was found that the county council was backward Under this Act a large number of statutory small holdings have been created the success of which cannot as yet be estimated though there is evidence that the expenses incurred by a public body in purchase division the erection of buildings etc are burdening the holdings with rents that are difficult to earn Under the operations of this Act holdings of between 1 and 50 acres which had fallen to their lowest number in 1908, increased from 287 176 to 292,488 in 1911 The Small Holdings Act with its compulsory powers followed by the Finance Act of 1910, created a feeling of distrust among owners of land, which with the rising values due to the returning prosperity of agriculture prompted an unprecedented number of estate sales. During 1010 and 1011 the sales both of large and small estates went on in increasing volume and many tenants found themselves in the difficult position of having either to give up their farms which they had worked up into a profitable condition from their previous depressed state or to find the capital for their purchase. Many cases of hard ship occurred until there was a call for legislation and a Departmental Committee which reported in 1912 was appointed to consider the advisability of state assistance towards enabling sitting tenants to purchase their holdings.

During the period of depression the British farmer may be said to have emancipated himself from the covenants as to the course of cropping that proved so characteristic a feature of the old agreements whether for a lease or for a yearly tenancy Freedom of cropping and sale has been rendered possible by the introduc tion of artificial manures and imported feeding stuffs which enable the farmer to restore to the farm the elements of fertility which are being sold away in the crops the old four course rotation all that was lost to the land was the nitrogen phosphoric acid and potash contained in the corn and meat sold and the losses of the first named element were replaced by the nitrogen of the atmosphere brought into combination during the growth of the clover crop the roots the hay and the straw which make the chief demands upon the soil were all returned and under such a conservative system of farming the fertility of the land could be maintained almost indefinitely though the level of production attained was not high. The sale of the so called recuperative or green crops or even the introduction of additional corn crops into the rotation dis turbed this equilibrium and the losses had to be repaired by imported fertility as Still it can hardly be said that the British farmer was emancipated manure or food from his old restrictions because of any increased appreciation of the scientific issues involved in the bad times he became able to make what bargain he pleased and could force his landlord to accept any scheme of cropping that would yield a profit

The old fashioned farming on which the covenants were based assumed that the crops were taken out of the soil modern intensive farming only uses the soil as a medium to transform certain raw materials manures and feeding stuffs into saleable Big crops do not in practice prove exhausting to the land be produce cause they can only be attained by getting the soil into high condition and supplying an overplus of manure The last decade having been a period of advancing prices has encouraged British farmers to raise the fertility of their land and aim at systems of cropping that would ensure larger returns per acre. It cannot be said that any new rotations have been introduced for the underlying principles are of course not subject to change but such systems as permit of more than two years corn in four or the introduction of a paying crop like potatoes or the reduction of the labour bill have resulted in widespread modifications For instance the five course shift—roots barley seeds wheat barley or oats—nowadays more characteristic of Norfolk than the rotation called the Norfolk has become very general or even a six course like wheat oats roots oats wheat seeds found in the maritime plain of West Sussex is now regularly followed because thereby the land yields two saleable crops in three years of cropping dictated by the potato crop we may instance a characteristic East Lothian rotation-potatoes, wheat seeds potatoes turnips barley or a Lincolnshire one-On the other hand we find in potatoes oats wheat with seeds every seventh year Sco land a tendency to increase the duration of the grass in the rotation as prices fell and labour grew more costly it became common to leave the seeds down for two or three years the five or six shift Indeed the longer system has been forced upon many farmers by the increasing trouble with finger and toe in the turnips which however becomes greatly reduced during the comparatively long rest from cruciferous plants the land obtains when laid down to grass Near large cities where market gardening prevails or where there is a demand for hay and straw, and root crops and green meat for the town dames farmers have often lost any idea of rotations they consult their convenience and the promise of the market entirely though cleaning the land and arrangement of labour necessitate some alternation of green and straw crops. With the need for heavy manuring the necessity for a sequence of crops largely disappears, near Penzance for example farmers have for forty years grown year by year a crop of early potatoes fol lowed by one of broccoli and on the Ayrshire coast early potatoes are similarly repeated on the same land and followed up by some sort of catch crop to be eaten off by sheep

The intensive growers of market garden and other produce in the neighbourhood of the large towns are beginning to find their operations curtailed by the rapidly increasing difficulty of getting town manure. For example near London one great mar

Decrease in ket gardening district is the strip of light Lower C reensand that is found in lown Bedfordshire by Sandv and Biggleswade another hes upon the thin Bag manure shot Sands and the alluvials derived from them in Surrey, another upon the equally poor sands of the Eocene in North Kent all soils naturally of the poorest quality but easy to work early and grateful when liberally supplied with dung tato growers on the gravels of Hertfordshire, which Arthur Young described as the jaws of a wolf and the hop growers of Kent, are equally dependent upon London manure as the Lancashire and Cheshire potato growers look to the Lancashire towns and the Ayrshire men to Glasgow But the advent of the motor car particularly its displace ment of horses in omnibuses trams and the vans of the big carrying companies, has all ready enormously reduced the amount of manure produced London manure for example which we or seven years ago could be bought at is a ton on rail or on barge has now risen to over 4s 6d and become of much inferior quality. At the same time the town market for straw and hav has declined so that considerable changes in the farming meth ods near the large towns are inevitable. It is difficult to see how the market gardeners can easily replace the dung they are losing on the light soils an abundant supply of humus is as essential as the fertilising elements that are also supplied by farmyard Fail ng the latter the only alternative method of obtaining humus is to turn in green crops but the market gardener cannot as a rule afford to leave his land idle even for the time in which to grow a catch crop like mustard or tares 1

It cannot be said that any new staple crops have been introduced into the United Kingdom Some considerable experiments have however, been made in the direction of reintroducing tobacco, experiments mainly conducted in Ireland and British owing their substantial progress chiefly to Sir Nugent Everard of Randles tobacco Tobacco was at one time grown freely in England Scotland and growing Ireland but the cultivation was put down partly in the interests of the Virginia settlement and partly because of political objections to the exci e that had to be applied as an equivalent to the customs duty Permission having been obtained from the Treasury who granted a bounty of £50 an acre and an excise rebate of d per lb of manufactured tobacco experiments began in 1904 and 124 acres were in 1912 under crop in Ireland Corresponding experiments did not begin in England until 1911 30 acres being so cropped in 1912 It has been demonstrated that certain grades of smoking tobacco particularly a Virginian variety known as Blue Prior will grow with great vigour in the British Isles crops as large as 1600 lbs per acre of merchantable tobacco having been obtained but it has not yet been demonstrated that the culture will succeed on a commercial scale without any bounty Further experiments extend ing to 150 acres in Ireland and about the same area in England have been sanctioned

Considerable interest has been aroused in the question of whether the sugar beet crop can be given a footing in British agriculture, largely through the efforts of Mr Sigmund Stein who for many years has organised the growth of trial plots of sugar beet in various parts of the kingdom, and by the analysis of the roots had demonstrated that crops can be grown as large as or larger than those obtained on the Continent, and

¹ In view of the decline in the supply of manure the chief engineer to the London County Council suggested in December 1912 that attention should be directed to the utilisation of the London sewage which at present is simply carried out to sea and destroyed.

of equal richness and purity During 1000 and 1010 crops on a commercial scale were grown in East Angha and exported to Holland for manufacture but owing to the large amount of capital required for a modern factory none of the projected under takings was able to make a start. The Government were precluded from extending any assistance so long as they were bound by the provisions of the Brussels Convention but in 191 a branch of a Dutch company established a factory at Cantley in Norfolk. It may be taken as established that profitable crops may be grown in England at prices equivalent to those paid by the Continental factories. The question is whether the manufacturing process can be conducted cheaply enough to make the industry profitable.

(A D HALL)

DRY FARMING

The term "Drv Farming has come into use to meet the need for a descriptive name for that type of farming which has been developed without irrigation in semi and regions where irrigation is desirable but impracticable. No intallible rule can be laid down as to the range of annual precipitation which will include the drv farming regions and delimit them from humid regions on the one hand and from and regions on the other. It is however fairly well recognised that in most parts of the United States and Canada, the minimum requirement for drv farming is represented by about 12 inches annual precipitation and that 20 inches or more is sufficient when properly distributed for crop production, on most soils of the Middle West by ordinary methods of humid agriculture.

For several years past annual international congresses have been held in the west ern states of the United States in the interest of the dry farming movement. The 5th congress held at Spokane Wash October 3-6 1910 was attended by 1 200 delegates and the 6th held at Colorado Springs Colo October 16-20 1911 and presided over by President J H Worst of North Dakota Agricultural College was even more satisfactory. The seventh was held at Lethbridge 1 Alberta. Canada October 21-25 1912 and was attended by delegates from 15 nations. W. R. Motherwell minister of agriculture for Saskatchewan was chosen president for the ensuing year and resolutions were adopted favouring the raising of a fund of \$1 000 000 for the purpose of maintaining permanent headquarters and inaugurating a world wide propaganda Oklahoma City. Okla was selected as the place for holding the 1913 congress. An important part of the work of the U.S. department of agriculture and of many state agriculture experiment stations in 1912 related to the subject of dry farming

The most distinctive feature of dry farming as compared with other types of farm ing is that it recognises the conservation and utilisation of moisture as the aim and end of all agricultural practices having to do with sol preparation and crop produc Fven the problems involved in the quality of the crop produced and the main tenance of soil fertility which are of major importance in most systems of agriculture assume a minor importance in dry farming. It is more important that a variety be selected that is reasonably certain to grow and produce a moderate crop of fair quality under semi and conditions than to select one that might produce a superior quality and quantity of crop if climatic conditions happened to be favourable but would fail to produce any crop under adverse conditions The problems of soil fertility under dry farming conditions are relatively simple as compared with those of humid agn Dry farming soils are usually rich especially in the mineral elements of plant food for the reason that they have been formed under and or semi and conditions which instead of leaching out the soluble salts formed from the disintegration of rock material, have caused an accumulation of these salts near the surface The same ch matic conditions which have produced these fertile soils will tend to preserve these salts under dry farming methods which take from the soil but small quantities of mineral plant food for the production of the moderate crops usually produced

¹ Dry Farming and Rural Homes (founded 1906) the official bulletin of the congress is published monthly at Lethbridge Alberta

deterioration in the soil under dry farming is therefore likely to be mainly in the loss of the organic matter. In most virgin dry farming soils the organic matter is low in quantity but high in mitrogen content, and it may be rapidly destroyed under faulty methods of farming particularly where bare fallow is frequently practiced and where the amount of organic matter which is restored by plowing under some portion of the crops grown is small. Here occurs another contrast between dry farming and humid farming. The main object usually sought in increasing the organic matter in soils of the humid regions is to provide nitrogen, while under dry farming the main purpose is to improve the physical condition of the soil in its relation to water, with the addition of introgen as a secondary consideration.

Many attempts have been made to elaborate some general system of dry farming that would meet all conditions Such attempts could be made only by those with an entirely inadequate conception of the magnitude and complexity of the problems involved and the diversity of soil and climatic conditions to be encountered or by those having some ulterior motives in promulgating such theories. The soils of the dry farming regions range from the lightest sands and silts to the heaviest clays and the annual precipitation from severe drought to humid conditions. Even in years of normal precipitation the daily distribution of the rainfall in relation to the stage of development of the crop and the character of the soil may under some combinations of these factors result in the production of an abundant crop and in others a total Practically every detail of dry farming practice must be predicated upon the particular combination of soil climatic and economic conditions with which the farmer is confronted at the time nor can he disregard the conditions that are likely to exist at some future time. For instance some have advocated early deep fall plowing as an invariable practice. Some soils under some climatic conditions are in such conditions at that time of year as to make deep plowing and in some instances even shallow plowing utterly impracticable The dry farmer must then look torward and attempt to form an opinion as to what combination of conditions is likely to exist during the following spring and to calculate how much spring plowing he can do with his avail able teams before seeding time He may come to the conclusion that he must disk some of his land without ploying at all and it is not impossible that he may get his be-t crop on his disked land A few years ago the dust mulch was recommended by many as the only proper means of conserving moisture Practical farmers how eyer soon discovered that on some soils the heavy winds would remove the entire dust mulch' and not only ruin the held from which it was blown but in some in stances the adjoining fields upon which it was deposited. Such have been the results of many attempts to maintain a dust mulch on the wind swent prairies of the Great Plains At Nephi Utah during the summer of 1900 a different result was obtained on a summer tilled field which was supposed to be in ideal condition being covered with a fine dust mulch A heavy beating rain of 2 5 inches occurred and it quickly reduced the dust mulch to a pasty impervious covering which allowed but 20% of the rainfall to be absorbed while on an adjacent stubble field 40% of the rainfall was ab-Similar results have been noted in many other instances. It has been found that both of the above mentioned difficulties can usually be avoided either by leaving the land unplowed and protected by the stubble of the previous crop during the fall and winter or if plowed by keeping the surface until seeded in an uneven or cloddy condition Subsoiling or very deep plowing is now being very strongly recommended by some but many experiments on a great variety of soils and under varying climatic conditions have shown that frequently as good and sometimes better crops can be grown on shallow plowing or even on land that has been disked but not plowed since the previous crop was harvested grain is to follow a crop of corn Alternate cropping and summer tillage is a favorite practice in some dry farming districts especially in Utih and Eastern Oregon and Washington and in some of the Canadian provinces but dry farmers are learning that a properly planned system of crop rotation in which corn or some other inter

that lost in faeces urine and gas voided and that required for mastication and diges tion of food. A short method of computing rations to supply the daily need of dairy cows has been outlined.

Production Records —Recent advances in the price of feed and labour have rendered unprofitable the cow producing a low yield of milk and butter fat, and have stimulated interest in the securing of accurate data as to actual production by individual cows through the Advanced Registry local cooperative test associations and private records. The elimination of unprofitable cows and the increased consumption of dairy products have stimulated the demand for profitable cows until prices are from 50 to 150 /6 higher than five years ago

Advanced Registry Testing of pure bred dairy cows is the result of a demand for accurate impartial knowledge of the year's production of milk and butter fat by individual cows. The agricultural experiment stations of most American states send a representative to see the milk from each cow weighed for two days per month and de termine its fat content which with the owner's daily record furnishes the basis of milk yield for the month's estimate of butter fat production. Compared with the average production per cow for the United States of less than 150 pounds of butter fat in one year the highest individual records in each of the leading breeds are significant—Holstein cow Banostine Belle De Kol. 2, 404.4 lbs milk. 1058.34 lbs. fat. Jersev cow. Jacoba Irene. 17.253 o. lbs. milk. 952.05 lbs. fat. Guernsey cow. Spotswood Daisy Pearl. 18.602.8 lbs. milk. 957.38 lbs. fat. Ayrshire cow. Netherhall. Browningth. 18.110.0 lbs. milk. 820.01 lbs. fat.

Methanical Milkers—Scarcity and high price of labour has stimulated a demand for the mechanical milker. The Burrell Lawrence Kennedy and Sharples mechanical milkers seem now to have reached a degree of efficiency where it may be said that they will milk most cows as well as or better than the average man though not as well as the best hand milker while a few cows cannot be milked thoroughly by either machine. They require more intelligent attention to operate and clean than the common labourer ordinarily is competent to give, though within the reach of the better grade of farm labour they are usually most successful in the hands of the intelligent farm owner who operates his own machine instead of depending on employes

National Dairy Show—In America a National Annual Exposition of the dairy in dustry has become firmly established in Chicago—The show of 1912 brought together nearly 1 000 of the finest dairy cattle every kind of mechanical device from stable fixture to pasteurizer churns and laboratory equipment—and attractive displays of butter cheese milk and cream from many states—Commercial demonstration of latest methods of bottle washing pasteurization and bottling of milk for retail delivery and making of butter occupied much space as did the United States government demonstration of feed ing methods with profitable and unprofitable dairy cows and municipal exhibits of the influence of bad housing poor milk and preventable diseases on infant mortality in great cities—Visitors were present from every section of the United States Canada and England—(H. E. Van Norman.)

POULTRY FARMING

Within the last few years the abandonment of a number of the largest spectacular poultry farms in America has had a marked effect upon the general attitude there to ward large poultry projects. People are not so ready to engage in them or to take reports of quick successes on a large scale at their face value. The public is learning to discriminate as qualified observers acquainted with the history of various enter prises of this kind have always done between the real and the fictitious successes. There are many large poultry farms in the United States and the number may greatly increase, but too many of those kept prominently before the public as practical poultry farms have used the publicity that could be thus secured to advertise some thing that they had to sell not to consumers of poultry produce but to producers

¹ Bulletin No 114, Pennsylvania Experiment Station

The lines in which operations on a large scale have been undoubtedly successful for long periods are the growing of ducks for the market and sale of exhibition and breeding towls. Duck growing has been developed on a very large scale on independent farms. Several of these for many years have produced about 50 000 ducks a year. One grower who operates two large farms some miles apart produces from 70 000 to 80 000 ducks a year. Farms producing from 10 000 to 15 000 ducks a year are much more numerous than those maling a larger output. The successful farms are all operated by owners who have built up from small beginning. The plants established on a large scale at the start as investments invariably fail

The larger plants doing a business in exhibition and stock fowls grow only a part (ometimes a small part) of the birds that they sell. This is a necessary condition because selling ability and judicious advertising develop a demand far greater than can be supplied from the stock grown upon one firm. This class of poultry cannot be crowded but must have ample range. So as the business grows the breeder unally puts out as much stock as possible on other farms and often also buys stock from smaller breeders. The latter practice leads to some abuses, but on the whole is to the advantage of all concerned. Very large plants of this type are not numerous

By far the greater number of poultry tarms of all types are small requiring the serv nes of only one of two men The plants for growing roasting chickens are on this scale or smaller. Only a few of these have an annual output exceeding. ooo or 3 ooo The special egg farms of Petaluma California are on about the same scale In the roaster growing section of Massachusetts and on the egg farms of Petaluma troubles due to carrying large stocks of fowls continuously on small areas of land are The same condition is apparent on many of the scattered farms. This and the gradual increase of intere t in poultry among general farmers and those resi dents of towns who have room to keep poultry constantly tend to restrict the growth of exclusive poultry farms. With variations due to differences in customs and eco nomic condition in different countries the conditions of poultry production are much the same the world over With the decline of confidence in mammoth poultry projects an unusual interest arcse as if in reaction in methods of keeping small flocks of towls in very clo e confinement This plan was exploited largely by the sale of books earh of which de cribed a system devised by its author whereby a very small number of fowls might be made enormously profitable. Such ideas had often before been explotted in a small way At this time skillful advertising on a very large scale enabled some of the promoters to realise very large profits. In America, where the movement started it made quite a sensation for several years. In England it was at first rid iculed as characteristically American but before long English promoters were exploit ing similar ideas. The interest in the e highly intensive methods still continues but greatly abated. The indications are that the net result of the movement will be to add many recruits to the number of poultry keepers who use more rational methods

Production and Distr bution—The increased production of poultry and eggs in all progressive countries is mailed—Statistics for the United States attract most attention because of the magnitude of the totals and the impression is often conveved that progress is more rapid there than elsewhere—A more correct view is that most progressive movement acquire an initial impetus more easily in America than elsewhere Comparisons of production in the United States with that of different European counties does not fairly represent progres in Europe—Comparing Europe as a whole with the United States and Canada there is a remarkable parallellism—In Europe England has been the principal market for the surplus of the Continental countries just as in America the New England and Middle States have furnished a market for the surplus of the West and South—The general history of the extension of interest in poultry culture in recent times on either continent is in nearly all essential particulars very like the history of development on the other—In the United States as a whole production and consumption have been very evenly balanced but within the United States too there have been backward regions—just as there have been in Europe

The tariff on imports restricting movement of poultry produce from Canada to the natural market in the States for a time prevented the development of poultry culture in Canada. It was well advanced in Ontario but backward in other parts of the Dominion. Efforts to build up an export trade with Fingland had the unexpected result of stimulating home consumption to such an extent that although production greatly increased the surplus which could be profitably exported dwindled to exceedingly small proportions.

In England and Scotland the question of future supplies of poultry produce has become important because it has long seemed plain that without some concerted effort for a general increase of production on farms the falling off in imports would not be offset by increased production at home. Within the last year the figures for the census of poultry on the farms of Great Britain tallen in June 1908 have been published. These show a total of 36 728 000 head of poultry of all kinds divided as follows fowls 32 356 000 ducks 2963 000 geese 712 000 turkeys 60 000. Stat istician, writing in the Illustrated Poultry Record August 191 observes that the number of fowls is almost precisely one to the acre of cultivated land in Creat Britain and that an average of three fowls per acre might be kept without the displacement of any other crop

In Germany the consumption of poultry and egos is increasing much faster than the home production. The increased demands of Central and Western Lurope have especially stimulated production in Russia and it seems apparent that that country will soon occupy a position in poultry production in Europe like that of the agricultural regions of the West in America.

The hgures for the number and values of poultry in the United States as obtained in the census of 1910 were also issued during 1912. Those showing egg production have not vet appeared. According to this census the number of fowls of all kinds has increased from \$6.624.038 in 1900 to 205.880 190 in 1910 an increase of 18.5 and the values have increased from \$6.80, 518 to \$154.663.2 of an increase of \$6.5 of The increase in population in this period was 1.0 It would appear that the poultry population had not increased as fast as the human population but as the rules of enumeration of poultry in 1900 and 1910 were not the same close comparison is not possible. The conditions under which the enumerations of poultry have been made are not favourable to accuracy and as no account is taken of the poultry not on farms it is apparent that a great deal of poultry is not enumerated. In Buffalo N Y a canvass made by a local poultry association discovered that there were over 5 000 per sons keeping poultry within the bounds of the city of 423 000 population. The ratio for all cities and towns would undoubtedly be found higher than this

With progress general and the total of supplies well maintained the years 1911 and 1012 have been poor years in poultry production both in Europe and America The increased numbers of those giving special attention to poultry account for the fact that there has not been a reduction of products over wide areas Climatic con ditions are commonly considered the fundamental cause of the poorer winter egg yields and bad hatches in the spring Unseasonable and extremely changeable weather affects egg production unfavourably and impairs the vitality of the breeding stock Lessened yield was in part made up by higher prices for market products but these seasons were very discouraging to novices In America the year 191 is likely to be memorable as a year of hard times for breeders of exhibition poultry manufacturers of and dealers in poultrymen's supplies and poultry journals. There was some depres sion in Europe but it was most severe in America where all lines dependent upon ad vertising have been greatly overdone. The close of the year gave many indications of improvement but it is the consensus of opinion that healthy conditions will not be fully re established until the elimination of weak concerns and the natural increase of business bring about a more even balance of supply and demand in these lines

Education—The most important factor in poultry culture at the present time is the educational movement. This includes not only the work of instruction at colleges

and schools and the work of experiment stations but the work of government depart. ments of poultry associations of many different types, and even of associations of other kinds which are in various ways engaged in education. This movement began to take definite form when poultry courses were introduced into colleges and schools and to show continuous growth soon after the first such course was established in Amer It did not, however make strong headway until near the end of the last decade and even then many believed that it would soon decline. Within the last few years the permanence of this movement has become assured. Nearly all states and provinces in the United States and Canada now provide instruction in poultry culture at their agricultural colleges and there are poultry departments at many secondary agricultural school and industrial schools. Some privately endowed univer sities are preparing to establish poultry departments. In a number of states poultry culture is taught in special high schools and in a few some instruction in the subject is given in all schools of certain grades. It is generally recognised that this is the branch of animal husbandry best adapted to school work. The wider introduction of practical courses halts for want of qualified instructors and suitable text books. In other parts of the world the movement is not so marked vet in nearly every country where poultry production is an important interest beginnings have been made —in some cases earlier than in America. It will not be long before opportunities for instruction in the subject in all progressive countries are nearly equal

The most notable events in the educational field in for were the organisation at London of the Interna onal Association of Poultry Instructors and Investigators and the completion of the administration building of the Department of Poultry Husbandry of the New York State Agricultural College at Cornell University effected at a cost of \$00 000. The reports of experimental work with poultry which in recent years have attracted most attention are those on the inheritance of egg production from the Maine experiment station and those on white charries in chicks from the Connecticut experiment station. In these experiments popular interest in the subjects allowed a concentration and continuity of effort which are not often permitted to Station workers.

Another example of the results of concentration of force has been given in the work of the United States depar ment of agriculture for the improvement of commercial eggs. This work developed several years ago from investigations of the bureau of chemistry in connection with problems of legislation relating to cold storage. The department of agriculture has used both the bureau of chemistry and the poultry experts of the bureau of animal industry in it. It has been found that there is an annual loss e timated at \$45,000,000 due to improper handling of eggs especially in hot weather. Through both the bureaus mentioned a campaign of education to check this loss is carried on by the department.

Current Discussion — The matters of greatest fundamental importance to poultry keepers which have been prominently discussed in recent years and especially within the past year vithout definite results are -the fox question efficient organisation of poultry interests and international standards for exhibition poultry The fox ques tion has become more acute in England because of the general increase of interest in poultry on farms and the special increase due to the recent multiplication of small holdings In America it has not had much attention except in Massachusetts In England the Poultry (lub and in America the American Poultry Association are subjects of constant controversy because of their alleged failure to adapt themselves to the needs of the poultry interests which they are respectively to represent. The discussion of international standards has been rather a question of Anglo American standards absurdity of having different standards for the same breed in different countries is on all sides admitted but as they exist the possible effects of changes of standards upon business have to be considered. While there does not appear to be any prospect of immediate action interest in this question is significant as an indication of the tendency (I H ROBINSON) to standardise poultry culture throughout the world

HORTICULTURE 1

The most important event during 1912 in the horticultural world was the great international Exhibition held in the grounds of the Chelsea Hospital, London from May 22nd to May 30th. The exhibition embraced every phase and every department of modern horticulture with the important exception of market gardening which however was represented in some fine exhibits from Belgium and Holland. As an exhibition of the marvellous skill possessed by the British gardener in bringing fruits, flowers and vegetables to the highest perfection nothing has ever been seen like it before. The exhibits were divided into eleven main groups and four hundred and twenty eight different classes. A large area under canvas contained the more tender stove and greenhouse plants from all parts of the globe as well as roses carnations, orchids aroids crotons dracænas palms ferns begonias foliage plants hardy herbaceous perennials and alpines choice fruits and vegetables etc.

Rock Garden ng—Although specimens of rock gardening have become a feature at exhibitions of late years no one had any conception of the marvellous popularity of this kind of gardening until the International Exhibition at Chelsea Several acres were devoted to rock gardens and hundreds of pounds were spent in their formation. Thou sands flocked to admire the rockeries and the charming alpines growing in them and it was evident that other classes of plants were for once put in the background by the public. At last people are beginning to recognise that it is possible to beautify with appropriate vegetation any piece of land whether large or small in area. Indeed it is possible to make quite a charming rock garden in the back yard of the humble t suburban dwelling providing one has taste and a certain amount of knowledge of the right kind of plants.

Wall Gardening—This is of even more recent development than rock gardening of which however it is a variety. It consists in building loose walls with slabs or boulders of stone filling up the central space between the outside walls with soil and then filling the outer spaces with plants that naturally flourish in the chinks and crevices of walls. The tops of the walls are of course also furnished with suitable flowering subjects and a quite new garden may be given an ancient appearance by the judicious erection of a wall garden.

Water Gardening—This may be looked upon as a modern adjunct to the rock garden and has become very popular during the past few years. At exhibitions by means of water tight tarpaulins and a stream of artfully concealed water from the tap some exquisite water gardens have been made and have attracted much admiration. A great trade is now done in the beautiful hardy hybrid water likes of various shades and in other water loving plants that have hitherto been sadly neglected. Closely associated with the water garden is the bog garden and many plants that love swampy or marshy soil are now grown on the margins of the water garden.

Moraine Gardening—This is a still more modern phase of rock gardening. It indicates a style of growing alpine plants amidst rocky debris as seen at the foot of glaciers etc. on the Alps. To make a moraine garden, the natural soil is deported, and its place is taken by a mixture of rock sand loam peat chalk lime etc. so that plants which naturally flourish in one or other of these. soils may be accommodated as near as possible to their natural surroundings. Moraine gardens are made on slopes or terraces and the gritty or rocky soil is prevented from being washed down by having the bottom of each slope or terrace shored up with larger boulders of rock. While stagmant water would be fatal there must however be a good supply of moisture the idea being to secure a kind of subterranean trickling as from the melting of ice during the summer months.

Japanese Gardening — This name has now become attached to a particular style of gardening in which an attempt is made to reproduce the piculiarities of Japanese land scape gardening — Thousands of dwarfed specimens of conifers, oaks, maples etc., are 1See generally E B xiii 741 et seq

exported annually from Japan, and are employed in the formation of Japanese gardens in England and elsewhere. In landscape gardening eastern and western ideas are quite dissimilar. The western idea is to clothe the landscape with vegetation suitable to its aspect altitude soil, indulations etc. In the Japanese style Nature is copied in such a way that plants from the mountain tops are never planted in the plans or valleys and vice versa. In a small garden, therefore, everything is dwarfed to such a degree to represent as it were in scale, trees shrubs buildings etc. reduced to corresponding dimensions. Hence pigmy trees, the miniature bridges of bamboo, the stone lanterns the kiosks, the rivulets rocks, and other objects on the landscape are all arranged to accentuate the governing idea. Deciduous trees are rarely used the principal exception being in favour of the double flowered cherries, and the wistaria—both conspicuous objects in Japanese gardens. Water or bog plants like the Japanese iris (Kæmpfen) the water likes the lotus etc. are much in evidence in and at the sides of streams and lakes while clumps of bamboos give a luxuriant and subtropical effect.

Identice of the American Carnation—Notwithstanding the many admirers of the hardy border and the Malmaison carnations these sections are becoming more and more eclipsed by the American or perpetual flowering varieties. These are now grown in hundreds of thousands and are actually pushing out other crops that have long held a place in the high esteem of cultivators. From a purely market point of view the American carnation has signed the death warrant of the orchid many kinds of which had just begun to be grown rather extensively for the floral trade. The extraordinary popularity of the American carnation is due to the ease with which it may be cultivated its long stems and the beautiful shape of the blossoms its many shades of delicate colour its delicious fragrance its cheapness and to the fact that it blooms profusely during what in Fingland are the worst months of the year from October to April (but also during the summer months) and that it may be and is used for such a great variety of floral decorative purposes. At present it stands without a rival in these respects added to which is the fact that the colours always seem pleasing under any condition of light natural or artificial

De etopment of the Dahlia—In addition to the older sections like the singles the show fancy pompon and cactus varieties the last year or two have seen the rise of quite new forms—or what are claimed as new for it is probable that they or something like them may have been seen by the first dahlia raisers nearly a century ago but were discarded because they did not conform to the hard and fast outlines that were regarded as ideals in those days. The cactus dahlia is still perhaps the most popular of all sections but even it is undergoing a change from the original types that were so fashion able a few years ago. Now there is the mimature? or pompon cactus dahlia in which the blooms although retaining the perfect cactus shape are much smaller about 3 inches across and are borne on long stifish stems in great profusion. The plants are also much divarter than the ordinary kinds being only about 3 feet high. They flower profusely and embrace every shade of colour almost except blue.

Another new section of the dahlia is that known as the collarette. The flowers resemble those of the ordinary single varieties in general appearance but they differ conspicuously in having a secondary row or collarette of small forked petals inter posed between the large outer ray florets and the small tubular ones in the centre or disc. The little petals forming the collarette are usually distinct in colour from the others. The giant flowered 'dahlias with huge double flowers and the paeony flowered dahlias having very large single blooms are both making headway in popular fayour as newer and better forms are being developed.

Evolution of the Gladiolus —Since the appearance of the first hybrid gladiolus in 1837 under the name of gandavensis gardeners have worked unceasingly to evolve other new strains. At first the work was slow and spasmodic and the second hybrid of note the still popular scarlet flowered brenchleyensis did not appear till 1848. The Lemoine hybrids were put into commerce in 1875 and were followed in 1882 by the Childsi section and in 1889 by the Nanceianus group. Since that time British, Conti

nental and American raisers have been busily engaged in mixing up the bloods of these different groups all of which originated in the first place from South African species far inferior to their descendants in size shape, colouring and vigour. At first only a few well defined colours appeared but now there seems to be no limit to the shades and blendings and hundreds of exquisitely tinted varieties are in cultivation. It was not however until 1911 that experts came to the decision that the time was ripe to establish a special society to encourage the more extended cultivation of the gladiolus and to arrange and classify in some systematic manner the varieties already known as well as to improve still further the various strains In America a gladiolus society has been established some time and growers are taking the keenest interest in this lovely bulbous plant in conjunction with British and Continental holders of stock To give some idea of the trade or the developing craze for the gladiolus it may be mentioned that a Dutch grower recently gave £1 666 for two corms (bulbs) of a variety with yellow flowers called Glory of Nordwijk 'and there is no doubt that we shall soon be in the midst of a great gladiolus boom At present the best white-flowered varieties include Albion Europa Duchess of Wellington Prof Hauber and l'Immaculee The finest yellow flowered forms are Sulphur King Golden Measure, Goldfinder in addition to which there are many other lovely varieties

Herbaceous Phloxes —Amongst purely hardy flowers perhaps there is none making such progress of late years as the herbaceous phloxes — These plants now have thousands of admirers against dozens not many years back — The ubiquitous hand of the hybridist and cross breeder is seen in these days among all classes of plants and the phlox has readily responded to his art — There are now some magnificent varieties in cultivation. The colours vary from the purest white as in Frau Anthony Buchner and Frau von Lasberg and the pink mauve, heliotrope and the violet purple of Le Mahdi to the fine scarlet of G. A. Strohlein and Baron von Dedem — These belong to the decussata section and flower in the late summer and during the autumn the earlier and dwarfer varieties belong to the "suffruticosa" section — Both groups are handsome and when grown in rich and deeply dug soil they produce immense trusses of blossom

Exportations of British grown Apples —The excellence of the British apple is at last beginning to make itself felt thousands of miles away from home —For many years the British grower has seen the large and increasing importations of apples from the United States British Columbia Canada Australia Tasmania etc. and was beginning to think not unnaturally that his home markets were about to be wamped. Now however owing to the increasing prosperity of South Africa and Buenos Aires in South America, exportations of British apples are being made to these far off climes —At present the industry is only in its infancy but it is hoped that the solidity and flavour of the British apple both due no doubt to a much maligned climate will enable it to travel long distances and hold its own against all comers.

The season of 1912 completely upset long cherished views as to the necessity of a hot dry summer being essential for the development of high and rich colours in apples Notwithstanding the cold and excessive wet the fact remains that apples were if any thing better coloured than they were in the hot season of 1911 while the flavour is quite up to the standard. Other plants besides apple trees have been remarkable for their more than usually rich colouring and the Virginian creeper may be cited as a particularly fine example. It is possible that the rains of 1912 were much needed after 1911 to give the soil a thorough good soaking, to liberate those earth salts that go to produce richness of colour

Potato Growing in America —According to the latest official returns, 3 689 000 acres of potatoes were grown in the United States in 1912 and the estimated yield is put at 108 bushels per acre that is, 2 tons 14 cwt if a bushel is reckoned at 56 lbs. In America this is considered a bumper "crop, and "much above the average". The total crop for the United States in 1912 is estimated at 308 millions of bushels, that is 0 950 000 tons. The price is estimated at 25 cents a bushel or at the rate of just over £2 per ton. The gross yield is therefore at the rate of about £5 108 od per acre—such a curiously low.

figure that the foreigner may wonder how it is possible to pay for labour rent manute to, and still yield a profit to the American grower. Against the American figures it may be stated that the British potato average works out at 6 tons to the acre and the average price at £3 per ton making a gross revenue of £18 per acre against the American £5 ros od. Under proper and intelligent cultural conditions it is possible to obtain from 15 to 20 tons of potatoes to the acre. Eviden ly there is much to be learnt from modern scientific methods by practical potato growers on both sides of the Atlantic, but especially in the United States.

Sterilisation of the Soil —Amongst large growers of plants under glass this question is often discussed and several carry out experiments in various ways to prove the advantages or otherwise of sterilising the soil the object chiefly in view being to destroy eelworms and those bacteria that are said to be injurious to vegetation. To secure immunity from these exils the soil is roasted in iron pipes or trays over a furnace fire the heat of which is calculated to destroy the organisms referred to as well as the seeds of weeds and the grubs of more conspicuous insect pests. Some cultivators attach great importance to the sterilisation of the soil for some of their crops while others look upon the process as a fad and not worth the time and trouble and expense of doing it. It is possible that when a soil is overdosed with rich organic manures, as it often is under glass eclworms and injurious bacteria develop as a result of the soil becoming sour. Therefore when heated a good deal of the unnecessary organic material is driven off by combustion and the soil is once more reduced to a clean and healthy condition and will grow plants to perfection.

Some interesting examples of soil sterilisation were exhibited at the International Exhibition at Chelsea from the Rothamsted Experimental Farm—Eight specimens of tomato plants were grown in pots the soil in which had been—sterilised—in various ways—The agents used were petrol phenol pyridene formaldehyde toluole and calcium sulphide—maddition to which one pot contained steam heated soil—and one un heated soil—The plants treated with phenol and toluole were very poor indeed—There was little to choose between those treated with formaldehyde calcium sulphide—and steam—and although the weakest plant of all was in the untreated soil—the outstanding fact was that there was not a good tomato plant among them all—(JOHN WEATHERS)

BEE-KEEPING1

Such rapid progress has been made in bee keeping during the last sixty years, that it is not surprising to find that the advance has been maintained during 1000-1 Creat Britain the most efficient means of advance both in the art and science have re sulted from the institution of the British Bee keepers' Association 38 years ago Among its objects were the advocating of more humane and intelligent treatment of the honey bee the improvement and advancement of bee culture and the increase of the The purposes thus set torth have been strictly kept home supply of wholesome honey in view and have been successfully brought out. Help and advice have been given in the formation of county associations of bee keepers and forty four of these are at the present time in affiliation with the parent association Encouragement has been given to increasing the number of persons keeping bees for although it is computed by the best authorities that there are over 90,000 bee keepers in the British Isles, the hone; imports from abroad amounting in value to more than £,0000 per annum show that the home production is not equal to the demand. The low price of the foreign product proves the superior quality obtained from British bees. The passing of the Small Holdings Act has opened a new field for bee keeping

The value of the industry has now been recognised by the British Government which has made a grant to the British Bee keepers. Association for the purpose of establishing an experimental apiary where courses of lectures, illustrated by practical manipulation of hives containing bees are given out of doors during the summer months. In winter the lectures are indoors, and are illustrated with suitable lantern slides. In addition

¹ See E B in 628 et seq

scientific lectures by specialists are given from time to time. The Government also make a grant for pioneer work and promoting bee associations, which the British Bee keepers. Association is able to do by sending its certificated experts and lecturers all over the country. Thirty six county councils also make small grants in aid of technical instruction in bee keeping, ten of them at their own agricultural colleges.

On the practical side progress has been made in queen rearing and by the adoption of Mendelian methods bees have been improved both as regards hardiness and working qualities. The principal improvements in appliances have been for making old combs render a better quality and a larger quantity of wax.

The value of bees in the pollenation of fruit blossoms is now fully recognised and the importance of having a sufficient number of them for this purpose has been brought prominently before the public owing to a serious epidemic which has destroyed not only whole colonies of bees, but has also devastated entire districts, causing fruit growers anxiety with respect to their future crops. The United States of America Canada New Zealand and many other countries have legislated with respect to the control of bee diseases and the British Government realising the necessity for similar action have introduced in Parliament a. Bee Diseases Bill, which it is hoped will enable them to cope with the two diseases which have caused such mortality among bees

Respecting the disease known as foul brood, recent investigations by Dr White have shown that in one of the two forms of the disease, viz the one known as foul smelling in which Bacillus alver is usually present the cause of the disease is not this microbe as has hitherto been supposed but one of several others found associated with it, to which Dr White has given the name of Bacillus pluton

An epidemic disease broke out in the Isle of Wight in 1906 about which little was known up to 1900. Since then it has spread to the mainland and has caused great losses of bees in many districts. The cause of the malady has been under investigation by the Board of Agriculture and Fisherics and a full report has been recently issued showing what has been done and the nature of the disease. European bacteriologists have also been investigating the cause of the great mortality among bees in various parts of the continent and Dr. Zander in Bavaria, who made a very careful study of bees suffering from infectious dysentery. In June 1907, discovered as the infecting agent a protozoal parisite to which he gave the name of Vosema apis. His findings have been confirmed by other scientists in Germany and Switzerland and in England it has been found by Dr. Graham Smith and others associated with him that the same parasite is the cause of Isle of Wight. disease, which is now called Microsporidiosis since Vosema apis is

a member of the group named the *Microspordia* Drs Fantham and Porter had al ready observed a protozoan in the digestive tract of some bees obtained from the Islc of Wight in 1906 and in subsequent years *Nosema apis* was found in bees from Hamp shire Surrey Middlesex Cambridgeshire and Hertfordshire. By teeding experiments they were able to reproduce the fatal disease, both in bees and in wasps

The life history of Vosema apis shows that it proceeds from a tiny germ which issues from the resistant spore and gives rise to unnicelate daughter forms known as plunouts because of their migrating or wandering habit. They increase by division and when they have penetrated between the epithelial cells they may remain there in a resting condition for some time or penetrate the gut direct from the lumen or from between the epithelial cells. The parasite is now called a meront and is at first unniur leate. It has now entered upon the feeding stage rapidly increases in size and multiplies by fission ultimately forming spores. The main alimentary tract of the bee particularly the chief stomach and intestine are the chief parts affected although Nosema may occasionally be found in other organs.

are the chief parts affected although Nosema may occasionally be found in other organs. The di ease is one of the adult bees larvae and voung bees remaining healthy. The queen also appears to be evempt and is frequently found as the last survivor of a colony. Bees suffering from the disease appear heavy and disinclined to move the wings are frequently dislocated and the abdomens swollen. They lose their power of flight large numbers drop on the ground and as the bees are unable to rise it is not long before they perish. The disease is infectious and is introduced into healthy colonies by infected foragers or infected foods. Affected bees void excrements which contain the spores while on the wing. Infected water grossly contaminated with excrement and honcy present in the hives in which bees have died are stated to be the most important infected foods.

The introduction of the parasite into the hive is not necessarily followed by the appear ance of the disease and some stocks remain healthy while the infected bees are gradually eliminated. At present no remedy is known, and it is recommended that where a stock exhibits a heavy continuous mortality it should be destroyed as it never completely recovers and is a continual and serious source of danger.

All dead bees should be picked up and burnt and the ground disinfected. Hives that

have contained diseased bees should likewise be disinfected

Nosema has also been found in humble bees and wasps but it is not yet conclusive that it belongs to the species Vosen a apis. New light has been thrown on the life his tory of humble bees and their parasites by Mr. Sladen who has succeeded in domesticating and I eeping under observation species of Bombus in artificial domiciles to which queens were attracted.

The following are the most important works which have appeared during the last three veirs bearing on the subject. Dr. E. /ander's Der Bun der Biene and Die Krankheiten und 5 nadlinge acr erwachsen in Bienen T. W. Cowan's Wax Craft all about beeswax its history production adulteration and commercial value. The Report on the Isle of Wight disease by Dr. Craham Smith and others issued by the Board of Agriculture & Fisheries and F. W. L. Sladen's I've Hun ble Bee its' fe history and ion to domesticate to (Thos. WM. COWAN)

THE FUR INDUSTRY'

So far as concerns the preparation of fur skins for the market there is nothing new of importance since 1910. One great change however has occurred in the primary conditions of the fur supply. In connection with the great importance and necessity of enforcing close seasons and restrictions to prevent the total extermination of tur bearing animals a notable event has taken place a the result of the International Fur Scal Conference between the United States (reat Britain Japan and Russia which was in session at Washington from May 17 to July 7 1911

The conference concluded its labours on the latter date by the signature of a convention which was ratified and went into effect on December 15 1911 and is to continue in force for a period of lifteen years from that date and thereafter until terminated by twelve months written notice given by one or more of the parties to all of the others. This convention was for the preservation and protection of the fur seals and sea otter which frequent the waters of the North Pacific ocean its essential object being to stop pelagic sealing which was an international question. Pelagic sealing 'means the killing and capturing fur seals at sea which had long prevailed in spite of the constant and earnest efforts on the part of the United States Government to have it discontinued

The Pribiloff Island which are the natural home and breeding places of the fur seals were in former years leased by the United States to companies who had the right to engage in taking fur seals on these islands. These leases expired by limitation on Apr' 30 1910 and it was found advisable to abandon the former system of leasing the Covernment of the United States taking over entire control of the islands and the seal hirds. It appeared that the seal herds on the islands have been reduced to such an ϵ tent that their early extinction had to be looked for unless measures for their preservation were adopted. A herd numbering 375 000 twelve years ago was reduced to 1.55 000 and it was estimated that the breeding of seals had been reduced in the same period of time from 1.50 000 to 56 000. The rapid depletion of these herds was undoubtedly to be ascribed to the practice of pelagic ealing and by the convention signed by the four countries above named pelagic sealing is prohibited for 15 years from December 1911

The countries who were until recently engaged in this wasteful and indiscriminate slaughter of fur seals have been induced after difficult and protracted negotiations to agree to abandon pelagic sealing on condition that they shall receive compensating in terest in the skins taken by the United States Government on land

In killing seals at sea all ages and seves are killed indiscriminately and a great waste thus takes place as many upon being shot sink and are lost before the hunters can reach them in fact it is well known that of all killed fully one half are lost

The seals leave the islands in the autumn and make a most wonderful migration, it 1 See E B xi $_{346}$ et seq

scientific lectures by specialists are given from time to time. The Government also make a grant for pioneer work and promoting bee associations which the British Betkeepers. Association is able to do by sending its certificated experts and lecturers all over the country. Thirty six county councils also make small grants in aid of technical instruction in bee keeping, ten of them at their own agricultural colleges.

THE FUR INDUSTRY'

So far as concerns the preparation of fur skins for the market there is nothing new of importance since 1010. One great change however has occurred in the primary con dition of the fur supply. In connection with the great importance and necessity of enforcing close seasons and restrictions to prevent the total extermination of tur bearing animals a notable event ha taken place as the result of the International Fur Seal Conference between the United States Great Britain Japan and Russia which was in session at Washington from May 11 to July 7 1011

The conference concluded its labours on the latter date by the signature of a convention which was ratified and went into effect on December 15, 1911, and is to continue in fone for a period of lifteen years from that date and thereafter until terminated by twelve months written notice given by one or more of the parties to all of the others. This convention was for the preservation and protection of the fur seals and sea otter which trequent the waters of the North Pacific ocean its essential object being to stop pelagic sealing which was an international question. Pelagic sealing means the killing and capturing fur seals at sea. which had long prevailed in spite of the constant and carnest efforts on the part of the United States Government to have it discontinued

The Pribiloff Islands which are the natural home and breeding place, of the fur seals were in former years leased by the United States to companies who had the right to engage in taking fur seals on these islands. The e-leases expired by limitation on April 30 1910 and it was found advisable to abandon the former system of leasing the Covernment of the United States taking over entire control of the islands and the seal herds. It appeared that the seal herds on the islands have been reduced to such an extent that their early extinction had to be looked for unless measures for their preservation were adopted. A herd numbering 375 000 twelve years ago was reduced to 13 000 and it was estimated that the breeding of seals had been reduced in the same period of time from 150 000 to 56 000. The rapid depletion of these herds was undoubtedly to be ascribed to the practice of pelagic calling and by the convention signed by the four countries above named pelagic seal ng is prohibited for 15 years from December 1911.

The countries who were until recently engaged in this wasteful and indiscriminate slaughter of fur seals have been induced after difficult and protracted negotiations to agree to abandon pelagic sealing on condition that they shall receive compensating in terest in the skins taken by the United States Government on land

In killing seals at sea all ages and seves are killed indiscriminately and a great waste thus takes place as many upon being shot sink and are lost before the hunters can reach them in fact it is well known that of all killed fully one half are lost

The seals leave the islands in the autumn and make a most wonderful migration, it 1 See E B \approx 346 et seq

goes on for nine months in the year and covers about 2000 miles. The seal gets all its food in the open sea at great distances from land. It resorts to the land only to bring forth and nourish its young to self dependence. It is resident for this purpose on certain islands in Bering Sea from May to November. The mother seal goes 150 to 200 miles from the rookenes to find her food leaving her young behind returning to nurse it and again going away to feed. With the storms of winter all classes of animals leave the islands and make a long migration down through the Pacific ocean to the latitude of Southern California the farthest point south reached by the fur seals about the month of January when the course of their migration turns again northward along the western coast of Alaska ending at the Pribloff Islands sometime in the month of July

It has been the custom of the Indians of the north west coast of America from the earliest times to go out in their canoes a day's journey to hunt with the spear stragglers from the migrating herd on its northward journey. It was a precarious business and the number of animals taken was unimportant. In 1879 however sailing vessels began to be used to take the Indians and their canoes out to the main body of the herd and to enable them to follow its course. This new form of sealing was very successful. The fleet grew in numbers and the catch multiplied until it reached the total of 140 000 skins in a single season. The operation of the fleet gradually extended over the entire migration route of the seals and included their summer feeding grounds in Bering Sea. Until very recently at least the pelagic fleet contained about thirty vessels manned by about twelve hundred men using about three hundred boats. The sealers knew in general the locality of the fur seals at different periods of the year the migration route has been determined by the logs of the various pelagic sealing vessels that have taken fur seals at various times of the year throughout that great course.

Between 1883 and 1897 a total of 304 713 skins of seals killed at sea were marketed and undoubtedly an equal number were lost. The moment the mother seals left the islands the sealers were after them, and a mother seal in order to get her food with which to suckle her young was obliged to run the gauntlet of the vessels. The destruc tion of the mother seal meant the starvation of the offspring on shore and uncounted thousands of young seals have perished on the islands from that cause The males being reduced in numbers by land killing the females predominated in the herd as found at sea On land the young males are forced to herd by themselves through fear of the They can be readily distinguished and handled without disturbance to the breeding herd At sea the sexes cannot be distinguished On the spring migration the mother seal is heavy with young and hence less swift in her movements. On the summer feeding grounds she must feed regularly and heavily through necessity of nourishing her young and as a result the pelagic catch is made up chiefly of the breeding From 1870 to the present time this hunting of gravid and nursing females has gone steadily on with the consequence that the herd of fur seals belonging to the United States has been reduced enormously

This decline of the seal herd was established for the United States Government in 1808 by a commission of scientific experts. It was pointed out that only by the establishment of an international game law for the high seas which should protect the female fur seal—in other words the abolition of pelagic sealing—could the herd be preserved and restored. The property involved is a very important one. With regard to the practice of killing bachelor seals for the natives food it was decided that this should not be abandoned unless a cogent reason presents itself. No harm to the herd can result from the killing of surplus males. No benefit to the herd could accrue from the maturing of males unnecessary for purposes of reproduction which when of adult age would have no female consorts but which by incessant and furious fighting would destroy or cripple the breeding bulls and themselves as well

Since signing this convention, the United States Government has passed a new measure with regard to killing fur seals on the islands and has decided on a close season for five years from 1913. The section of the bill giving effect to the convention has

therefore been amended to read as follows

That from and after the approval of this act all killing of fur seals on the Pribiloff Islands or any where within the jurisdiction of the United States in Alaska shall be suspended for a period of five years and shall be and is hereby diclared to be unlawful and all punish ments and penalties heretofore enacted for the illegal killing of fur seals shall be applicable and inflicted upon offenders under this section provided that this prohibition shall not apply to the annual killing on the Pribloff Islands of such male seals as are needed to supply food clothing and boat skins for the natives on the islands as is provided for in article 11 of the said convention. The skin of all seal o used for froid shall be preserved and annually sold by the Government and proceeds of such annual sales shall be covered into the treasury of the United States.

With regard to fur seals killed on the islands so called 'Alaska fur seals 'it is in teresting to note that from 18,0 when the Alaska Commercial Company took charge of the islands under a lease for 20 years 100 000 skins were taken annually

With regard to the future of the so called South Sea seals taken in the Southern Pacific and Indian oceans it was reported in 1012 that the fleet which had been sailing from Halifax regularly for 7 years would abandon the enterprise in the coming season and that no ships would proceed to these regions probably for several years

Sil er Fox — During the last few years considerable progress has been made in the rearing of these animals in captivity in the United States and Canada. The tur has been found to compare favourably with those trapped and the skins are bringing very good prices Russian Suble—In order to pre erve the Siberian sable from entire extermination the

Russian Suble—In order to pre erve the Siberian sable from entire extermination the Ru van Government passed a law in 1912 prohibiting sable hunting and trapping from February 14, 1913 to October 28, 1916 provision being also made for making it illegal between February 1 and October 15 in subsequent years. It is doubtful however whether this action will be sufficiently effective to attain its object as there are great possibilities in a yeast country like Russia for smuggling the fur and exporting under an assumed name

rast country like Russia for smuggling the fur and exporting under an assumed name

*Chinchilla**—The e animals are becoming so caree that the Government of B livia has prohibited the exportation and killing of chinchilla**. In Chile killing is also forbidden for a period of two years but in spite of these restrictions the killing, till gots on and the catch i smuggled out of the country. The collection of bastard chinchillas has been as high as 360 000 per year, the real chinchillas a high as 10 000 and chinchillonas 18 000. In 1905 a total of 220 000 skins were exported from Bolivia alone in 1906 1.4 000 in 1907 58 000 and in 1908 38 000. In 1911 the collection was as follows —Ba tard chinchilla 30 000. Real chinchilla is 200. Chinchillonas 2 400.

Australian Opossum—The number of these animals has also been considerably reduced of late and in consequence the Covernment of New South Wale. Queensland and Western Australia have passed a law for a temporary close season the duration of which however in uncertain (S. Politzer)

THE COTTON INDUSTRY AND TRADE1

The Cotton Industry.—It was declared some year ago that the world a cotton spin ning spindles were in excess of the worlds requirements. But in consequence of the fall in real cost of production which is constantly taking place as a result of progress combined with the development of backward places the demand for cotton goods steadly expands for they are the cheapest of textiles and therefore the first to feel the effects of advancing civilisation. Hence considerable additions have been made to the world's facilities for spinning of late years as the following figures show.

cies for abunum	5 01 1000	y cars as the	Totto wind memor	D220	
Spinn	ing Spind	lles in Million	s	Spinning Spir	ndles in Millions
•	1908	1911		1908	1101
Great Britain	52 b	54 5	Portugal	45	48
Germany	99	10.5	Holland	40	43
France	6 7	7 3	Sweden	39	53
Russia	7 9	8 7	Norway	07	07
India	5 5	63	Denmark	08	ი8
Austria	40	46	United States	27 8	28 Q
Italy	1 2	46	Canada	80	86
Spain	i 9	19	Other Countries	5 10	28
Japan	16	2 I	_		
Switzerland	I 5	15	Total	1289	137 3
Belgium	12	13			

These figures are rough estimates only but they are put forward with the authority of the International Committee of Master Cotton Spinners and Manufacturers Association and are founded to some extent on collected statistics

¹ See E B vii 256 et seq

It is notable that while spinning spindles would seem to have advanced in the world by more than 6 per cent between 1908 and 1911, those in the United Kingdom only ad vanced by a trifle over 3 per cent This result was however to be expected course of the industrialising of the world textile industries less developed than the famous Lancashire industry have been rapidly improving and increasingly satisfying home demands in the countries where they are placed while spinning mills have been appearing in other countries where until recent times spinning was unknown. There is no reason to apprehend that the hand of the Lancashire operative is losing its cunning or that slackness of management is preventing costs in English mills from being as low as they might and it is beyond question that Lancashire still continues to enjoy differential advantages for the prosecution of the cotton industry. A cheap substitute for her climate is yet to seek and nowhere else is an approach to be found to the systematic arrangement of her industry around marketing centres in consequence of which a high degree of business specialism is rendered possible and the locking up in raw material of a great deal of capital is avoided How great Lancashire's gain is with respect to the latter point is indicated by the mill stocks of cotton. The average mill stocks in bales per 1 000 spindles held on the 31st of August in the five years 190/~11 amounted to Great Britain 66 Germany 35 France 4 Russia 65 India 93 Japan 192 United States 6 Russian bales are mostly of about 300 lbs American of 500 lbs

It is remarkable that the cotton industry in the land from which most cotton comes must hold mill stocks four times as great as those held in the British industry which is divided from its supplies by the mighty Atlantic. One leading reason is that the American industry does not approach the Lancashire industry in completenes as an organic whole and that the former is not peculiarly well placed with respect to means of transportation. The chief port of Lancashire Liverpool and one might add the secondary port of Manchester. He so close to the spinning districts and are so well connected with them by rail that supplies of cotton can be obtained on the shortest notice as they cannot elsewhere, and Lancashire's cotton market is so highly organised with its expert dealers and brokers and its system of futures that spinners can easily make arrangements for cotton to flow into their mill, as they require it. Reservoirs of cotton so to speak need not be maintained in Lanca hire mills. We may see in Lanca shire as nowhere else in the world as yet cotton supplies travelling to the various mills according to almost immediate requirements much as the blood in the body flows to the parts where it is needed when it is needed and in the proportion in which it is needed

It must be remembered moreover when the number of spinning spindles in the United Kingdom is compared with the numbers elsewhere that a year's working of an English spindle represents on an average a greater value than a year's working of any foreign spindle because English spinning as a whole is becoming finer and the value of the fine work is greater than of the coarse work. Thus in the five years 190,-11 the average consumption of cotton per spindle in different countries was

Cr Brit	Germany	France	Russia	India	Japan	ISA
71	173	137	250	371	685	170

England has been steadily driven into undertaking more fine spinning (for which she enjoys special advantages) by foreign competition. It goes without saying that early attempts at spinning are made on the coarser and easier work.

It is impossible to put forward figures showing recent increases in looms, but they certainly still continue to increase enormously. In Lancashire and contiguous districts cotton looms were augmented by nearly 40 per cent between 1884 and 1911 despite the extension of manufacturing in other countries and it will be realised that countries which embark on the production of cotton textiles invariably begin with manufacturing

 1 The total imports of cotton into the United Kingdom amounted to (1907) 2387 million lbs (1909) 2189 million lbs and (1911) 2207 million lbs. The amount shipped direct to Manchester via the Ship Canal was (1907) 300 million lbs (1909) 340 million lbs and (1911) 350 million lbs. Nearly half the cotton consigned direct to Manchester came from Egypt

(as weaving is technically termed) and then pass on to spinning. It is notable as regards manufacturing that there are still no signs of an extensive adoption of the automatic loom in Lancashire though its success in America appears to be assured. It is hardly conceivable that the main explanation is any lack of enterprise on the part of Lancashire manufacturers. The main explanation is far more likely to be (as is commonly alleged in Lancashire) that the automatic loom is not—at any rate under the conditions now prevailing—suited to the character of the bulk of the British output.

The results of the British census of 1911 with respect to occupations are not yet available.

The results of the British census of 1911 with respect to occupations are not yet available but in considering the changes in numbers employed in the cotton industry in the United Kingdom we have factory inspectors returns to fall back upon. The e show as follows—

Cotton Operati es in the United Kingdom in Thousands

	Half timers	Under 18	Over 18	Males	Females	Total
159b	-9 5	121	362	204	2-9	533
1901	21 0	115	387	194	329	523
1904	17 7	109	396	196	3~7	523
1907	19 I	131	426	218	359	577

The advan e since 1904 is substantial and bears out the view that recent years have witnessed an accelerated growth of the British cotton industry. The inspectors returns for 1909 are corroborated by the returns made for the census of production, which reveal a total of 500 500 wage earners occupied on an average on the last Wednesdays of January April July and October. Of the e 560 500 wage earners about 14,000 were at work in Scotland The return of the census of production how that the number of salaried persons engaged in the cotton industry in the United Kingdom was 12,400.

Among the operatives the proportion of maks to semales has remained about the same males being in each period between 37 and 38 per cent of the total. Under 18 the proportion of male is les which is of course to be explained by the fact that many women give up facto y work when they marry. The augmentation of numbers between 1904 and 1907 is naturally mot marked among those under 18. This does not neces arily mean that the voung are sub-tantially displacing adult for as a rule when an industry suddenly requires more labour the bulk of the new recruit are of the plastic age. Those already in the industry get promoted younger than they would have been otherwise, and fresh labour new to the industry tends to take the place vacated at the bottom

The Cotton Trade —In 1908 the cotton trade of the world was thrown into a state of collapse for by that time the trade boom of the previous years had worked itself out and reaction had set in particularly in the United States where a severe financial crisis occurred in the autumn of 1904. From this collapse however, the cotton trade had by 101 recovered entirely with the result as regard, the United Kingdom, that the high figure of exports of cotton goods in 1907 was actually surpassed in 1911 (and again in 1911). The fact must be allowed for that all over the world the general level of prices has been rising so that values for 1911 must be somewhat reduced to bring them into relation with the effor 1907, but they still show an appreciable excess. The following figures represent approximately the recent foreign cotton trade of the four leading countries.

Fore n Trade in Cotton Goods in Mil i n Pounds Sterling

	United	Kıngdom	United	States (ern		nany	France	
	Imports less re exp rts	Exports of home manufac ture	Imports luss re exports	Exports of home manufac turc	Special imports	Special exports	Special import	Special exports
1904-6 (average) 1907 1908 1909 1910	6 2 6 8 7 7 7 3 8 5 9 0	91 110 95 93 106 120	10 6 14 5 13 3 1- 3 13 0 13 1	7 9 ¹ 5 7 4 6 6 0 6 0	5 8 10 7 7 4 8 - 9 1 8 6	19 8 23 9 19 7 18 9 21 7 ~3 4	2 7 3 7 3 0 2 9 3 5 3 4	10 8 14 8 11 6 13 7 13 7 14 0

¹ The pinnacle was reached in 1906 in America with exports over £10 000 000

In connection with the varying trade of the world it is worthy of mention that it is usual in the British cotton industry for short time to be agreed upon when margins be

tween the prices of the product and the cost of material droop and show no sign of im mediate recovery the operatives as a rule, readily falling in with the arrangement. The same policy is practised in countries other than England but an attempt made in the late depression to secure concerted action throughout the world failed. The method of short time when judiciously applied is generally favourable to the interests of operatives as well as employers as it rauses under employment to be spread over the industry instead of unemployment being concentrated on a section of the working class

Coming to piece goods we find an output of 7091 million vards (value f05000000 including f12000000 for bleaching dyeing and finishing) and an export of 6.98 million yards (f8100000). The exports were nearly 89 per cent in quantity and about 85 per cent in value. But the export values include merchants experses and profits and if we allow about 5 per cent for these we get a percentage of export in value of about 91. The probable explanation of the discrepancy between the quantity and value percentages of export is that

explanation of the discrepancy between the quantity and value percentages of export is that the average value of the goods retained for home consumption is much higher than that of the exports. A large proportion of the exports are unblicached and unprinted and the average quality of exported prints is pretty certain to be below that of prints for home use. Admit telly there are sources of error connected with the census of production and with the collection of export figures, but they are not likely to have vitiated the results seriously

Cotton Supplies - The question of cotton supplies continues to agitate the English spinning world It is still felt that dependence on the American supply is too great and it is feared that the output of long staple cotton in America is much nearer its limit than the output of other kinds Peculiar apprehension has been excited as regards the conditions of cotton growing in Egypt It is maintained that the yield of the plants is talling in quantity and quality The yield of kantars (I kantar = 98 lbs) per feddan (I teddan = 1 1 10th acres) was on an average 5 gin the period 1896-1901 4 55 in 1901-06 and 4.24 in 1906-11 according to statistics published by the Egyptian survey depart ment It is contended that the cause of the fall includes some or all of the following (1) careless seed selection (2) over cropping as a result of the reduction of customary rotation from three years to two and also of the squeezing of the plants together (3) insect pests and (4) the water logging of the soil. Some authorities are particularly insistent as to the gravity of the fourth case. Information was laid before a cotton commission in 1909-10 which reported in due course made twenty six recommendations and nominated a committee with a view to the carrying out of its recommendations The committee had not met up to the time of the visit of Mr Arno Schmidt (the secre tary of the International Cotton Federation) to Egypt in 1911 but he states that he was informed by Lord Kitchener of an intention to institute a permanent cotton commit tee to take up the whole matter Since then a committee to investigate the ravages of the cotton worm has been appointed The question of the Egyptian supply is a serious one for England at the present time for it has been estimated that of some twenty one million spindles which are dealing exclusively with Egyptian cotton fifteen millions are in England—there are supposed to be no more than one million and a half in Germany about one million and a half in France and in no other country as many as a million But the matter will become an increasingly important one to countries other than Eng land as they push their way further into fine spinning

The British Cotton Growing Association which is specially concerned with the question of increasing cotton supplies has now almost raised the capital of £500 000

which it first set out to obtain. In addition several subsidiary companies in which the Association is interested have been formed some with the Association's assistance Such are the British Cotton Ginning Co. Ltd. (capital £100,000). British East Africa Corporation Ltd. (capital £00,000). Sudan Plantations Syndicate Ltd. (capital £50,000). East African Cotton Co. (1911). Ltd. (capital £35,000). Rhodesia Cotton Co. Ltd. (capital £30,000). The table appended shows the amount of cotton which has come torward from new fields in the British Empire to which the Association has given its attention.

Cotton Grown in Neu	Fulds in the British	Empire Bi	iles of 400 l	bs
	1906	190~	1909	1911
Sierra Leone	í,00	100		•
Gold Coast	200	250	200	100
Lagos	6 000	9 500	I_ 100	5 800
Southern Nigeria	150	250	300	300
Northern Nigeria	1 000	1 500	400	ťυο
_				
Total West Africa	7 500	11 600	13 000	6 800
Uganda	500	2 000	5 100	~0 DOO
British East Africa	200	~00	300	500
Nyasaland	2 _00	2 300	2 400	5 000
Rhodesia	100	200	400	ათ
				<u> </u>
Total Fast Africa	3 000	4 ~00	8 200	25 800

Sind	1 000	1 800	2 000	500
Sundries	۵۰۰ م	300	500	700
Sudan				21 000
Total	17 200	2 4 900	30 100	61 300

The present total is only a minute fraction of the world's crop but it is approaching one and a half per cent of the imports into the United Kingdom and though the amount of cotton raised from the new field is relatively small it is absolutely large and is increasing by substantial percentage. High expectations have been formed if the possibilities of the Sudan. The total amount of cotton which passed through the hands of the As ociation (spart from that sold through other channels) in 1908 and the three succeeding years was respectively in bales and in value—(1908) 17 700 (£2 4900) (1909) 20 000 (£2.5 100) (1910) 21 400 (£296 200) (1911) 27 700 (£3.73 500) (S. J. Chapman)

LINEN AND LINEN MANUFACTURE 1

As indicated by the British Board of Trade returns the linen trade is in a comparatively healthy state, and there has been a large increase in the number of acres in Ire land devoted to flax growing. This increase is due mainly to the gradual increase with in the last few years, and the rapid rise in 1910 in the price of the better qualities of flax. A glance at the average prices of flax in pounds per ton as supplied by the Flax Supply Association indicates that the cultivation of flax may prove remunerative.

Year	Belgian	Irish	Dutch	Russian
1902	£64	£50	£49	£37
1905	67	56	5~	35
1908	69	48	56	30
1909	68	61	58	32
1910	73	80	60	36
1911	87	64	63	44

A rapid rise in the price of flax may be a healthy sign from an agricultural point of view but it often checks not only the production of yarn but also that of cloth. It is all the more satisfactory to find that the trade has assumed such large dimensions

The following table indicates the approximate number of acres under flax cultivation in the principal flax growing centres

¹ See E B xv1 7-4 et seg x 484 et seg

Country	1906	1907	1908	1909	1910	1911

Ireland	55 000	60 000	47 000	38 000	46 000	67 000
Həlland	38 000	42 000	36 000	25 000	29 000	39 000

Within the last decade there has been a considerable development in the manufacture of linen cloths intended to be embellished by some form of hemstitch or embroidery. Although this type of cloth does not as a rule require a large weight of flax it neverthe less creates a demand for the finer qualities, and moreover provides work for a consider able number of operatives in the fine spinning departments and in those departments where hemstitching and embroidery are performed. This branch of the trade is now a very extensive one the work being done mostly by mechanical means. Handkerchiets table covers bed spreads and small fancy cloths of all descriptions are adorned more or less by this method. A considerable amount of labour may be expended in comparative ly short lengths of material, and hence a mere statement of the number of yards of cloth manufactured may not be a proper criterion of the extent of the trade. Nevertheless along with other developments in the tiner end of the trade the British exports of linen goods show a satisfactory record.

The improvements in methods of manufacture which are mentioned with reference to Jute are applicable to flav machinery and to all other where similar condition obtain in regard to the roving spinning and twisting of long vegetable fibres. Numerous attempts have been made from time to time to introduce quicker and if

Numerous attempts have been made from time to time to introduce quicker and if possible more satisfactory methods of bleaching flax and a new method which claims to be a simple and inexpensive chemical process of preparing flax straw for spinning is the invention of Dr. R. R. Roberts of Washington. It is stated that in this new process five hours are quite sufficient for the purpose, and that since the material is under complete control during the operation, there is no danger of the fibre suffering from ineffective treat ment. The fibre bleached by this process has we understand been spun into yarn and woven into cloth for use as table cloths, napkins towels and similar article, and compares well with Ru sian flax.

(I Woodhouse)

JUTE AND JUTE MANUFACTURE¹

The state of the jute trade during 1910 and 1911 was not very satisfactory. During 1912 however a great improvement took place and towards the end of the year mills and factories were everywhere as busy as possible. The following table indicates the respective Dundseprices per ton of jute per spyndle² of weft, and per yard of cloth which were ruling in the middle of October in the years 1901-12

1 See E B xv 603

² A spyndle is a length of yarn equal to 14 400 yards not to be confused with spin dle the rod used in spinning

The fluctuation in the price of the raw material is often influenced by the size of the crop but in spite of a forecast of practically a 10 000 000 bales crop the prices for 1012 were very high. New uses are continually being found for the jute fibre so that the whole of the large crop is not available for what were originally the few typical types of simple varus and fabrics. The crop in 1006 was a regord one but the figures compiled by Messrs W. F. Souter & Co. show that this has been exceeded since

	1906	1907	1908	1909	1910	1911	1912
Acres Est crop in	3 336 400	3 974 300	×56 700	2 876 600	2 84- 600	3 106 400	o 353 800
bale	6 7360	9 867 000	6 ,60 800	7-9 580	8 052 000	× 339 700	9 621 800

A good idea of the expansion of the jute trade in various countries can be gathered from the estimated consumptions in 1906 and 1912

Country	Bales pe	r annum	(au-t	Bales per annum		
Country	1906-07 1912-1,		Country	1906-07	1912-15	
Scotland	I _50 000	1 300 000	Vorway and Sweden	6 500	60 000	
England	⊸ 0 000 0⊾		Russia	180 000	2,0 000	
Ireland	25 000	25 000	Holland	25 000	30 000	
France	475 000	620 000	Spain	90 000	150 000	
Belgium	120 000	150 000	Italy	160 000	250 000	
Germany	750 000	800 000	America	600 000	600 000	
Austria and P hemia	→6 uoo	, 0 000	India	4 400 000	4 900 000	

The figures shows clearly that over half the total jute is used in India. Although the expansion in India was checked somewhat a few years ago the new factory act has probably been the cause of many extensions which have been and are still being made in that country. In 1906 there were 6/99 looms and 5 o 980 pindles for jute where as at present there are over 32 700 looms and 650 000 spindles.

Within the last few years there had been a development in the spinning of finer jute yarns in the Dundee district and it is hoped that this development will lead to a correponding movement in the manufacture of cloths from these varns. They are used already for cloths intended for ladies hats and might well be adopted for other articles of clothing.

A new textile thread or at least a combination of paper and fibre termed textilose has recently been introduced for uses similar to those in vogue for jute yarns. So far as cloth is concerned it appears to be used only for coarse sacking

In the methods of spinning and weaving jute improvements are constantly being introduced with the object of consuming less power of improving the quality of the work and of facilitating the operations generally so as to increase production

A circular loom on an entirely new principle has been invented by Mr C Whalley of Clitheroe but has not yet been tried so far as we know for the manufacture of jute fabrics Ball bearings have been used for a small number of spinning spindles but the expense of a really satisfactory arrangement of this kind appears to stand in the way of a general adoption A great improvement and one which results in the saving of from so per cent to 40 per cent horse power has re ulted from the introduction of the Boyd and Phillip patent automatic tension cylinder or the fixed tension cylinder to spinning frames. The former maintains an equal tension on the driving bands under all varying atmospheric conditions and at the same time leads the driving side of the band off the spindle whorl almost perpendicularly to the axis of the spindle the fixed cylinder performs the same function of directing the bands at right angles to the spindle and it is this desirable condition which account for the great saving in power. A spindle drive is now being introduced which dispenses with the use of a guide cylinder. It consists of a solid drawn tube of small diameter suitably supported in ball bearings and rotating at about 1000 revolutions per minute. The bands pass direct from the tube to the spindle whorls. Since the driving tube is mounted on radial arms and equal and uniform tension on the band.

For a considerable number of year endeavours have been made to simplify the method of imparting the necessary drag to the spinning bobbin as it is being filled. The latest invention and one which appears to justify all that is claimed for it is that by Mr. J. M. Mallock termed the Turbo Drag. It consists of an annular disc of thin steel in the inside of which are flexible vanes. Its underside is provided with a renewable leather washer which is to in the lobbin board while a loose leaden ring on the typ supplies just the amount of weight which is essential for the empty bobbin. The drag is driven by the bobbin to which it acts as a carrier and as the bobbin is filled a uniform tension is maintained on the yarn by the combined action of plane friction (due to weight of drag bobbin and yarn) the air resistance induced by the vanes and the increase of plane fri tion caused by the weight of the column of air in motion. There is no side pressure on the bobbin such as is always caused by the temper band and weight hence the bobbin and spindle run more smoothly. With this drag the spinner is free to give her whole attention to the varn since the tension or drag is applied automatically—this is a distinct advantage and one which is sure to appeal to employers of labour. The turbo-drag is capable to being utilised on all frames which are used for the roving spinning or twisting of long vegetable fibres.

Another recent invention is an electrical rove stop motion by Mr P Sharp. The apparatums in senious and successful as the rove is arrested immediately the yarn breaks. It has been in operation for some time in America, and is being experimented with in one or two

Dunder jute mills

ROPE AND ROPE MANUFACTURE 1

Recent changes in rope manufacture are of only minor importance. As in all other trades involving mechanical processes there have been various slight improvements in the machines employed. The price of the raw materials used has shown the same tendency as other thres to rise, and in consequence, attempts have been made to use larger quantities of the cheaper fibres. All sizes of ropes and twines from one inch downwards are now made of just and these are quite satisfactory where great strength is not essential but the best ropes are made from the superior fibres.

The introduction of jute ropes and twines has caused a great development in the twisting of these varis. In addition to being used alone the twisted yarns are extensively used in

connection with cables for all kinds of electrical purposes

A new form of driving rope made from 8 strands of sisal or similar fibre is now being manufactured by plaiting—a process some hat similar to that employed in the manufacture of box cords and the like. In some cases each of the 8 strands is composed of a large number of individual threads whereas another style consists of 8 strands acach of which is in the form of a smaller rope. Although driving by means of ropes has been and is still a very successful method, its position is being seriously threatened by the electrical method. Both the group drive and the individual drive by electrical motors appear to be making satisfactory progress.

(T. WOODHOUSE)

WOOL AND WOOL MANUFACTURE

Sheep and Wool—In the British Home Wool Industry a freer interchange of opinion among sheep breeders has resulted since 1909—10 in a more perfect adaptation of the animal to its environment or rather the development of the various sheep districts to their utmost capacity through the introduction of the breeds yielding the most profit. Thus the rounded short grassed downs of the southern counties are now frequently

1 Sce E B xxii 713 et seq

See E B xxviii 805 et seq

(T WOODHOLSE)

stocked with the Cheviot breed of sheep reared in a similar environment on the hills bor dering England and Scotland while the heavier sheep of the Down class have made more headway for crossing purposes in the richer pisturage lands of the northern counties. With wool fetching a better price more attention has been given by the tarmer to its growing and get up to the benefit of both himself and the manufacturer.

Reference must here be made to the attempts of the Wool Section of the Bradford Chamber of Commerce to impress upon both home and colonial wool growers the neces sity for greater care in the packing of wool in order that the vegetable fibre difficulty may be climinated. After experimenting with various wool packs the Chamber have made definite recommendations and it seems probable that in the near future wool packed as recommended will fetch top price at the wool sales. The Chamber has also faced the difficulty of grey hairs in otherwise white fleeces and has made certain recommendations to sheep breeders which may help to clear flocks of this defect

In Australia also some most interesting questions have been decided. Years ago the question of shipping wool in the greasy as opposed to the scoured state was hotly debaced in the press and a perusal of the correspondence on the matter left one absolutely in the dark as to which was the better method. Actually there was never a doubt with few exceptions shipping in the grease being distinctly preferable question of the value of the Vermont breed in Australia has been fought out on very sim lar lines and although from the correspondence of a few years ago in the Australian press it was impossible to decide for or against the Vermont, the past few years have shown that the Vermont is practically doomed so far as Australia is concerned. In the drought of 190 the mability of the breed to withstand heat and dryness was only too pain ully in evilence but it has needed the experience of the past three or four years in wa hing combing spinning and manufacturing Vermont wools to bring the matter to Bradford after trying to in titute a coating trade based upon low and strong qualities of merino wools has had a sudden awakening and now demands nothing lower for these fabrics than a 64 s or preferably a 70 s quality. This has been the deciding factor and so it comes about that the tendency of to day is to grow a finer rather than a coarser merino and for this purpose the Vermont strain is practically useless

The following particular taken from the Textile Mercury still show a result in favour of growing the strong merino but a slight rise of price in the fine and a down ward tendency in the strong would leave the advantage with the fine

Another most noticeable feature in the Australian flocks is the wonderful increase in numbers. The maintenance of the prices paid for the leading Australian brands in view of the large increase in wool shipments can only be explained by the vastly increased demand by a more numerous and wealther world population for better clothing

Wherever sheep are reared as wool producing rather than mutton producing animals at least some endeavour is made to improve the fleece in one or more of its characteristics Of late some attention has been paid to the breeding of uni fleeced sheep i e sheep pro ducing wool of one or two qualities only, as distinct from the five or six qualities frequent ly to be found even on well bred sheep. This tendency is usually in evidence wher ever attempts are being made to improve the merino or other breeds

Attempts have been made to improve the breed of sheep in South Africa and in the West Indies The connection of both these localities with Australia in the early days of Australian colonization adds interest to the recent importations of Australian merinos from accredited Australian stocks and in the near future these localities may forward to Europe considerable quantities of the finer qualities of merino so much in demand

Professor T B Wood on the Cambridge University Farm has applied Mendelism to sheep breeding an endeavour being made to reshuffle the Shropshire and Merino characteristics and select the combination Merino wool and Shropshire carcase October 1912 Professor Wood had the third generation of the cross showing marked segregation in wool characteristics The effect of environment on the wool of Mcrino sheep kept for some years in England is also being investigated

This attempt has stimulated other wool growers to work upon Mendelian lines and it is more than probable that in the near future much better control of flocks will result

Wool Washing Processes—In the preparation of wool for the subsequent manufacturing processes perhaps the most noticeable event since 1909-10 has been the debacle attendant upon the attempt of a Bradford firm to introduce the solvent method of wool scouring on a large scale. Although the case was never proved against the firm in question the Bradford Beck explosion so clearly showed the dangers attendant upon the use of any of the volatile agents that on their own initiative the firm referred to gave up the attempt and dismantled their machines. This failure is to be regretted from more than one point of view solvent method is so useful for dealing with tar lors and various stain on wools that its suppression almost amounts to the elimination of such special lots from the market

suppression almost amounts to the elimination of such special lots from the market. From time to time new methods of scouring or revival of old methods ketp appearing. Solvent earths appear disappear and re-appear again. Upon the whole it appears impossible to improve upon the emulsion method especially if suitable emulsifying agents and well thought out machines are employed. The most recent emulsifying agent introduced is sapon for which the following advantages are claimed. (1) The scoured wool die better. (2) While durt etc. is cleared away the wool way is left in and gives the wool a most desirable handle, and lustre. (3) There is no liberating of free caustic alkali and consequently no production of sticky, insoluble soap on the wool him. (4) Economy in the scouring agent. (5) Washing at 96 to 100. F. and consequently no clotting of blood carrying anthrax and a consequent minimising of liability of the workers to contract anthrax. Up to the present. Sapon has proved its worth from the economical and efficiency point of view for the longer wools but it has yet to prove its value for the shorter merino wools. of view for the longer wools but it has yet to prove its value for the shorter merino wools

Attempts are being made to treat wool combers suds washwaters etc. Suveral methods have been or are being tried and although it can not be said that any one has proved a marked success it seems probable that in the near future much will be done towards the purification of certain of the Yorkshire rivers from these deleterious substances and that this

wool Preparing Processes — The efficiency of carding engines has recently been improved by designing the framework to come close up to the revolving rollers with driving wheels and pulleys on the outside. This amentrange is more efficient owing to the absence of virving air currents towards the ends of the carding rollers. The hot air backwasher has firmly established itself in the worsted industry. humouring the wool more and producing a better yield and a better top than that produced on the old ironing type of machine. Attempts continue to be made to improve the Noble comb but little headway is to be The attempt to place three or four small circles within the large circle has not met with marked success while mechanical dabbers to supplant the ordinary dabbing brush have been tried again and again and apparently found wanting although there is one type making some headway. French combing has established itself for special types of work but for bulk lots the Noble comb is still holding its own.

Spinning Processes—French drawing and mule spinning are claiming increased attention.

in Yorkshire, and as a result drawers and spinners upon the ordinary English machines are being forced to study and if possible extend the capacities of their machines to meet the demand for soft spun yarn. A Yorkshire machine making firm has put a useful gill box (the OPS) upon the market for dealing with short fibred material to advantage and various combinations of French and cone drawing boxes are being tried in connection with

ring and cap spinning and twisting

The most interesting development to be noted in the woollen trade is the attempt which is being made to introduce a continuous frame spinner in place of the woollen mule remarkable varus are being produced on this machine and it seems probable that for at least a section of the trade the mule will be superseded by this simpler and quicker spinner

Perhaps the most important development to note with reference to both cap and flyer spinning is the marked development of the self doffing mechanism. Three years ago the self doffing machine was considered a questionable advantage to day owing in England to the shortage of half time labourers and also to certain incidental advantages it is being adopted as the only possible solution to the difficulties by which the spinner is surrounded. The Arnold Forster self doffing fiver frame led the way and is now closely followed by I later's Prince Smith and others for the fiver frame and by Prince Smith and Hall and Stall self doffers for the cap frame. When the self doffer was first suggested its mechanical advantages were considered nil and it has needed some years of experience to find out that there undoubtedly are such advantages. The latest rap frame doffer for example is so designed that there is no nicking of bobbins and no wearing away of cap spindles and there are other advantages which are slowly being realised. Strange to say cap doffing which for some time after the introduction of flyer doffing was considered impossible is now the simpler of the two and further has not necessitated that change in the construction of the frame which is noticeable in the flyer frame. The ring and mule self-doffers have yet to appear but the demand for them seems inevitable

Various attempts have been made to increase the production of wool spinning machines by the adoption of a variable drive. At present each machine is driven at the speed which will just yield a satisfactory result when the machine is spinning at its worst say when the yarn is being wound upon the thin part of the bobbin or tube. Under the new arrangement the speed is not changed for this portion of this spin but the machine is automatically speeded up for the easier part. Possibly the extra expense of the variable speed motors has militated against any wide adoption of this method of increasing production.

The winding of yarn on to bobbins, tubes or speeds, eems unimportant, but the Inter-

national Winder has proved its value for by its means layer after layer of varn can be so closely laid that about double the kingth can be got on to the spool or bolbin as compared with ordinary winding. Thus when such spools or bolbin come to be woven there are but

half the stoppages for reshutting with a consequent greater production

Acternice should here be made to the difficulties often to be faced due to the electrification
of wood while passing through the various machines. Two main systems to meet this The most successful method seems to be to introduce humidity our carry off the electricity. The other method is to employ a difficulty have been tried into the atmosphere and thus carry off the electricity neutrali or throwing a continuous stream of the opposite sort of electricity into the electrined wool. The use of radium has also been suggested, but is too expensive

Warping Weaving etc Processes -In the weaving section some few improvements are The Scotch Warping Mill and the Warpers Beam Systems are undoubtedly to be noted taking the place of the old upright mill and more perfectly tensioned warps result The tedious perations of drawing and twitting or tying in have naturally claimed the attention of the inventor and all the e operations are being systematically and eriou ly attacked. The case with which the Barber warp-tying in and the automatic warp draw ing in machines work is a revelation in mechanical possibilities

The most interesting from development to note is an automatic shuttling mechanism in troduced by Messrs Robert Hall & Sons Bury. The warpstop motion shuttling mechanism etc is so connected up to the lighting up of the from that the moment anything goes wrong and it stops in come the lights the moment the from is put to rights and set running down go the lights and the loom does its work in an economical darkness

In both automatic and ordinary looms a marked exten ion of the warp stop mechanism is to be noted. Such a mechanism ensures greater perfection in the resultant pieces

A shuttle box control mechanism has been put on the market by two firms

double shuttling are here obviated by the empty box controlling the picking

The question of mechanical as against electrical driving of looms has been strongly fought. More electrical driving is certainly being introduced but upon the whole under sperial circum tances only. It seems probable that if current can be supplied at \$\frac{1}{2}\$d \cdot per unit then electrical driving is as cheap as mechanical driving. Both the group and individual drive systems are advocated but the group system seems to be gaining

Dveing and Finishing Processes - In the dyeing industry marked advance seems to have been made in the dyeing of tops or wool in the combed state. Regularity of the dye has been considered an impossibility until quite recently but the latest machines have certainly suggested the possibility of success. The Permutet water softening apparatus is worthy

of note a good water upply being a desideratum both for scouring and dyeing
In the designing section of the industry the two most noticeable features are the develop ment of the worsted tweed trade-no doubt largely due to the introduction of the hobble skirt—and artificial silk In 1912 tons of artificial silk were being employed in the York shire manufa turing district alone and the manufacturing firms were months behindhand (A F BARKER) with deliveries

NEW FIBRES1

Through the fibres" of the organic world mankind exhibits in a striking way his direct dependence upon natural products both for the useful and the decorative and aesthetic elements of his life. It is in such regions of activity that we become aware that the arts have antedated 'Science' by centuries and moreover that our modern science is contributing no few factors of primary importance. It might be presumed that the application of scientific investigation to the wealth of material presented by the organic world would certainly lead to the selection and industrial application of fibres outside the range of staple materials of natural empirical selection. The presumption however is not justified by the facts, and there are few elements of material and fundamental novelty in the present development of the textile and allied industries

The only noteworthy exception is in the artificial fibres, which are chemical transformation products of the natural celluloses. These are manufactured in a large variety of dimensions from a "monofil" of 0.5 mm diameter to a unit thread of 0.5 mgr per metre. The 'artificial silks are assemblages of the finer units suitably twisted. The world's production of these yarns has steadily grown, and is advancing to 10 000 tons per annum. Hitherto, the artificial silks have not senously competed with or displaced the true silks they have rather made for themselves new applications. With increasing perfection of the product however, the situation may be different. The industrial applications of cellulose derivatives have followed the lines of development in dicated in E B, V, 600. The viscose process is supplanting the nitrocellulose and to a certain extent the cupr ammonium process for the production of artificial fibres. The acetates of cellulose are in certain directions supplanting the nitrate for nims and massive solids. The pure cellulose sheet or film in continuous length has developed into an important industry, and the product is on the market as. Cellophane

The production of *Phormium* fibre (New Zealand flax") is again engaging the attention of the colonial authorities and the New Zealand Government offers prize money to the amount of £12 000 to inventors who shall improve the yield or quality of the nbre or cheapen the production by utilisation of wastes or by products

In papermakers' raw materials there are supplies of new fibrous products on the market. The most important is the cotton hull fibre. Cotton hulls are the envelopes of the cotton seed and they retain a residual proportion of cotton fibre, which escapes the ginning process of separation of the textile cotton from the seed. The treatment of the waste hulls after removal of the endosperms for the purposes of oil and feeding cake manufacture, has been the subject of various inventions for the separation and concent tration of the fibre (see Beadle & Stevens J Soc Chem Ind 28 1015). The machines invented by De Segundo (English Patent 3.68 and 11 137 of 1908) effect a very complete separation of the fibre from shell residues giving a raw material of 85 per cent collulose concentration and on a low rate of working costs. By this process a supply of 5000 tons of fibre per annum is already rendered available for European consumption, and bought at rag" cellulose prices.

Bamboo has long been recognised as a potential source of papermakers half stuffs and cellulose. An important report has recently been published by Mr. W. Raitt describing investigations carried out for the Forest Research Institute at Dehra Dun This report puts the cost of production of unbleached bamboo pulp as £6.55 od per ton (in India). It is also to be noted that a bamboo half stuff is offering in the London market and the present available supply is stated to be 1000 tons per annum. This is produced in Tongking, where work has been started on a unit plant of 10 tons per day capacity. The undertaking is an Anglo American capitalisation and is projected for a possible extension to 100 tons a day.

Papyrus (Cyperus) — The massive reed growth on the Nile river is attracting attention as a possible source of paper making cellulose — Practical investigations under the auspices of Sudan Industries Ltd, and Sudd Fuel (Suddite) Ltd, have established the

¹ See E B x 309 et seq

industrial value of the compressed material in briquette form as a fuel large shipments of the raw material to England have been worked up into paper, and the results establish an all round utility as a papermaking material. It remains to establish the important question of steady supply in convenient form for economical freights, and minimum rates of sale in European markets. (C. F. Cross.)

SECTION VIII

SPORT AND GAMES

Internationalism —In explaining the aspirations of his country towards sea power, the new German Ambassador to England Prince Lichnovsky remarked at the end of 191 that Germany had already adopted British manners dress and sports. The assimilation of these and other features of social life throughout the portion of the world that affects the Furopean form of civilisation is of course, mainly the consequence of extended international intercourse and the growth of towns and commerce. It is a commonplace observation that nowadays the inhabitants of great cities in Europe and the countries colonised by Europeans are superficially very much alike and it could easily be shown that their uniformity is no longer confined to appearances. But in the matter of sports and games which reflect besides modifying character, other influences than the mere imitation of fashion have to be recognised

In Great Britain it may be asserted that the passion for outdoor recreation is es sentially hedonistic While publicists preachers and philosophers have for many years kept up a fierce controversy the natural practice has been little if at all influenced by the questions whether games in moderation or excess waste the time and per vert the energies of school boys or squires whether physical culture is better advanced on the cricket ground or in the gymnasium whether University oarsmen for the most part die prematurely of cardiac hypertrophy whether the prevalence of football ab sorbs enthusiasm which ought to be given to national defence. There are of course, thoughtful unprejudiced and experienced educationalists who advocate athletic games as a necessary part of juvenile training and are able to command practical as sent to their views while there are many thousands of sportsmen and players of games who are convinced by their experience of the immense utility of their favourite di But on the whole it must be confessed that the general adoption during the last half century of rural amusements by the British urban population has been caused not by a conscious desire for culture but simply by a desire for enjoyment while the main retarding force has been a fast decaying puritanism first done and afterwards defended. At this point both the practice and the defence are seriously reinforced by the imitation of foreign nations. And it would seem that in their case the movement is to a considerable extent deliberately undertaken from a conviction that their own educational methods can be advantageously supplemented by a selection from the recreative customs of their neighbours. While increasing recognition is paid to the value of physical culture and curative exercise, it is now also understood that in sports of most kinds the senses are sharpened and a mental as well as bodily kind of alertness and dexterity fostered Further the element of competition -together with that conflict with the luck of a contest which to the Anglo Saxon race has so much to do with the pleasure of games -- is admitted to be in a high degree formative of character
In short games and sports are in times of peace more or less useful substitutes for the normal military struggle for existence by which the nations have reached their present development

Whether as an effect, as a cause or as a concomitant of this new attitude on the part of the nations the modern Olympic Games must be taken into account. They have certainly accelerated the growth of internationalism in sport. The celebration of the games in London in 1908 was practically the first revelation to some European peoples of a national opportunity. They found that they possessed champions worthy to stand up in an international arena and thus was originated a new competitive

patriotism a kind of national consciousness similar to that which is generated by warfare though of much less intensity At Stockholm in 1912 international rivalry was even more vivid. The conviction that the credit of a state could be served by success in the Games had become so firmly established that Government subventions were granted to some of the competing teams, while others were assisted by public subscription or donations from wealthy patriots

That international sport will occupy a still more important place in the future provided that the general peace of the world is maintained may be confidently as serted At present the obstacles to free and universal sporting intercourse are con siderable but they are not entirely insuperable. One of the greatest difficulties to be overcome is the establishment of an international code-perhaps necessitating international legislative conferences. It is only necessary to instance the defects of the fencing, rifle shooting and wrestling contests at Stockholm in order to show what has to be accomplished in this direction. There also remain the vestiges of political barriers to be obliterated before French and German, Russian and Finnish Austrian and Bohemian teams for example, can freely engage in matches at such games as hockey and football

At Olympic meetings hitherto the strictly athletic part of the programme has been the simplest to arrange and the most favoured as well as the most conspicuously suc cessful Of what are called games in the limited sense of the word the most cosmopolitan, because most independent of different geographical conditions are lawn tennis golf and football of the Association type Both golf and lawn tennis are finely adapted for the recreation of townsmen of sedentary occupations and restricted leisure Association football besides being simple inexpensive and easily learned (though giving scope for great skill and speed), is assisted in its extension by attractiveness as a popular spectacle since it affords the excitement of a combat to the spectators while demanding the smallest amount of practical comprehension of its technique It would be tedious to catalogue the places where the game is played—let it suffice to mention that it has recently taken root in the United States it pervades South America and has been played by native Asiatic teams in Jerusalem besides affording a moment of patriotic and ungrudged triumph to a Calcutta crowd when a native eleven defeated a British regiment Similarly it may be recalled that lawn tennis flourishes in St. Petersburg and in the Spanish Peninsula, that a journey across Africa has actually been described in the guise of a golfing tour that a course has been laid out at Kabul for the Amir of Afghanistan Both golf and lawn tennis in spite of the peculiar demands of foursomes and doubles are essentially games for the individual International competition in these games is accordingly carried on largely through the private enterprise of players who compete in the open tournaments and champion ships of foreign countries But lawn tennis matches besides the Davis Cup contest have recently taken place between teams representing London Berlin and Paris and the Dulwich Covered Court Club has received a visit from a Bremen team ball, as in cricket what are termed international matches are almost exclusively played by teams belonging to different sections of Great Britain with occasional interchanges of visits between British and Colonial teams But the Football Association has for some years chosen amateur elevens for matches with several Continental countries and English clubs have undertaken tours in the United States, Canada South Africa France Belgium Holland Germany Austria and Bohemia The one Continental European country which enters largely into competitions in many kinds of sport with Britain is France but Belgian rowing has been exemplified with great effect at Henley Particulars of international contests in many sports and games will be found under the separate headings below

The new movement towards competitive athletic games has been more highly exemplified in France than elsewhere Though French athletes were not as numerous or as prominent at the Stockholm Olympic Games as might have been expected the progress made in running on the track and across country has been sufficiently shown

in matches between English and French clubs and in the performances of French teams in the international cross country championships. French lawn-tennis players are capable of holding their own with All England champions on grass courts and on hard courts have the advantage But it is especially in Rugby football that the new French athletic spirit is most impressively declared A priori no game seemed less likely to become acclimatised on the French side of the English Channel A few years back when the Parisian clubs Stade Français and Racing Club de France took up this form of football the deficiency of school training the want of personal dexterity and the apparent ineptitude of the players for concerted play were the most obvious features of their matches A sufficiency of courage and something more than a sufficiency of combativeness did not seem to hold out great promise for the future Nowadays Rugby football is popular throughout the country and the Southern towns Bordeaux Nantes Bayonne Toulouse Tarbes and Lyons possess very strong clubs backed by a local enthusiasm which is indicated by the large crowds of spectators at their matches English club fifteens even of the highest reputation no longer play French teams in France with confident assurance of victory international matches with the pucked teams of France are considered to require the full force at the Rugby Union's disposal a strong Scotland team has actually been defeated. In football is exemplified the modern French earnestness the striving towards efficiency the consciousness of the necessity for su tained national effort and sacrifice that the present military phase of development has produced But further the practice of the game has already developed a genuine sporting love of it. Something like the old spirit of the knightly tournament is now discernible in the play of French afteens the delight in a fierce and headlong onset and the concentrated endeavour towards victory are now tempered by an appreciation of the technique of the game Accordingly the self possession and mutual reliance on which the concert of a team depends have been evolved and a game is more likely to be won when the whole sum of enjoyment is not staked on I robably the tayour in which boxing is now regarded in France may be attributed to the national change of temperament. The acceptance of professional pugilism came about in spite of a total accident in the ring which might have been expected to prejudice the sport in the eyes of the public. The ordinary Continental European attitude towards boying is such that no amateur contests were held at Stockholm in 1912 because of a doubt as to their legality Pugilism is now so attract tive that a sum of more than 100 000 trancs has been produced in Paris at one of Carpentier's matches Boxing in the army and in amateur circles is also prospering under the impetus of a popular taste which is perhaps now at its climax

Athletics—or competitive running jumping and throwing—may be classified as lying between ordinary ball games and gymnastics. The readiness with which the athletic part of the Olympic programme was taken up by the Scandinavian nations was due to their excellent gymnastic discipline based on the methods of P H Ling 1 This system though it has made its way into all countries is still cultivated more extensively and in higher perfection in Sweden than elsewhere but an excellent gym nustic drill of the same type is used in Italy It is significant of the expression of national feeling by the way of physical culture that the Bohemian Sokol societies whose object is to preserve Slav nationalism make a peculiar mass drill the chief feature of their meetings. Nothing was more striking in the results of the Olympic compc titions than the progress made in athletics by the Swedes and Finns the latter ex celling especially in wrestling and feats of strength The Swedish National Union subsidised by the state is a great federation of clubs having for its aim the enlisting of all adult citizens in an athletic discipline. Swedish citizens are encouraged to qual ify for bronze silver and gold badges by passing tests in five groups of exercises which include jumping running swimming fencing weight discus and javelin throwing bicycling skating and ski running. There is no other country in which so near an approach is made to the old Spartan regimen Hockey football and lawn tennis are 1 See E B xv1 728

also flourishing in Sweden and not only are Swedish yachtsmen now famous but considerable progress has been made in designing yachts of the smaller classes

It would not be impossible to construct a scale of the nations arranged according to the degree in which active popular interest was taken in the despatch of competitors to the Olympic Games. This list would in no way represent the total amount of each country s devotion to athletic games and if Sweden were placed at the head of the table Britain would occupy a low place. In Belgium for instance a taste for sport is very prevalent but as in England it is not corporately manifested. It will probably however, find its opportunity at the Ghent Exhibition. In America the docurine of physical culture inspires a large amount of organised endeavour the Athletic Union co operates with the clubs in encouraging the systematic study of athletics and it is supported by public interest and on occasion by private munificence.

Olympic Results 1912 - The Olympic Games were carried out in Stockholm in July 1912 during exceptionally hot weather Although the resources at the disposal of the Swedish committee did not admit of so large a programme as had been under taken in London in 1908 the whole festival was exceedingly successful. In regard to the presentation of internationalism the Swedish capital had the advantage of not being so large as to engulf its visitors, and the spectacle of diverse nationalities was therefore most impressive. The stadium and its ornamentation were of striking and beautiful design and were situated in picturesque environment. There were several points in which the arrangements showed an advance on those of 1908 and though there were a few failures in the management of the competitions—partly through unavoidable defects in the programme the conditions and the judging--very little cause was given for dissatisfaction. One of the most noteworthy innovations was the electrical timing of the foot races and in view of the extraordinary speed attained by the runners it should be recognised that the use of mechanical apparatus for this purpose can hardly have favourably misrepresented their performances in comparison with the old way of time keeping with a stop-watch The foot races on account of the facility with which they are exhibited in a stadium once again were invested with a larger importance than they ordinarily attain in public esteem. By far the best results in this part of the games were secured by the United States contingent who were also prominent in what are called field events but not without strong rivalry from Sweden and Finland

Comparison of the aggregate number of points gained during the whole series of contests by different nations is of no great utility for the reasons that success in a team competition counts no more than the victory of an individual in a single race and that the Olympic programme includes contests which are not in vogue in all the competing nations while omitting others like cricket baseball Rugby tootball and (at Stockholm) boxing on which hundreds of thousands of sportsmen concentrate There are slight discrepancies in the published returns but it is sub their energies stantially accurate to state that three points being counted for a winner or winning team two for a second place and one for a third the United States team gained 85 points in athletics and 45 in all other events. Sweden scored 30 points in athletics and 130 in other events. Great Britain 15 points in athletics or rather foot races and 61 in other The British Dominions scored 13 and 29 points Finland 29 and 3 points That Sweden was able to make the best total was mainly attributable to ability to undertake a greater number of competitions and to place in the field a greater number of competitors than any other country on account of the locality of the Games but largely also to organised preparation. The United States had better results in proportion to the number of entries and actually held the lead until the yacht races at the close of the meeting. These races from geographical and other considerations were practically limited to a very few countries. The Americans took no part in rowing or football and sent in but one competitor for the gymnastics the British were not represented in open air lawn tennis the javelin the discus and the weightevents which have never interested Englishmen,-the athletic decathlon and pentath

lon certain of the shooting, wrestling and gymnastic competitions etc. It is curious that while little or no public support was extended to the British Olympic Committee and while the state of athletics in Great Britain furnished hardly any hope for suc cess in the races disappointment was loudly expressed by the British press and public when the anticipated results duly came to pass. The Swedish successes were widely distributed points being gained especially in some of the less universally practised forms of athletics in Swedish gymnastics horse riding cycling shooting driving, wrestling and yachting Finland, who came fourth in the order of aggregate with 52 points profited by the assistance of the greatest long distance runner of modern times (Kolehmainen) and did well in discus-throwing and wrestling Germany gained 47 points Australasia Canada and South Africa 42-South Africa producing the winner of the much esteemed Marathon race as well as the second man and the win ner of the curious cycling road-race France scored only 31 points Austria Hungary 2 Denmark 19 Norway 16 Italy 1, Belgrum 11 Russia 6 Greece 4 Holland 3 Entries were sent in but no successes were obtained by Iceland Switzerland Por tugal Luxemburg Monaco Servia Egypt, Turkev, Argentina Chile and Japan

In the following sections on the progre's of particular sports and games 1 in 1911-12 they are taken for convenience in alphabetical order with the exception of the final section on American sport

Angling

Within the last few years there has been one remarkable development in the field of salmon investigation It has been discovered or rather re discovered (for Anthony von Leeuwenhoek late in the seventeenth century was the first to suggest it—a fact which seems to have escaped notice until it was lately pointed out by Dr W J Turrell in The Field) that it is possible to tell a fish's age from the markings of its scales. This has proved to be easier with salmon than most fish, and the results obtained by investiga tions have been notes orths Messrs H W Johnston and W L Calderwood in Scotland Mr I Arthur Hutton and Dr H Turnbull in Ingland and Dr Knut Dahl in Norway are the workers to whom the new knowledge of salmon is chiefly owed. Mr. P D Malloch of the Tay Salmon Fisheries Company has also done good service and much interesting information is to be found in his book (see below) though some of his conclusions do not find general acceptance with other observers The result of salmon scale reading briefly put is the following view of the fish's life history The parr usual ly stays two years in the river (in Norway the river period is sometimes longer a fact which may be accounted for by differences of climate) after running down to sea as a smolt the fish spends at least a year in salt water and it may spend two three or even tour years there ascending a river again for the purpose of spawning as a three year old four year old five year old or six year old as the case may be This quite upsets the old idea that a grilse might return after only a few months in the sea. Another old idea must also be relinquished that salmon spawn every year of their lives data so far obtained go to prove that most of them spawn only once A proportion (which has yet to be clearly determined) may spawn a second time, at present the data seem to show that this proportion is not more than 10 per cent. A very few may spawn three times in their lives but so far fish bearing evidence of three spawning seasons on their scales have been very rare indeed. There is obviously a good deal more to be learned but the main facts cited may be considered proved. When the investigation has gone somewhat further doubtless fresh problems of a practical nature such as the treatment of kelts will arise but the time for them and for new legislation based on the new knowledge has hardly arrived vet

In other fields of the angler's interest perhaps the most interesting is a revival of wet fly fishing on chalk streams. The practice as now carried on is really a development from the dry-fly and those who practise the method go a step further than dry fly men by imitating the nymphs of the Ephemeridae and using them under the surface. The book by Mr. Skues mentioned below is the chief authority for the method.

¹ See the corresponding E B headings for general accounts up to 1910

The following is a selection of recent angling literature worth noting

Dr W J Turrell's Ancient Angling Authors (London 1910) dealing with angling literature down to the end of the eighteenth contury is a carefully compiled and useful book. Dr

H M Hall's Idvils of Fishermen (New York 1912) a study of piscatory ecloque literature (of which there is a considerable mass dating from Theocritus onwards) is the first attempt

to deal with it at all fully

On Salmon and trout fishing A. H. Chaytor's Letters to a Salmon Fisher's Sons (London On Salmon and trott listing A. A. Chaytor's Letters to a Salmon Fisher's Sons (London 1910) is an excellent book of practical instruction. H. Lamond's The Gentle Art (London 1911) contains useful chapters on legal and economic questions. G. E. M. Skues in Minor Taches of the Chalk Stream (London 1910) deals with the use of wet fly on dry fly streams with this may be mentioned I. M. Halford's Modern Development of the Dry Fly (London 1911). L. West's The Natural Fly and its Imitation (St. Helens 1912) is perhaps the best book on practical fishing outproblems and the state of the Natural Fly and its Imitation (St. Helens 1912) is perhaps the best book on practical fishing entomology since Ronald's it contains excellent coloured plates

H T Sheringham's Coarse Fishing (London 1912) and C O Minchin's Sea Fishing

Condon 1911) are excellent on their respective subjects
C Tate Regan's British Fresh Water Fishes (London 1911) W. L. Calderwood's Salmon Rivers and Locks of Scotland (London 1909), and Life of the Salmon (London 1907) P. D. Malloch's Life History of the Salmon etc. (London 1910) J. Arthur Hutton's Salmon Scales (I ondon 1909) and Salmon Scale Examination (London 1910) and Dr. Knut Dahl's Age and Growth of Salmon and Trout in Norway (edited by J. Arthur Hutton and H. T. Shering, ham and published in English by the Salmon and Trout Association 1911) all deal more or less with the new science of salmon scale reading. Important papers on this subject by Mr. H. W. Johnston are also to be found in the twenty third twenty fourth twenty fifth and H W Johnston are also to be found in the twenty third twenty fourth twenty fifth and twenty-eighth Annual Reports on Scottish Salmon Fisheries Dr Francis Ward's Warrely of Fish Life (London 1911) is a remarkable study of fish as observed under water both with the eve and the camera Dr J de Bellesme 5 La Pisciculture en France (Paris 1910) 1 1 study of French fish culture with particular reference to the work of the Trocadero Aquarium

Archery

In spite of much unfavourable weather several fine scores were made in England in 1912 by both ladies and gentlemen The most notable was that of Mr H P Nesham at the Southern Counties Meeting in September when in the double York Round he obtained 1 067 with 23 hits This is the highest score made since 1868 when the late Mr H A Ford at Learnington scored 1 087 with 219 hits and except by Mr Ford, it has never been beaten at any public meeting. The championships were shot for at the Grand National Meeting at Cheltenham and won by Miss O Newall with 716 and Mr R Brooks King with 829 In 1911 Miss Q Newall at the Grand National Meeting where she won the ladies championship scored 803. Mr W Dod who won the gen tlemen's championship scored 885. Flight shooting is now rarely practised but a fine shot of 463 yds was made by Mr Ingo Simon in 191 with a Turkish bow

The opportunity may be taken here to correct the L B article on Archery in some particulars. The bow now used by men is from 6 ft 1 in to 6 ft 4 in in length a lady bow ranges from 5 ft 6 in to 5 ft 8 in mea used between the nocks, these lengths according in the one case with an arrow of 27 in to 28 in and in the other with an arrow of 25 in to 26 in Exceptionally long arms may render necessary an arrow an inch longer and a corresponding addition of one or two inches to the bow. The weight of a bow is the number of pounds required when appended to the string to draw to the head an arrow of 28 in for 1 man's bow or 25 in for a lady s. The weight of men's bows varies from 36 lbs to 58 lbs of ladies from 18 lbs to 30 lbs the lighter weights being sufficient for beginners. Bow arc together Self or backed according as they are made of one wood or of two or more glued together Self bows if of vew are usually made of two pieces joined by a double fish splice at the handle as it is difficult to had a piece of this wood (incomparably the best) of sufficient length while free from knots. If made of lance they are invariably of a single piece. Backed bows, may be of yew backed either with the same wood or with hickory or alternatively of washaba or of ruby lance or other woods backed with hickory the back being the flat side of the bow and the belly the rounded side. Three woods are sometime employed a thin strip of fusic being interposed between a belly of yew and a back of hickory. There should be an inflexible centre of about 21 inches whence the bow should taper grad ually towards each end It should be straight the back true and when strung the strin, should appear to cut the belly into two equal parts Self vew bows are the best. They are light in the hand the sweetest to pull and have the best cast but they require careful handling. They are also expensive costing from £5 to £15 and they are liable to crysals or tiny cracks which gradually spread until the bow breaks. A yew backed vew which is next in ment can be bought for £5 and is somewhat less hable to crysals. Between the next in merit can be bought for £5 and is somewhat less hable to cry als Between the others there is little to choose provided that they are properly made and not reflexed as there are said to be when the ends bend outward for these jar the hand. Their price varies from 25s to 3 guineas. The string for a man's how should be from 6 in to $6\frac{1}{4}$ in from the back of the bow when strung for a lady's from $5\frac{1}{4}$ in to 6 in according to the length of the bow. The nock of arrows—it is never called the notch—should not be cut square but rounded. The feathers must be wing and not body feathers which are quite useless. They should be from the same wing 1 e right or left about $1\frac{1}{4}$ in long and tapering to the front from a depth of $\frac{1}{2}$ in at the nock. If balloon shaped their greatest depth should be at one third of their length from the nock end

With regard to target scoring and handicapping it should be noted that a St George's Round has never been shot at a public meeting or indeed at any meeting held within the last 60 years. Handicapping by the loss of rings has been obsolete for more than 35 years nor is there any system which can rightly be called handicapping by points. Handicapping is now carried out either by dividing the archers into classes according to their powers or by

deducting percentages from their scores for previous successes

As regards the history of archery some corrections may also be made. The bow was used in war at a later date than 1860 viz by the Japanese against the English at Surin Nosake September 5 1864. Nor did the Armada year see the last appearance of the English archer. A company of archers was raised for the expedition to the island of Rhè in 1627. There were archers among the Russian troops in the Crimea. Again the relation of Fins bury Archers the Hon Artillery Company and the Royal Toxophilite Society requires restatement. In July 1676. William Wood. Marshal of the Finsbury Archers was sent round with a paper signed by Sir E. Hungerford and others setting forth that the officers and others of the Society of Archers within the cities of London and Westminster. have determined that the bearer shall have a silver badge and bear the same as Marshall to the Queen's Majesty's Regiment of Archers. The names of the subscribers were appended (Cuildhall MSS 193). Consequently this badge or shield had no connection with Oxford The Finsbury Archers became extinct about 1761 but the Royal Toxophilite Society was not founded until 1781 when Mr. P. Constable the last captain of the Finsbury Archers joined it and handed to it the shield and other valuables. There was therefore no combination of the two clubs in 1841. It is incorrect to assert that the Finsbury Archers were not connected with the Hon Artillery Company. They were connected and under their powers shot over the Finsbury Field up to 1657. The Archers Division of the Hon Artillery Company was formed by members of the Royal Toxophilite Society in 1784.

It may also be mentioned that the Championship is not recognised as a term belonging par excellence to any of the public meetings and that the list of public meetings should include the Southern Counties Meeting The Crystal Palace meeting became extinct in 1902

Athletics 1

It was to be expected that under the impulse of the Olympic Games produces of nat ural speed and strength would be forthcoming from several nations hand while general improvement and an increase in the number of prominent athletes might be counted upon, the actual displacement of records being apparently a matter of increasing difficulty was considered improbable. In the course of the Olympic Games at Stockholm and of the trial contests held in the United States a number of feats were accomplished surpassing the best performances of exceptional and reputedly unapproachable athletes of former years For example if any record could be consid ered unassailable it was the high jump of 6 ft 5 in of M Sweeney of New York and in another category the long distance times of A Shrubb and W G George seemed scarce ly likely to be equalled. It was however precisely these records together with the wonderful halt mile running of Lunghi that were eclipsed either at Stockholm or in preliminary contests among American aspirants to Olympic medals Systematic study and training in the United States together with the large resources of athletic ability made available by the popularity of inter club inter school and inter university con tests have considerably enlarged the athletic horizon. At Stockholm the United States team admirably organised and disciplined carried off a considerable majority of the athletic medals In many cases the struggle for the first two or three places was confined to the members of this team and in several instances the failure of the expected winner did not impair the American chances of victory On the other hand Finland besides doing well in feats of strength, produced the most remarkable long distance runner of modern times in H Kolehmainen, and yet even he in the most memorable race of the meeting over a course of 5 000 metres, was barely able to beat the French

¹ See also under United States below

runner, J Boum after running at his side for the whole of the distance. In the shorter races the Americans fully maintained their reputation for sprinting ability and practically had the issue at their mercy, although W R Applegarth for Great Britain showed exceptional speed In the subsequent English meetings of the year this runner achieved further distinction. On the whole the British competitors, who had shown little or no promise at their preliminary trials acquitted themselves better than had been expected. The ill fortune of G R L Anderson who might possibly have won the 120 yards hurdle race, but fell when well placed towards the end of the final heat was compensated by the victory of A N S Jackson in the 1 500 metres 4 high jump of b ft 4 in was accomplished by A W Richards USA and a long jump of 24 ft 111 in by Gutterson USA and excellent performances were shown in the weight putting and the throwing of the discus, Javelin and hammer, as well as in the hurdle race. Although the American team gained so large a proportion of the Olympic medals athletic ability of an exceptionally high order was forthcoming from several other countries The German runner H Braun like the Frenchman Bown was unfortunate in meeting men of phenomenal speed Sweden and Finland produced many fine athletes and Canada besides producing the winner of the 10 000 metres walking race Goulding did very well in the long jump and the hammer In the Marathon race two South Africans McArthur and Gitsham finished first and second showing but wonderful endurance of the topical heat

The previous best performances on record were excelled at Stockholm in the 800 metres (J E Meredith, USA 1 min 51 9/10th sec) and the 5000 metres (H Koleh mainen Finland 14 min 36 3/5ths sec) Meredith ran on and beat the half mile record in 1 min 52 sec and Kolehmainen ran 3 miles in 14 min 13 sec -or 4 sec less than 4 Shrubb s previously unbeaten time—in the course of his great exploit Perhaps how ever the most wonderful of the Olympic victors was James Thorpe an Indian from Oklahoma who easily won the pentathion and decathion His long jump was 23 ft 2 in his high jump 6 ft, and he cleared to ft 9 in in the pole jump besides running 400 metres in 51 /5ths sec 100 metres in 11 1/5th sec 1 500 metres in 4 min 40 sec and 110 metres over hurdles in 15 3 5ths sec, and throwing the javelin 155 ft

Other amateur record performances accomplished in the past two years may be men tioned here. In the pole jump M S Wright has done 13 ft 24 in. In the high jump (Horine has done 6 ft 8 in in the American Olympic trial. J P Jones at Cambridge Mass in May 1911 ran a mile in 4 min. 153 ser. or nearly 12 ser. faster than the British amateur record established in 190° and A kiviat at Harvard in June 1912 covered 1500 metres in 3 min. 554 sec. The hammer was thrown 187 ft 4 in. by M J McGrath (afterwards Olympic winner) in 1911. The Swedish javelin thrower C Lemming in September 1912 established the amateur record at 2013 ft for the right hand and 116 ft. 4 in. for the left. Olympic winner) in 1911. The Swedish javelin thrower C. Lemming in September 1912 established the amateur record at 205½ ft for the right hand and 146 ft 4 in for the left. At Herne Hill on May 20 1911 H V 1 Ross walked 11 miles in 1 hr 25 min 48 sec and surpassed all records from this distance to 17 miles (2 hr 18 min 29½ sec) S C. A Schofield walked 22 miles in 3 hr 9 min 48½ sec and 25 miles in 3 hr 37 min 6½ sec. At Kennington Oval in September 1912 W. R. Applegarth ran 1200 vards in 192 sec. and at Stamford Bridge a few days later the same runner covered 220 yds in 214 sec

The Amateur Athletic Championships of 1911 in Figland were undistinguished but in 1912 H. Braun in the half mile W. R. Applegarth in the 220 vds. G. H. Patching in the 100 yds. E. Owen in the mile G. R. L. Anderson in the hurdle race contributed to make the meeting one of more than average quality. An international university match took place in 1911 at Queen's Club West Kensington between a team from Harvard and Yale and another from Oxford and Cambridge. The Englishmen won by 5 events to 4. Cambridge won 6 events to 4 against Oxford in 1911 but the contest of 1912 resulted for the third time

in the history of this annual engagement in a draw each side winning 5 events

Aviation 1

With the advance of mechanical efficiency there came about in 1911 a transition from closed aerodrome contests to cross country races The Gordon Bennett race was the only important one held under the old conditions and it was won at Eastchurch by Weyman for the United States The European Circuit-1 x 5 miles of flight which included a start and finish at Paris and halts at Liege, Antwerp Brussels, Calsis, Lon don and Calais en route-was won by André Beaumont, with Garros second The ¹ See also Aeronautics p 339 et seg

circuit-of Britain race was also won by Beaumont, this time from Védrines, the total distance being about 1,000 miles In 1912 the principal events were the various inhitary aeroplane tests organised by the French German and British War Departments The Gordon Bennett race held at Chicago was won by Vedrines for France at a mean speed of 105 miles per hour Legagneux put the altitude record up to 18 767 feet. The hydro-aeroplane has been considerably developed and a number of competitions for it have been organised.

Badminton

A steady if not very great, increase in the number of clubs and players has been accompanied by a corresponding rise in the general level of proficiency. In the tactics of the players no change is observable. Success has attended what is called the 'back and front' game in mixed doubles but this depends on the ability of the lady to defend the net and of her pattner by means of great activity to take charge of the whole of the back of the court. The mixed doubles championship of the Badminton Association were gained in this manner by Mr. G. A. Thomas and Miss Larminie in 1911 and by Mr. E. Hawthorn and Miss Hogarth in 1012.

In 1911 Mr G A Sautter won the singles Messrs P D Fitton and E Hawthorn the doubles Miss C Douglass and Miss Orr the ladies double. In 1912 Mr F Chesterton won the singles Messrs G A Thomas and H N Merritt the doubles Miss Cundall and Miss Cowenlock the ladies doubles Miss I armine (Mrs Tragett) in both years won the ladies singles.

For Buseball see under United States below

Billiards

Since the prohibition of consecutive spot hizards and the push stroke English professionals have rehed chiefly upon the top of the table game. An innovation how ever was introduced in 1011 by George (ray a young Australian who repeatedly made huge breaks by means of a series of losing hizards from the red bail. In all he scored twenty four breaks of four figures of which the highest was 2 106. Gray invariably declined to play matches with ivory balls and these breaks were not made under Billiard Association rules. H. W. Stevenson though not at his best during this season beat M. Inman twice for the championship of the Billiards Control Club.

In January 101. Ccorge Cray met Stevenson and defeafed him in two games out of three of 18 000 up M Jaman beat I Reece for the Billiards Control championship

HAO Lonsdale tiid not defend his title of amateur champion and the cup reverted in 1911 to HC Viri. An alteration was made in the arrangements, the champions of England Ireland. Scotland and Wales meeting in competition in the finals.

Heland Scotland and Wales meeting in competition in the finals

H C Virr beat Major I leming by only seven points in 3 000 for the amateur champion ship in 1912. The influence of C ray's example was plainly perceptible in this competition in the use made of the losing hazard. A break of 1016 made by Stevenson in October 1912 in the course of a match with W. Cook is the highest yet recorded as having been achieved without series of spot strokes anchor cannons or long successions of losing hazards.

Bouls

In the summer of 101° a visit to England was made by a representative team from New South Wales which won 30 matches out of 54 played. They were very strong on fast greens in sunny weather but were unable to do themselves justice when during the latter part of their tour rainy days and dull grounds became the rule rather than the exception. In the international matches Scotland won against Ireland and England and England lost also to Ireland. A large extension of bowls as a club game, and of club and county matches has recently been noticeable.

Boxing and Pugilism 1

Though boxing is cultivated in many English public schools and has been encouraged in the British army and navy with the result that it is more generally practised and appreciated at present than ever before the standard of skill in England would appear to have fallen rather than risen in the past few years. The same thing is true of pro-

See also under United States below

fessional pugilists. English bantam and feather weights have fairly held their own but for weights above o st America and France dispute precedence The progress of boxing in France is worthy of particular attention French pugilists were at first trained by Lavigne, the American light weight champion who defeated Burge at the National Sporting Club and later by Erne, also an American The style of these men can be traced in their pupils of whom Carpentier and Ledoux have been most prominent Carpentier (b 1804) is one of the most promising boxers of the day. In spite of his youth he defeated the English middle weight champion J Sullivan, in two rounds at Monte Carlo, and easily accounted for two of the best English welter weights S Burns But he lost to F Klaus at Dieppe in the spring 1912 and in October to Papke in a fight for the middle weight championship. He is a boxer of polished style but not perhaps equal to some of his American rivals in in fighting and hard hitting Ledoux is a sturdy bantam weight who has both stamina and hitting power losing to Stanley the English champion he took his revenge decisively now much in vogue in France and may be said to have completely displaced the savate (la boxe Française) In England Bombardier Wells, a man of a remarkable reach of some 80 inches holds a heavy weight championship and the Lonsdale belt. He was not however regarded in 1912 as comparable to the heavy weights of the past such as Jackson Sullivan, Corbett and Fitzsimmons His victory over Storbeck a South African who in 1900 very easily won the amateur championship is the chief basis of his On the other hand in J Driscoll of Cardiff Great Britain is believed to possess the most skilful boxer of the day He has won the Lonsdale belt for feather weights three times in succession and has gained convincing victories in America but failed in an ill advised attempt to beat the light weight champion F Welsh who when insufficiently trained was defeated by Matt Wells an amateur ex champion result was reversed in November 1912 Stanley (b 1882) retains the bantam champion ship chiefly by his height and reach and the facility with which he is trained for a com Whatever else may be said of the heavy weight champion of the world the negro Jack Johnson he is well qualified by physique skill and quickness to compare with any boxer of the past but another American negro. Langford who in Australia twice beat Mclea without being hit, though at a disadvantage of $2\frac{1}{2}$ st and 4 inches of stature is perhaps even more wonderful as a boxer pure and simple

Box 1g has certainly suffered from the American use of rough tactics and clinching as well as by the price which 1s demanded by champions for their appearance in the ring Stipulations are made for a certain sum to be paid win or lose. In a match 1t Sydney Burns the loser received £6 000 and Johnson the victor £1 100. Difficulty has also been found in obtaining the services of qualihed referees. In the reaction provoked by excessive clinching what is called the clean break has been enforced in Australia and America with the effect of preventing quite legitimate in fighting.

The Amateur Boxing Association championships were won in 1911 by W. W. Allen (bantam weights) H. Bavers (feather weights) A. Spenceley (light weights). W. Child (middle weights) W. Hazell (heavy weights). Allen regained his title in 1912—the other winners in the same order of weights were G. R. Baker. R. Marriott. E. V. Chandler. R. Smith.

Bridge

A modification of the trick values in auction bridge has recently come into general use. The new values are as follows—spades 2 clubs 6 diamonds 7 hearts 8—likes " (or royal spades) 9 no trumps 10—The advantages of this method are that (1) speculative declarations of no trumps are discouraged, (2) the preponderating value of red suits diminished (3) a situation is brought about in which the declaring side is placed at a disadvantage—On the other hand it is objected that in the bidding the strength and na ture of the hands are often so thoroughly disclosed as to detract from the interest of the play

Chess

While the number of chess players and of professionals entitled to the rank of masters increases continually and international tournaments are becoming common events no very exact proportion exists between the demand for prize competitions and professional

exhibitions and the supply As a rule European tournaments receive so many applications from candidates that a selection is with difficulty made for the masters' contests and supplementary classes are frequently included in the programme. On the other hand in England, though amateur talent abounds and opportunities for using first class play are eagerly welcomed, professional chess is by no means abundant

Next to the veteran Blackburne Burn is the most prominent English master. France is not nowadays represented in masters tournaments but Russia is prolific of players of every digree and so are the Dual Monarchy and Germany. But it is the modern school fathered by Steinitz adopted by Dr Tarrasch and brought to perfection by Dr Lasker the present champion which has for some years been predominant. It is characterised by academic soundness rather than brilliancy. In the indecisive matches between Lasker and Schlechter and between Schlechter and Tarrasch the players permitted themselves no variety of opening or of tactics but were content with playing variations based on preliminary analysis and with avoiding enterprise or complications in the middle game unless forced upon them in some cases by exigencies of the battle. Of the younger masters Rubinstein who has been conspicuously successful has also of late years made sound position play his principal aim. Masters adhering to the romantic style (Morphy.) like the late Tenigorin and to a modification tempered to modern demands like Jinowsky. Mieses Spielmann and Marshall—in fact masters with an individuality of style and a capacity for producing interesting games—ave the game from degenerating into dull academic precision. Janowsky though he did not do himself justice in his match with the champion is at his best a player of commanding personality and exceptional strategic power. Mieses is distinguished by enter prie and taitual cleverness over the board. Spielmann is capable of producing specimens of both soundness and brilliancy. Marshall's daring verges on recklessness while on a high level of all round efficiency. Nie mzovitch has displayed considerable ingenuity and originality.

At the San Sebastian tournament in 1911 J. R. Capablanca a young player from Havina already famous having beaten Marshall in a set match accepted the place originally reserved for Dr. Lasker and won the chief prize from the leading players of the day. His style, though at times tempered to the exigencies of the score sheet was brilliant enough to cause him to be hailed as a new Morphy. It was hoped that he might be able to play a match for the championship but hitherto Dr. Lasker has declined his challenge under the plea of having been insulted by Capablanca in the wording of a counter proposition to some clauses of the conditions proposed for the match. In the meantime Dr. Lasker has accepted Rubinstein schallenge who of late has achieved several successes at San Sebastian Postyen and in the Ru. in Championship Tournament. Teichmann won the Carlsbad Tournament of 1911 in grand style, while Niemzovitch and Spielmann ran Rubinstein at San Sebastian very close Off younger masters Russia may boast a beyv of whom Alechin is the best while young Breyer of Budape t promises to take high rank among the masters of the day.

Coaching and Driving

Undoubtedly the advent of the motor car has caused a great diminution in the number of horses kept solely for driving. In London, in every continental European town and in the cities of the United States mechanical traction has practically taken the place of the horse. But motor cars are still beyond the reach of the countryman who drives a gig, and of the small suburban tradesman who sends out his wares in a horse drawn vehicle. In Great Britain few people now breed harness horses except those of the hackney breed, the best of which are of considerable value not only for the show ring but because there still exists a small and wealthy public which will pay highly for possession of the smart stepper. The breeding and exhibiting of harness horses possessed of high action both in England and America is now quite a business but it is confined to a not very large number of enthusiasts and is in no way a national affair. In the United States there are the trotters and the standard bred horses and both these breeds are in a flourishing condition, and not in the least likely to undergo a slump

The pastime of driving as is only natural with the motor car so much to the fore is in the hands of a few but in London and its neighbourhood there has been in the last four or five years a considerable revival of four in hand driving due in a great degree to the institution of the International Horse Show at Olympia and to the establishing of the Coaching Marathons and Corinthian Cups. These contests one of which attracted as many as twenty teams have shown that the coach horses of the present day are better and more valuable animals than those of past generations and that the art of driving four horses has by no means been impaired. Indeed the good whip of the present day has to contend with increased traffic everywhere and with such fresh varieties of road users as the traction engine the trancar the motor bus and the taxicab. Yet the driver of horses can hold his

own and this also applies to those who have charge of the public coarbes in which direction there has been some revival both in Great Britain and the United States. All over the world the best harness horses are better and more valuable than they have ever been before, though it is certain that m most countries their numbers are decreasing

Coursing

Competition between greyhounds of different countries is attended with almost insuperable difficulties Australians from time to time have sent dogs to the Waterloo Cup, meeting with but little success—perhaps through the effect of the long sea voyage Coursing has become popular in France The French Greyhound Club has leased a fine ground at Tremblay near Paris, where many meetings are held every year Having purchased some of the best English blood for breeding purposes. French coursers are naturally anxious to send dogs to Altcar and have more than once approached the Board of Agriculture and Fisheries in England with a view to the relaxation of the quarantine regulations On the other hand English greyhounds are frequently sent abroad even to countries as distant as Argentina where many meetings have been held and it is very rarely that they do not prove their superiority. In France for instance the majority of the stakes have been won by English bred dogs Nevertheless some British breeders believe that the dogs now produced, while possessing speed are defi cient in stamina, and one breeder at least has decided to make the experiment of cross ing with the Afghan hound a slow animal remarkable for staying powers. One of this breed was imported by Lieut M H Lucas of the Indian Army (37th Lancers) who bought him from a caravan of Afghans passing through Zhob Baluchistan now at the stud in Northumberland and the career of his produce will be watched with The pre eminence of the English greyhound has been proved in Hun gary where coursing or at least the pursuit of the hare with greyhounds has been practised from time immemorial The typical Hungarian dog was undoubtedly slow but he was endowed with wonderful courage and before the National Coursing Clubs (England) rules were adopted, the most sought after greybound was the one that could bring his hare down no matter what obstacles he might be called upon to negotiate Since those days the Hungarian coursers have imported many English dogs and the result has been highly interesting for the reason that few stakes are won but by an Figlish bred dog or one possessing English blood Coursing has also been taken up in Russia with the support of the Grand Duke Nicholas on whose estate at Perchino about 200 miles south of Moscow meetings are regularly held

No other coursing event of importance in the world is held under such conditions as the Russian Waterloo Cup. After the snows have disappeared the sin everts such power that coursing during the day is out of the question. It is therefore nece sary that a start should be made at about two o clock in the morning or as soon as there is sufficient light, and as a rule eighty courses are decided before nine o clock. In 1911 Dendromys, the winner of the Barbican Cup in England was purchased by the Grand Duke Nicholas, and he was beaten in the final by Flower Glen, also English bred. In 1912 Bachelor's Ball II a prominent performer in England and runner up for the Barbican Cup, was secured by Count Cheremeteff, and won the Russian Waterloo Cup defeating Thekan in the last round. Thekan was bred in Russia but is by Prince Plausible who ran second for the Waterloo Cup at Altear in 1905. The borrous are frequently tested in Russia with hares. It has been held in many authorities that the English grey hound would beat the borzous if entered to wolves being certainly much the quicker, while possessing quite as much courage but the Russian dog has a great advantage in weight. In addition to the stakes for grey hounds at the last meeting held in Russia by the Grand Duke Nicholas there were several events for borzous. Considerable interest was attached to the English Waterloo Cup both in 1911 and 1912

owing to the fact that puppies played so important a part. In 1911 the winner and runner up were in their first season. Sir R W B Jardine's Jabberwock by Bachelor's Acre from Forrester's Favour beating Mr P Storey's Silk and Scarlet by Earl's Court from (ay Feather in the final and in 1912 Mr E. L. Townshend's Tide Time by Friendly Foe from Fast Waves beat another puppy in Mr F Alexander's Adversary by (lenfield from Alternative.

Cricket

For more than two years past public attention has been concentrated on international cricket. The visit of a South African team to Australia in 1970-11 served as

a prelude to the so called trangular tournament of 1912 and in the meantime an English team under the management of the Marylebone Cricket Club carried through a wonder

fully successful tour in Australia in 1011-12

The South Africans in Australia hardly did as well as had been expected was considered to be chiefly in their bowling but they were disappointed by the inability of A E Vogler on whom much reliance was placed to do justice to his reputation. On the other hand they found Australian batting in its prime. In eleven a side matches as many other hand they found Australian batting in its prime. In eleven a side matches as many as fifteen Australian batsmen averaged more than 30 runs an innings against the South Africans and eleven of them more than 40 runs. The most formidable were V. T. Trumper who exceeded 75 runs an innings and in Test matches averaged 94.57. W. Bardsley W. W. Armstrong C. Kelleway C. G. Macartney and V. S. Ransford. The Australian bowling was of no very high quality though W. J. W. Hitt was very consistent and H. V. Hordern who was able to match the South African googly bowling with a similar tyle had a great share in winning two Test matches. For the South Africans G. A. Faulkner besides bowling well batted with wonderful certainty failing in none of the Test matches to make at least too runs in the two innings. The South Africans won the third Test match by 18 runs at roo runs in the two innings. The South Africans won the third Test match by 38 runs at Adelaide but they lost the remaining four and they were also beaten once by victoria and

twice by New South Wales Three of the twenty two matches were drawn
The tour of the M C C team was extraordinarily successful Of 18 eleven a side matches the first Test match placed at Sydney alone was lost four were drawn and 18 including four Fest matches were won The strength of the English team was found principally in the bowling of Barnes and F R Foster Both these bowlers are above medium pace and of great accuracy Barnes has a fine command of the leg break with the other break as a variation and Foster while often causing the ball to swerve in the air has a remarkably quick rise from the pitch and on that account is well suited by fast wickets. The batting of Hobbs Rhodes Woolley G. Guin and J. W. Hearne contributed much to the success of their side while J. W. H. T. Douglas who acted as captain was of value both as a resolute and patient batsman and as a fast bowler of great precision and a mastery of the swerve Douglas who took up the captaincy on P F Warner being in apacitated early in the tour by scrious illness distinguished himself by his correct judgment and his unfailing presence of mind in the important matches. The batting of Hobbs has never been excelled in Anglo Australian contests Invariably sent in first he played innings of 187 178 and 1.6 not out in It t matches. His first wicket partnership with Rhodes in the fourth match at Mel bourne amounted to 3.3 runs—the greatest first wicket partnership for a Test match—and the whole innings aggregated 589. The fifth match was won after the English team had been 144 runs in arrears on the first innings. The Australian bowling again seemed to be less dangerous than in previous years, but H. V. Hordern was always formidable. He had a principal hand in winning the first match for Australia and took five wickets in each innings of the last match

At the end of 1910 a team sent to South Africa by the M C C won two and lost three Test matches In spite of the brilliancy of Hobbs the batting was weak on the whole and it could not cope with the bowling of G. A. Faulkner and Vogler, who took 65 out of 85 wickets. Faulkner was also by far the best of the South African bat, men, having an average

ot 60 55 runs in the Test matches to the 67 57 of Hobb In consequence of the exceptionally bad weather of the summer of 1912 the Triangular Tournament in England was a complete failure. From the first the South African team was unlucky several players and notably Faulkner being at one time or other more or less incapacitated while they also seemed to be more adversely affected by the slow wickets than their opponents. They were without the assistance of Vogler. On the other hand Australia was unable to send to Figland a representative team. A dispute in which several of the foremost players were at variance with the Australian Board of Control prevented the inclusion in the party of Trumper Hill Arm trong and Ran ford The weather however did not permit a convincing trial of strength between the English and Australian teams. Of three matches arranged only one was finished, and that one was much interrupted by rain being concluded with difficulty in four days at the Oval on a treacherous wicket decisively won by England, who had the advantage of greater experience of such conditions and bowling much better suited to them England defeated South Africa at Lords Leeds and the Oval and Australia had two easy victories at Manchester and Lords Throughout this series of matches sudden spells of successful bowling were surprisingly common. In more than one of these Pegler (South Africa) was concerned and it was currous that his periods of effectiveness would occur without any apparent cause when the batting had for some time been more or less dominant. In the first match between South Africa and Aus tralia at Manchester J T Matthews (Australia) performed the hat track in both imings—an unprecedented feat Pegler took six England wickets at Leeds for 16 runs when 308 had been scored for four wickets G R Hazlitt (Australia) against England at the Oval closed

A team of Indians visited England in 1911 and played 14 matches losing ten but beat ing Leicestershire and Lincolnshire Lord Hawke took a team to Argentina in 1911-12

A new method of deciding the English County Championship was fried in 1911 and although not giving general satisfaction was retained in 1912. With the idea of discouraging the players from aiming at drawn matches five points were given for a win and three points with one point to the losing side) for a first innings victory. This purely arbitrary mode of reckoning which had for some time been the rule of the minor counties assisted Warwickshire to win the championship in 1911, but they probably also profited by having no matches with some of the strongest counties. The fast wickets were favourable to several of the Warwick shire batsimen and still more to the bowling of F. R. Foster and Field. Kent would have been first according to the old reckoning. Middlesex were third and Lancashire fourth. In 1912, the wet wickets were adverse to Warwickshire but suited Northamptonshire whose eleven showed great improvement in batting. This county was second to Yorkshire who had a strong team several of their younger professionals assisting materially in their success. Kent took the third place and Lancashire to fourth.

Kent took the third place and Lancashire the fourth

The Jam Sahib of Nawanagar (Ranjitsinjhi) played in several county and other first class matches in 1912 and showed that he had lost little or nothing of his old skill in batting Oxford beat Cambridge in 1911 through the excellence of P R LeCouteur's slow bowling which was of varied style but was classed as belonging to the googly order Cambridge won a very close match in 1912 largely by the fine all round play and captaincy of E L Kidd

Eton in both years won against Harrow

Good fast bowling is scarcer than ever in first class cricket. Many bowlers have cultivated the delivery of the swerve the ball being so held that the seam, while rotating vertically less a little to the right or left of the line from bowler to wicket. The googly, has made little progress though it was effectively used by H. V. Hordern in Australia. The plan of bowling at the leg stump or even at the batsman's legs, originated by Hirst, has been perfected by other left handed bowlers notably Dean and F. R. Foster. In batting back play and on side hitting are prevalent and the right foot is shifted without compunction. In consequence of these developments the setting of the field has transcended all the old customs and positions are assigned for which the game has no vocabulary.

Croquet

One of the causes to which the decline—amounting almost to extinction—of croquet was attributed some thirty years back was the modification of the conditions of the game to suit the requirements of the most skilful players. When the 32 in hoops were introduced the game became too difficult to be popular. The same difficulty has been reasserting itself For many years the Croquet Association has been continually revis ing its laws to meet the increasing skill of the foremost players—nowadays by no means a small class The small hoops no longer constitute any serious obstacle to the making of long breaks In spite of the provision of baulks ' in order to secure an open shot for a player as soon as his opponent has finished a turn it is realised that the player who first gets possession of the balls has the chances overwhelmingly in his favour laws committee of the Croquet Association has been discussing several proposals for making the game more difficult The most favoured of these are (1) playing with either ball of the side (2) the reintroduction of a cage in the middle of the ground, (3) the turn to cease if any ball is sent off the ground after the first croquet has been made The tactics of croquet have undergone but little change of late except that the best exponents (and there is nothing which now shows the quality of a player more than the way the balls are left at the finish of a turn) almost invariably go out for a break thus following the example of the present champion Mr C L O Callaghan -and that the art of peeling "-especially in handicaps-is greatly on the increase

The principal competitions of 1911 and 1912 resulted as follows —Open championship (1911) E. Whitaker (1912) C L O Callaghan ladies championship (1911) Miss E Reid (1912) Miss Simeon gentlemen's gold medal (1911 1912) C L O Callaghan ladies gold medal (1911) Miss N S L Gilchrist (1912) Lady Juhan Parr champion cup (1911) H Maxwell Browne (1912) P D Matthews ladies champion cup (1911) Mrs R (J Beaton (1912) Miss D M Standring

Curling

The winter of 1910-11 was soft that of 1911-12, after beginning badly later afforded excellent sport. During the latter part of January and the first week of February 101 there was unique activity both in Scotland and Switzerland, and at the same time the Scotlish team in Canada reached the climax of their tour at Winnipeg.

In Scotland, for the second time since 1903 at was possible to hold the Grand Match

Though it was necessary to wait till the ice was five inches thick before announcing this event and though considerable notice had to be given yet the ice held long enough to enable 2000 players to take part at Carsbreck on February 2. A usual the South beat the North The International Match (England v. Scotland) fixed a day too late was spoult by the weather. It had not been played in the open since 1907. The rinks or at least their skips were deliberately selected making the match genuinely representative a place in the team having hitherto depended on inclination to enter and luck in the ballot. After several English victories (including 1911) Scotland won in 1912 at Craigielands Loch by an average of six shots a rink over 24 rinks. Curling lacihties have been multiplied not only by the use of sprinkled asphalt rinks but by the opening of ice palaces in Edinburgh and Aberdeen

In Switzerland curling has increased in popularity it being possible to play in milder weather than suits most other winter sports. The centre of chief activity has moved from the Fngadine to the Oberland partly because of Grindelwald's victories in the Jackson Cup in 1911-12 necessitating the competition being held at Grindelwald (instead of Davos or St Montz) until they lose it. In the International Bonspiel Mr. McGeoch's Manchester rink

won in 1911 and 1912

During their tour in Canada the Scottish touring team lost by 16 47 61 and 31 shots on six rinks in their four international matches—an average of six shots a rink

Cycling

Interest in bicycle racing was maintained with difficulty during 1911 despite the continued increase in the use of the bicycle for utility and recreation. The World's Championships held at Rome early in June resulted in the Englishmen. Bailey and Meredith winning the one kilometre and too kilometres amateur contests, and Ellegard winning the kilometre professional race. In 1912 the World's Championships held at Chicago resolved themselves practically into duels between American and French professionals out of which Kramer, the United Statis represent time emerged successful. The fact that the cycling contest at the Olympic Games was a road race gave a great fillip to that form of the sport and led to quite unexpected results. As the leading road racing country England was looked upon as the inevitable winner but anticipations were entirely falsified for Lewis a South African accomplished the fastest time and the Swedish team (Friborg Malm and Persson) placed their country first. The race however, was greatly influenced by the order of the draw for places.

Motor cycling made great progress in 1911 but mostly in Great Britain Germany being a fair second. The only international events of sporting importance were the Tourist trophy races held by the Auto Cycle Union of Great Britain in the Isle of Man on June 30th and July 3rd. On the former date Evans won the junior event for engines of less than about 3 H P. and on the latter Godfrey won the senior race in which the power practically was limited to about 4 H P. The expansion of motor cycling in 1912 was much more rapid, and general and international contests are likely to be multiplied. The chief sporting events however were again the Tourist Trophy races in the Isle of Man. The junior event was won by Bashall and the senior by Applebee. The chief mechanical development of the year was the evolution of the cycle-car—a four wheeled motor cycle which formed the feature of the London Olympic Motor Cycle Show in November 1912.

Fencing

For the advancement of international intercourse it is desirable, as recent events have demonstrated that an effort should be made to assimilate both the rules and the accepted canons of foil and epic fencing as practised in different European contests For instance the rule as to the 'target' adopted by the Swedish committee was regarded in France as so unsatisfactory that, by way of protest, no French team was sent to Stockholm for the Olympic contests, nor in fact was France even represented in the epée and sabre competitions. The Italians also declined the epee matches because the longer weapon which they affect was not admissible. In the French rules the upper part of the sword arm is assailable. The new rule adopted by the Amateur Fencing Association, but not yet applied to the foils championship counts hits on the upper part of the sword arm, if in the judge's opinion it has intercepted the point when this would otherwise have reached the chest.

completely excluded except that the jury could count a hit on the head arm, or hand as valid, if the recipient had effaced the target by adopting an ungainly or irregular position or instead of making a parry, covered the target with head, arm or hand Much of the fencing at Stockholm was open to the charge of being rough and ungainly The gold medals were won as follows individual foils N Nadi Italy individual epée P Anspach Belgium individual sabre, Fuchs, Hungary The épee team contest was won by Belgium with Great Britain second, and Holland third, the sabre team by Hungary with Austria second and Holland third

The Grande Semame of 1911 was held in Rouen instead of Paris France retained the International Cup by beating Belgium (24–18) and Great Britain (26–12) In the Osterd week Great Britain beat Holland (15–14) but lost to Belgium (16–11) and France (17–11) A representative British team for the first time took part in the sabre contest and did well losing to Bohemia who took the first place (5–4) Holland (5–3) and Belgium (4–2) No British team could be sent to the Grande Semaine of 1912 on account of the Olympic Games France beat Belgium for the International Cup (22–18) Baron de Evide carried off the épée championship and Lieut Perrodin the sabre championship With the épée at Ostend France beat Belgium (16–11) and Great Britain (22–5) With the sabre Belgium defeated France and Italy and France defeated Italy M Gravier France was first with the epée M Hennet Belgium with the sabre

The British amateur foils championship fell in 1911 to E M Amphlett in 1912 to P G Doyne after a tie with G R Alexander R M P Willoughby and P M Davson The amateur épée champion of 1911 was J P Blake in 1912 the title fell to R Montgomerie W Hammond sabre champion of 1911 was replaced in 1912 by Captain C Van der Byl Miss G Daniell won the ladies championship in 1911 and 1912 after fighting off with Miss J Johnstone in 1911 and with the Misses C A Walker and A B Walker in 1912

Football 1

The Rugby Game —Although no distinct new phase has lately been observable in the manner in which Rugby football is plaved the method of attack by means of con certed runs by half backs and three quarter backs becomes yearly more indubitably The play of the forwards is subordinated to this leading idea when the ground and the weather make the passing of the ball extremely difficult while enhancing the effectiveness of dribbling the same style of play is generally attempted and often with some success. On the other hand, as the counter moves are better understood, the attack has been varied by the artifice of kicking across the ground and the forwards get some opportunity of using their skill in dribbling in the scrambling play thus brought about So much depends on the first possession of the ball in the scrummage whether for the purpose of heeling or wheeling that various tricks and manoeuvres have been attempted By an improvement on the tactics of the famous New Zealand team the forwards on forming a scrummage sometimes bring up a man suddenly into their front row on the side nearest to the player who is about to put the This forward being unobstructed is said to gain the 'loose head and is at an advantage in getting the ball with his feet. In order to check this trick the International Board has declared that the ball is not fairly in a scrummage until it has passed a player on each side It follows that the leading row of forwards must contain at least two if not three players though no rule exists to this effect also that the out side forward who has the first chance of playing the ball may be penalised if he does so for preventing the ball from being fairly placed in the scrummage This consequence though logical is not universally accepted. By new legislation penalties have been enacted for wilful knocks-on and throws-forward, and for wilful throws into touch

The Rugby game though exceedingly popular in some districts has lost ground in the west of England and even in South Wales through the rivalry of Association football. Its progress in France however has been unchecked. Early in 1911 a French team for the first time was victorious in an international match beating Scotland in Paris. French players are remarkable for impetuosity speed and quickness in starting which last quality makes them strong in defence. In the same season Wales beat England Ireland Scotland and France, Ireland beat England Scotland and France England at Twickenham beat Scotland and France. In 1912 all the international matches that took place in the United Kingdom

¹ See also under ' United States below

were won by the fifteen playing in its own country. England defeated Wales and Ireland but narrowly lost to Scotland. Ireland beat Scotland and Wales and Wales beat Scotland In no match was France victorious. The University match went in favour of Oxford in 1910 and 1911 the disablement of a Cambridge three quarter back B R Lewis apparently turning the scale in the first match. Cambridge won by 2 goals to a try in 1912. Rugby football was omitted from the Olympic programme at Stockholm. A strong South African team began a tour in C reat Britain in the autumn of 1912. After gaining several decisive victories over countries the South Africans lost to Newport were with great difficulty victorious over Llanelly the United Services and London beat both the universities were narrowly beaten at Twickenham by another London fifteen and easily beat Scotland at Edinburgh avenging the defeat sustained by the South African team in 1906. They next gained their most dictive victory at Dublin securing 36 points against Ireland and beat Wales by a try at Cardiff but lost to Swansea by the same margin.

Association Football -The wide dissemination of Association football not only in Europe but also in the other continents is illustrated by the fact that a tour was under taken in Brazil in 1910 by the Corinthian F C and another in North America in 1911-There are now many clubs in Argentina Uruguay Brazil and Chile Amateur international football has been affected by a dissension among English clubs dating from In consequence of the Football Association insisting upon the admission of professional clubs (so called) to the district associations a large number of amateur clubs including the University College and public schools clubs seceded to form the Amateur Football Association The officers of the army while sympathising with the seceders, considered it advisable for the sake of regimental football to retain their con nection with the Football Association. But in 1911-1 they used their influence to promote a reconciliation. A conference was held at which the delegates of the two associations only failed to arrive at an agreement because the older body would not accept an arrangement by which the younger could receive the adherence of newly formed amateur clubs The Federation Internationale de Football Associations com manding the support of most of the countries of Europe including the Football Associa tion is necessarily cut off from intercourse with the Amateur Football Association This however is in alliance with the Bohemian Football Association and with many French clubs belonging to the Union de Societes Françaises de Sports Athletiques

International matches played by England with other countries are no longer representative of English amateur football. The A F A although allowed a representative on the British Olympic Council was debarred from sending an eleven to the Olympic Games Nevertheless an amateur team organised by the Football Association was able to win the Olympic trophy beating Denmark in the final round by four goals to two after easier victories over Finland and Hungary. The Holland eleven gained the third place. The matches were played in very hot weather in July. The playing strength of the English Football Association is largely professional and therefore cannot be exhibited in contests with continental players though occasional visits to the continent have been paid by professional teams. The amateur elevens of the Football Association won matches with Wales Belgium France and Holland in 1910-11 but lost to Ireland and could only draw with Germany. In 1911-12 besides their victories at the Olympic Games they defeated Ireland Wales Denmark Holland and Belgium. The Amateur Football Association teams were consistently victorious beating Wales and France in both seasons and in October 1911 winning a close match with Bohemia in Prague by 2 goals to 1. The full representative elevens of the Football Association defeated Ireland and Wales in 1911 and drew with Soct land. Ireland lost to Wales and Soctland and Soctland drew with Wales. In 1912 England and Soctland again played an indecisive match but both beat Wales and Ireland. Wales lost three matches. As an entertainment professional football is as popular as ever. More than 127 000 spectators attended the England v Scotland match of 1912 in Glasgow. The Football Association Cup was won in 1911 by Bradford City after a drawn match with New castle United in 1912 by Barnsley after a drawn match with West Bromwich Albion. The championship of the Football Association was won in 1911 by the Old Malvernians in 1912 by Oxford City. The Arthur Dunn Cup for public school clubs fell to the

Golf

By the introduction of the rubber-cored ball a phase in the evolution of golf was initiated which cannot yet be safely said to have culminated. The ingenuity of invent ors has supplied balls with heavy cores of various materials, and these are tightly bound with rubber thread and an outer casing of gutta percha. A small ball of high specific gravity combined with great clasticity is now in general use and is of course found partic ularly advantageous in a strong adverse wind. Not only have clubs and courses been modified to meet the development of the ball but attempts have been made to obtair a reversion to the 'gutty'" or at least the adoption of a standard ball for important competitions A memorial addressed to the committee managing the British amateur championship in 1912, though signed by a large number of leading players, failed to effect a reform because the committee did not consider itself to be competent to pass what amounted to a legislative measure There is a consensus among the most authoritative professionals, as well as amateurs, concerning this question. It is held that the new ball does not sufficiently penalise and in fact does not invariably penalise to any extent the not quite perfectly delivered stroke. In this way it directly impairs the game as a test of skill Indirectly the action of luck is favoured by the elaborate hazards with which courses are often embelished and the somewhat fantastic slopes given to putting greens in order that they may not be too easy. It is further argued by Vardon and other teachers that an undesirable kind of stroke is fostered by a ball which when driven low and 'pulled" can be made to travel a great distance after pitching On the other hand it can hardly be maintained that the worse player is enabled habitually to defeat the better and it is undeniable that the majority of golfers would be reluctant to aban don a ball which appears to flatter their skill. The rubber cored ball indeed may be credited with much of the universal popularity of golf. In America the wonderfully rapid spread of the game has induced municipalities to lay out public courses, of which the long course in Jackson Park, Chicago—one of four belonging to the city—may be taken as an instance

International intercourse is encouraged by open championships. After winning the Briti h amateur championship in 1911 Mr Harold Hilbon succes fully essayed to carry off the amateur championship of the United States He was less fortunate in 1912 when the competition took place in very hot weather and Mr J D Travers won The American open Tournament was gained in both years by J J M Dermott The French amateur champion ship was captured by Hon M Scott M Castel being the foremost native competitor but ship was captured by Hon M Scott M Castel being the foremost native competitor but in spite of an invasion of British champions—Ray Vardon Taylor and Braid among them—a French player Jean Gassiat of Chantilly was first in the professional championship of 1912 at La Boulse with a score of 289 for four rounds of the course. A competition at Baden Baden for which the title of championship of Germany was assumed attracted a number of British and French professionals and ended in Taylor beating Ray after a tie. H Vardon was the British champion of 1911 E Ray of 1912 and Vardon in the latter year beat Ray in the final round of the News of the World competition. Mr John Ball supplanted Mr Hilton as amateur champion winning the title at Westward Ho in 1912 for the eighth time in his unparalleled career. The laddes championship which fell to Miss D Campbell in 1911 was won at Turpberry in the following year by Miss Gladys Rayenscroft. Of the many noteworthy additions which have been made to the literature of the game it must suffice to mention The Royal and Ancient Game of Golf by H. H. Hilton and Gordon

must suffice to mention The Royal and Ancient Game of Golf by H H Hilton and Gordon

G Smith (1912) The Book of the Links edited by Martin Sutton (1912) How to Play Golf by Harry Vardon (1912) The New Book of Golf edited by Horace G Hutchinson (1912)

Hockey

Scarcely a year passes without some small alteration in the laws of hockey if it be only the regulation of flag posts which are now obligatory. They must be four feet in height and must be placed at the centre points of the side-lines and at the corners of the round one yard outside the line. In the 'hully 'each player must strike the ground firshis own side of the ball and his opponent's stick alternately. Some latitude has been are rided to the goalkeeper who except in a penalty bully is allowed to kick the ball them n the circle and is not penalised, if, when he has stopped the ball with his hand, it Francisco so as not to fall perpendicularly to the ground. It is no longer necessary in isong a corner hit for an attacking player to make the ball absolutely motionless

Though hockey is largely played in several European countries it was excluded from the Olympic Games at Stockholm To repair the omission a tournament was held at Hamburg in October 1912 but this was only partially successful as but four teams took part in it. An English team found strong opponents in a German team but defeated it besides easily accounting for an Austrian contingent In 1911 England beat Wales (7–0) Scotland (5–0) France (4–0) and drew with Ireland (2–2) In 1912 England beat Wales (6–3) Ireland (10–3) and France (9–1) but lost to Scotland (1–2) Though Scotland defeated England for the first time Ireland beat Scotland (1–0) and Wales drew with Scotland (2–2) Cambridge won the University match in 1911 (4–1) but lost in 1912 (1–3)

won the University match in 1911 (4-1) but lost in 1912 (1-3)

Ice Hockey so popular in Canada is increasingly plaved on the Continent of Europe
In 1909-10 a team composed of Canadians at Oxford took part in a tournament at Les Avants
and they have since made an annual tour through Europe during the Christmas vacation
visiting Belgium Germany Bohemia Austria Switzerland France On their last tour
they noticed a vast improvement in the standard of play In December 1911 and December
1912 Cambridge teams beat Oxford teams at Murren by 2-0 and 1-0 respectively Inter
national tournaments are frequently held at Swiss winter resorts but the contesting teams

are rarely representative

Horse Racing

The most important changes which have occurred in connection with international turf matters of late are the suppression of racing in nearly every part of the United States (see under United States below) and the extraordinary rise in the value of blood stock in the Argentine Republic Doubtless there was room for improvement as regards the great meetings formerly held in the Northern States of America and it is generally thought that some of the laws forbidding the meetings may be rescinded at an early date Meantime there has been a fall in the value of thoroughbred stock in the United States and valuable English and French stallions which had been sent to Ameri ca at big prices not many years ago have now been brought back to Europe, while a fair number of American bred yearlings are also imported to England and sold by auction at Newmarket every year. The breeding industry in the United States is quickly dy ing out but would be even more quickly resumed if racing were once more legalised In the Argentine Republic four figure yearlings are even more common than they are at Doncaster and yet in September 1919 Messrs Tattersall sold by auction at the annual Doncaster sales yearlings of the value of £110 000 In every part of Europe the value of the highest class of stallions has enormously increased and now the posses sor of a really great performer can always be sure of £30 000 and more if he desire to sell In other respects the English turf is pursuing the even tenour of its way. Every year there are more runners and more money to be run for and though it is only occasional ly that horses of the very highest class are forthcoming it is probable that the average standard of excellence is thoroughly maintained. On the continent of Europe and especially in France Germany and Austria the thoroughbred flourishes and racing becomes more popular everywhere but whereas in France there is every encouragement for the long distance runner the tendency in England is towards the development of speed and important long distance races are by no means numerous

The form of the most prominent horses on the English turf during the season of 1911 was more consistent than in 1912. In the first place, Sunstar, by Sundridge Doris, held his own against the best of the three year olds, and it is probable that he would have won the three leading events of the year but for breaking down after taking the Epsom Derby. He carried off the honours in the Two Thousand Guineas and the most important race of the year at Epsom after which he was sent to the stud much to the regret of his owner who was justified in the hope that the colt would win the so called triple crown. In consequence of Sunstar's inability to compete in the St. Leger this race at Doncaster was deprived of much of its usual interest and Mr. T. Pilkington's Prince Palatine by Persimmon Lady Lightfoot won easily from what was undoubtedly a mediocre field of opponents. A note worthy incident in connection with the leading three year olds of 1911 was that Stedfast the second in the Epsom Derby and Prince Palatine the winner of the Doncaster St. Leger should have provided some of the most interesting racing of 1912. As a matter of fact, the meetings of Stedfast and Prince Palatine were the leading features of the season and it was a moot point which was the better four year old. The exciting racing provided by these two horses was very welcome especially as the three year olds in 1912 ran in so inconsistent a manner that in no case was any outstanding ment shown. Tagalie a grey filly by Cyllene-Tagale after securing the first place in the One Thousand Guineas won the Epsom Derby,

a performance which led many excellent judges to the belief that she was likely to prove an exceptionally smart raceborse, but she failed unaccountably in the Caks a race after her Derby victory, considered to be at her mercy. It was remarkable that in the Derby Tagalie led all the way and west with such ease that stamma was considered to be her strong point the Cake she led for a part of the course and then failed to stay finishing last. Tagalie yet in the Cake she led for a part of the course and then failed to stay finishing last. Tagalie also ran in a very disappointing manner in the St. Leger which was won by Tracery who had finished third to her in the Derby. It may be mentioned that Tracery was bred in America, as also was Sweeper II the winner of the Two Thousand Guineas. The former was however of English parentage During the season of 1912 as many as eight owners won over £10 000 each in stakes, Mr T Pilkington mainly by the aid of Prince Palatine heading the list with £20,822 and Lord Derby coming second with £17 333.

Hunting

British fox hunting still holds its own, in spite of such modern developments as barbed wire increase of railways, excessive pheasant rearing and the greater cost of maintenance of hunt establishments. In some districts the scene of operations of various hunts has been curtailed owing to the expansion of the country towns to the institution of small holdings near the towns and to the fact that coal mining has greatly extended But nevertheless every part of the country where hunting is possible has its pack of hounds whether they be forhounds staghounds harriers or beagles and everywhere there are more people hunting every year while the great expansion in the size of the fields is chiefly caused by the ever increasing number of ladies who hant In this connection it can truthfully be said that there are a dozen lady forhunters for every one that followed hounds a generation ago. I oxes are more plentiful than formerly hounds are faster, and much of the hunting especially in the most famous countries is carried on at a higher speed than formerly. This means that hounds are taken from one covert to another at a canter that there is no dawdling between the hunts and that-at times-hounds are unable to do justice to their own hunting powers, because of the crowd pressing on from behind

Great Britain still takes the lead in foxhunting but many hunt clubs have been estabhashed in the United States in recent years there are in France over 300 hunts the quarry for which is deer wolf hare and occasionally fox and in the British colonies and in India hunting is carried on wherever it is possible. The price of the best English foxhounds has risen enormously and good hunters are only to be secured at high figures.

Lacrosse

It is generally held that the use of the lighter crosse with less rigid strings, introduced by Canadian teams into England a few years back has made lacrosse a less difficult game to acquire and has improved the general quality of team play. In the north of England several clubs have attained a high standard of attack play but defence seems to have slightly deteriorated mainly through the disuse of the body check and this may tell against English sides when international matches are undertaken

The north of England is still uniformly superior to the south The North and South match in 1911 and 1912 produced the identical score of 16 goals to 7. The Stockport Club having won in both years the Northern Flags beat Lee in the Club Championship by 15.5 and 18-8 and the County Championship was twice taken by Cheshire. The runners up to Stockport in 1911 were the Old Hulmeians, who lost only after a tie in 1912 Albert Park were beaten in the final by 7 goals to 3. For the Southern Flags Oxford University fought out the final match with Lee in 1911, and West London reached the final in 1912. The University match of 1911 was won by Cambridge at 8-3 in 1912 Oxford won at 9-4. The competitions among the professional clubs of Canada ended in Vancouver winning the Minto Cup in 1911 after having beaten the holders (New Westminster) and the champions of eastern Canada (the Tecumseh team). In 1912 New Westminster regained the Cup defeating Vancouver and Victoria and then easily answering the challenge of Cornwall The Manx Cup for amateur lacrosse is held by the Vancouver Athletics who in 1911 beat Torponto Juniors and in 1912 defeated Winniper (champions of the north west) and St match in 1911 and 1912 produced the identical score of 16 goals to 7 The Stockport Club

Toronto Juniors and in 1912 defeated Winnipeg (champions of the north west) and St

Catherine (champions of the east)

Lawn Tennis 1

In the countries where good turf is not generally available lawn tennis is satisfactorily cultivated on hard courts The covered court form of the game was recognised by See also under *United States below

inclusion in the Olympic programme in 1908, and the existence of a good covered court in Stockholm enabled similar competitions to be carried out in 1912 Further, an open covered court championship has been instituted in Paris French and German players, who are now able to hold their own with British champions on grass, have proved them selves superior in the hard court

In Paris O Frontzheim carried off the French championship in singles, and (with O Kreuzer) the doubles A. H. Gobert took the Olympic medals at Stockholm in singles and doubles partnered by M. Germot, although the British champion A. F. Wilding competed as the representative of New Zealand. Gobert visited London and won the Covered Court Championship in 1911 and 1912. In the former year he was also victorious in doubles with M. J. G. Ritchie but in 1912. A. F. Wilding and S. N. Doust took the doubles championship in 1911 at Wimbledon no other successes fell to foreign competitors the singles champion ship being retained by A. F. Wilding who was again victorious in 1912 when C. P. Dixon and H. Roper Barrett won the doubles.

and H Roper Barrett won the doubles

The grass championships at the Olympic Games were fixed for a date which conflicted with the All England tournament and the latter was pricerred even by most of the leading foreign players. The medals were accordingly captured by Winslow (singles) and Winslow and Kitson (doubles) representing South Africa. Another international test of play on grass was afforded by the preliminary round of the Davis Cup in which the English team beat the French in the summer of 1912 at Folkestone. But in two matches between England beat the French in the summer of 1912 at Folkestone. But in two matches between England and Germany in 1912 each team was successful on its own ground the English match being played on turf and the German on an artificial surface. In the previous winter Australasia represented by N. E. Brookes. R. W. Heath and A. W. Dunlop had retained the Cup by beating an American team at Christchurch New Zealand. England unexpectedly regained the Davis Cup at Melbourne on November 28–30. 1912. C. P. Dixon and J. C. Parke beat. R. W. Heath and N. E. Brookes respectively on the first day and on the third Parke beat. Heath but Dixon lost to Brookes. The Australian pair Brookes and Dunlop beat Bramish and Parke so that England won by the odd match. A team enlisted by the Drive L. T. C. (Fulham) made a tour in South Africa in 1910–11 and won two out of the three Test matches. A mixed team of men and ladies sailed from England for South Africa in the following winter and played three test matches but unexpectedly lost one of them. The university matches and played three test matches but unexpectedly lost one of them. The university matches of 1912 went in favour of Cambridge in 1911 Oxford won the singles and Cambridge the doubles. A young Russian player Count Saumarakoff Elston gained distinction by defeating C Setterwall the Swedish champion in the Olympic tournament and made a close match with Kreuzer a German player of the first rank. Many hard courts for autumn and spring play have been recently constructed in England and a new covered court is used for spring play have been recently constructed in England and a new covered court is used for winter play at Dulwich. The difficulty of enforcing the foot fault rule is still receiving attention. At an International Congress held in Paris in October 1912 preliminary measures were taken for a common understanding with regard to international championships. The American lawn tennis championships were won as follows—men s singles—1911 W. Larned 1912 M. E. Wilcoughlin ladies singles—1911 M. is H. Hotchkiss—1912 Miss M. Browne men s doubles—1911 R. D. Little and G. F. Touchard 1912 M. E. Wilcoughlin and Thomas C. Bundy

Motoring

The sport of motor racing as distinguished from the competition of manufacturers in races for testing mechanical qualities is best seen in France and America

The chief French event of 1911 was the I ight Car Race competed over the Dieppe circuit on June 25 The distance was 387 miles and the contest was won by Bablot from Boillot at an average speed of about 55 miles per hour In America some serious accidents caused a considerable restriction of high powered racing The principal event there—the Vander bilt Cup—was won by Mulford In 1912 the revival of the French Grand Prix race and its fusion with the Small Car Contest—the Coupe de I Auto—formed the chief event of the season. The Grand Prix was a race without any limitations of engine power and was won by Boildot on a car of 175 H P from Wagner on a still larger car. Behind the pair came three small cars of 12–16 H P driven by Regal. Re ta and Medinger. The winner's speed was 70 miles per hour while Regal and Re-ta who were first and second in the Coupe de l'Auto averaged about 66. In America Hunery drove a 200 H P car at a speed equal to 141 miles per hour. The American Grand Prix was won by C. Bragg. and the Vanderbilt Cup. Race by Ralph de Palma.

Mountaineering

For the purpose of Swiss Alpine clumbing never were two successive summer seasons more unlike than those of 1911 and 1912 The latter was perhaps the very worst within the memory of the oldest climber and the former was certainly the finest

1911 will always be remembered for four great climbs carried out by Messrs G Winthrop Young and H C Jones Mr Todhunter joined these on the new route up the Grepon Altogether this victorious party carried out six new expeditions of which the Grepon marks the high water mark of rock climbing though the two ridges of the Jorasses are only a little less severe The Jorasses had previously been climbed by its south face and the first object of this party was to find a route up the terrific wall that stoops down to the Col des Hiron delles The ascent of this ridge was proved to be utterly impossible but the descent was accomplished by an ingenious and daring combination of fixed ropes and pitons. On this climb Joseph Knubel was the leading guide and Laurent Croux represented Courmayeur The same party climbed for the first time the west ridge which had defied so many previous assaults. On this occasion Knubel was the only guide. Not content with this triumph boung Jones the famous Austran climber Dr. Blody and Knubel defeated one of the last virgin ridges on Mont Blanc the great Brouillard arete. And finally this unconquered party with Todhunter in place of Dr. Blodig and an extra guide. Brocherel forced a new direct route up the great northern face of the Grepon The Grepon by the ordinary route is as hard as most climbs in the Alps or elsewhere and it is scarcely a peak on which to look for variation routes Knubel's ascent of the last mentioned slab wrote Mr Jones relying solely on an axe with its point inserted into a minute crack as hand hold and merely on friction for the rest is one of the most remarkable climbing feats I know of As a member of the Alpine Club remarked after Mr Jones had finished reading his paper this kind of climbing can only be appreciated by about a dozen British mountainers and can be colleged by no living cragsman. The only other climb yet made which can be mentioned in the ame category with these achievements was Dr. Piacenza's desperate ascent of the Matterhorn by the Furgeen artic.

Other interesting new ascents of 1911 may be mentioned the direct ascent of the Jungfrau from the Jungfraujoch by Herr Weber with the guide & hlunegar of Wengen and the first passage of the Gletcherjoch by Dr. O. K. Wilhamson. This climb roused some comment as Dr. Williamson introduced a practice which was first made use of in Welsh guillics. He chimbed the pass from the easy side and let down a rope on the top of the difficult section to facilitate the traverse of the pass on another day

Beyond the Alps Captain Corry and Lieut Squires did some interesting new climbs in the Himalaya of which the North Peak of Kolahoi was perhaps the finest and in the Andrs Dr

Helbling made the first ascent of a virgin peak over twenty thousand feet in height

The winter of 1911-12 was as disappointing as the summer was satisfactory. British climbers as usual did very little and such ascents as were recorded fell to foreign moun taineers. The Alpine Ski Club claimed the three ascents made by British ski runners, and one of these the Lauterbrunnen Breithorn was probably a first winter ascent climbed at the end of January by Mr Edward Tennant and Mr Arnold Lunn

The summer of 1912 was remarkable for persistent bad weather The indefatigable Mr Young climbed the last of the Dames Anglais and Messrs Mallory Pope and Portman made without guides a fine variation ascent of the Dent Blanche perhaps the finest guide less climb as yet accomplished. The season was marred by an accident in which the brilliant young Cambridge professor and expert climber. Mr. H. C. Jones, was killed with his wife and the guide Truffer on Mont Rouge de Peuteret not as originally stated on the Aiguille Blanche Mont Rouge is not a difficult mountain and the climb was well within the rs Jones Truffer came away with a detached boulder and the whole party de Peuteret powers of Mrs Jones

were dragged from holds and killed An unroped Austrian climber ahead escaped
At the end of the season Hugh Pope (perhaps the finest rockelimber known) was killed
on the Pic du Midi d Ossau He was climbing alone and death was caused by rotten rock

The search party organised by Mr Young found his body after a day s search

Polo

A noteworthy change in connection with polo in 1912 was the definite adoption by the Hurlingham authorities, who make the rules and govern the game in Great Britain of the system of playing without penalty for offside, and with eight periods of seven and a half minutes each instead of six of ten This system had been given an exhaustive trial the year before but the change in the rules is directly traceable to the influence of the Meadow Brook team in 1909, when the International Cup, which for twenty three years had rested on the English side of the Atlantic, was regained by the Americans English players then learned that there were possibilities of the development of greater pace and greater accuracy of hitting without real loss of combination in the less restrict ed American game, and the victory of Mr Whitney's team and their success in retaining the trophy against the challenge of the Hurlingham team under Captain Lloyd in 1911 have otherwise been far reaching. In the United States indeed, polo has received a decided stimulus, and there has been a marked increase of players and clubs especially

in the army In 1912 new clubs were formed at Cincinnati Lexington and Islip (Long Island) among other places and even American ladies have taken to playing polo In England there has been a notable accession to the list of provincial clubs by the forma tion of the V W H (Swindon), which had the rare success of winning the County Cup in its first season In France a new club has been started at Le Touquet, sixteen miles from Boulogne the Austrian Jockey Club in order to encourage the game has laid down a new ground in the centre of the racecourse at Kottingbrunn, near Vienna, and among the most recent additions to clubs and grounds in India is that made by the Maharajah of Gwalior at his 'rains station of Sipri Polo is now played in almost every European colony in Asia and Africa It has spread to Northern Nigeria Morocco Rhodesia Abyssinia Arabia and each year it finds fresh security in such countries as Canada Australia New Zealand South Africa and Argentina

The most pronounced feature of the London polo season of 1912 was the success of the Old Cantabs in winning the Champion Cup at Hurlingham and the Open and King's Corona tion Cups at Ranelagh and no surprise was occasioned when the Duke of Westminster under taking the organisation of the challenging team to visit America in 1913 invited Mr Walter Buckmaster (the captain of the Old Cantabs) and Mr F M Freake and Captain George Bellville (members of the side) to accompany him Captain Leslie Cheape who ranks with Mr Buckmaster highest in the official handicap list of British players Captain R G Ritson

and Captain Hardress Lloyd were also among the players in rited

As regards the international polo matches in 1911 it may be recalled that America (represented by the brothers L and M Waterbury Mr H P Whitney and Mr D Milburn) beat England (Captain Leslie Cheape Mr Noel Edwards Captain Hardress Lloyd and Captain Herbert Wilson) by 42 goals to 3 in the first match and by 4\frac{3}{2} goals to 3\frac{1}{2} in the second Many who witnessed those two games were convinced that if the Englishmen had half a dozen more first class points their narrow defeat might have been turned into a narrow victory. England 8 goals were all scored by Mr Edwards. In spite of the fact that several first dealing players were away in America diving the region of the Lordon goals. of the leading players were away in America during the major portion of the London season English polo in 1911 was highly successful A feature of the season was the brilliant success to begin with of the Royal Horse Guards (Captains G. V. S. Bowlby, Harold Bra sey and Lord A Innes Ker and Mr. J. F. Harrison). They won the Whitney Cup at Roehampton and the Open Cup at Ranelagh but by trying themselves and their ponies too highly they fell between the control of the London season and the control of the control of the London season and the London season and the control of the London season and the control of the London season and the control of the London season and the London season and the control of the co fell between two stools just losing the Inter Regimental Cup to an admittedly inferior team of the 4th Dragoon Guards and the Champion Cup to a splendidly mounted Eaton combination comprising Messrs C P and P W Nickalls and G A and C D Miller The King's Coronation Cup went to a powerful side representing the Indian Polo Association (Captains L St C Cheape Shah Mirza Be, R G Ritson and V N Lockett) Another interesting feature of the I ondon season of 1911 was the playing of King Alfonso of Spain at Hurlingham and of the Crown Prince of Germany at Rochampton

Rackets

Having taken measures to limit the ever-growing size of the racket ball the Tennis Rackets and Fives Association has recently made a few amendments in the laws of the A ball which in the course of a rally passes over without touching the cross bars A player s right to try to return a ball which he has missed of the roof remains in play at the first attempt is expressly recognised but he may not claim a let " In important matches an umpire is deputed to call the footfaults

A match for the championship of the world was plaved in April and May 1911 at Queen's and Prince's clubs by Jamsith of Bombay the holder since 1903 and C. Williams, the Harrow school professional and was easily won by Williams. The English amateur championships were won as follows—singles (1911) E. M. Baerlein. (1912) B. S. Foster doubles (1911) B. S. Foster and the Hon. C. N. Bruce. (1912) H. W. Leatham and H. A. Denison. The Public Schools Challenge Cup was won by Rugby (C. T. B. Simpson and W. H. Clark) in 1911. and by Charterhouse (G. A. Wright and C. A. Leatham) in 1912. In both years. Cambridge won the University matches-singles and doubles

Rowing 1

International interest in oarsmanship has been considerably stimulated by the success of Belgian crews in the races for the Grand Challenge Cup at Henley In May 1011, an eight drawn from past and present members of Jesus College Cambridge defeated at Ghent a combined crew of the Ghent clubs, Sport Nautique and Club

¹ See also under United States below

Nautique over a course of 2 111 metres The winners' time of 6 m 43 s was estimated as equivalent to 6 m 55 s or 7 m on a calm day at Henley The English victory was made the occasion of an extraordinary ovation by the Belgians The winning crew was composed of E C Henty H J Shields, C Hudson H E Swanston S Hudson, H M Goldsmith G E Fairbairn, T M Crowe (str.) and C A Skinner (cox)

In the University Boat Race of 1911 Oxford woh by 2\frac{2}{2} lengths in record time 18 m 29 s
Cambridge also beat the old record 18 m 47 s held by Oxford 1893 and Cambridge 1900
The names of the crews were — Oxford C E Tinne L G Wormald R E Burgess E
Millington Drake C W B Littlejohn A S Garton D Mackinnon R C Bourne (str)
and H B Wells (cox) Cambridge S E Swan P V G Van der Byl F E Hellyer C F
Burnand R le Blanc Smith J B Rosher G E Fairbairn R W M Arbuthnot (str) and
C A Skinner (cox) The contest of 1912 took an unprecedented course necessitating two C A Skinner (cox) The contest of 1912 took an unprecedented course necessitating two races. In the original race both crews sank and though Oxford re embarked and reached the winning post the umpire, Mr F I Pitman in the exercise of his discretion declined to award them the victory. A second race was rowed two days later in almost equally rough weather and resulted in a victory for Oxford by six lengths in 22 m 5 s. It was R C Bourne is fourth vear of stroking the winning screw a record unparalleled in the history of the race. The crews were —Oxford F A H Pitman C E Tinné L G Wormald D D Horsfall A H M Wedderburn, H F R Wiggin C W B Littlejohn R C Bourne (str.) and H B Wells (cox). Cambridge R W M Arbuthnot D C Collins H M Heyland R S Shove J H Goldsmith R le Blanc Smith L S Lloyd S E Swann (str.) and C A Skinner (cox). At Henley Regatta both in 1911 and 1912 the standard of oarsmanship was high. In the latter year the width of the course was reduced by ten feet, and the additional outside margin.

latter year the width of the course was reduced by ten feet and the additional outside margin was located on the Bucks shore with the object of equalising the value of the two stations by moving the boats to leeward of a bushes wind. The king and Queen visited the regatta and the Queen distributed the prizes. The most noteworthy feature of the racing was the capture of the Grand Challenge Cup by an Australian eight. The following is a list of Henley results.—Grand Chillenge Cup, (1911) Magdalen (1912) Sidney R. C. N.S.W. Ladies. Plate (1911 and 1912) Eton. Thames Cup (1911) First Trinity (1912) Rowing Club de Paris. Steward's Cup (1911) Thames R. C. (1912) New Coll. Visitors Cup (1911) Third Trinity (1912) Christchurch. Wyfolds Cup (1911) Pembroke Cam. (1912.) Queen's Cam. Silver Goblets (1911) J. Beresford and A. H. Cloutte (Thames R. C.) (1912) Bruce Logan and C. G. Wright (Thames R. C.). Diamond Sculls (1911) W. D. Kinnear (1912) E. W. Powell. Of the Wingfield Sculls. W. D. Kinnear remains the holder.

The professional sculling championship of the world returned to England after many year through the victory in 1912 on the Thames of E. Barry over R. Arnst. who had beaten him in 1910 on the Zambesi. In 1911 R. Arnst defeated H. Pearce on the Paramatta. Barry was challenged by Durnan. a Canadian but easily defeated him on October 14, 1912 over the Putney Mortlake course. latter year the width of the course was reduced by ten feet and the additional outside margin

the Putney Mortlake course Barry had twice rowed successfully in 1911 for the pro-fe sional sculling championship of England.

At the Olympic regatta in Stockholm over a course of 2000 metres a Leander eight took the chief honours defeating their Henley conquerors the Sydney crew England was less successful in the fours rowed with coxswains the Ludwigshafen Club being victorious but Kinnear secured the Olympic trophy for sculling without great difficulty

Shooting

Game Shooting -The report of the British Grouse Disease Inquiry Committee published in 1011, furnishes an important addition to the knowledge necessary for the proper management of a grouse moor The committee appointed in 1905 was never empowered to draw public money but its members gave voluntary work through six seasons and succeeded in tracing beyond reasonable doubt the origin of the mysterious disease which at intervals has decimated the stock of grouse on many moors

This grouse disease is due to a threadworm Trichostrongvlus pergraculis with which all grouse are infected Healthy grouse in a year free from disease throw off the attack but there is a point at which infection becomes too strong for the bird and it succumbs prechaposing cause to an outbreak of disease is a shortage during the winter and spring months in the supply of the young heather shoots which form the staple food supply of the grouse At the end of a good shooting season it may happen that too many grouse are left on the moor in proportion to the heather supply. The grouse become crowded the larvae of the threadworms accumulate from the droppings of the grouse on the patches of heather left uncovered by snow where the birds must congregate for food. These patches become in the grouse become in the patches become in the grouse of the grouse of the patches become in the grouse of the grouse of the patches become in the grouse of the grouse of the patches become in the grouse of the grouse of the patches become in the grouse of the grouse tensely infected and the tips to which the larvae find their way are eaten by the grouse These when weakened by insufficient food are unable to throw off the aggravated infection. The remedies are prophylactic —(1) reduction of the stock by harder shooting (2) increase of food supply by burning old heather (3) extensive draining since the threadworm flourishes in damp soil. It remains to be seen whether the cause being known, the disease can be

checked with certainty

Some progress has also been made in the study of the parasitic diseases of pheasants especially coccidiosis which often ravages the rearing grounds. Experiments have been tried in the administration of drugs by which the coccidia are apparently to some extent repressed and the young pheasants are fortified and made sufficiently resistant to survive the attacks. If further trial confirm these expedients one of the chief difficulties in the artificial rearing of pheasants will be considerably diminished.

Rifle Shooting et -To a considerable extent the shooting competitions at the Olympic festival at Stockholm were dominated by the conditions which were more favourable to some of the national teams than to others In the military rifle shooting the United States team took the first place They not only possessed the best weapon but were the only team to use aperture sights Great Britain was placed second and The team shooting with any rifle was at the 300 metres range and Sweden third this produced the result that Sweden Norway and Denmark occupied in this order the leading places However Paul Colas (France) took the gold medals for the individual score both in the 600 metres military rifle and the 300 metres any rifle competition The 100 metres military rifle individual competition was won by A Prokopp Hungary In the miniature rifle matches no range of more than 50 metres was employed range the United Kingdom team of four were first with a total of 76 out of a possible Soo P J Lessimore making the fine score of 19 Sweden won the 25 metres disappear ing target competition with the United Kingdom only 8 points behind prizes fell to F W Hird USA in the 50 metres and Lieut Carlberg Sweden in the The United States carried off the honours in the pistol and revolver shoot ing winning the 50 yards team and individual contests. A P Line took two gold medals the second being in the duelling matches in which Sweden was first in the team Sweden swept the board in the running deer competitions The standardisa tion of rules is an essential preliminary if international contests are to be a perfect test

At Bisley the chief trophy for the military rifle the king prize was carried off in 1911 by Private W J Clifford with a total core of 319 in 1912 the winner was A G Fulton the son of a previous victor and although but 24 years of age a mark-man of great experience in important matches having gained a place in repre entative British teams and regularly made his way into the last hundred for the prize which he at last secured Mr M Blood took the grand aggregate (Hopton Chalkinge Cup) in 1911 in 1912, it was captured by Corporal Mortimer (Canada) by the aid of the 280 Ross rifle a remarkable weapon produced by a Canadian factory under the initiative of a well known Scottish landowner

Clay Bird and Pigeon Shooting—The rules at Stockholm were not adverse to the chances of the British team except in so far as the permission of a heavy shot charge may have handicapped competitors unable to use it. They were beaten for the first place by the United States team but J R Graham one of the members made the best individual score of 96 birds out of 100. The shooting was of a very high standard

The Clay Bird Shooting Association champion is W Ellicott who is also well known for his skill with the rifle at the running deer range and is probably both with gun and rifle the best all round shot in the United Kingdom. In 1911 A Maunder who had twice previously held the championship regained it with a score of 34 points out of a possible 35. The Pigeon Shooting Grand Prix du Casino at Monte Carlo fell to an Englishman F. Moore of Newmarket in 1911 after a most exciting contest. in 1912 M. Des Chaux was the winner.

Skating

The winter of 1910-11 was unfavourable to skating throughout Europe In England it was impossible to hold any of the speed championships. But it saw a notable extension of artificial ice facilities in the opening of the Manchester Ice Palace with a skating surface of 100 ft. by 140 ft enabling the National Skating Association to revive the championships in the English style of figure skating abandoned since 1904 Ice palaces have since been opened in Edinburgh and Aberdeen

The international style of figure skating continues to make progress on the continent of Europe especially in Germany and among English visitors to the Engadine and habitues of artificial rinks. A short but hard frost in February 1912 allowed the English

Speed Championships, both amateur and professional to take place, a new record (4 min 44 4/5 sec), being set up in the latter by Greenhall An open race for amateurs and professionals over a straight course of a mile was held in 1912 for the first time in thirty-one years, with the remarkable result that all the competitors, amateur and professional beat George (Fish") Smart's record of 3 min made in 1881 F W Dix claiming the new record in 2 min 27 1/2 sec. The speed skating championships of the world produced two new records, 222 500 metres in 44 1/5 sec and 10 000 metres in 1, min 46 3/10 sec Oscar Mathiesen being the winner Roller-skating has not maintained its sudden access of popularity but has left a residue of increased proficiency Practice on rollers is gaining recognition as useful for the ice skater when ice is wanting

The winners of the principal championships of 1911-12 were as follows:

Speed Skating - English amateur championship (1½ miles with three turns) 1912 F W Dix English professional championship (same course) 1912 Sulney Greenhall Both the winners were the holders One mile straight away 1912 F W Dix World's championships 1911 N Strunnikoff all four distances (500 1500 5000 and 10 000 metres) 1912 Oscar Mathiesen all four distances European championships 1911 N Strunnikoff

1912 O Mathiesen

Ski ing

As a competitive sport running on ski is extensively practised in central Europe during the winter, especially in the Alps the Black Forest and Tirol where there are many clubs and several international open meetings are held In the neighbourhood of Christiania the older and more famous meetings have for some years been carried out with difficulty the weather having been on the whole exceptionally unfavourable Ski ing is now the favourite amusement of visitors to Alpine winter resorts and has increased in importance as a valuable aid to winter mountaineering. Its military value is recognised by the nations that have Alpine frontiers as well as by Norway and Swe The practical side of the exercise has also been illustrated by Amundsen's success ful rush to the South Pole

Owing to the varying nature of the ground and of the condition of the snow no purpose can be served by attempting to compare the times in which long distance races have been Jumping records are almost equally devoid of significance as no standard angle of declivity is recognised But it may be mentioned that in the early part of 1912 the longest standing jump —i e jump in which the competitor kept he feet after landing—yet recorded was accomplished at Modum Norway by Gunnar Andersen of Lyn Christiania The distance was 47 metres

Swimming

After the lapse of thirty six years the feat of swimming from Dover to Calais accomplished by Capt Matthew Webb was repeated on September 4 and 5 1911 by Γ W Burgess an Englishman resident in Paris had been made in vain by numerous swimmers. Burgess was fortunate in obtaining calm weather but he was hampered by the tide in such a way as to be carried back over the Varne sand and his course including a large loop, was thus considerably longer As his time (22 hrs 35 min) was but little inferior, his exploit must be than Webb's considered equal to that of his precursor

As a competitive sport swimming has been brought to a high pitch by the Austral sans, who are favoured by their climate and by Americans Of the former, J G Longworthy has shown great speed at distances from 100 yards to a mile and he is not unlikely co accomplish unprecedented performances. A Canadian, G R Hodgson, who won the 1 500 metres race at the Olympic Games of 1912, is a swimmer of at least equal promise. At this meeting an Hawanan D P Kahanamoku, won the 100 metres decisively in time approaching the unparalleled performance of C M Damels (USA) Great Britain unexpectedly found a young champion in J G Hatfield of Middles brough who profiting by the example of Kahanamoku exhibited sudden improvement and almost succeeded in beating Hodgson. Since that time Hatfield has beaten several records. In Great Britain swimming has made great progress in the public schools of all grades and some degree of proficiency is attained by almost all the pupils. A satisfactory account of the present state of swimming whether as a sport or as a desir able accomplishment is to be found in The Complete Swimmer, by Frank Sachs (Methuen)

In the past two seasons new records have been made for the following distances—400 metres (free) by J G Hatfield (England) time 5 min 21² sec Shoreditch Baths September 28 1912
500 metres (free) by J G Hatfield (England) time 6 min 56[‡] sec Weston Super Mare August 6 1912
400 metres (breast) by W Bathe (Germany) time 6 min 29[‡] sec Stockholm July 1912
1500 metres (breast) by E R Hodgson (Canada) time 22 min Stockholm, July 1912
100 metres (breast) by E Toldi time 1 min 20 sec Budapest September 17 1911
200 yards (breast) by E Toldi time 2 min 39[‡] sec Budapest August 20 1912
100 metres (back) by A Barony time 1 min 18[‡] sec Budapest July 17 1911

400 metres (back) by S Wendelin time 6 min 38\$ sec Budapest August 5 1911 Tennis

A match for the world's championship in 1912 between G F Covey and 'Punch Fairs (holder) ended in favour of the former who had been defeated by the same opponent two years previously. The amateur championship in 1911 was won by the Hou N S Lytton but in 1912 he was defeated by E M Baerlein. The M C C gold and silver prizes were taken in both years by E H Miles and Major Cooper key Oxford won the University matches in both seasons, and was represented by the Hon J N Manners and Hon W H Grenfell, in the singles by the Hon J N Manners

Tobogganing

At St Moritz tobogganing has been somewhat overshadowed by the many other diversions of the place and especially by ski kjoring. In Switzerland generally it has given way to bob sleighing. The Cresta run has been modified the banks being built far higher and steeper than formerly with the result that tobogganers especially be ginners can make faster times. Throughout the two winters 1910-11 and 1911-1 the record for full bob sleighs on the Schatz Alp course at Davos was continually being beaten. Herr Luders on Torpedo frequently gained and regained the record and finally retained it at 3 min 13 sec (March 15, 1912). A special prize is offered for a bob sleigh taking under 3 minutes.

Grand National —1911 Captain Webb Bowen 1912 Mr E O Quicke Symonds Cup—\ Antoinetti (1911 and 1912) Manchester Bowl—1911 Christmas Daisy (H M Jame son) 1912 Vereina II (Th Hew) Coupe de France—1911 Vereina II (Th Hew) 1912 Taffy (C A Longcroft)

II restling 1

To the necessarily limited programme of the Olympic Games at Stockholm in 1912 the Graeco Roman style of wrestling was alone admitted as having the best claims to be compolitan. The contests however proved unsatisfactory. It is the defect of this style that it encourages passive resistance and when a bout lasted for eleven hours and it was considered necessary to allow intervals for rest and refreshment it was felt that something like a reductio ad absurdum had been reached. This fiasco however was due in some degree to the intentional omission by the Swedish committee of a time limit such as had been enforced at the London Games of 1908. Some of the members

^{*} See also under United States below

of the sury withdraw, and a protest meeting was held by the competitors. The first prizes were won by Saarela Koskelo and Ware of Finland, with C. E. Johansson of Sweden Ahignen and Boling of Finland receiving second prizes for the incomplete final round above-mentioned. A German a Hungarian, and a Russian reached the prize list which was otherwise confined to Finns and Swedes.

Professional wrestlers have assisted towards the present eclipse of this style. Gotch the American champion, was victorious by a hold which gave his antagonist the choice of sur render or permanent injury. In a public match Gama an Indian and Zbysco a Galician helped to discredit wrestling as a popular spectacle by remaining on the mat for three hours and doing nothing. In Lancashire and Cumberland wrestling is still cultivated, and is seen at its best at the Grasmere and similar Fell meetings.

Yaching

The progress of international yacht racing in European waters in the last few years has been considerable. The International Rule for yacht measurement and rating was introduced in England on January 1 1907, and in all European countries on January 1 1908. Since its introduction up to 1912 about 650 vachts have been built to the classes which race under the rule. 176 of the vessels have been constructed under the survey of Lloyd's Register of British and Foreign Shipping. 112 of this number have been built in Great Britain and 64 have been built abroad. The remainder about 4/4 have been built in Germany Norway, Sweden France Denmark. Spain, Russia and Finland under the survey of foreign classification societies.

In 1911 the first great European International regatta was held at Spithead there were 19 events of which Great Britain won 9 Germany 4 Spain 4 and Norway 2 13 of the events were won by yachts of British design and 6 by yachts of foreign design.

In 1912 the second European International regatia was held at Kiel 24 events were sailed German-owned vachts won 11 British 8 and Norway Austria Russia Spain and Belgium one each 15 of the events were won by yachts of British design 9 by yachts designed abroad

All the yachts of the international classes of 23 metres (75 4 feet) and under have been single masted vessels and those from 23 metres down to 8 metres have been cutter rigged. These smaller than 8 metres have usually carried a triangular form of lugsail. The most successful designers of the cutters have been Fife Mylne, and Nicholson (British) and Anker (Norwegian) and of small lugsail vessels in addition to the designers already named. Morgan Giles Gien Coats. Laws and Linton Hope (British). Notable racing cutters have been Shamrock (Fife) 23 metres. Octavia (Mylne) 19 metres. Mariquita (Fife) 19 metres and Nicholson in 1912 designed a splendid all round sea going cutter in the 15 metre class named listria.

The racing in Class A above 23 metres has been carried on by schooners yawls having gone out of favour Since the visit of an American schooner the Westward (Herreshoff) to Europe in 1910 which was most successful the German schooners have been the best in European waters Germania and the German Emperor's yacht Meteor both designed by Max Oertz winning all the prizes in their class at the International regattas of 1911 and 1912 (A. W. BROWNE)

SPORT IN THE UNITED STATES

Sport in America is constantly undergoing changes of more or less importance. This may be due in part to the nature of the amalgamated race or it may be due to the fact that sport has had such a short life in the United States as thus far to have no strong traditions. Every game is played by the letter of the rule, and the rules must therefore be exact and with this exactness comes a pressing necessity for completeness that would hardly be recognised in England, where tradition governs so strongly. For this reason a brief summary of the changes that have affected American sports since 1909—10 will aid the reader in understanding the general situation in the United States.

Football—The sport of American intercollegiate football has developed quite materially m method and ruks in the last two or three years. First, the periods of play from two halves of thirty five minutes each, separated by an intermission have been altered into four periods of fifteen minutes each with an intermission of one minute between the first and second and third and fourth periods and an intermission of fifteen minutes between the second and third periods. The field of play has also been quite materially altered. The actual distance between the goal lines instead of 330 ft as formerly is now only 300 ft. but there is an additional end zone at each end extending 30 feet back from the goal line in which a man may

legally receive a forward pass. It can really be said therefore that the middle line of the field is no longer the 55 yard line but the 50 yard line. Furthermore a change in the rules has been made that makes the 20 yard line the limit of kick out instead of the 25 yard line. Hence the two lines that are marked more heavily than the rest on the field are now the yo yard have and the 20 vard have instead of as formerly the 55 yard line and the 25 yard line. The longitudinal lines of marking on the field have also been practically eliminated as they are now of no particular service. The latitudinal lines remain to mark the distance gained and lost. The scoring has also been altered a touchdown counted five points and the conversion of this touchdown into a goal added one point more a field kick goal counted four now a touchdown counts six and its conversion one point so that a goal and touch

down together count seven and a goal from the field counts only three

The method of play has also been somewhat altered owing to certain changes in the rules It has recently been enacted that a side shall have four trials to advance the ball the required distance of ten yards instead of three as formerly and this has increased the value of the running game. The restrictions upon the forward pass have also been rendered less severe A man may now pass the ball so that it crosses the line of crimmage at any point and he may make the pass as long or as short as he wishes provided he stands at kast five yards back of the scrimmage line when he makes the pass. The onside kick has been entirely climinated The number of officials formerly four has been changed to three but these three have so much to do that it is not improbable that there may be a return to the old method However the number of officials now stands at three the referee umpire and lines man With all these alterations the play is more interesting and exciting and tends to an increase of scoring possibilities as well as giving an opportunity for the exercise of greater generalship On the whole it is safe to say that the rules have been improved from the standpoint of player and spectator

The contests of greatest interest in 1912 were as usual in recent years those between the three Eastern universities of Harvard Princeton and Vale. On November 2 at Cam bridge Harvard deleated Princeton 16 to 6 on November 16 at Princeton Vale and Princeton played a drawn game 6 to 6 and on November 2 at New Haven Harvard defeated

Yale 20 to 0 On November 28 the University of Pennsylvania defeated Cornell 7 to 2

As occution or Soccer football 1 being encouraged in the United States and has the support of many athletic directors throughout the colleges It does not attract the large crowds but is popular as a pastime among those who do not care for the perhaps longer and more arduous training of the intercollegiate. It has added one more to the list of ports that help to attract out of doors during the fall and early winter months the student who otherwise would employ his time possibly in a less satisfactory manner. Rugby as such is not played in the United States except by two of the Pacific Coast universities.

Baseball—In baseball the rule—have not been materially altered nor has the game taken on such distinct divergence a has lootball. The commanding feature of the baseball studies is that the rubbe interest has not only been maintained, but has increased and

situation is that the public interest has not only been maintained but has increased and the attention given to the World's Series that is the annual contest between the winners of the American I cague pennant and the National League pennant consisting of the winning

of four games out of seven has become a matter of national interest

The series of 1911 was exciting and ended in the victory of the Philadelphia American I cague Club over the New York National League Club The series of 1912 was probably the closest ever known in a series of this nature the Bo ton American I eague Club finally winning out in the concluding same of the scries after each term had won three games. Public interest in intercollegiate games is ad o keen. In 1912, on June 13 Princeton defeated Yale at New York by a score of 19 to 6 and won the scries between these two universities. Princeton was easily fir t among all the college teams winning. I out of 29 games played with other colleges in 191. On June 19 Yale defeated Harvard at Cambridge 9 to 6 thus winning the deciding game in the series between the e two universities

Boxing —Boxing interest saw its height at the time of the Johnson-Jeffries match at Reno New July 4 1910 but the permitting of the port in New York state under a certain board of commissioners has led in the last year or two to considerable development of interest in the so called athletic club promotions. On the whole however the meteoric career of lack Johnson (the negro champion) has been typical of the ups and downs of the pugilistic

profession in America

Rouing -Intercollegiate boat racing in the United States is represented by two principal regattas the one at Poughkeepsic on the Hud on river and the other at New London on the Although Cornell at Poughkeepsu and Harvard at New London have now been monotonou ly winning for some years there has appeared no diminution of interest and the crowd in the vachts assemble at the courses just the same rendering the spectacle as brilliant There has continued the everlasting and apparently unending discussion of the ments of various strokes but the subject seems to be one upon which opinions must always differ Great respect is had in America for the theory as well as the practice of English rowing and occasionally representatives of American rowing interests have as in 1912 visited the English crews and compared notes. Whether the two schools are coming grad. ually more nearly together is a question. It is more than likely that constant alteration will

continue although at times emphatically demed and that after all the most successful

crews will always be those whose stroke boat and physique are best correlated

Apart from intercollegiate rowing an annual regatta is held of amateur oarsmen in which crews and boats of many kinds from singles to eight oars are represented and which is grad ually gaining in importance and quality In 1912 the Harvard-Yale race at New London Conn June 21 was won by Harvard by about 5 lengths At the Poughkeepsie meet on June 29 in which for the first time the Far West was represented (by a crew from Leland Stanford Jr University) all the races were easily won by Cornell

Athletics—At the Olympic Games of 1912 (July 6-15) in Stockholm Sweden many records were broken. In the event of perhaps greatest interest the 800 metres run the record was broken by the winner J. E. Meredith (1 min 519 sec.) and by the second and third contestants all of whom were Americans. America was first in 16 out of a total of 31 events and scored 85 out of 184 points The intercollegiate games held at Philadelphia on June 1 1912 were won by the University of Pennsylvania with a score of 28 points Five new records were established

Cricket - Cricket in certain quarters notably the environs of Phi adelphia and in some of the schools like Haverford has kept up a specific interest among those devoted to the sport but has not pread to any great extent. The Germantown (Pa.) Cricket Club visited England and Ireland in 1911, they won five games, lost five and three were a draw

Lawn Tennis —Lawn tennis has more than held its own and although the Dayis cup matches have not proved sufficiently stimulating to draw new blood into tennis ranks in influences have not proved sunicently stilling to draw new blood into tennis ranks in sufficient quantity to build up young players to take the place of the old the general spreading interest in the game has been fully maintained. The chief creents of 1912 were the winning of the national doubles title by Maurice E. McLoughlin and Thomas C. Bundy both of California in a challenge match with Raymond D. Little and Gustave F. Touchard at Newport R I August 21 and the winning of the singles championship by McLoughlin on August 26 and the winning of the women's championships in single by Miss Mary Browne also a Californian at Philadelphia June 15. An important change made in 1912 was that the holder of the championship in singles was to be required to play through the championship tournament instead of merely playing in a challenge round the winner of this tournament. W. A. Larned who had won the championship in 1911 (and in several previous years) was prevented by his health from playing in the 1912 tournament year was notable on account of the success for the first time of the Western players

Polo—Polo holds its own even though the cost of equipment is high and the game in consequence confined peculiarly to people of large means. Popular interest was greatly stimulated in the spring of 1911 by the international matches between the American Meadow Brook Club and the English Hurlingham Club at We toury. New York. The Americans

won two closely contested matches the score being 4^1 to 3 and $4\frac{1}{2}$ to $3\frac{1}{2}$ Horseracing —Horseracing has been placed in an anomalous position in the United States in the last few years owing to legislation. The truth of the matter is that in order to stop the pool room betting which certainly was a detriment to the youth who were exposed to its influence and temptations legislation piled up to such an extent as to affect the interest on the track and the owners. As probably betting has never yet been entirely dissociated from horseracing the attempt to carry through this divorce proved as usual to have un expected results and one of these has been the cutting down very materially of the interest in this sport

Wrestling -In wrestling the important fact has been the still further victories of Frank Cotch his decisive defeat of the Russian George Hackenschmidt at Chicago Sept 4 1911 and his final retirement to his farm. The sport itself has been kept up very well in the colleges although there have been some defections from the Intercollegiate League

(WALTER CAMP)

PART II LOCAL

SECTION I THE BRITISH EMPIRE

ENGLISH POLITICAL HISTORY 1

I The Crown

King Edward VII died on May 6, 1010 and was succeeded on the throne by his only surviving son as George V whose consort Queen Mary, by the Regency Act 2010, was at once nominated to be regent in the event of a demise of the Crown Accession of before the next in succession arrived at the age of eighteen. As their George V eldest son Prince Edward was born on June 3 1804 a Regency Act was a temporary constitutional necessity but he was created Prince of Wales on his sixteenth birthday and before attaining his majority in 101 he had completed his naval education at Osborne and Dartmouth (gazetted midshipman June 22 1911 and appointed to the Hindustan for a three months cruise ending October 26th) young Prince then returned to private studies paving a visit in the summer of 1912 to Paris with his tutor Mr Hansell as guest of the Marquis de Breteuil and in the October term he went into residence at Oxford as a commoner of Magdalen new Civil List for the Crown as approved by Parliament in 1910 was fixed at £470 000 a year but Parliament was not asked to provide for the Prince of Wales his income from the Duchy of Cornwall (£87 000) being sufficient

An important change which had been mooted but not proceeded with when king I dward came to the throne was made at king George's accession in the alteration of the Sovereign's dictaration respecting his religion the terms of which as provided in 1680 by the Bill of Rights had long been resented by Roman Accession Declaration Act of 1910 finally substituted a short and simple formula for the more detailed no Poperv manifesto which it was generally agreed was no longer needed. The following were the new terms provided—

I (name of Sovereign) do solemnly and incerely in the presence of God profess testify and declare that I am a futhful Prote tant and that I will according to the true intent of the enactments which secure the Protestant succession to the Throne of my Realm uphold and maintain the said enactments to the best of my powers according to I aw

At his first opening of Parliament according to the practice King George made this diclaration and the whole question was removed from further controversy

At the death of so active popular and influential a sovereign as Edward VII in the midst of grave parhamentary difficulties and a condition of social economic unrest The Throne which was soon to be fertile in industrial conflict the country was fortunate at any rate in this that the Throne had already established itself in the and the Country hearts of the people as a central and unifying force di tinct from all party considerations The Royal Family without exception were known to be active in all that their position enabled them to do for the furtherance of the public welfare all classes of the community recognised the value of this factor in English social life and took a proud and affectionate interest in the manifest determination both of the Throne and of individual members of the Royal Family to do their duty and to justify the public trust The first two years of the new reign made in this respect an auspicious start and it was soon realised that the consolidation of the Monarchy begun under Queen Victoria and so remarkably continued under Edward VII, was being effectually carried on with high ideals and in an earnest spirit under the Sailor king whose exhortation

Wake up England in his speech at the Guildhall when returning from his Colonial tour as Prince of Wales in 1901 had already made history as a general signal to the nation. At King Edward's death there were some who thought that under his success

¹ For the course of events immediately preceding this narrative see Encyclopaedia Britannica Arts English History (vol ix pp 53° 533) Edward VII (vol viii) George V (vol vi) Asquith H H (vol ii) Lloyd George D (vol vi) Balfour A J (vol iii) Chamberlary J (vol v) Parliament (vol xx) and British Eupire (vol iv)

sor the country would have a Court of more severity less inclined to display less sym pathetic towards the joyous side of life -high minded and worthy indeed but rather In so far as such doubts represented a fear that the new King and Queen whose pure and happy domestic life was universally recognised and respected would not enter into the amusements of the people and play a Royal part in the social life of the country it was soon falsified and disappeared As Prince of Wales George V had indeed shown no particular interest in horse racing and some other kinds of national sport and amusement though he was known to be one of the best shots in the country but as King he and his Consort after the period of mourning was over at once removed any misconception in this respect Not only did they follow King Edward's example in attending race meetings (the Royal training stables entering horses for the principal races) and patronising the theatres but in the summer of 191 for the first time a state visit was paid to a London music hall (the Palace) and to Henley Regatta and the King went to Lord's on the occasion of the Test match between the Australian and South African cricketers and had the teams presented to him so that the tradition of Royal interest in national sport and games was amply sustained

The national inclination for pageantry and display which King Edward had done so much to gratify found in King George and Queen Mary sovereigns who were ready

at any cost of personal sacrifice and fatigue to go even further in making The public ceremony on appropriate occasions the magnificent expression of Coronation important acts of State The Coronation at Westminster Abbey on June 22 1911 a solemnity of unparallelled grandeur attended by representatives from all parts of the Empire and other countries for which London was decorated as it never had been before was followed on June 23 by a Royal procession through the streets both north and south of the Thames on June 24th by a great Naval Review at Spit head on June ofth by a gala performance at the Opera on the 2,th by a Roval garden party at Buckingham Palace in the afternoon and a gala performance at His Majesty's Theatre in the evening on the 28th by a Roval visit to the Agricultural Show at Nor wich on the 29th by a thanksgiving service at St Paul's and a luncheon at the Guildhall on the 30th by an entertainment at the Crystal Palace given by their Majesties to 100 000 London Elementary school children and by the Kang's presentation of medals at Buckingham Palace to 500 Indian and 1400 Colonial soldiers On July 3rd the King reviewed 17 000 officers of the Territorial Army in Windsor Park and on July 4th 30 000 Boy Scouts gathered there from all parts of the country

In order to complete the public assumption of Royal authority throughout the United Kingdom the King and Queen with the Prince of Wales and Princess Mary then made State visits to Ireland (July 7th-1 th) Wales (July 13th) and Scot Royal visit land (July 17th-21st) The fact that the Dublin Corporation refused to vote to Ireland. an Address and that the leaders of the Nationalist party as usual held aloof while 'Sinn Fein' even got up local demonstrations against any celebration of the new reign only detracted in a very slight degree from what the King himself described as the spontaneous and hearty loyalty" of his reception in Ircland When the Royal party drove on July 8th from Kingstown to Dublin Castle they had a great popular welcome from cheering crowds all the way and in the course of the day the new College of Science was inaugurated and visits were made to Trinity College and to the Phoenix On Sunday the oth their Majesties attended Service in St. Patrick's Cathe dral, and in the afternoon paid a visit to Maynouth College. On the 10th the King held a levée and received loyal addresses from deputations sent from various parts of the country a special address of welcome from 16, 000 Irish women being also presented to the Queen in the afternoon their Majesties went to Leopardstown races and in the evening gave a State banquet at Dublin Castle On the morning of the 11th the King reviewed over 16 000 troops in Phoenix Park in the afternoon their Majesties gave a garden party at the Viceregal Lodge and in the evening they held a Court at the Castle On leaving Dublia next day the King gave £1,000 for the relief of the poor and the occasion was also taken by Lord Iveagh to distribute £50 000 among the Dublin hospitals

The Royal visit to Wales had for its central object the Investiture of the Prince of Wales at Carnarvon Castle on July 13th a magnificent ceremony and an imposing demonstration of Welsh nationalist sentiment, in the arrangements for investiture which Mr Lloyd George, who had been appointed Constable of Carnarvon of the Prince of Castle had from the first taken a leading part. In the course of the pro-Wales ceedings a national address was presented to the young Prince by Sir John Rhys Mr Abraham MP and the Archdruid the Prince made part of his replies in Welsh and in the religious services two Welsh Nonconformist ministers were associated with the two Anglican bishops The whole affair was a great success On July 14th the King and Queen visited Bangor for the opening of the new buildings of the Univer sity College of North Wales and on July 15 they visited Aberystwyth and laid the foundation of the new National Library of Wales

From Wales the Royal party went to Edinburgh where on July 17th a great procession escorted them to Holyrood Palace Here again ancient Scottish ceremony and modern Scottish sentiment were duly observed and encouraged A levee and a state banquet were held on the 18th on the 19th the King and Queen assisted at the dedication of the new chapel of the Order of the Thistie m St Giles's Cathedral and the King laid the foundation stone of the new City Hall and on the 20th reviews of troops and boy scouts were held in the King's Park and a garden party was given at Holyrood On the 21st the Royal party returned to London, after having brought the whole of the United Kingdom more closely within the ambit of the Coronation festivities by their personal presence in all its capital cities

But there still remained an important extension of the whole principle of the recognition of Imperial sovereignty in the visit paid by their Majesties to India and the Coronation ceremonies at the ancient capital of Delhi. At the time of King Edward's death the native unrest in India had become a source of considerable political anxiety and it was his successor's own idea that the personal presence of the King Emperor for the first time as such on

Indian soil and the compliment paid to his Indian subjects by his being crowned Em peror in their midst would give new life-blood to all the elements that made for lovalty to the British connection and for Anglo-Indian co operation in the great work of ad ministering India under the British Crown The announcement that the King would go in person to India for this purpose and that instead of sending a representative as had been done in the case of king Fdward he and his consort would themselves be crowned at a Royal Durbar was made in the autumn of 1010 It was understood that the King's decision was assented to at this time by his ministers with considerable hesi tation and when the Indian unrest continued to show itself during 1911 doubts were freely expressed as to its being prudent. Prophets of evil as the time drew nearer to November 11th when the King and Queen were to leave England were numerous but the King's own courage and prescience were fully justified by the event and the history of the Empire has included no more epoch making act of State than was involved in all Embarking from Portsmouth on the P & O steamship Medina its circumstances and attended by Lord Crewe the Secretary of State for India and a numerous suite with an escort of men of war the Royal party arrived at Bombay on December and (see INDIA) and were not back in London till February 5 1911

From a political point of view the most remarkable part of the proceedings in connection with the Delhi Durbar was the Royal announcement of certain changes in the Indian administrative system (see under INDIA). In celebration of the Coronation itself various boons were granted, measures of relief and release for certain classes of debtors and prisoners, a large preliminary outlay towards a new scheme for the extension of popular education extra pay to certain classes of native officers and civil servants and the inclusion of native officers and men among those eligible for the award of the Victoria Cross. But all such concessions were overshadowed by the fact that occasion was taken for a public assertion of Royal power and authority in respect of the government of India, by the King's announcement that

in future Delhi would replace Calcutta as the Capital and that Lord Curzon's partition of Bengal which had led to so much contention but which not long since had been described even by ministers in Parliament as res gudicata would be annulled Bengal becoming a presidency Behar Chota Nagpur and Orissa being placed under a lieuten ant governor and Assam being restored to a chief commissionership. Not a word of this impending coup detat had leaked out though now the despatches of the Indian Government recommending it (August 25, 1911) and of the Secretary of State sanction ing it (November 1) were published. Without making any communication to Parlia ment and without giving any opportunity for discussion-for when once royally an nounced in this way the step by common consent of all parties in England was irrev ocable however much it might be criticised-an English Radical Ministry had deliberately utilised the King Emperor's position and prestige to carry out a great autocratic act of State policy which otherwise certainly could not have been accom plished without considerable friction So far as concerned the restoration of Delhi the ancient centre of the Mahommedan Empire as the capital the announcement was undoubtedly an appropriate and effective accompaniment of the inauguration of a new Emperor a dramatic exhibition of monarchical will and it was made in a magnificent spirit characteristic of Oriental ideas Nobody outside the inner ring of the King's advisers not even among important Anglo-Indian officials had guessed at such a proposal yet it had obvious advantages both sentimental and administrative. Besides gratifying the Mahommedans and others to whom Delhi had immemorial associations with Indian Imperialism, whereas Calcutta represented rather the traditions of John Company it not only moved the seat of government away from the rather disturbing influences of Bengal politics but also provided a central railway position from which the annual migration to Simla in the hot weather could be made more conveniently and at half the cost This latter point combined with profit from the enhanced value of land available for building sites could be off-set against the lavish outlay (estimated at £4 000 000) required to bring the new capital into existence Bengal and the Hindus meanwhile were consoled for the removal of the Indian Government from Calcutta by the rearrangements made in partial satisfaction at all events of the opposition to Lord Curzon's partition of the province From a political point of view this was the part of the announcement specially open to criticism and to Lord Curzon himself it came as a personal rebuff of the bitterest kind but though the opposing views were well expressed by him and others in subsequent debates in Parliament, the deed was done in India the King's word had settled it. No single act of Government in the history of the British constitutional monarchy had ever exhibited so promptly the latent resources of the Throne as an extra parhamentary factor in Imperial administration That a Radical Ministry supposed to stand for 'democratic methods and the responsibility of the House of Commons should have had resort to the machinery of autocracy was surprising however to a good many of their democratic supporters

By a curious coincidence just at the time of the Indian Durbar the P & O liner 'Delhi,' with the Princess Royal (the Ling's sister) her husband the Duke of Fife and their daughters Princesses Alexandra and Maud on board, was wrecked in a gale off Cape Spartel on the Morocco Coast (December 13th) and became a total loss and the boat in which the Royal passengers were taken to shore was upset in the surf so that they had a somewhat trying experience. It was hoped that the party had escaped with nothing worse than a wetting and a shock but after going on to Egypt whither they were bound for the Princess Royal's health the Duke of Fife fell seriously ill with pneumonia and he died at Assuan on January 20th. His elder daughter now became Duchess of Fife in her own right.

and the Duke of Argyll (husband of the King's aunt, Princess Louise) had been made Knights of the Garter at the Coronation, and his death removed from the Royal circle a Scottish noble of high character and patriotism esteemed by all who knew him In any survey of contemporary English history it is only proper to dwell first on mat ters directly connected with the Crown and Royal Family, because of the interest

attaching not only to the opening of a new reign but to the increasing importance of the activities of the Throne under modern conditions of British social and political

The King's Royal sup porters.

Much inevitably depends on the extent to which popular respect and affection surround the whole Royal Family and also on the amount of assistance available for the Sovereign, in the varied and exacting functions which the Throne is expected to perform from others among its In these respects king George was able to benefit from a continuous growth of mutual confidence, on the part of the Royal Family and the public at large. In his mother Queen Alexandra and his consort Queen Mary the national affection had always been unchangingly concentrated and his aunts King Edward's sisters Princess (hristian Princess Louise (Duchess of Argyll) and Princess Henry of Battenberg remained as they had long been active and popular figures in English social life. His one surviving uncle the Duke of Connaught a man admired and respected throughout the British Army and indeed among all classes not only for his distinguished ability but also for his camaraderie and good sense, was still able and willing to take an important and most useful part in public life, he went in October 1910 to South Africa with great success to open the Union Parhament on the King's behalf and in 1911 was appointed to succeed Farl Grey as Viceroy of Canada where he and the Duchess quickly made themselves popular and their charming daughter Princess Patricia not less so The Duke of Connaught's son Prince Arthur of Connaught was meanwhile chosen by the king to be his representative on several important missions to foreign countries and was appointed one of the four councillors of State (the others being the Archbishop of t interbury Lord Chancellor I oreburn and Viscount Morley of Blackburn) empowered to transact business in the king's stead while absent on the Royal visit to India. With such supporters among the Roy il Family the work of the Throne was ably assisted nor was the support confined only to these Queen Mary's brother Prince Francis of

public ends and to spare no effort on behalf of national causes But the character of the Sovereign himself is necessarily the central factor in the realisation of those potentialities for social and political influence which have become so marked in the democratic development of the British Monarchy King George s vindication the very outset of his reign King George found it necessary to vindicate his personal character against certain remarkable aspersions and in doing so he gave a proof of his own confidence in the public which had excellent effect. It is now purely a curious episode in the history of scandal mongering that at the time when he came to the Throne, in spite of the genuine liking which existed in all classes for King Edward's sailor son stories were current in various quarters founded on irresponsible gossip, in the first place that he was addicted to drink and in the second—a still more serious matter—that he had been secretly murried before his marriage with the Queen and that this earlier wife was alive though for dynastic purposes the union was ignored I ven while King Edward was alive reports somehow became prevalent that the Prince of Wales drank too much At 'Grand night at one of the Inns of Court the Prince bluntly told the Treasurer who was his host that people said so, and asked him how to get the impression removed a question more easily asked than answered. Those more immediately in the Prince's entourage know that it was nonsense but the more such things are denied the more publicity they generally get When King George came to the Throne however it became desirable that the progress of this lie should be checked and the Dean of Norwich in July 1910 by the King's desire spoke out plainly with excellent effect Right minded people felt moreover that a King who was prepared to abandon the usual reticence in such a matter had a straightforward way or acting which was preferable to the arts of diplomacy

Teck a gallant officer whose death on October 2 1010 cut short a career of much promise had thrown himself into social service at home by becoming chairman of the Middlesex Hospital and his brother Prince Alexander followed his example It was generally recognised as being the pride of English Royalty to use the r position for

Reports with reference to the second allegation had indeed been spread at the time

supporters in the country behind them had created the problem and its solution still remained for them to find. Between them wherever the fault might lie they had sown the whirlwind, and it must carry them where it blew. Meanwhile the Crown outside domestic politics remained by universal consent an Imperial and social factor of all the more potential value because of the warring of political factions. The consolidation of the Empire was making steady progress irrespectively of the political situation in the United Kingdom and King George though not the personal force in European diplomacy and statemanship that King Edward had been was known throughout its length and breadth as no English Sovereign had ever been before. In spite of all the political difficulties in the mother country, the British Throne represented in his person a centre of Imperial authority to which other peoples and Parliaments than those of the United Kingdom contributed and whenever opportunity should serve for a judicious exercise of this authority, the extent of its influence both on domestic and on international affairs would not be limited by constitutional theories affecting the British Isles alone

II The Empire

"Finglish history to day cannot indeed be written without reference to the British Empire as a unit greater than is represented by home (i e English Welsh Scottish and Irish) politics The course of domestic affairs in the other British Progress of Dominions and Colonies is however dealt with in other sections of the Imperialism Year-Book and here it is only necessary to refer to certain matters of common Imperial interest, which are also part of the recent history of affairs in the mother country as the centre of the Empire The Imperial idea to which Mr Chamberlain's administration of the Colonial Othice and the emergency of the Boer War had given such a pronounced impetus has progressed during these later years with rapid strides both in Great Britain and the Dominions - It has done so irrespectively of English domestic politics, in consequence of the increasing consciousness in all quar ters that the different parts of the Empire have a common interest in the maintenance of British power, and that this is only possible by mutual support. The persistent advocacy of the fiscal policy of Tariff Reform and Colonial Preference by the Unionist party in the mother country and their agreement in this respect with the trade policy of the statesmen of the Dominions has undoubtedly done much directly and indirectly to popularise the idea of closer union but on these lines no advance was possible while an English government committed to Free Trade 1 was in othice

Since 1909 however the question of Imperial Defence has become acute in conse quence of the rapid increase of the German navy and its manifest challenge to British sea power This new external pressure and the strain it involved on the imperial resources of the mother country at a point where the security of the Détence outlying British Dominions was immediately affected, concentrated attention throughout the Empire on the problem of a fuller co-operation for Imperial defence and during 1911 and 1912 this aspect of Imperial consolidation brought the statesmen of the Empire increasingly into closer touch over a problem which raised no differences of political principle The most remarkable incident during the Imperial Conference which reassembled in London in 1911 was the confidential discussion of British inter national policy at which the Colonial representatives were addressed by Sir Edward Grey with a detailed account of the situation in foreign affairs For the first time it was felt, the Empire as a whole had been taken into the counsels of the statesmen of the mother country in order that a common understanding might prevail. A naval defence scheme was adopted providing for the maintenance of the various naval services and forces under the control of their respective governments but for making the training and discipline uniform with those of the fleet of the United Kingdom and for arranging an interchange of officers and men, while in war time the colonial ships placed at the disposal of the Crown would be under the British Admiralty The movement for increasing the Colonial navel forces, and combining their provision with the idea of 1 See E B x1 88 at seq

an Imperial Navy acting as a single unit was also notably forwarded by the visit to England of the Canadian Premier, Mr Borden with other Canadian manisters in 1011 for the purpose of discussing the whole subject with the home government and the Committee of Imperial Defence. The public speeches made by Mr Borden and this colleagues during this visit and the references made to it by Mr Asquith in the House of Commons showed that in this department of administrative policy at any rate the goal of Imperial federation was appreciably nearer

In connection with the Imperial Conference of 1911 it may also be noted that reso lutions were adopted by it in tayour of (1) an Imperial Naturalisation Act, based on a scheme to be agreed upon but still undefined for conferring an uniform British citizenship throughout the Empire (2) the appointment (carried out in 1912) of a Royal Commission representing the whole Empire, to investigate and report on its natural resources and the possibility of their development (3) the establishment of a chain of British State owned wireless telegraphic stations within the Empire (proposed under the Marconi agreement of 1912). A some what elaborate scheme proposed by Sir Joseph Ward for setting up an Imperial House of Representatives for Defence, and an Imperial Council of State was withdrawn by him after both Mr. Asquith and various Colonial ministers had criticised it adversely

III Domestic Politics

The history of domestic British politics in 1911 and 1912 wa., dominated by the state of the parties resulting from the general election which was precipitated in December 1910 when the private conference between the Liberal and Partles in Unionist leaders on the constitutional crisis broke down 1. On the eye of Parliament. the election at a great meeting in the Albert Hall Mr Balfour introduced a new issue on the Unionist side by advocating a Referendum on great constitutional questions and declaring that he was prepared to refer Tariff Reform to the people by this method if the other side would do the same for Irish Home Rule - It was believed in some Unionist quarters that this declaration in favour of a Referendum on Tariff Reform (which was generally discussed without any question of its depending on the willingness of the Government to adopt the Referendum for Home Rule) would help to secure support among Unionist critics of the Tariff Reform policy but it came too late in the day for that purpose and was not much to the taste of the more ardent Tariff Reformers Mr Austen Chamberlain for one at once expressed his view of the diffi culty of taking a Referendum on a question of finance and after the elections the idea of qualifying the Tariff Reform issue by coupling it with a pledge not to proceed without a Referendum practically disappeared from the Umonist platform though suggestions tor its revival were occasionally made by Umonists who thought Tariff Reform unpopular 2 Its failure for electioneering purposes helped indeed to increase the criticism which was already rife in certain Unionist circles against Mr. Balfour's leadership. On the other hand the use of the Referendum for putting large constitutional changes before the electorate and for thus solving the problem of conflicts between the two Houses of Parliament was increasingly advocated on the Unionist side A bill for this purpose brought by Lord Balfour of Burleigh before the House of Lords in March 1911, made no actual headway, but the proposal in one shape or another became part of the Unionist alternative to the Parliament Bill The Government, on their side concen trated all their efforts on an appeal to the electorate to give them a majority for the Parliament Bill, as an essential preliminary to any Liberal legislation, and the result showed that the short interval since the general election of January 1910 had made practically no difference in the balance of party power. The distribution of seats and

the point of grew of Insh Nationalists who were not satisfied that all was well with the Government policy

In the Upper House Liberalism had but a small tollowing, but was actively represent ed under Lord Crewe s1 leadership by Lord Morley, 2 Lord Loreburn (Lord Chancellor since 1905 formurly as Sir Robert Reid, Attorney General 1894, and M P since 1886, b 1846) Lord Pentland (Secretary for Scotland 1905-191, till 1909 as Capt John Sinclair M P for Fortarshire b 1869), Lord Beauchamp (Lord Pres of Council June-Nov 1910, then First Commissioner of Works b 1872), Lord Burghelere (formerly an Mr Herbert Gardner M P Pres of Bd of Agriculture 1892-1895 b 1847), Lord Lucas (Under Sec for Colonies March-Oct 1911 then Sec for Agriculture b 18,6) Lord Welby (till 1894 the chief official of the Treasury b 1832) Lord Sheffield 3 (b 1839) Lord Weardale (till 1995 Mr Philip Stanhope MP, b 1847), Lord 5t Davids (till 1908 Mr J W Philipps M P b 1860) and Lord Ashby St Ledgers (till 1910 Capt the Hon Ivor Guest, MP eldest son of Lord Wimborne b 1873) Lord Roscberv⁴ (b 1848) continued to plough a lonely furrow and Lord Courtney of Penwith (b 1832) to play the part of a political Aristides In 1911 the Liberal Peers were reinforced by the elevation of Lord Haldane in March and of Mr Alfred Emmott as Lord Emmott (b 1838 Chairman of Committees in the Commons since 1906) in October the latter being appointed Under Secretary for the Colonics

On the Unionist side, Mr Balfour⁶ (b 1848) had no rival as a parliamentary figure but the party was sore with unsuccess and the personal affection and admiration with Leading men which he was regarded were balanced by misgivings among the rank and on the Union file and in the country as to his capacity to lead them out of it. No other ist side Unionist leader however was prepared to be put in competition with him and he was loyally supported in the House of Commons by ex Ministers in Mr. Austen Chamberlain? (b. 1863) Mr. Walter Longs (b. 1854) Mr. Bonar Law (b. 1858) Mr. H. Chaplin⁹ (b 1841) Mr G Wyndham¹⁰ (b 1863) Mr A Lyttelton¹¹ (b 1854) Sir R B Finlay (b 1842 formerly Attorney General), Sir L Carson (ex Solicitor General and ltader of the Irish Unionists b 1854) Sir W R Anson! (b 1843) Mr J H Campbell (formerly Solicitor-General for Ireland b 1851) Mr F & Pretyman (who had come prominently forward in 1909 as a critic of the new land taxes b 1859) and Mr W Haves Fisher (fresh from leading the Unionists or 'Municipal Reformers on the London County Council b 1853)

In Mr F E Smith K C (b 187) who had made a rapid and brilliant success both at the Bar and in politics the party had an indefatigable worker and an audacious orator now taking a place in the front rank corresponding more or less to that of Mr. Churchill on the other side, and a variety of political takint or experience was actively represented by Sir F. G. Banbury (b. 1850). Mr. G. Cave (b. 1856). Mr. H. E. Duke (b. 1855). Mr. J G Butcher (b 1859) Sir Gilbert Parker¹³ (b 1861) Mr Charles Bathurst (b 1567) Mr A H Lee (b 1868), Lord Hugh Cecilia (b 1869) Lord Charles Beresiord (b 1840) Mr E A Goulding (b 1863), Sir A Griffith Boscawen (b 1865) Mr H Stavely Hill (b 1865) Mr J W Hills (b 1867) Mr H J Mackinder (b 1861) Mr F Cassel (b 1869) Mr B L Peto (b 1862) Mr L Worthington Evans (b 1868) Mr H Page Croft (b 1881) Mr George Sandys (b 1875) Major Archer Shee (b 1873) Mr A Burgoyne (b 1880) Mr. W Ormsby Gore (b 1885), Mr W W Astor (b 1870) Lord Winterton (b 1883) Lord Castlercagh (b 18,8) Lord Ronaldshay (b 1876) Lord Tulhbardine (b 1871), Lord Wolmer (b 1887), and Lord Helmsley (b 1884) The Irish Unionists included Mr. W. Moore (b. 1864). Sir J. B. Lonsdale (b. 1840). Capt. J. Craig (b 1871), and Mr W Mitchell Thompson (b 1871)

With Sir Alexander Acland Hood (b 1854) as Chief Whip—retiring with a picrage

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            13 Ibid xx 8,7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       14 Ibid xxiv 76
```

succeeded him in the post Mr H W Forster (b 1866), and Mr H Pike Pease (b 1867) and as the result of a rearrangement of the machiners of the Conservative Central Office in 1911 (carried still further by the fusion in 1912 of the Conservative and Liberal Unionist organisations under Mr John Boraston as Chief Agent), Mr A H Steel Maitland M.P (b 18,6) was made Chief Organizer of the party, independently of the work of parliamentary whipping 2

In the House of Lords Lord Lansdowne³ (b 1845) was the recognised Unionist leader, actively supported by such a Ministers as Lord Halsbury⁴ (b 182₃), Lord Londonderry⁶ (b 1852) Lord Curzon⁶ (b 1850), Lord Midleton⁷ (b 1856), Lord Sel borne⁸ (b 1859) Lord Cawdor (1847-1011, First Lord of the Admiralty 1905), Lord Sahsbury⁹ (b 1861) Lord St Aldwyn¹⁰ (b 1837), Lord Balfour of Burleigh¹¹ (b 1849), Lord Ampthill¹ (b 1860), Lord Derbyl³ (b 1865) Lord Onslow¹⁴ (1854-1911), and the Dukes of Norfolk¹⁵ (b 1847) and Marlborough¹⁶ (b. 1871, formerly Colonial Under Secretary) Lord Aveburyl¹⁷ (b 1834) Lord Cromerl³ (b 1841) and Lord Milnerl³ (b 1854), were other important figures on the same side, and among Unionist peers of marked political talent and influence were Lord Ridley (b 1874 Chairman of the Fariff Reform League) Lord Malmesbury²⁰ (b 1872), Lord Willoughby de Broke ¹ (b 1869) and Lord Newton (b 1857)

Among the members who were returned to the new House of Commons subsequently to the general election the most notable personalities on the Liberal side were B4ron de Forest (b 1879) for North West Ham (July 1911), Mr W G C Gladstone (b 1885) for Kilmarnock Burghs (Sept 1911) Mr S O Buckmaster (b 1861) for the Keigh ley division of Yorks (Oct 1911) Mr Hemmerde (b 1871) for North-West Nor folk (May 1912) and Mr R L Outhwarte (b 1869) for Hanley (July 191) in the Ministry itself Mr C F Masterman (b 1813) was returned in July 1011 for South West Bethnel Green after being unseated on petition for North West Ham On the Unionist side the ablest of the Tariff Reform leaders. Mr. Bonar Law, who had been defeated for North West Manchester at the general election was returned for Bootle in March 1911 and other important additions to the Parliamentary personnel were represented by the return of Sir J Larmor (b 1837) for Cumbridge University (Γεb 1011) Mr W Joynson Hicks (b 1865) for Brentford Mr L S Amery (b 18/3) for South Birmingham Mr Ronald McNeill (b 1861) for the St Augustine's division of Kent (July 1911) Lord Robert Cecil (b 1864) for Hitchin (Nov 1911) and Mr W A 5 Hewins (b 1865) for Hereford (March 8, 1912) Mr T M Healy deficated as an Independent Irish Nationalist at the general election was in July 1911 provided with a seat for North East Cork by the retirement of Mr Moreton Frewen

The Unionists were now united after all the troubles over the Tariff Reform move ment which started in 1903 by the common bond of resistance to the Radical Socialist programme of their opponents. The Unionist Free Traders had been compelled by the course of events—especially as in their opinion the Liberal Government had under Mr. Lloyd George's guidance pursued an economic policy disastrous to the essentials of Free Trade—to accept the fact that Tariff Reform and Colonial Preference now stood officially in the forefront of the constructive programme of the party. In the House of Commons itself when it met in February 1911, Lord Hugh Cecil remained solitary as an Unionist Free Trader in the peculiar conditions attaching to his seat for Oxford University. The precise form which the Tariff Reform policy would take if the party were returned to power—whether the food taxes.

¹ Mr Percival Hughes who had been Chief Agent on the Conservative side since 1907, resigned in January 1912 Mr Boraston had been Liberal Unionist Chief Agent for some years

could be modified or dropped whether the idea of a Referendum should be persisted in was debated in some quarters according to varieties of opinion on electioneering tactics but it was sufficient for the moment for those Unionist politicians who had opposed it altogether or still wavered as to details to wait events. The solidarity of the party in opposition in the immediate crisis was of more immediate importance. On the other hand while recognising this fact, the convinced Tariff Reformers were satisfied, from their point of view, with the progress of their movement. The party leaders and the party organisation were now identified with the whole policy and its acceptance by Umonist candidates was therefore a matter of party loyalty. In the constituencies it was making continued headway the winning back of eight seats in Lancashire at the general election indicating that an impression was being made on the industrial North of England Above all the general idea inspiring Mr Joseph Chamberlain's proposals, -the federalisation of the British Empire and its closer union for fiscal as well as other purposes -was taking more definite shape in the common political consciousness While a protective national economic policy was advocated by the Tariff Reformers as an essential condition of the improvement of industrial and social conditions at home —and on those lines they were prepared to go considerable lengths to meet the demands of Labour,--its most active supporters had always in their mind its bearing on the policy of Imperialism Faced with the inevitability of large constitutional and social reforms a new constructive spirit had come to dominate the party changing the whole outlook for democratic Conservatism under the guidance of this vision of systematised Fighting as they must to defeat the Coalition Government if possible Imperial unity in order to preserve the integrity of the Imperial Parliament menaced by Irish Home Rule and the check of an effective Second Chamber upon Radical Socialist legislation put in jeopardy by the Parliament Bill the most influential Unionist politicians and publicists were looking anxiously to the wider Imperial issues beyond the solution of immediate domestic problems. It would be unjust to the more Imperially minded individuals on the Liberal side to claim a monopoly in this respect for the Tariff Reform Unionists but Liberal and Labour politicians and publicists were naturally engrossed with the purely domestic issues represented in their own party programmes predominant characteristic of all the Unionist activity both at this stage and after wards that it centred round the Imperialist policy which was the end in view immediate danger to the cause of Imperial commercial unity which was threatened by the reciprocity treaty between Canada and the United States was therefore a matter of special concern hailed as it was on the Liberal side as according with the Free Trade Grave as the position was for Conservatism and Unionism in English parliamentary politics in Imperial politics as viewed by supporters of Tariff Reform and Colonial Preference this seemed even a more momentous development hopes were still entertained that either by agreement between the parties or through the failure of the Ministry to obtain the King's consent to actual coercion of the House of Lords the immediate constitutional crisis might be solved or the Government forced to resign or once more dissolve in circumstances more favourable than before to a Unionist success at the polls After the last two elections further defence of an unre formed House of Lords was out of the question

It was clear from the first that the Government could rely on the support of the Irish Nationalist party. The passing of the Parliament Bill was an essential prelim mary to the successful accomplishment of Home Rule, and it had been Mr af the Redmond's policy ever since the elections of January 1910 to press the de Government. Struction of the peers' veto to its final issue for that purpose. The only doubtful element in the coalition was the Labour party, whose parliamentary independence—partly as directly representing the Socialist movement, partly as representing the economic policy of the trade unions and partly as advocating equally against fory or Liberal "capitalists" and against the whole public of "consumers' the claims of the wage-barning classes as such,—was shown in the promotion of third party candi

¹ See E B xv1 28

dates at some of the by-elections Its parliamentary programme included a 'Right to Work 'Bill which the Liberal party could no more support than the Unionist, whatever individual members of either might do, and at the present moment having successfully extorted the Trade Disputes Act from parliament in 1906, it was set on obtaining from the Government a bill for reversing the Osborne judgment,"2 and freeing the employ ment of trade union funds for political purposes The fact however that the "inde pendence' of the Labour party was dominated by reluctance to put Liberalism in a minority in so far as it stood for causes with which the Labour party also identified itself.—Free Trade, the Parliament Bill, Irish Home Rule and Welsh Disestablishment -made its parliamentary position more or less of a sham, and one over the manoeuvring of which the Government's Whips had the upper hand The result was that the idea which had begun to prevail in 1006 that the power of the Labour party in Parliament (as distinct from the Labour movement 'outside) was likely to have a rapid growth was The industrial troubles of 1011 and 1012 notably the railway considerably modified strike, the coal strike and the London dock strike (see IV below), were seen to be beyond their guidance or control —they were indeed largely the consequence of a widespread feeling shown in outbreaks of syndicalism that the Labour members in parliament were impotent because their action was subject to their maintaining the Liberal Govern ment in power Moreover the wind was taken out of their sails by the extreme radical ism of Mr Lloyd George and other Liberal electioneers, whose object naturally was to show that Liberalism could do all that Labour wanted On the other hand a consider able section of the Liberal party was either apprehensive of the alliance of Labour and Socialism or jealous of surrendering to the Labour party seats which were considered to be within the Liberal preserve. Between the claims of Liberah and Labour the Liberal party managers were unable to avoid friction in the constituencies as this situa tion developed and though the Whips kept a majority for the Government together against every sort of Unionist attack up to the adjournment of Parliament in August 101 the possibilities of a serious breach between Liberalism and Labour were towards the end of that period clearly shown in the by election at Hanley (July 13th) where a Liberal displaced a I abour member followed by that at Crewe (July 26th) where the Unionist candidate was returned in a three-cornered fight and still further in the rivalry of Labour and Liberal candidates for Midlothian (Sept 10th) resulting in a In this last instance the local Liberals flatly declined to accept the Unionist victory Master of Ehbank's suggestion-made just when he was retiring from the post of Chief Government Whip and was taking a peerage as Lord Murray —that they should sup port the Labour nominee But this particular weakness within the Coalition majority was of no advantage to the Unionists while the Parliament Bill was still under discussion For their immediate purposes in 1911 the Government had complete control of the parliamentary machine when they started afresh after the general election and they went ' full steam ahead

On February 6, 1911 the first Parliament of George V was opened, and its prelim mary stages in the way of amendments to the address were soon over On February oth, an Opposition Tariff Reform amendment moved by Mr Austen The Parka Chamberlam was defeated by 102 votes and on February 15th an anti ment Bill in the House of Home Rule imendment was defeated by 113 On February 21st, the Parha mentBill2 was reintroduced in the House of Commons and had a first reading majority of 124 next day and the second reading moved on February 27th was carried by a majority of 125 on March 2d The Committee stage lasted from April 3d with an interval for Easter from the 12th to the 18th till May 3d, on May 8th Mr Asquith carried a motion to devote only four more parliamentary days to the Bill and on the 15th the third reading was carried by a majority of 362 to 241, and the Bill was sent up to the House of Lords A few trivial changes had been accepted in its wording, but all the substantial amendments proposed by the Opposition had been negatived, and the one attempt from within the Coalition to modify the Bill—a Labour party amendment 1 E B xxvii 143 Ibid 15 846 847

they may understand that in the event of the policy of the Government being approved by an adequate majority in the new House of Commons. His Majesty will be ready to exercise his constitutional powers which may involve the prerogative of creating peer—if needed no secure that effect shall be given to the decision of the country. His Majesty's ministers are fully sine to the importance of keeping the name of the king out of the sphere of party and electional controversy. They take upon themselves as is their duty the entire and exclusive responsibility for the policy which they will place before the electorate. His Majesty will doubtless agree that it would be inadvisable in the interests of the State that any communication of the intentions of the Crown should be made public unless and until the actual occasion should arise

The King had felt that he had no alternative except to assent though he did so as Lord Crewe now stated (as was understood) on his behalf, ' with natural and legitimate reluctance. The Government, according to their own view had hoped that as the result of the general election, the Parhament Bill would be allowed to pass without amendments which would be fatal to its purpose and therefore without a disclosure of the confidential understanding which all the time existed as to the use of the Prerogative but this was no longer possible and the only question now was whether the threat was to be sufficient by itself, or whether by continued resistance the Government should be forced to carry it into effect.

On this point a serious division of opinion at once was shown in the Unionist party It was clear that in the House of Commons the Lords amendments would be summari The Die-Hard ly rejected by the Coalition majority and any further development of the Movement political crisis depended on what would happen in the House of Lords when and the Bill was sent back to it. A hurried meeting of Unionist Peers was held immediately (July 21st) at Lansdowne House at which Lord Lansdowne informed them that the Government had told the Opposition leaders that their intention was not to send the Bill up from the House of Commons unless an assurance was given that it would be passed, the assumption being that failing this assurance peers would at once be created in sufficient numbers for the purpose and it was freely stated in the Liberal Press that the Government Whips had a list ready of persons who were prepared to accept peerages on condition that they voted for the Liberal programme A state of extreme exasperation prevailed but a considerable majority of Unionist peers agreed with Lord Lansdowne's view that if this creation of peers was proceeded with, not only would the Parliament Bill be passed but even such opportunities as it left open for subsequent resistance to Home Rule and similar measures would be nullified, the only prudent course in the interest either of the Unionist party or of the peerage was to sink further opposition now that they were no longer ' free agents ' On the other hand a minority whose view was strongly expressed by Lord Halsbury the veteran ex Lord Chancellor bitterly opposed such a surrender in their view they did not cease to be free agents until they were actually out voted, and it was in this sense that they had understood Lord Lansdowne's use of the phrase on the third reading and only on that condition that they had not rejected the Bill then they still regarded the Government threat as a piece of bluff which could not be carried into action but even if it was not bluff and a large number of new Liberal peers were actually created such a violent course would bring ridicule and disaster on the Liberal party and would make the country realise as nothing else apparently could the revolution that was contemplated experience in the past, it was well within what might be expected that when the 500 eligible magnates who were willing to take Liberal peerages had voted for the Parliament Bill they would take a more independent view of their position so far as Home Rule and other measures were concerned When the Government had finally shot their bolt and by creating the new peers had reconstituted the existing House of Lords in such a way as to destroy the Liberal contention that it was simply a Tory preserve it would formally at all events, be actually strengthened as part of the constitutional machinery impossible to suppose that even in so wholesale a creation, the class of men whom Mr Asquith was prepared to nominate for the purpose would be different from those who in recent years had been added quite acceptably to the House of Lords by Liberal initia tion in considerable numbers, and who had in many cases come round there to a different

way of thinking 1 A further argument was that if a creation of peers was avoided now it would not prevent exactly the same situation arising if and when the House of Lords subsequently rejected a Home Rule Bill, the best thing therefore was to get the whole business over at once, and exhaust the credit which had been opened by the Ministry, matters had already gone too far for the House of Lords any longer to act as safeguard against single-chamber government

Between these opposing views of the situation a cleavage in the Unionist ranks was at once manifest, among the peers, the party in the House of Commons the rank and nle in the country and in the Press Mr Balfour decided to 'stand or fall 'with Lord Lansdowne's advice, and they were followed by much the larger numbers, but public interest centred in the outcome of what was known as the ' Die Hard " movement, which was actively organised under Lord Halsbury's leadership and initiated at a large ly attended and enthusiastic dinner in his honour at the Hotel Cecil on July 26th at which Lord Selborne presided supported by Lord Salisbury, Lord Milner, the Dukes of Northumberland Marlborough, Bedford and Somerset, Mr Austen Chamberlain, Mr George Wyndham Sir Edward Carson, Lord Hugh Cecil Mr F E Smith Lord Wil loughby de Broke and other prominent men How many peers would follow the lead given by Lord Halsbury and vote against the unamended Bill when it was again sent up was still uncertain but as Lord Lansdowne and the bulk of those who accepted his advice were only prepared to desist from further opposition and would not assist the Government affirmatively by voting for a measure they detested just as much as the "Die Hards it was impossible for him to give Mr Asquith the assurance he had de A period of extreme tension and uncertainty followed. On July 24th when Mr Asquith was to move in the House of Commons that the Lords amendments be dis agreed with, he was howled down from the Unionist benches, amid a scene of great dis order in which Lord Hugh Cecil and Mr F E Smith were specially prominent and the Speaker was eventually obliged to adjourn the House further disorder took place next day when Lord Hugh Cecil was howled down by the Ministerialists and it was not till August 8th that with Mr Winston Churchill leading the House in the absence of Mr Asquith who was suffering from laryngitis the motion for disagreeing with the Lords amendments was carried by 321 to 215, after the Government had agreed to introduce a Meanwhile Mr Balfour had endeavoured to placate the whole of few minor changes the Unionist party by moving a vote of censure (Aug 7th), which was rejected by 365 to 246 and in the House of Lords a similar vote of censure moved by Lord Curzon (Aug 8th), was carried by 282 to 68 but the "Die Hard" movement had gone on unfalteringly and an active canvass had been in progress both on the Unionist and the Liberal sides with a view of ascertaining how the division might go if the Bill came again before the House of Lords under existing conditions

The uncertainty whether the ' Die Hards would outnumber the Liberal peers if Lord Lansdowne's supporters simply abstained, as he advised them to do made the situation very difficult both for the Government and also for those Unionist peers who thought that a wholesale creation of new Liberal peerages would be worse even than the passing of the Bill without it. On the one hand a considerable section of Radical opinion was in favour of settling the whole question, including the future of the Radical programme, by immediately making enough peers to ensure a Liberal majority on the other a section of Unionist peers led by Lord Cromer and Lord St Aldwyn were considering whether to avoid this they should vote for the Bill bad as it was while others passionately resenting this suggestion, declared that if it were acted on they would desert Lord Lansdowne and join the Die Hards ' Amid the confusion on both sides and the increasing bitterness of feeling among the Unionists, it was believed that Lord Knollys the King's private secretary who was in constant communication with Down

It is worth noting in this connection that between 1868 (when modern Liberalism and Conservatism practically started as organised parties) and October 1912 the new peerages created by Liberal Governments numbered 164 and those created by Conservative Governments 149 Mr Asquith alone had created 52 new peers up to October 1912 since he became Premier in 1908 See also E B xxiii 112

so as directly to reverse the Osborne Judgment, was impossible, though the Government was prepared with a Bill—unsatisfactory to the Labour party and not proceeded with a second edition being introduced in 1912—for enabling Trade Unions to make special provision for voluntary political funds, separately from the general funds to which every member of the Umon had to contribute but it was hoped that payment of all M P s out of public money would do away with the particular grievance of the Labour members. This was not however in fact the result, and the demand for a complete legislative reversal of the Osborne Judgment persisted. In the country generally a good deal of disgust was felt at the calm way in which M P's had voted themselves \$400 a year and a number of individual members, who were far too well off to want the subsidy, did their best to refuse it. But the deed was done, provision was made in the Budget and a new temptation was held out for the multiplication of parliamentary candidates among persons to whom \$400 a year would be useful

Meanwhile the National Insurance Bill introduced by Mr. Llovd George on May 4 1911, had introduced new issues into the political conflict even when the constitutional criss was at its height. This elaborate measure in 8, Clauses covered two distinct subjects, one being National Health insurance under newly constituted Insurance Commissioners for England Wales, Scotland and Ireland (with a joint Committee, formed from among them, for adjusting common affairs) assisted in each case by an Advisory Committee with County and County borough Committees for local administration and the other Unemployment Insurance directly under the Board of Trade. As the latter excited comparatively little criticism it may be dealt with first

- (i) Unemployment Insurance administered largely through the Labour Exchanges was limited to begin with to certain trades—building construction of works (railroads dock etc.) shipbuilding mechanical engineering ironfounding construction of vehicles and saw milling—but with power for the Board of Trade to extend the scheme to others. Workmen in these trades (others than foremen clerks indentured apprentices and persons under sixteen) would be entitled under various restrictions to unemployment benefit (up to a standard of 7 s. a week for not more than fifteen weeks a year starting at the second week of unemployment) out of an Unemployment Fund formed by each workman compulsorily contributing $2\frac{1}{2}$ d a week (paid by employer and deducted from wages) employers $2\frac{1}{2}$ d a week per man and the State adding an amount equal to a third of their total contribution
- (2) For National Health purposes compulsory insurance was imposed on all persons (between 16 and 70) under contracts of service with certain exceptions (includ ing those employed otherwise than in manual labour and paid over £160 a year or possessing f.26 a year from property), provision being also made for certain classes of employed persons not compulsorily insured to come into the scheme as voluntary contributors Under the compulsory insurance (except for certain lower rates) male contributors were to pay 4d a week female 3d (employers making the payments and deducting them from wages), and employers 3d for each male or female employed (special stamps for each amount having to be affixed to cards for this purpose) the State adding to the National Health Insurance Fund so constituted an amount (two ninths in the case of men and a quarter in the case of women of the cost of benefits and administration) which was reckoned to work out at 2d a week per head primarily secured were (1) free medical treatment at home (2) sanatorium treatment for tuberculosis and other diseases specified by the Local Government Board for which special arrangements were made the Government allocating fr 500 000 for the building of sanatoria (3) payment during sickness of ros a week for men and 7s 6d for women up to 26 weeks (4) subsequent payment during disablement of 5s a week and (5) maternity bonus of 30s to women (including wives of insured persons) on confinement provisions being made for granting these benefits (medical attendance sickness, and materraty behefits not till six months disablement not till two years after payments started) or modifying and extending them as funds permitted The agencies for

administering the benefits were made (1) approved societies' ie the Friendly Societies trade unions and such similar bodies as the Insurance Commissioners an proved the intention of the Government being to have as many as possible of the insured included as members of "approved societies 1 (2) the Post Offices which would deal with those who would not join societies or whom societies would not admit. and who thus became "deposit contributors ' The Local Health Committees among their other duties (including the administration of sanatorium benefit) were left to arrange for the service of medical practitioners for insured persons, preparing lists of doctors from among whom the patients were to have their own choice payment to the doctors from the general fund being estimated for at the rate of 6s (including cost ot drugs) per head per annum This feature of the Bill as explained by Mr Lloyd George quickly aroused the opposition of the doctors who were organised under the British Medical Association to refuse their services unless a larger payment was made and as a body the doctors stood out for better terms month after month going by without any settlement being arrived at even after the Act came into operation medical benefits under the Act became due on January 15 1913 it became a question for the Government whether if no terms could be arranged a regular State Medical Service would not have to be started but this would take time to organise and mean while it would be poor consolation to the prospective beneficiaries under the Act for the Government merely to hand them over the money proposed for the doctors and to leave them to make the best of it On October 23 1912 Mr Lloyd George announced the Government's final' offer to increase the capitation fee to 98 (including drugs and extras) representing a further increase in the remuneration of doctors by fr 650 000 but on November 17th the offer was rejected by an overwhelming majority of the profession at a representative meeting of the British Medical Association and negotia tions began again (See below ad μn)

The second reading of the Insurance Bill debate on which began on May 24 1911 was carried without a division on Miy oth and the Committee stage went on inter mittently from July 3th to August 4th when with the discussion on the 17th clause finished Mr Lloyd George was still able to regard the Opposition Parliament. as favourably disposed towards the Bill and co operating by useful criti cism in giving shape to what was necessarily a very complicated measure. Its re maining stages were then left over for the Autumn Session, which began on October But in the interval opposition had been growing and the political situation in other respects was such that genuine co-operation with anything proposed by the Government was hardly possible if party capital could be made for the Unionists by what was unpopular in its programme. Not only were the doctors in full revolt against the terms the Bill proposed for their remuneration but the working classes themselves were found to dislike exceedingly being taxed in such a direct way for benefits they were not able to appreciate Mr Lloyd George ever an ardent electioneer however sincere he might be as a social reformer exasperated the Unionist party sore enough already at his success with the Budget of 1909 and the electioneering use made of the grant of Old Age Pensions by his description of the Bill as giving the working classes ninepence for fourpence but there was no doubt about the fourpence being a first charge on wages and the man who paid it was perhaps only providing ninepence for somebody else -this being the essence of any insurance scheme, -and was not so much impressed by the prospect of benefits as by the compulsory character of the contribu Among domestic servants the scheme was cordially disliked Though the Bill was planned so as to involve financial co-operation between the State and the Friendly Societies there was considerable uncertainty as to how far a great many of the latter especially the smaller local societies, would reap advantage rather than loss The whole scheme in spite of the excellence of its intentions, was seen to raise a number of new social and economic problems the solution of which nobody could foresee, either before it became law or afterwards and public discussion concentrated on the difficulties and objections It was inevitable therefore that, so far as the political aspects of the Bill were concerned the attitude of the Opposition should be affected by the discovery of its wide unpopularity. They had originally welcomed it in principle but they represented for organised political purposes, a growing body of hostile criticism as to details and criticism which in the circumstances was becoming more and more incompatible with parliamentary support

The result was decidedly unfortunate for a scheme which aimed at accomplishing so important a work of social reform The Government had its programme for 1012 full subject to the way being cleared by the Parliament Act by the political necessity of proceeding with Home Rule and Welsh Disestablishment Act passed and Mr Lloyd George whose influence on the parliamentary tactics of the Coahtion was now supreme, determined to force the Insurance Bill through before 1911 When the House of Commons resumed on October 24th Mr Asquith carried a time-table resolution for closuring the remainder of its stages, and by this drastic method the Bill passed through Committee on November 21st and was read a third time on December 6th Under such conditions the opportunity for effective Opposition criticism and amendment was so limited that very little was possible in spite of the activity of Mr Worthington Evans and other Unionist members and towards the end it became a question whether the Unionist leaders would actually divide against the third reading, a course to which they were openly challenged by Mr Lloyd George Instead of this an Opposition front bench amendment was moved by Mr H W Forster proposing that the Bill should be postponed for further discussion and this was defeated by 320 to 223 the third reading then being carried in a division in which the Opposition as a whole took no part, 21 members recording their votes against it On December 11th the Bill was read a second time in the House of Lords and after various Government amendments had been inserted in Committee on December 14th it was passed and received the Royal assent next day when Parliament was prorogued

During all this time both inside and outside Parliament opinion as to the scheme and its prospects had become more clearly crystallised. While Mr Llovd George and his supporters proclaimed it to be the most beneficial reform ever conceived in the interest of the working classes and taunted the Opposition with discontent. attempting to destroy it the Unionists dwelt on the injury done by forcing through a measure which ought to have been more carefully considered before it became law, and threw the responsibility on the Liberal party for everything that was object tionable and unworkable in it. The by elections showed that its unpopulanty was continually growing and under the arrangement made in the Act that the Insurance commissioners should during 1912 make regulations as to details nobody knew vet what procedure would be adopted to overcome countless points of difficulty which under the Act itself remained quite unsettled The medical profession without whose co-operation so far as could be seen the Act would not work at all continued to refuse it unless they were given better terms, to which Mr Lloyd George was still unable passive resistance ' was being organised on their behalf by the British Medical Association and threatened in various other directions. As time went on the muddle only grew worse and when the Act came into effect in the autumn of 1912 most of its problems were still unsolved

As a measure of social reform indeed the Insurance Act was undoubtedly one which ought to be of great value when in full operation and as usual in Great Britain in spite of general discontent most people combined to carry the Act out Speaking on October 12 1912 Mt Lloyd George was able to boast that, whereas the original actuanal calculations led to the expectation that 12 million stamps on the average would be fixed to cards every week, this number had been regularly and continuously exceeded, and had that week reached over 15 million. In spite of all objections and much talk about resistance among employers and employed, though the benefits were not yet forthcoming and comprise uncertainty existed as to the action of the medical profession payment, was being made for insuring between 13 and 14 millions of people against sickness and 22 millions against unemployment. As a piece of Liberal electioneering,

on the other hand despite desperate oratorical efforts on Mr Llovd George's part and assiduous lecturing by his emissaries throughout the country on its advantages to the working classes it was for the present a complete failure, and its unpopularity became the most prominent teature in the political life of the country, with the result of a marked improvement in the Unionist position. During the debate on the address early in 1912 the leader (Mr Bonar Law) of the Unionist party being asked in debate by Mr. Asquith whether he would repeal it if he came into office hastily replied. Cer tainly—afterwards explaining that he meant—withdraw for amendment—It was considered at first by the Liberal Press (and even by many Unionists at the time) that he had made a faux pas—but as a matter of fact the unpopularity of the Act was such that the Liberals found it impossible to make any lasting capital out of the indiscretion.

Another piece of social legislation which caused considerable local irritation was the Shop Act quickly passed in the autumn session which many shopkeepers found to work very inconveniently. It limited the hours of shop assistants to 60 (with one half holday) a week regulated the overtime permissible and while providing for Sunday closing gave power to local authorities with the

approval of two thirds of the shops affected to decide the closing hours on other days It was however not only the stimulus given by the antagonism of the country to the Insurance Act that was causing a revival of Unionist confidence after the defeat Ar Balfour's over the Parliament Act During the autumn session the Unionist party resignation had started airesh under a new leader in the House of Commons The ' Die Hard revolt had been a fresh illustration of the dissatisfaction within the party at the way it had been led by Mr Balfour for some time past the Parhament Bill had actually been defeated in the House of Lords by the Die Hards it was an open secret that both Lord Lansdowne and Mr Balfour had intended to retire from their positions at the head of the party and it was largely the dislike of acting disloyally by them that confined the open revolt to a comparatively small section Exasperation at the result however was general and though when the crisis was over. Unionist concentration was obviously dictated by all the circumstances Mr Balfour's authority had been senously shaken He himself did his best to smooth matters over declaring in a public speech (Haddington Oct 7th) that the question of the Peers tactics was now a dead issue of no more practical importance than the controversy as to the identity of Junius and the Die Hards though they started a Halsbury Club and kept their organisation in being protested at the same time that the differences within the party were ended with the cause of them and that they only meant to work for the common good. But after some weeks of reflection when the hubbub was all over Mr Balfour made up his mind that the right moment had arrived for him to retire from the leadership though not from Pirliament in view of the arduous political struggles still impending and the unlikelihood of his being strong enough in health should the Unionists again return to power to conduct a Ministry Since 1801 he had led his party in the House of Commons and at sixty three it was time for him to make way for others It would be better he thought to get a new leader into harness at once so that he might be ready for the responsibility of office His announcement to this effect was made on November 8th at a hastily convened meeting in the City of I ondon and he made it clear that the step was irrevocable a tew days the question of who would succeed him was uncertain. Mr. Austen Cham berlain, not only as principal leader of the Tariff Reformers and one whose very name would, on his father's account be most representative of the Imperialist movement, but as a Chancellor of the Exchequer and officially Mr Balfour's deputy on the Opposition Front Bench had apparently the strongest claim but as a Liberal Unionist his selec tion was opposed by many Conservatives who considered Mr Walter Long a better choice, and Mr Long's great popularity among all sections was much in his favour It became clear to the partisans of both that if either were proposed and votes were taken it would only emphasise the division of opinion and create friction between their supporters whereas unanimity was the first consideration

It was found that Mr Austen Chamberlam and Mr Long were both prepared to stand aside in favour of Mr Bonar Law, 1 nominally a Conservative and at the same time a strong Tariff Reformer, and on their joint proposal he was quickly Mr Bonar Law the new adopted as leader in the House of Commons (Lord Lansdowne continuing to be leader in the House of Lords) at a party meeting on November 13th Their sacrifice of personal ambition to the party interest and their loyal pledges of co-operation with the new leader, who himself enjoyed the admiration of all sections set an example which did much to promote fresh confidence within the party and Mr Bonar Law had no sooner become leader than there were signs of improved Unionist prospects in the constituencies. In intellectual range, subtlety of exposition and criticism and political experience, Mr Balfour had admittedly no rival on either side but he still remained in the fighting rank ready to devote himself to the Unionist cause as much as anybody His retirement from the formal responsibilities of leader ship gave freer play to the respect and admiration felt for him personally as a public man while relieving the party of the accumulation of doubt as to his policy and tactics which rightly or wrongly had led to undercurrents of dissension To the plain man his detached and philosophical outlook on public affairs had been rather too lofty to be ' had' or tricked as the party was openly taunted by its opponents over the Budget of 1909 or the Parliament Bill of 1911 simply meant that its leader had failed in astute ness, ardent Tariff Reformers enthusiastic for Mr Chambeilain's policy and pining for Mr Chamberlain's aggressive tactics telt that Mr balfour's balancing support of their proposals was unpractical and was confined to economic generalities. He was too much of a gentleman as well as too little of a business man the situation Mr Bonar Law on the other hand was more of the Chamberlain type a successful man of business the clearest and most convincing platform exponent of Tariff Reform a speaker who was accustomed to calling a spade a spade Though he had never sat in a Cabinet he had for several years been regarded by his party as one of their principal leaders. If Mr Balfour for his own reasons had not decided to retire it is certain that however vocal the malcontents were -- and the Vational Review and Morning Post had for some time been in open mutiny —the party as a whole and all his colleagues would have remained loval to his leadership but as things were it is equally certain that the change was regarded on all sides as marking an epoch in the fortunes of the Unionist party With the selection of Mr Bonar Law to lead them in the House of Commons came a new spirit of hope and zeal He made an excellent start with his first public speeches after becoming leader notably with a general attack on the Government at the Albert Hall on January 6 1912

At the same time the result of the Canadian elections at the end of September and the defeat of Sir Wilfrid Laurier's American Reciprocity proposals had delighted the Unionists and given them fresh confidence for the future of Imperialism Canada had shown that she meant to keep her place in the Fmpire, and that antagonism to the prospect of becoming simply an annexe to the United States was more powerful than the temptation to secure immediate commercial advantages from Reciprocity Up to the last the result of the Canadian elections had been very uncertain and the Tariff Reformers in England who had been thoroughly depressed and disheartened by the idea that if reciprocity between Canada and the United States were established, their hopes for Imperial commercial union would be frustrated had in Mr Borden's success a legitimate triumph for their own views of Imperial policy Imperial patriotism in Canada had averted the greatest danger yet

The Rt Hon Andrew Bonar Law was born in New Brunswick Canada on September 16 1858 his father being a Presbyterian minister and his mother a native of Glasgow He was sent to school in Glasgow and went into the business of his mother is family there William Kidston & Sons iron merchants, from which he retired with a fortune He entered Parlia ment for the Blackfriars division of Glasgow in 1900 but did not contest the seat in 1906 being then returned for Dulwich where he sat till December 1910 when he stood unsuccessfully in Marchester In March 1911 he was returned for Bootle From 1902 to 1906 he was Under Secretary for Trade

threatened in spite of the support given by the Liberal government at home and the British Ambassador at Washington Every platform rang with Unionist rejoicings, and the Canadian victory put new heart into the Tariff Reform propaganda

On yet another question of Imperial moment a rebuff was given to the Ministerial Throughout 1011 the decision of the Government to ratify the Declaration of policy London had led to a prolonged agitation Most of the Unionist party The Naval together with a strong body of naval opinion were actively opposed to it Prize Bill their argument being that under its provisions the advantages of British supremacy at sea in war time would be seriously diminished. The Government suc ceeded however (June 1 1911) in obtaining the support of the Imperial Conference considerable weight attaching to Sir E Grey's view that adhesion to the Declaration would be advantageous in Great Britain's toreign relations and to the cause of peace As Parhament had no direct control over the action of the Government in the matter of ratification political opposition centered on the Naval Prize Bill which was introduced to carry out the provisions of the Declaration of London the second reading being taken on July 3d So much headway was made in arousing antagonism to the Declara tion itself that when the third reading of the Naval Prize Bill came on in the House of Commons on December 7th the Government only managed to get a majority of 41, and the House of Lords promptly rejected the Bill

The Government were meanwhile being perpetually worn and worned by the militant agitation for Women's Suffrage and by the difficulty of dealing with any legisla tion on the subject when the Cabinet was divided The Prime Minister The Franchise ques himself was avowedly opposed to Women's Suffrage altogether, and tion among other Ministers Lord Loreburn and Mr. Lewis Harcourt shared his On the other hand Mr Lloyd George while professing himself a strong supviews porter of the cause which was also advocated by Sir E Grey and Lord Haldane objected to any Bill which was not thoroughly democratic, and because the mili tants regarded his attitude as obstructing the particular measure which they had in view and held him responsible for a Government Bill not being introduced as they desired he was pestered as much as it he had actually been an open opponent like Mr Bill introduced by Sir G Kemp which The so called Conciliation issimilated the parliamentary to the municipal franchise for women and would give votes to about a million had been read a second time in the House of Commons on May 5 1911 Mr Asquith himself puring against it while Mr Lloyd George and other Ministers supported it, and as there was no time for proceeding with the Bill in 1911 the Government promised to give it facilities in the following year. But while the various sections of supporters of Women's Suffrage disputed about its prospects and the militants raged together Mr Asquith suddenly gave a new turn on November 7th by announcing the intention of the Government to add to its programme a Franchise Reform Bill on the lines of Manhood Suffrage In answer to a deputation of Woman Suffragists on November 1,th he declared that while he was personally opposed to Women's Suffrage altogether this Bill would be so drawn as to admit of amendment to include women on certain terms and if an amendment which the Government as such would not oppose, were carried the Government would then adopt it. They would also as had been promised give facilities for the Conciliation Bill

It had been generally supposed that the Government would take advantage of the passing of the Parliament Act to reintroduce the Bill against Plural voting which the Lords had rejected in 1906 but this larger measure was totally unexpected and the announcement was widely construed simply as a device for 'dishing Women's Suffrage. It was at once denounced for that reason by the militants, who began to make more trouble than ever. Their proceedings are chronicled elsewhere. So far as Parliament is concerned it is sufficient here to note that from this moment the internal divisions within the Cabinet on the subject of Women's Suffrage and the necessity of tiking administrative action against militant 'violence remained a source of constant difficulty. When eventually on March 28, 1912 the Conciliation Bill was rejected.

by 222 to 208, owing to disgust at "militant" tactics the prospect of legislative action rested entirely with the question of an amendment of the Government Franchise Bill, which was read a first time on June 17 1912 by 274 to 50 and a second time on July 22th by 290 to 218 In other respects this Bill, which abolished plural voting and University representation made six months' residence by adult males the only qualification for votes and did away with existing restrictions as to registration handing it over for automatic action by the Municipal Authorities, excited comparatively little public interest. There did not seem likely to be time even if there were inclination to pass it into law before the session ended. The Unionists while objecting to details opposed it mainly on the old ground that Redistribution should accompany Reform while the Liberal rank and file who for their own electioneering purposes were principally anxious to destroy the plural vote, felt that a simpler measure with that object would have sufficed. A Bill, to abolish plural voting introduced by a private member, Mr Baker was read a second time on March 1 1912 and it was thought that the Government might well adopt this if their own Bill had to be dropped.

Mr Asquith's introduction of the Franchise Bill was however not the only parlia mentary result of the continued blocking of the movement for Women's Suffrage A desire to prove that measures demanded in the interest of women were not Slave Traf neglected in the House of Commons gave useful support to Mr A H tic Bill. Lee's Bill aimed at the so-called White Slave Traffic which in June 1912 was adopted as a Government measure. Its object was to give power to any constable to arrest procurers " summarily on good cause of suspicion without having to delay to get a warrant to strengthen the law dealing with brothel keepers and make landlords of such houses liable for their illegal use to make the law as to solicitation apply to men as well as women and to penalise more effectually men who lived on the earnings of immorality The Bill was read a second time and then referred to a Standing Committee, where it met with a good deal of criticism resulting in some of its provisions being weakened the power of summary arrest in particular being altered so that it could only be exercised by special officers not below the rank of sergeant The movement however, outside Parliament was too powerful to be denied and in October the Home Secretary promised a deputation of the Bill's supporters to use the Government influence to pass it with the original and more drastic provisions restored The whole subject had aroused much public attention during 1912 in England as well as in America and it was widely felt that everything ought to be done at any risk to deny facilities in England for carrying on what had become an international traffic in women for purposes of prostitution accompanied by systematic fraud and outrage which the existing law was powerless to stop In accordance with the Home Secretary s advice the House of Commons agreed on the Report stage to restore the Bill to its original more stringent form By a considerable majority flogging was made the penalty under Clause 2 for a second offence on the part of male procurers and by a narrow division was extended also to a first offence against the advice of the Govern ment, under Clause 6 flogging was made a penalty for the second offence but the proposal to extend it to a first offence was defeated On November 12th the bill was read a third time without discussion On December 9 it passed the Lords with minor amendments in its most drastic shape, and on December 11 it became law, coming into operation at once

The main problem however before the Government when Parliament met on February 14 1912 was Irish Home Rule with Welsh Disestablishment and Disendow ment in a secondary place. The latter measure keenly as it was opposed in the interests of the Church of England may be dismissed in a comparatively short statement. The general scheme of the Bill which was introduced by Mr Mckenna on April 23d had been already explained by him may speech at the Queen's Hall London, on January 28th. Its main interest lay naturally in the financial provisions, and their effect may be shown as follows. The income of the Welsh dioceses in 1906 was £556 000 (£296,000 répresenting voluntary contributions

which would be unaffected) and of the \$260,000 derived from endowments the Bill would take away £1,2 500 representing (according to the Liberal view) national property but this reduction would only be gradually effected in about forty years by the Welsh Commissioners appointed to manage the transfer - existing interests being maintained and existing incumbents being paid their present stipends, so that in that time the Church would have the chance of making good the loss of income by increased voluntary contributions The disestablished Church was given power to et up a representative body which might be incorporated by charter, and to this body the Welsh Commissioners would hand over the cathedrals episcopal palaces, churches and parsonages and also the modern endowments-and such part of the glebe as was not considered to be part of the ancient endowments—to which the Church as such was strictly entitled as a dividing line the date of 1662 was taken as that after which property of uncertain origin now owned by the Church might be regarded as her own The funds which by degrees would be taken from the Church were to be applied partly to charitable and public purposes by being handed over to the County Councils and partly to the colleges of the University of Wales (library, etc.)

The rather moderate extent or the disendowment thus proposed was somewhat of a surprise Extreme Liberationists had to console themselves with the prospect of a success for the principle of disestablishment rather than any considerable acquisition of Church property for secular purposes On the other hand from a Church point of view the smallness of the operation on its financial side made the whole transaction seem one of peculiar meanness for a paltry result the work of the Church-admittedly now well done as had been proved before the Welsh Church Commission, whatever its shortcomings in the past—was to be crippled and hampered. Defenders of the Church notably the Bishops of St David's and St Asaph's and Lord Hugh Cecil could point with cogent force to the fact that the Church was the largest single religious body in Wales and the only one which was represented in every parish by a regular Their argument for its being better entitled than any other denominaorganisation tion to be the national Welsh Church and administer as such the 'national' property it had so long possessed represented one side of the case against the Bill. The ecclesi astical indivisibility of Wales and England was a more fundamental objection the Welsh dioceses being from the Church point of view an integral part of the Church of The case for the Government granted the principle of disestablishment at all was however fairly simple. Their precident was the case of the Irish Church in 1869 it was equally a part of the Church of England and disestablishment and dis-The answer to those who contended endowment had done it good rather than harm that the Church really was the national Church of Wales was that the Welsh people thought otherwise at election after election almost unanimously so far as political representation showed they demanded the change as an act of justice. On the first reading of the Bill (April 25) which was carried by means of the closure by 331 to 253 Mr Lloyd George emphasised this point in a somewhat rhetorical plea for the right of his own nationality to have the religion it chose and not to be nationally misrepre sented by a Church which however well it worked was English and not Welsh May 13th the second reading opened with a slashing criticism from Mr F E Smith but on the 16th it was carried by the closure by 348 to 267 and the Bill was then hung up till the late autumn. Its introduction satisfied the Welsh party but otherwise it excited no real parliamentary enthusiasm. In recent years disestablishment had ceased to interest any large section of Liberal politicians and the Bill while alienating many Liberal Churchmen and rallying to defence of the Church numbers of voters who are normally indifferent to ordinary political issues was not of a nature to help Liberal or Labour electioneering outside Wales itself

In making an Irish Home Rule Bill their chief measure in 1012 the Government were more fortunate in one respect than Mr. Gladstone had been in 1886 and 1893 when the whole Irish question was still associated in Great Britain with the prejudice and hostility aroused by the agrarian war, with all its incidents of cattle-maximing

and boycotting the plan of campaign' the Phoenix Park murders and dynamiting outrages, the downfall of Parnell and the split in the Nationalist ranks A new genera tion had grown up to whom all this was ancient history with no special application to the existing conditions. Ireland for years had been peaceful and growing in prosperity, the Unionist Government had given her both local govern ment and the Land Purchase Act and the idea of Home Rule (as apart from the for gotten Home Rule Bills) was now familiar simply as one of the standing issues of party Lord Rosebery's defection had not prevented Sir Henry Campbell Bannerman trom inscribing it again in 1905 on the banner of the Liberal Party and though the Liberals then came into power, independently of the Nationalist vote under a pledge not to introduce a Home Rule Bill during the 1905-1910 Parliament Mr Asquith had been quite explicit in saying, when the elections of January 1910 were taken that if he got a majority this self-denying ordinance would be at an end On the Unionist side the attitude of the Liberal party in this respect was indeed severely criticised and it was true that at the elections of December 1910 neither Mr Asquith nor his colleagues in the Cabinet made Home Rule a direct issue either in their election addresses or in their On the contrary, when the Unionists warned the electorate that in voting tor the Parliament Bill they were voting also for Home Rule, they were constantly told that this was only a "bogey' But the fact remained that in spite of Unionist efforts and in conformity with what, from a Liberal point of view was quite sufficient intima tion that Home Rule was an integral part of the Laberal programme a majority for the Parliament Bill had been returned and within the coalition majority the Irish Nation alists held the balance of power The Unionists taunted Mr Asquith with being in office simply by the will of Mr Redmond and continued throughout the controversy to deny any Liberal mandate for Home Rule at all, but the parliamentary majority was the solid fact of the situation Mr Redmond for his part had been pertectly trank about the conditions of his support on September 27 1910 for example (to give only one instance out of many) at a moment when it was still uncertain to what lengths the Liberal Cabinet would go in framing a Home Rule Bill he was reported as saving in t speech at Buffalo USA 'I believe the leaders of the Liberals are sincerely friendly to Home Rule, but sincere or not we have the power and will make them toe the line Undoubtedly the Nationalists could have turned the Government out if it did not too the line "but this would have done their cause no good. The strength of their position for making a good bargain over the terms of the Bill was really based on the willingness of the Liberal and Labour parties to concede in all essentials the Nationalist demand representing as it did not only a solid vote from three quarters of Ireland but also an important body of Irish opinion in America and the British Colonies Apart altogether from the older arguments for Home Rule the Liberals justified their policy by the success attending their grant of self government to the Transvaal and by the congestion of business in the Imperial Parliament, which in any case made it desirable to move in the direction of devolution An Irish Parliament and executive of the colonial type for purely Irish affairs subordinate to the Imperial Parliament would not only satisfy the Irish claim but might be the beginning of a federal scheme for the whole of the United Kingdom Arguing on these lines —and Mr Redmond carefully put the Irish case no higher in his speeches before British audiences-it was much easier in 1910 and 1911 for supporters of the Government than it was in 1886 and 1893 to scout Unionist objections to the principle of Home Rule they could even appeal to Unionist arguments in favour of an Imperial federal constitution Whether the Bill to be introduced would reconcile Imperial interests and those of the United Kingdom with its proposals for Irish government had still to be seen but meanwhile its consideration was approached this time under conditions more favourable than formerly English Liberal Nonconform ists were not now so much agitated about Home Rule meaning Rome Rule and public opinion in Great Britain generally had become rather apathetic about Ireland altogether being to a large extent out of touch with its problems. It was only in Ulster that the passionate resistance of a generation before was as yet reawakened

Mr Asquith introduced the Government of Ireland Bill in the House of Commons on April 11, 1912 He laid particular stress on its being intended to be the first step towards Parhamentary devolution and a system of federalised parhaments within the British Isles and on its maintaining the supremacy of the Imperial Parhament at Westminster over the new Irish Parhament equally with any that might later be set up in other divisions of the Kingdom. The

essence of the Bill was that in Ireland an Irish Parliament and Irish Executive should be responsible for exclusively Irish affairs Instead of saying precisely what these affairs were the Bill specified what were the Imperial affairs which the Irish Government could not deal with, including certain Irish matters (Clause 2) reserved " to the Imperial There would be two Houses, -- an elected House of Representatives of Government 164 members (of whom, on the existing basis, 30 would probably be Unionists), and a nominated Senate of 40 members, on which Mr Redmond's view was that there would thus be the opportunity to secure the inclusion of Irish public men of eminence without reference to their party colour In case of a conflict between the two Houses they would sit and vote together For Imperial purposes Ireland would still be represented at Westminster but only by 42 members subject to a special provision (Clause 26) for increasing this number in case the question of altering the financial relations should arise at some future time and purely for that purpose The acts of the Irish Parliament would be subject to veto or postponement by the Imperial Executive or Parliament disputes as to their validity being adjudicated on first by the Irish Court of Appeal and secondly by the Privy Council It might not enact privilege or disability endowment or deprivation for any form of religion or make any religious belief or ceremony necessary to the validity of marriage. Irish taxes would be settled by the Irish Parliament but would continue to be collected (together with such Imperial taxes as remained) by the Imperial Government and an annual sum corresponding to the cost of Irish services at the time of the passing of the Act would be transferred 'to the Irish Exchequer under the administration of a Joint Exchequer Committee together with a grant beginning at £500 000 to be reduced as circumstances permitted practically this meant an annual subsidy of £ 000 000 from the Imperial Exchequer The 'transferred sum would provide a security on which the Irish Government could raise loans financing of Old Age Pensions National Insurance the Post Office Savings Bank and the Royal Irish Constabulary was reserved temporarily to the Imperial Exchequer but the Irish Post Office (with the patronage attaching to it) was made a separate service under Irish administration The powers given to the Irish Parliament to deal with Customs and Excise as well as other taxation contemplated the setting up of Irish custom houses independently of Great Britain and (within certain limits) the possibility of varying duties as between goods imported into Ireland or into Great Britain and as the collection was to be made by the Imperial Government and allowances for the Irish levy to be made to the Irish by the Imperial Exchequer the procedure was necessarily rather complicated. The finance of the Bill was indeed admittedly and necessarily provisional complete data being unavailable in spite of the Government's having had the advice of a Committee of financial experts whose report however was not disclosed For 1012-13 it was estimated that the revenue derived from, and the expenditure incurred in, Ireland would be as follows showing a deficit of £1,515,000

Revenue		Expenditure		
Customs Excise Income Tax Estate Duties Stamps Miscellaneous Post, Office	£ 3 230 000 3 320 000 1 512 000 939 000 347 000 137 000 1 354 000	Not separately specified Post Office Old Age Pensions Charges for Land Purchase Nat Insurance and Labour Exchanges Royal Irish Constabulary Collection of Revenue	£ 5 462 000 1 600 000 2 664 000 761 000 191 500 1 377 500 298 000	
Total	10 839 000	Total	12,354,000	

In the next ten or fifteen years it was contemplated the charges for Land Pur chase might well increase by £450 000, and for National Insurance by £300 000, while the cost of Old Age Pensions within twenty years might decrease by £200 000, thus a mormal increase might be expected in the deficit bringing it up to over £2 000 000 In arranging for Ireland to manage her own finances, England was bound to give her a fair start and not to expect to score by the change and the subsidy now proposed was esti As against this, it was claimed on the Nationalist side that since mated accordingly 1817 Ireland had altogether contributed about £330 000 000 to what was strictly Imperial expenditure, so that she was justified now in getting even a larger subsidy back towards mternal expenditure the scale of which had been imposed according to English and not Irish ideas According to the new system proposed under the Bill it was calculated that under Home Rule the first year s finances would work out as follows in the Irish and (on Irish account) the Imperial Budgets -

Irish Revenue		Irish Expenditure		
Transferred Sum Post Office Fee Stamps	sferred Sum 6 127 000 Not separately specified Office 1 354 000 Post Office		5 462 000 1 600 000

Dencit	2 015 000	Collection	1 377 500 298 000	
Tutal	£11 419 000	Total	£11 419 000	

For convenience a summary of the Bill is here given clause by clause omitting de tails as to the mancial adjustment between the Irish and Imperial Exchequers

Precis of Government of Ireland Bill 1912

(1) Sets up Irish Parliament with two Houses a Senate and a House of Commons Supreme power of Imperial Parhament however to remain undiminished over all persons matters and things within H M s dominions

(2) Irish Parliament shall have power to make laws for the peace order and good government of Ireland but only in respect of matters exclusively relating to Ireland or some part thereof It cannot legislate concerning the Crown peace or war army or navy treaties or foreign relations dignities and titles treason naturalization foreign trade (except for taxation) quarantine navigation, lighthouses etc coinage weights and measures trade marks copyright and patents nor on any reserved matters including the subject matter of the Land Purchase Act Old Age Pensions Act and National Insurance Act the collection of taxes the Royal Irish Constabulary the Post Office Savings Banks and Trustee Savings Banks Friendly Societies or Irish Public Loans up to date of the Act Any laws in contravention of these limitations to be void [In Committee the question of Trinity College Dublin was added to the reserved matters]

Irish Parliament shall not make any law so as either directly or indirectly to establish or endow any religion or prohibit its free exercise or give a preference or advantage disability or disadvantage to any religious belief or status or make any religious belief or ceremony a condition of the validity of marriage. Any law in contravention of this limita

(4) Executive power in Ireland to continue vested in the King As regards Irish serv ices the Lord Lieutenant or other chief executive officers approved in his place shall ex ercise any prerogative or executive power which may be delegated by the king this power being exercised through such Irish departments as the Irish Parliament by its own Act may establish and officers (i.e. ministers) to administer these departments being appointed by the Lord Lieutenant and holding office during his pleasure. Ministers must be members of the Hish Privy Council and of the Irish Parliament (if in office longer than six months) (5) After six years a transfer of the management of the Royal Irish Constabulary shall be made to the Irish Government. Also if the Irish Parliament so resolves the public

services connected with Old Age Pensions National Insurance, Labour Exchanges and (after ten years) Post Office Savings Banks. Trustee Savings Banks and Friendly Societies

Irish Parliament must meet once a year at least

(7) Lord Lieutenant shall give or wathhold Royal assent to Bills passed by both Irish Houses of Parliament but (1) shall comply with any instructions given by His Majesty (1) the Imperial Government) in respect of such Bill and (2) if so directed shall postpone assent during the King's pleasure

(8) The Irish Senate shall consist of 40 members, the first 40 being nominated by the I ord Laeutenant on the advice of the Imperial Covernment and subsequent members being nominated by him on the advice of the Irish lixecutive. They shall sit for eight years one fourth (selected by lot, as provided in Clause 42) retiring every second year. [This

was altered in Committee see below]

(9) The Irish House of Commons shall consist of 164 members returned (as to the Imperial House of Commons) by the following constituencies (1st Schedule) Boroughs Dublin 11 Belfast 14, Londonderry 2 Cork 4 Limeric 2 Waterford 1 University Dublin 2 Counties Ulster 43 Leinster 30 Munster 30 Connaught 25 It is limited to a duration of five years. After three years from the passing of this Act the Irish Parliament may after the qualification of electors mode of election constituencies and distribution of members among them but not the number

(10) Money Bills shall only originate in House of Commons after recommendation by

I ord I teutr nant (i.e. proposal by an Irish mruster)

Senate may neither reject for amend a Money Bill and may not amend any bill so as to increase taxation

(11) If Senate rejects or fails to pass a Bill sent up by House of Commons or amends it in a way the latter will not agree to and the House of Commons next session repeats the Bell and the Senate repeats its action the Lord I seutenant may convene a joint sitting of

both Houses they shall vote together and a majority shall prevail

(1...) Peers (Irish or otherwise) are qualified to become members of either House Mini ters who are members of one House may also sit and peak but not vote in the other Irish Parliamentary powers privileges and immunities to be as defined by Irish Act but

otherwise the same as at We tminster and no greater

(13) Instead of the existing Irish representatives in the Imperial Parliament 42 Irish members shall be returned to Westmanster for the following con tituencies under the election laws and qualifications of the United Kingdom unalterable by Irish Parliament -Boroughs Dublin 3 Belfast 4 Cork 1 Counties Ulster 11 Leinster 9 Munster 9 Con

naught 6

There shall be an Irish Exchequer and Irish Consolidated Fund separate from (14) There shall be an Irish Exchequer and Irish Consolidated Fund separate from those of the United Kingdom but the proceeds of all Irish taxes shall be paid into the Impe rial Exchequer and out of the Imperial Consolidated Fund a transferred sum is annually to be paid to the Irish Exchequer This transferred sum is composed of (a) an amount to be determined by a Joint Exchequer Board (see Clause 16 et seq) representing the net cost of Irish services to the Imperial Exchequer at the time of the passing of this Act. (b) a sum of £500 000 to be reduced eventually to £200 000 by annual diminutions of £50 000 begin ning after the third year. (c) a sum equal to the proceeds as determined by the Joint Exchequer Board of any new Irish taxes imposed by the Irish Parliament. The Irish Parliament shall provide for the cost of Irish services within its own sphere of action existing charges. on the Imperial Consolidated Fund ceasing together with advances from the Public Works

Loan Commissioners or Local Loan Fund

(15) The Irish Parliament may vary (add to [reduce]¹ or discontinue) any Imperia tax (except certain stamp duties) as regards the Irish levy and may impose in Ireland any independent tax substantially different (in the opinion of the Joint Fxchequer Board) from Imperial ones but subject to certain limitations. It may not impose a customs duty (export or import) unless there is also an Imperial customs duty on that article it may not levy a customs duty exceeding a corresponding excise duty and (Clause 17 5 3) no Imperial customs duty (except on beer and spirits) nor income tax nor death duties may be in

creased by more than ten per cent

(16-25) In these financial clauses detailed provision is made for adjusting Irish and Imperial customs duties and other financial relations under the control of a Joint Excheq uer Board consisting of a Chairman appointed by the Imperial Government two nomineus

of the Imperial Treasury and two of the Irish Treasury

(26) It in any three successive years the Joint Exchequer Board reports that the proceeds of Irish taxation and of any revenue to which Ireland is entitled exceed the tran ferred sum a revision of the whole financial arrangement is to be taken up by the Imperial Parliament For this purpose alone the Irish representation at Westminster as provided for in Clause 13 is then to be modified there shall be summoned such number of members of the Irish House of Commons as will make the representatives of Ireland in the Commons House of Parliament of the United Kingdom equivalent to the representatives of Great Britain on the basis of population

¹ This was afterwards climinated see below

(27) Irish judges shall in future be appointed by the Lord Lieutenant
(28) For appeals to the House of Lords appeals shall be substituted to the Judicial
Committee of the Privy Council
(29 30) Questions raised by the Lord Lieutenant or a Secretary of State as to Irish Acts being ultra wires shall be determined by the Judicial Committee of the Privy Council to whom also shall be appeals on such points raised by decisions of the Irish Court of Appeal and similar appeals shall be to the latter from the Irish Courts

(31) The I ord Lieutenant may be any truth subject irrespective of religious belief this term of office shall be six years and he shall be paid by the Imperial Exchequer a deduc

tion for this purpose of 45 000 per annum being made from the transferred sum (32-36) Provision is made in these Clauses for safeguarding the interests of existing Irish judges and administrative officials under the direction of a Civil Service Committee consisting of a chairman nominated by the Lord Chief Justice of Fingland a nominee of the Imperial Treasury and a nominee of the Irish Ministry

(37) Provision is also made for maintaining the existing interests of the Dublin Met ropolitan Police and Royal Irish Constabulary

(38-41) General provisions including that the Irish Parhament cannot repeal or alter this act or any other that the Imperial Parliament extends hereafter to Ireland

(42-46) For the purpose of effecting the transition to a Home Rule system in Ireland provision is made for details to be settled by Orders in Council

(47) Definitions

Even before the introduction of the Bill it had been seen that the greatest practical difficulty in the way of Home Rule, irrespective of controversy over particular details in the scheme, would be the attitude of Unionist Ulster Under Sir Edward Ulster's Carson's leadership opposition was already being organised in 1911 on oppositios behalf of the North of Ireland Protestants and Orangemen which, it was openly avowed, would if necessary go to extreme lengths, even to a refusal to recognise a Parliament in Dublin and to the setting up of a separate provisional government The anxiety of the Government to counter this movement as far as possible had been shown early in the session by the announcement that Mr Winston Churchill was going over to Belfast to speak on February 8th in the Ulster Hall, and violent opposition to the proceeding was at once taken in hand there. It was considered on the Unionist side that for the son of Lord Randolph Churchill who had said that Ulster would fight and Uster would be right,' to preach Home Rule in a place associated with the campaign against it was an outrage, and the leaders of the Ulster Unionist Council took steps to make the delivery of his speech in the Ulster Hall impossible. Eventually its engage ment for the purpose was cancelled, and it seemed for the moment that the prospects of noting and bloodshed if Mr. Churchill appeared in Belfast at all were so serious that the Government would be obliged to keep him away Mr Churchill however was not to be daunted Arrangements were made for the speech to be delivered in a pavilion in a field outside the city, and for troops to be drafted there in large numbers for the The apparent denial of free speech at all on the Ulster Unionist maintenance of order side was severely commented upon elsewhere, and justified with some misgivings by English sympathisers, but when the leaders had been successful in defeating the plan for holding a Home Rule meeting in the Ulster Hall they went no further Mr Church ill duly arrived and made his speech with characteristic courage dwelling particularly on the safeguards which the Home Rule Bill would contain against anything to which Ulster could object but the city was in a ferment of dangerous antagonism and he had to be smuggled away afterwards to avoid the hostility of the crowd. Actual noting was avoided, and peace was kept between Nationalists and Loyalists at the cost of £2 730 for the expense of the troops engaged, the Ulster leaders having eventually devot ed themselves to keeping their supporters well in hand, but the whole incident was an unpleasant revelation of the rebellious spirit that was being aroused. A little later (April 9th) Mr Bonar Law was present at a great anti Home Rule demonstration at Belfast, the special note of which was a solemn pledge of Loyalist resistance

The Liberal Press in England made light of these warnings, but the organisation of

¹ The anniversary of Craigavon Day ¹¹ September 23 1911 when Sir E Carson was acclaimed the Ulster leader and the Declaration of Ulster was published to the above effect was publicly celebrated in 1912

opposition in Ulster went steadily on As controlled by the Irish Unionist leaders for a single purpose—to meet the situation arising if the Home Rule Bill became law -it was formally independent of actual parliamentary tactics and therefore Caioaist of the action of the Unionist party under Mr Bonar Law's guidance but attitude Unionist opposition in Parliament and in the constituencies was inevi tably concerned with what might take place in Ulster Mr Bonar Law at a Unionist meeting at Blenheim on July 27th gave emphatic expression to the view he took of its meaning which he was severely reproved by Mr Asquith for repeating in the House of Commons on August 5th while Mr Churchill on August 10th again took him to task in a published letter to which Mr Law made a spirited reply (Aug 1 th) He and his party were bound to side with the Unionists of Ulster As Mr Bonar Law put the case if the Ulstermen were forced into open dehance of a measure passed under the Parliament Act without further appeal to the electorate and by the dictation of a Nationalist vote which had in their view always been disloyal to the Empire any attempt to coerce Uster could only mean civil war and this could not be confined to Ireland it was incredible that the Government should contemplate the coercion of Ulster by British bayonets but if they went to that kingth the situation would be intolerable —ministers would be lynched in London" Here was indeed the root of the Home Rule difficulty Many Liberals hoped to find relief by proposing to leave Ulster out of the Home Rule Bill at least temporarily altogether, but Mr Agar Rob artes s amendment to this effect in Committee (July 18) after some ambiguous enquiries from the Government whether Ulster would be satisfied if it were adopted was rejected by 320 to 52, the Nationalists could not do without the richest part of Ireland

Criticism in Parliament meanwhile had gone on for the present along more or less stereotyped lines On April 23rd an Irish National Convention in Dublin with Mr Redmond presiding accepted the Bill and the doubts as to whether Irish Nationalists might disagree over it and it might be snuffed out like the the Bill Irish Councils Bill in 1007 were dissipated. On July 10th Mr. Asquith addressed an enthusiastic meeting in Dublin and was received with fervour as the first English Prime Minister who had had a welcome there in Nationalist circles hirst reading of the Bill was carried in the House of Commons on April 16th by 360 votes to 266 and the second reading (April 30th) was carried on May 4th by 37 to 271 Committee stage began on June 11th and on July 3rd the first clause had gone through discussion was then suspended till the autumn. On the Unionist side the objections to any scheme for a separate Irish Parliament and Executive were fortified by criticisms of special features in the new Bill itself—the finance the proposal for Irish representa tives to remain at Westminster the separation of Post Offices and Custom houses but these subjects had still to be further discussed when Parhament adjourned in August On the Liberal side a good many members disliked the provision for the nomination of an Irish Senate and this question arose in Committee on Clause 1 but Mr Dickinson's amendment to exclude it was rejected (June 10th) by 288 to 100

The real opposition meanwhile went on in Ulster not in Parliament Serious rioting between Protestants and Catholics in the Belfast ship-yards during July showed the tension there and on September 14th a free fight between partisans of The Solema both sides in the course of a football match at Belfast at which 10 000 Covenant people were present resulted in injuries to about 100 revolvers and knives Active preparations were on foot for a series of Unionist demonstrations being used. in Ulster beginning at Ennishillen on September 18th and leading up to the signing on September 28th of a Solemn Covenant pledging resistance to Home Rule The per plexity on the Liberal side in face of Ulster's determination was shown by a speech of Mr Churchill's at Dundee on September 12th in which he suggested, purely on his own account that to secure a federal system of government for the United Kingdom —to which Home Rule for Ireland however was an essential preliminary—it might be desirable to grant separate legislatures to large homogeneous areas in England like Lancashire Yorkshire the Midlands and London he would not shrink from the

creation of ten or twelve such English bodies all subordinate to the Imperial Parlia ment. The obvious comment on this suggestion was that Umonist and Protestant Ulater was as much entitled to stand alone in Ireland as Lancashire in England, Mr Churchill's speculation was effectively criticised by Mr Balfour at Haddington on October 9th, the scheme being described as 'the application of decimal fractions to the Umited Kingdom' What Umonist Ulster demanded was to remain under the Imperial Parliament and not be at the mercy of a National Executive and Parliament in Dublin

The text of the Solemn Covenant, promulgated by the Ulster Umonist Council, was as follows —

Being convinced in our consciences that Home Rule would be disastrous to the material well being of Ulster as well as of the whole of Ireland subversive of our civil and religious freedom destructive of our citizenship and perilous to the unity of the Empire we whose names are underwritten men of Ulster loyal subjects of His Gracious Majesty King George V humbly relying on the God Whom our fathers in days of stress and trial confidently trusted hereby pledge ourselves in Solemn Covenant throughout this our time of threatened calamity to stand by one another in defending for ourselves and our children our cherished position of equal citizenship in the United Kingdom and in using all means which may be found necessary to defeat the present conspiracy to set up a Home Rule Parliament in Irc land and in the event of such a Parhament being forced upon us we further solemnly and mutually pledge ourselves to refuse to recognise its authority. In sure confidence that God will defend the right we hereto subscribe our names and further we individually declar that we have not already signed this Covenant.

Sir Fdward Carson signed first, on September 28th at the head of a great gathering in Bolfast And when, just afterwards, he crossed with Mr F E Smith to Liverpool he had a remarkable ovation violent speeches being made by sympathisers with the cause of Ulster, in favour of supporting her resistance by force of arms It was an nounced later that the total signatures to the Covenent were —Ulster, men 218 206 women 228 991 Outside Ulster men 19 162 women 5,055

Parliament met again for the autumn session on October 7th, and the political conflict was once more transferred to the House of Commons. The effect of the Ulster demonstrations on the Government up to this point was not specially terrifying, and Mr Asquith speaking at Ladybank on October 5th dealt somewhat scornfully with Sir Edward Carson's movement and the Unionist attitude towards it. The Government he intimated were ready to consider any pro-

posals for safeguarding Ulster but Ulster had nothing to suggest—she simply would not allow Ireland to have what the other four fifths of Ireland demanded. It was impossible for the Government to give way to intimidation prompted by the spirit of Orange ascendancy, they meant to go on with their Bill On October 10th he intro duced in the House of Commons a series of resolutions for completing the various stages of discussion on it by Christmas under the closure Including the time already occupied fifty days (to which two were added a few days later) were on this scheme to be devoted to debate An Opposition amendment proposed by Mr Bonar Law, was defeated by The operation of the guillotine combined with the "Kangaroo system by 323 to 232 which the Chairman of Committees was left to choose which among the various amend ments proposed should be discussed in the time available made the resumption of the Committee stage simply a question of whether the Government could maintain their majorities any effective debate was obviously impossible and Mr Bonar Law bluntly declared that the Government might just as well have moved that the Bill should be On the other hand it was equally true that without passed without further delay

1 It must be remembered of course that "Ulster" as an Irish political unit does not mean the whole province but only the NE portion comprising the five counties of Antim, Armagh Down Londonderry and Tyrone with the cities of Beliast and London derry As a geographical unit Ulster has a population (1911) of 1,581 696 but the NE portion by uself has 1 188 695 Out of the latter total those of 16 years old and over were 387 241 males and 438 774 females As the census classification showed that 33 1 per cent of the population in this NE area was Roman Catholic the number of adult male Protestants in Ulster who might be expected to sign the Covenant was not much in excess of those who actually did so

such a time limit the Opposition would have protracted the debates till Doomsday, the Government had no option in the matter if they were to send the Bill up to the House of Lords during that session as they must in order to obtain the beaefit of the terms of the Parliament Act. Even if the Home Rule Bill were to be passed through the House of Commons by January the Government programme was overloaded for they had announced their intention also to pass the Welsh Disestablishment Bill, the Franchise Bill and other measures before the session ended

Meanwhile with Mr Lloyd George's active encouragement yet another political issue had been made prominent during the autumn throughout the constituencies in the shape of an organised agitation for land tenure retorm and increased taxation of land-owners promoted more particularly by a section of the agitation Radical party who had long been advocates of the single tax theory on Henry George's lines (see E B xi 747) The Budget of 1909, with its provisions for effecting a complete valuation of the land paved the way for such a movement and the land reformers saw their opportunity now for pushing their views and preparing for legislation The unpopularity of the Insurance Act made it opportune moreover for Mr Lloyd George's section of the party to try to divert electioneering attention on the Radical side to something more attractive and at the summer and autumn by elections the new land campaign was made a leading feature by Radical candidates notably by Mr Outhwaite at Hanley Intense exasperation was created on the Conservative side representing as it did to so large an extent the landed interests of the country by the organisation of an unofficial Committee of Inquiry under Mr Lloyd George's auspices, with the authority of the Cabinet in order to obtain evidence of various sorts of agrarian grievances in furtherance of a Radical policy It was objected that any such enquiry for Government purposes should be by an impartial Royal Commission which would act publicly and responsibly and not by an unofficial body acting surreptitiously and in the interest of a partisan movement. Mr Asquith on behalf of the (overnment, repudiated entirely any sympathy with the single tax theory and insisted that any new land policy adopted by the Cabinet would be announced by them when the proper time came But it was clear that so far as Mr Lloyd George was concerned the next move forward in the direction of Radical social reform would be for freeing the land" and that active preparations were being made by him with this object

An important change in the Home Rule Bill was made when on October 30th the discussion in Committee reached clause 8 concerning the composition of the Irish

It was suddenly announced by Mr Asquith that while the The pro proposed nomination of the first Senators by the Imperial Government posed Irish would be adhered to the Government had decided to abandon the idea of Senate their successors being nominated by the Irish Government Instead of this the method would be substituted of election by the voters in the four Irish prov inces taken as units on a plan of proportional representation each elector having a ' transferable' vote 1 The term of office for Senators would be five years and all would retire together at the end of the hfth year so that the elections might then be taken casual vacancies being filled by substitutes sitting only for the unexpired term, to be nominated if the vacancy is that of a nominated Senator and elected if of an The next day (October 31st) the revised clause was introduced and carried Mr Asquith insisted that it would be an additional safeguard for the Unionist and Protestant minority in Ireland but Mr Bonar Law regarded it as worthless for any such purpose and Mr Healy frankly declared that in his opinion the Irish Unionists would have been better off with the method of nomination Mr Redmond while accepting the Government's decision expressed much the same view The fact was that the whole idea of a nominated Senate was distasteful to most of the Liberal party and it seemed a favourable opportunity for putting the experiment of proportional representation which had recently made many converts into practice ment refused however to adopt proportional representation for the Irish House of

¹ See E B xxm 115c

Commons They also resisted the proposal made in an amendment moved on November 5th by Mr Snowden to make the local government register and not the parliamentary the basis of elections to the Irish Parliament and thus include women voters. The defeat of this amendment by 314 to 141, through Government and Nationalist pressure caused considerable irritation among the more active supporters of women suffrage but the case against it was strong if this was purely an Irish question it was one which it was contended, the Irish Parliament itself should decide while if a decision was to betaken on the general question of women's suffrage for the whole lingdom, the proper occasion would arise when the Government's Franchise Bill came on

On Friday November 8th a further step was taken to expedite the work of the session by the introduction of a guillotine time table for the Welsh Church Bill Mr Asquith moved a resolution allocating 14 days to the Committee stage 2 to Report and one to third reading So short a shrift excited much discussion between the Opposition benches and it was hotly debated the discussion.

sion that day being adjourned and on the following Monday (Nov 11th) the whole situation in the House of Commons was changed by an unforescen event The Resolution required as a preliminary to discussion of the financial clauses of the Home Rule Bill was in its Report stage having been carried in Committee by a majority of 1 o and Sir F Banbury now moved an amendment without notice providing that the total payment from the Imperial to the Irish exchequer in any one year should not exceed £2 500 000 It was early in the afternoon and the Government Whips had not realised that the Unionists were in unaccustomed force and had temporarily a majority m the House but on a division the Covernment was deteated the amendment being Mr Asquith immediately moved the adjournment of the carried by 228 to 206 House in order to consider what action should be taken but the idea of resignation was scouted at once and next day it was announced that the Cabinet had decided to move a resolution rescinding the vote notwiths anding anything in any Standing Order and providing (so as to regularise further proceedings under the time table which was entirely upset by the incident) that the next day on which business was taken on the Home Rule Bill should count as the 16th allotted day though as previously fixed the 10th day was November 11th when this had been done they proposed to reintroduce their financial resolution and proceed as though nothing had happened On Wednesday the 13th Mr. Asquith accordingly moved to this effect, arguing that all the circumstances showed that the defeat of the Government had not been a genuine one and that they were not called upon to pay any attention to it This proposal to rescind the vote and set up the resolution afresh was however as the Speaker agreed in reply to Unionist objections absolutely unprecedented in Parliamentary procedure. It had always been held and was laid down by Erskine May that no question or Bill could be brought up in the House that was substantially the same as one on which judgment had already been expressed in the current session and when the Speaker nevertheless ruled that Mr Asquith's motion though unprecedented was in order Opposition exasperation became intensified to a point beyond control After Mr Bonar Law had argued the case at length and had moved the adjournment of the debate, which Mr Asquith curtly declined to accept a state of organised disorder prevented any further proceed With the approval of their leaders the Opposition showed their resentment by keeping up a chorus of cries of Adjourn" and refusing to allow any continuance of The Speaker at last took the only course open to him and adjourned the business There seemed likely to be renewal of the same scene next day since the Opposition were determined not to allow what in their view was a defiance of the "common law of Parliament Before the House met however on the 14th calmer counsels prevailed owing to the exercise of the Speaker's influence. At the opening of the sitting he suggested that if more time were given for reflection a less objectionable way might be found for regularising the proceedings. Mr Asquith promptly accepted this suggestion and moved that the House should adjourn for the purpose till Monday the 18th As Mr Bonar Law concurred this course was accordingly adopted and the

anticipated storm was avoided by amends being made by Mr Ronald McNeili for the most violent incident in the disorder of the previous evening. In the heat of the moment he had thrown a book at Mr Winston Churchill which struck him a severe blow on the face, but he now offered a handsome apology which was equally handsomely accepted

The Liberal Press was inchned to treat the opposition to Mr Asquith's motion as purely factious and the organised disorder as a further mark of deterioration in parlia mentary manners But the historian of Parliament cannot well take this The point The defeat of the Government was certainly an accident but simple view it was the sort of accident that happens when a number of nominal sup porters are not personally enthusiastic for the particular cause involved or are being tired out by excessive demands on their attendance The opinion of a high independent Liberal authority on procedure Mr James Caldwell ex M P and formerly Chairman of Committees was moreover that Mr Asquith's proposal for meeting the new situation was clearly out of order '(Times No. 16th) although not so ruled by the Speaker Owing to the critical state of foreign affairs consequent on the situation in the Balkan war a change of government as Mr Bonar Law frankly admitted was not at this moment desirable and if the Government chose to ignore what was formally a parlia mentary defeat their normal majority was still available. But the Opposition were naturally not prepared to forgo what according to the practice and precedent of Parlia ment was a legitimate opportunity for impeding the execution of the Government's programme of legislation for the session and they gained their point. On Monday the 18th Mr Asquith made an amended proposal which was agreed to without further discussion that the financial resolution should simply be negatived that day and the Committee stage on the financial clauses of the Home Rule Bill set up afresh on the 19th by the introduction of an amended resolution, the report stage of which would be taken on the 20th so that the next allotted day (the 1,th day under the time table) would be on Thursday November 21st This course was accordingly pursued

The loss of a full week led to some questioning as to either the Welsh Church Bill or the Franchise Bill being dropped but any such intention was firmly denied by The only immediate victim to the necessity for lightening the ship was the Mental Deficiency Bill an important social reform which a section of Radical members in the supposed interests of individual liberty were hotly opposing in Standing Com mittee the Home Secretary on the 19th announced that the hope of carrying this measure through must now be abandoned though it would be reintroduced next session with the improvements suggested by the examination it had already received Mr Asquith speaking at Nottingham at the annual meeting of the National Liberal Federation on November 22d declared that the Government intended to pass Home Rule Welsh Disestablishment and Franchise Reform before the prorogation vigorously denied that there was any justification for the Opposition contention that a majority obtained at the last general election for the Parliament Bill should not be used to carry these Liberal measures to the introduction of which the destruction of the Lords veto was well known to be a preliminary The meeting was memorable for the appearance of Mr Redmond side by side with Mr Asquith this being the first time that a Nationalist leader had been on a National Liberal Federation platform. and he made a speech insisting on the solidarity between the Irish and Liberal parties and the cordial agreement of the Nationalists with the Government programme

After the scare in the Government ranks caused by the misadventure of November 11th and its immediate consequences the resumption of proceedings on the financial clauses of the Home Rule Bill saw their normal majority well kept up and the guillotine fell with merciless regularity. Faced with a hostile and unreformed House of Lords whose certain antagonism could only be defeated by sending the Bill up in time to obtain the benefit of the Parliament Act the Coalition were compelled to restrict discussion in the House of Commons and it might well be thought on their side that at this stage, since in any case the Parliament

Act myolyed nearly two years' delay it was futile to attempt to examine every detail in a scheme which was approved in principle but which still had a long fight before On the other hand it was incontestable that, for a measure of such profound importance, supposing it to be one that might come into operation as it left the House of Commons the discussion of the various difficult and obscure aspects of the new financial relations proposed between Ireland and Great Britain was entirely inadequate Insurance Act had been an unfortunate example of the results of insufficiently considered legislation but here too clause after clause was carried undiscussed under the closure. full of complicated provisions the working of which very few of the rank and file in larhament even pretended to understand The present scheme was totally different from anything proposed in Mr Gladstone's Bills of 1886 and 1893, yet the one thing certain in 1912 was that if those Bills had become law their financial arrangements would have hopelessly broken down And now the new proposals fraught with revolutionary consequences alike to the finance of Ireland and of Great Britain were being forced through with even less consideration. It was only natural that the Opposition should remain restive under conditions which made serious criticism im possible, if only because there was no time for ministers to reply in more than a per functory way Mr Herbert Samuel Sir Rufus Isaacs and Sir John Simon for the Government defended the finance of the Bill with marked ability so far is time served but the fact remained that on a single evening (Nov 26th) after the guillotine had cut short a discussion on clause 15 which left it quite uncertain to what extent it enabled a protectionist system to be set up in Ireland clauses 16 17 18 10 20 and 21 were then passed with various amendments introduced by the Government itself altogether undiscussed most of the time available being consumed simply by taking division after Sir Edward Carson hotly denounced the whole proceedings as the gravest public scandal in the whole history of Parliament On behalf of the Government it was contended that it was absurd to suppose that any Irish administration would be so foolish as to adopt the means which Mr Amery and other Unionist speakers suggested that the Bill opened to them for introducing a protectionist policy variation only from the original draft of the Bill was proposed by the Government in deference to remonstrances from their own supporters under clause 15 the power to reduce an Imperial tax was omitted But the Opposition amendments proposing to reserve all power over Customs and Excise to the Imperial Government and to pro hibit the giving of direct or indirect bounties were stoutly resisted Mr Bonar Law summed up the Opposition view by declaring that the Bill undoubtedly enabled the Irish administration to set up the worst form of Protection namely bounties and that the Government were really giving in to the demands of their Nationalist allies while professing to be the champions of Free Trade principles Mr Samuel on his side taunted the Opposition with being advocates of Protection yet dwelling on the objection to a protectionist system in Ireland Thus each party retorted on the other But the clauses passed under the closure with only the slightest consideration by Parliament of the effects of its own legislation For any judicial examination in debate reflecting the careful conclusions of the House of Commons was substituted the opinion of the ministers in charge of the Bill alike as to the powers it gave and the way those powers were likely to be used
Just as the Insurance Act had left all sorts of obscure questions to be settled by the Commissioners so the Home Rule Bill left some of the thorniest problems of the financial relations with Ireland to be solved by the proposed Joint Exchequer Board an entirely new official body whose real status was highly question able and clause 22 providing for this with the remaining financial clauses 23 24 and 25 were duly guillotined on November 27th During 18 allotted days since the beginning of the Committee stage 78 lines of the 25 clauses passed had been discussed and 534 lines undiscussed, while 48 amendments had been discussed and 771 ignored on the financial clauses alone (14 to 25) 301 lines had been discussed, and 2602 lines passed without discus sion the amendments discussed numbering 12 and undiscussed 210 Eventually under the guillotine the Bill passed its third reading on January 1, 1913

When Parliament adjourned for Christmas from December oth till December 30th the two chief Government Bills, for Irish Home Rule and Welsh Church Disestablish-

Situation at end of 1012

ment were well on their way through the House of Commons mittee stage of the Home Rule Bill had ended on December 12th clauses 26-18 and the final schedules having been carried since December 2nd by the operation of the guillotine without any concession to Unionist criticisms

The Committee stage had lasted altogether 36 days, including the 25 provided under the time table two clauses (1 and 31) had been fully discussed and 22 partly discussed while 24 had received no discussion at all (6 10 12 16 18 19 20 21 23 25 28 30 32 34 35 36 30 40 41 44 45 46 47, 48) Seven days' discussion was reserved for the Report stage For the Welsh Church Bill the time table resolution had been carried on November 28th at the end of an all night sitting after a reasoned amendment,' proposed by Mr Lyttleton on behalf of the Opposition had been defeated by 205 to 22x but the government agreed to give 16 days instead of the 14 originally propo ed, to the Committee stage which began on December 5th The discussions were marked throughout by much bitterness of feeling on the part of the defenders of the Church among whom Lord Robert Cecil was specially prominent but they were notable also for some important expressions of the desire of Liberal Churchmen to make the disen dowment proposals less harsh than what the Welsh Nonconformists considered to be in accordance with their rightful demands. On December 5th clause 1 was carried by 208 votes to 179 and clause 2 by 279 to 183, while clause 3 was carried on December 6th by 59 to 145 but on December 13th clause 4 was only carried by 269 to 202 after an amendment moved by Mr France and seconded by Mr Gladstone (both Liberals) for leaving the Church all its endowments except tithe rent charge (thus proposing to re duce its funds by £1 6 000 a year instead of £173 000) had been rejected by 265 to 215 the majority of 50 including 68 Irish Nationalists And after clauses 5, 6 and 7 had been carried on December 10th and 17th by normal Coalition majorities a concession was made on clause 8 the government accepting (Dec 18th) amendments proposed by Sir Ryland Adkins and Mr Atherley Jones (both Liberals) by which much to the disgust of the Welsh members the Church would retain possession of the Queen Anne s Bounty funds and property (see E B xx11 7 o 730) On another amendment proposed by Mr Ormsby Gore (Conservative) for keeping all the glebe as Church property the government majority fell (Dec 10th) to 55 the figures being 277 to 222 and clause 8 was only carried by 84 to 2 I The fact that the majorities in both these cases were smaller than the number of Irish Nationalists voting with the Government showed that there was a good deal of sympathy with the Opposition among some sections of Liberals

The actual proceedings in the House of Commons were being followed however with marked apathy in the country

Everybody felt that the real struggle had to come in During the whole of December the critical state of European affairs Revival of monopolised public interest and the party conflict took a secondary place

Liberal confidence

when larger issues were at stake Mr Asquith and Sir Edward Grey by common consent were making British influence a powerful factor for peace in the settlement of the Balkan crisis The Administration was strengthened for the moment simply by the fact that it represented the whole nation in the councils of Eu Meanwhile trade was booming and in some other respects also the position of the Government was more favourable than it had seemed likely to be a few months earlier Since the Bolton by election on November 23rd when the Liberal candidate had sur prised his own party by retaining the seat with only a slightly diminished majority the Liberal Press had taken a much more confident tone about the Coalition prospects Moreover in the middle of December a flurry started in the Unionist ranks over a con tentious question of electioneering tactics which did much to assist a revival of Liberal confidence Since Mr Bonar Law had become the Unionist leader there had been to all appearance a concentration among all his followers on Fiscal Reform and Imperial Preference as the corner stone of their constructive policy and little had been heard of any wavering as to the principle of including low taxes on foreign wheat and other food

stuffs so as to give a preference to colonial imports. But the question of going to anoth er election at all on a programme including food taxes was now raised again on what started purely as a side issue. It was thought by the leaders of the party that the time had come when an explicit declaration should be made that Mr Balfour's proposal, be fore the general election of December 1910, to submit the first Tariff Reform Budget after the Unionists returned to office to a Referendum was no longer the party policy, and Lord Lansdowne accordingly made a statement to that effect at the Albert Hall on November 14th. No sooner had it been made than an agitation arose in certain Union ist quarters especially in Lancashire where it was contended that harm would be done to their electoral prospects by dropping the proposal and the cry was taken up in circles where the food taxes had always been dishked, with the result that pressure was put on Mr Bonar Law to make a definite pronouncement on the whole scheme of Imperial Preference. This he did at Ashton under-Lyne on December 16th, but without the effect that was presumably intended

A large part of Mr Bonar Laws speech was devoted to combating the claims of the Radical party that they were the peculiar friends of the working classes on the contrary

Mr Law's Ashton speech he insisted that the party now in power were occupied mainly in work of destruction and that the real social needs of the community could only be met by a Unionist government. After criticising Mr. Lloyd George for offering what were only quack remedies and declaring that the most im

portant question of the day so far as the industrial class was concerned was to raise the level of wages throughout the country which Tariff Reform would help to do he pro ceeded to explain at length the main lines of the Tariff Reform programme and particu larly its relation to the policy of Imperial Preference He repudiated the allegation that Tariff Reform was simply old fashioned Protectionism It was not proposed to bolster up industries which were not naturally suited to the country or to enable manufacturers to secure an artificial monopoly Tariff Reform involved the imposition of duties smaller than in any other country and its object was to give British workmen a preference in the home market over their foreign competitors. Similarly the object of Imperial Preference was to unite the Empire on lines of trade and to secure for the United King dom the largest possible advantage in the British oversea markets. It was in connection simply with Colonial Preference that food duties were included in the Unionist programme and he adhered to that policy in spite of all the misrepresentations to which it lent itself 'For nine years we have kept the flag flying and if there is any sincerity in political life at all this is not the time and I am not the man to haul down that flag But he wanted to make clear exactly what this meant and here Mr Law announced a new departure which to some extent appeared inconsistent with his previous utterance

If our countrymen entrust us with power we do not intend to impose food duties. What we intend to do is to call a conference of the Colonies to consider the whole question of preferential trade and the question whether or not food duties will be imposed will not arise until those negotiations are completed. We do not wish to impose them. They are not proposed by us for the sake of Protection and there is no Protection in them. They are proposed solely for the sake of Preference and if when the conference takes place the Colonies do not want them—I will put it far stronger than that unless the Colonies regard them as essential for Preference—then also the food duties will not be imposed. All that we ask is that our countrymen should give us authority to enter into that negotiation with power to impose certain low duties on foodstuffs and within strict limits which will never be increased. If hope it will be possible and I think it may be possible that if any readjustment is necessary it will only be a duty on wheat. I hope so but I do not think it would be reasonable to ask the Colonies to meet us if our power of negotiation were limited. If the Colonies do not think those duties necessary for Preference they will never be imposed if they do think them necessary then I for one do not believe that the people of this country would not be ready to make that readjustment which is necessary to effect the purpose

As regards the Referendum, Mr Law repeated Lord Lansdowne's declaration and justified it on the ground that a pledge to submit the result of the negotiations with the colonies to a Referendum in the United Kingdom would not be fair to the colonies

Next morning this speech had a mixed reception both in the Unionist Press and

The Daily Mail took it quite plainly as meaning that no food taxes would in the party be proposed at all and approved of their being dropped. The Times, admiring the spirit but not the letter 'objected to making the taxation of the United Unionist Kingdom appear in any shape to depend on the decision of the colonies Internal the responsibility must be with the electors of the United Kingdom In dissensions Lancashire and Yorkshire and also in Ireland and Scotland some important Unionist papers openly mutinied against the abandonment of the Referendum certainty as to what Mr Law really meant—an unusual thing in his case—led to a revival in the clubs and in the House of Commons as well as in the Press of the same sort of expression of hostile sectional views that had made Mr Balfour's leadership so difficult between 1903 and 1906 There were alarums and excursions" for several days Mr Garvin in the Pall Mall Cazette and Observer violently accused the Times and Daily Mail of leading a movement for repudiating the idea of food duties altogether and fulminated against all and sundry who hould split the party and betray the cause of Imperial Preference Nothing that those papers had actually said really warranted any such invective, though the Times, both through its parliamentary correspondent and in its second leading article on the subject (Dec 19th) encouraged the view that the majority of Unionists were averse from food taxes and would prefer to see Mr Bal four's Referendum policy maintained and that the section in favour of food taxes though in control of the party machine was really a small minority By giving currency to the report that the larger section was composed of followers of Mr Walter Long and the smaller of those of Mr Austen Chamberlain —an analysis of the situation which was much too simple and very far from correct —the Times moreover gave some ground for su picion and irritation on the part of those who had always advocated the But while criticizing Mr Bonar Law's suggestion that it would rest whole policy with colonial opinion to decide whether food taxes should be imposed the Times had been quite firm in supporting Imperial Preference including the possibility of new food duties its real objection was to laying down any scheme of taxation in advance of pre cise knowledge of the conditions which might exist when a Unionist government should return to power Nor was there theoretically any weakening in the Daily Mail so far as the general policy of Tarift Reform was concerned on the contrary on December 24th it announced that the Daily Mail is frankly Protectionist and is a firm believer in Imperial Preference but it was not over enamoured of food taxes and hopeful that the Dominions do not wish Creat Britain to tax corn As consideration became cooler it was recognised that nobody wanted to do anything that was not in the interest of a united party Mr F E Smith speaking at Dudley on December 20th declared that the whole Unionist front bench in the House of Commons adopted the views ex pressed by Mr Law and that he had never meant that the decision as to food duties would be left to the colonies all that he meant was that the decision must depend on what the colonies wanted A duty on wheat which seemed a vital matter in 1903 might be much less so now, and while Mr Law had taken the straightforward course of saying that the electors must leave the matter open for negotiation the indications were that the colonies themselves would not ask for any measure which could be represented even untruthfully, as likely to raise the cost of living to the working classes in Great Mr Austen Chamberlain also wrote a letter to a correspondent on December

While this lively interlude was providing sport for the Free Trade party the penultimate act of another drama of more direct import to Liberalism, was also drawing to its close. On December 19th the result of the poll was published which had been taken among the medical profession as to whether they would accept Mr. Lloyd George's latest terms for ordinary medical service under the Insurance Act, outside the special

23rd expressing a general agreement with Mr Bonar Law 1

¹Eventually as the result of a memorial from the bulk of the Unionist M P s Mr Bonar Law on January 14 stated in a letter that he and Lord Lansdowne while remaining leaders of the party were willing to agree that food duties should not be imposed without the approval of the electorate at a subsequent general election

vested in 1013

terms made for the treatment of tuberculosis which had already been accepted. Out of a total vote of 13 751 only 2 422 were in favour of accepting 11 309 being for rejec

tion an adverse majority of considerably more than 4 to 1 On December The doctors 20th the representative meeting of the British Medical Association was held and the In to consider what action its members should take in view of the voting and surance Act. by 18° votes to 21 a resolution was passed rejecting the Government proposal and advising the profession to decline service under the Act In the previous February practically the whole profession—at all events 27 400 doctors—had signed an undertak ing to stand together by the policy to be decided upon by the British Midical Associa tion and if they held to their pledge this meant a complete breakdown in the provisions of the National Insurance Act for medical benefit which were to become operative on January 15 1913 On the other hand a scheme for an alternative policy was coupled with this flat refusal of Mr Lloyd George's own proposals. It was recommended that the profession should express its willingness to treat insured persons under arrangements to be made between local committees of doctors and the insured or their representatives (i e the approved societies) for a minimum capitation rate of 8s 6d inclusive of drugs or a minimum fee of 25 6d a visit on condition that each insured person should have free choice of doctor and that the doctor should consent to act Under this plan the doctors would not be dictated to by the lay insurance committees but the financial terms would be practically the same that Mr Lloyd George had last offered It was promptly announced that the Government could not fall in with this proposal which would in volve handing over public money without public control and the question now was whether there would be sufficient breaking away from the pledges given to the British Medical Association for the insurance committees to be able to secure their panels of doctors in accordance with the regulations under the Act Only about half of the 27 000 doctors who had ranged themselves with the Association in February had actually taken the trouble to go to the poll in December, and though this was generally believed not to indicate in itself any corresponding failure in the solidarity of the profession there were now signs of a good deal of independent action in certain localities and notably in Scot Already in November a few doctors who thought it a public duty to fall in with the Government scheme had started a new organisation in opposition to the British Medical Association called the National Insurance Practitioners Association and its influence backed by Government support was being exerted in the same direction On Jan 2 1913 Mr Lloyd George addressing the Advisory Committee took a sanguine view of this situation and declared that some 8 000 doctors were available Nevertheless

thus ended with the promise of a full crop of domestic political difficulties to be har IV The Labour "Unrest '

(High Chisholm)

the strike now proclaimed against the Insurance Act by the recognised leaders of the me dical profession was a very awkward fact for the Liberal party to reckon with The year

Allusion has already been made to the complications attending the political situation during 1911 and 1912 on account of the industrial unrest which had taken a peculiarly acute and dangerous form Though trade generally was busy and unemployment' which had been a serious problem only a little while previously steadily diminished 1 the demand of the wage-earning classes for a proportionately larger share of the good things of life-better pay and less work for it-had become more articulate and more organised than had been known before Socialist—and particularly "Syndicalist theories had for some time been getting a strong hold of the younger generation of trade unionists and a growing sense of the impotence of the Labour members in Parliament added to increasing suspicion that Liberals and Tories alike were in league with the

money power," encouraged the idea that 'direct action ' by means of strikes was ¹ The only official figures for 'unemployed' issued by the Board of Trade are for the trade unions. In these the percentage of unemployment which was 9 in 1908 and 1909 fell to 5 in 1910 and 3 in 1911 For the first eleven months of 1912 it was as follows Janu ary 2 7 February 2 6 March 11 3 (coal strike) April 3 6 May 2 7 June 2 5 July 2 6 August 2 2 September 2 1 October 2 0 November 1 8

the only way of successfully asserting the claims of the operatives to a larger share of the profits of industry. The fact that wages, under existing agreements practically remained stationary while the cost of living owing to higher prices, was going up gave a solid basis for discontent The result was seen not only in numerous local conflicts between (apital and Labour, of which it is unnecessary to give a detailed account, but in three more extended general strikes which aimed at holding up whole indus tries throughout the country and compelling parliamentary intervention. These were the Railway Men's Strike of 1011 and the Coal miners and Transport Workers Strikes of 1012 A narrative of each of these is given below in which allusion is made to the political incidents concerned with them One outcome of the Railway Strike, and of the general unrest of which it was a symptom was an addition made by the Govern ment to the official machinery applicable at the Board of Trade to the working of the Conciliation Act of 1906 In October 1911 an Industrial Council representative of employers and workmen was instituted as a permanent body for considering and inquiring into matters referred to them concerning trade disputes and for taking suitable action (but without any compulsory powers) on the same lines as the Con ciliation Boards already adopted in particular industries As Chairman of this Indus trial Council and Chief Industrial Commissioner the Government chose Sir George Askwith (b. 1861) head of the Labour department of the Board of Trade who had just been knighted in recognition of the valuable work he had done in effecting peace in recent industrial conflicts. But during 1012 at all events the deliberations of the new Industrial Council were not specially productive

From a public point of view the worst feature of the industrial conflicts during 1911 and 1912 was the spirit of lawlesquess so repeatedly shown in acts of violence and intimidation and the apparent inadequacy of the law (partly owing to the Trade Disputes Act) to vindicate the right to work on the part of willing labourers outside the ranks of the umons With a view to supplementing the protection available in the shape of the police and the military—limited as this might be by the unwillingness of the executive government to do more than appeared absolutely necessary in taking a side against strikers who were also voters and even actually political supporters various arrangements were made in 1911 for enrolling volunteer in private organisations for the purpose but so far this movement has not had any important practical result In spite of constant criticism on points of temporary difficulty both from employers and in Parliament and in the Unionist Press the measures taken by the Government in calling out troops and supporting the local authorities were sub-tantially effective. The complete tailure of the Transport Workers strike of May August 1912 following on the disappointing results of both the railway strike and coal strike showed that when society as a whole was threatened it could and would protect itself and that the security of existing social order was the first consideration for the executive Government however much it wished to be neutral in disputes between employers and employed. The necessity of using troops however as well as police in such circumstances has led to great bitterness on the part of the strikers and their sympathisers in Parliament, and in certain socialist quarters attempts have been made to put pressure upon soldiers themselves not to assist Capital against Labour and thus right against their own class - In March 1912 the Government prosecuted a journalist named Bowman, together with the two printers of a paper called The Syndicalist, for the publication of an article inciting soldiers to mutiny by telling them not to shoot at strikers if ordered to do so they were found guilty at the Old Bailey and sentences of nine and six months hard labour was passed On March 10th too for making a speech to the same effect Mr Tom (March 22nd) Mann, the well known Labour agitator was arrested on a warrant issued by the Salford magistrates and he was found guilty at the Manchester assizes on May oth and sentenced to six months imprisonment (reduced to two months by the Home Secretary)

The year 1012 also saw the fruition of an enterprise long discussed at Trade Union Congresses, namely the starting in England of a daily paper directly representing Labour On October 8th the first number of the Daily Citizen was published under the

Control of a board of directors appointed on behalf of the trade unions the parliamentary Labour party and the Independent Labour party. Heretofore the principal organ of the movement—and particularly its socialistic side—had been the weekly Labour Leader but the direct financing and control of a regular daily combining the supply of general news with the attempt to forward Labour interests in particular, in competition with existing dailies was a much more ambitious experiment the results of which remained to be seen

The Railway Strike of 1911 -For the first time in the history of English labour troubles a national strike was precipitated in 1911 and private war was made on the whole community by the members of the railway unions In 1907 there had been a violent agitation among members of the Amalgamated Society of Railway Servants for better wages and shorter hours and towards this end for recognition ' of their Trade Union by the railway companies which had been steadily refused by all except the North Eastern Company (after an arbitration in 1897) This struggle had gone on for many months the companies insisting that their finances would not permit of any concessions till in October 1907 a ballot of the Union was taken and preparations were made for a general railway strike. This was only averted on November 6th as the result of negotiations carried on by Mr Lloyd George as President of the Board of Trade by an agreement between both sides to accept a scheme of conciliation and arbitration Under this scheme¹ sectional boards were set up for each company, composed of representatives of employers and employed to deal with disputes about hours and wages a Central Conciliation Board also representing both sides was set up to adjudicate on points on which the sectional boards did not agree and a final appeal was provided to a single arbitrator to be appointed by the Speaker and Master of the Rolls or one of them The agreement to abide by this scheme was to remain in force for six years and then be terminable by either side on a year s notice

Mr Lloyd George was thought to have been highly successful in bringing it about and it was hoped that a permanent remedy had been found for the unrest in the railway The companies had gone a very long way to meet the demands of the Union owing to the pressure put on them by the Covernment to accept the scheme actual working of the Conciliation Boards however proved as time went on very dis appointing to the railway men and the movement for shorter hours and better wages persistently pressed by the forward party in the Union and associated with the socialist propaganda throughout the Labour world came to a head again in 1911 been going on in Liverpool Manchester London and elsewhere among various other classes of transport workers —seamen, dockers and carters In London a violent dock strike was only terminated early in August by an award of Sir Albert Rollit increasing wages and a carmen's strike which had been accompanied by serious disorder and had driven the Government to order troops from Aldershot was brought to an end with considerable difficulty at the same time by the intervention of the Board of Trade the men securing concessions both as to hours and wages At Liverpool a protracted dock strike had driven the shipowners on August 3rd to agree to recognise the Dockers Union and make other concessions but a number of strikers refused to go back to work, and the shipowners then announced a general lock out to begin on August 1.4th The answer of the Dockers Strike Committee led by Mr Tom Mann was to call on all transport workers to assist them by striking in sympathy and wild scenes of rioting resulted requiring the assistance of troops to assist the Liverpool police The general unrest now spread in an active form to the railway men too

For some time past the discontent at the working of the Conciliation scheme had led to talk of a general railway strike the Trade Union agitators were spoiling for a fight and the companies were preparing for emergencies. At Liverpool the goods porters at the Lancashire and Yorkshire stations struck on August 5th because of the delay in dealing with their grievances and at other stations the men came out in sympathy. On August 15th the joint executives of the four railwaymen's Unions—Amalgamated So-

¹ See generally E. B 11 331 et seq

ciety of Railway Servants Associated Society of Locomotive Engineers and Firemen General Railway Workers Union and Signalmen's and Pointsmen's Union-decided to order a general strike unless in twenty four hours the companies agreed to meet them and discuss terms The Companies at once refused to do so or to admit that the Con ciliation scheme of 1907 could be thrown over in this way. The leaders of the men on the other hand contended that the spirit if not the letter of the agreement of 1907 had never been carried out and that they must have direct recognition of their unions Matters were now at a deadlock However conciliatory the Government might be to Labour its attitude was necessarily dictated in the first place by the duty in the event of a strike of securing the transport of food and mails, the safety of property and other public interests threatened and secondly by its own responsibility for the agree ment of 1007 which the railway men were openly intending to break. The machinery of the Board of Trade was set to work to try to bring both sides together and to delay the rupture but meanwhile the companies who engaged to provide for a restricted service by means of their non union employes were guaranteed military protection and preparations were made for placing soldiers along the lines at the stations and elsewhere for this purpose.

On August 17th Mr. Asquith had an interview with the men's representatives and offered a Royal Commission to inquire into the working of the Conciliation Scheme but at the same time he warned them gravely and firmly that the Government could not allow the railway service of the country to be paralysed Resenting the tone of his speech and suspicious of a Royal Commission as simply a means of shelving the whole matter-though it was explained too late that Mr Asquith really meant a Commission of three to sit and report at once—they refused this offer and ordered the strike which began next day in spite of continued efforts by Mr Lloyd George (Mr A quith having left further action to him) to overcome what seemed to be a misunder As the result of his explanations to the men's leaders negotiations still went on a vote of censure on the Government which the Labour Party at first decided to move in the House of Commons was not proceeded with and instead of Parliament being adjourned on August 18th until the autumn session as had been arranged it was decided to meet again on August 22nd in order to deal with the situation Meanwhile the strike was in actual operation for practically two whole days and did not terminate till August 20th On Saturday (10th) however a settlement was effected late at night as the result of a conference at the Board of Trade between representatives of the companies and the men Mr Ramsay Macdonald Mr Lloyd George Mr Sydney Bux ton Sir H Llewellyn Smith and Mr G R Askwith It was agreed that a Special Commission should at once investigate the working of the Conciliation Scheme and report quickly what changes were desirable and that the trade union leaders should persuade the men to return to work the strikers being reinstated. There was some difficulty in certain districts in getting the men to go back at once but the crisis was now substantially at an end victory being claimed for the strikers at a mass-meeting in Hyde Park on Sunday When Parliament met on the 22nd Mr Asquith explained what had been done and gave the names of the Special Commissioners —Sir David Harrel (Chair man) Sir Thomas Ratcliffe Ellis Mr C G Beale Mr A Henderson M P and Mr John Burnett, and though Mr Keir Hardie and a few supporters insisted on a division against adjourning for the parliamentary holiday and attacked the Government for taking sides against the strikers-a charge warmly resented by Mr Lloyd George -the general feeling was that a bad business was over as well as was possible

The Special Commission started work on August 23rd and took evidence from both sides up to October 3rd, its report being issued on October 20th. It was unanimously recommended that the Conciliation Scheme should be amended in various ways the central board being abolished and any differences within the sectional boards being set tled by an independent chairman chosen from a panel drawn up by the Board of Trade Trade Union 'recognition' by the companies was not directly conceded—the Commissioners pointed out that the companies could not permit intervention on the subject

of discipline and management —but some satisfaction was given in this direction by a recommendation that the men should have anybody they wanted (e g a Trade Umon official and not actually an employe) on the sectional boards as their secretary and advocate Meanwhile however though the men were back at work, there was still much unrest and the Labour party and Trade Union leaders were by no means satisfied with the result of the Commission When they accepted its appointment there was a general impression, shared in by the Government that both sides had agreed to accept its findings, but on the men's side this was now denied, and threats of a renewal of the strike were made unless the companies agreed to specific demands for shorter hours and higher wages on a minimum scale The union leaders decided to take a ballot in Decem ber on the question whether the findings of the Commission should be accepted or another strike for "recognition' started, and when the report of the Commission came up for discussion in the House of Commons on November 22nd the situation was still a very difficult one A resolution was moved by Mr Lloyd George asking the Government to bring about a further meeting between the representatives to the agreement of August 19th but this was only carried after a contentious debate displaying obstinacy on both sides Mr Ramsay Macdonald insisting that the men had not agreed to accept the Report and that 'recognition' was indispensable while the view of the com pames was that the Government ought to hold the Report as binding on both parties It was not till December 11th that, after a good deal of diplomacy on the part of the Board of Trade officials a compromise was arrived at as the result of further conferences A few days before the ballot of the members of the unions had been taken but the result was not made public and now both parties agreed to accept the Report of the Commission as a basis for modifying the future working of the Conciliation Scheme the 'recognition" of the unions being accepted to the extent of allowing the men to have their Trade-Union Secretary as adviser Matters were gradually arranged for continuing the conciliation boards on this amended scheme and various concessions as to wages and hours were also made by the companies which helped to keep the peace with the unions during 1912, though discontent with their conditions of labour still continued among various classes of workers

As regards the strike itself while in actual operation the state of the railways during those two or three days was unprecedented Some 220 000 men altogether about a third of the workers were out and traffic was much restricted the worst dislocation being in the North of England, round Liverpool and Manchester Troops were em ployed freely to guard the lines and give protection against violence and in consequence there were only certain particularly disturbed districts where serious mischief occurred On August 10th an attack was made by rioters on a train at Llanelly and the soldiers had to shoot two men being killed while an explosion due to the mob setting fire to some trucks containing gunpowder resulted in five more deaths and at Liverpool on the 15th two men were shot in a riot The employment of the military was furiously denounced by the Labour agitators but the intimidation practised against non unionists and the danger of extended sabotage were such that on the whole the comparative peaceable ness of the stoppage which occurred in a summer of unexampled heat was rather re markable To a great extent, and particularly on the lines nearer London this was due to the fact that a large proportion of the union men who went out (a certain number remaining loyal to the Companies) only did so because they dared not disobey the union orders

Simply on the issue as to more generous treatment of the railway workers there was a fairly widespread sympathy on the part of the public with the men, and it was against the method employed by their leaders for asserting their claims that public indignation was aroused. It is too early to estimate whether any substantial success was gained by the strike in improving the position of the men. One definite advantage was however secured for the railway unions as such their membership before the strike had been steadily declining and during the subsequent months they were somed by large numbers of men who had previously remained outside

The Knox Case 1012 —In December 1012 a serious strike took place on the North Eastern railway over the case of Driver Knox leading temporarily to a complete local dislocation of traffic and much injury to industry Knox who was a main line driver had been arrested at Newcastle on October 6 for being drunk and disorderly and assaulting the police and when brought before the magistrates was fined five shillings for being drunk though the charge of assault was dismissed. He was off duty at the time but the company naturally took a serious view of such a conviction in the case of a man who was liable to be responsible for the safety of a passenger train and he was reduced in rank to that of driver of a pilot engine only He had apparently thought that no notice would be taken by the company and had paid the fine and not appealed against the conviction, but when he was reduced in rank he protested that he had been wrongly convicted and his case was taken up by the local branches of the men's union at Newcastle Gateshead and elsewhere their claim being that the company had no right to take cognisance of a man's action when off duty demand that Knox should be reinstated was refused on public grounds by the company and on December 6 the men decided to strike The situation was altogether anomalous, since the strike was carried out without the sanction of the officials of the union without legal notice and contrary to the agreement made with the company for reterring all disputes to a conciliation board but by December 8 thousands of railwaymen at Newcastle Gateshead South Shields and other neighbouring centres had gone out and the whole service was disorganised. It quickly became apparent that a settlement depended on whether knox's conviction for drunkenness represented a serious offence or not As matters stood the company were bound to treat it as one but it he could show that an error had been committed they were prepared to reinstate him this purpose an appeal was made by knox to the Home Office and on the 10th of December the Home Secretary sent Mr Chester Jones one of the London police magistrates to Newcastle to hold an official enquiry He began to take evidence on the 1 th and issued his report on the 14th. It was shown that Knox was not quite sober on the occasion in question and had been refused admission to a tramcar with the result that an altercation took place in which he had been roughly handled by the police but the evidence was by no means satisfactory and Mr Chester Jones in the circumstances came to the conclusion on the main point at issue that Knox was not drunk or disorderly ' or drunk and incapable or even really either all in the police court sense This being so the Home Secretary announced that Knox would be granted a tree pardon and as this result wiped all the proceedings out the company immediately reinstated him. It was agreed that the strikers should resume their old places which they had forfeited by their breach of agreement on paying a week's wages as a fine while the company paid compensation to the new men they had taken on during the strike and on these terms the whole affair came to an end on December 16 with a minimum of further dissatisfaction

The National Coal Strike of 1912 —In December 1910 a strike began at the Cambrian Combine Collieries (of which Mr D A Thomas was managing director) owing to the failure of the two referees (representing owners and men) appointed by the South Wales Conciliation Board to agree upon a tonnage price for the working of a seam at the Ely Pit which had till then been worked on day work. The rates offered by the owners were denounced by the strike committee as a starvation' wage but the strike was really a forward move on the part of the younger extremists among the men who had obtained the upper hand and were influenced by socialistic doctrines A general lock out of the men working in other seams in the Ely Pit was the masters' reply. The Welsh socialists then sent delegates to enlist sympathy among the English and Scottish miners elsewhere and to try to bring about a general strike but the leaders of the Miners' Federation of Great Britain were not prepared to support the action of the Ely Pit strike committee and managial support was withdrawn so that the strike collapsed. But the propaganda which started in connection with it had an influence on what followed.

For some little while the Miners' Federation had been putting a claim before the owners in the Federated area for the fixing of definite rates of payment in the case of "abnormal places" where the men were unable to earn an average day's wage for no fault of their own The reasonableness of some such step could not be altogether denied but the difficulty was to agree on satisfactory terms and no conclusion had been arrived at At the Southport Conference of Miners Delegates in October 1011 the demand that in abnormal places, a miner's remuneration should be made up to the district rate was given a different form a claim now being made for an all round minimum. The following resolution, proposed by the executive was unanimously passed—

That the Federation take immediate steps to secure an individual minimum wage for all men and boys working in mines in the area of the Federation without any reference to the working places being abnormal. In the event of the employers refusing to agree to this the 21st rule to be put into operation to demand assent

The delegates were instructed to report the result of their negotiations with the employers at a second Conference on November 14th. At this conference at which they reported their failure to obtain the minimum wage an adjournment was resolved on (by 336 000 votes to 238 000) for future negotiations, and on December 21st the situation remaining the same it was resolved that a ballot should be taken on January 10th-1 th 101 on the question. Are you in favour of giving notice to establish the principle of a minimum wage for every man and boy working in the mines of Great Britain? A resolution was also passed "that each district send to Mr. Ashton [General Secretary of the Miners Federation] a tabulated statement of what it desires to be its minimum wage and that the Executive Committee of the Federation meet to consider the state ments and report to a National Conference in Birmingham on January 18 1012"

The result of the ballot as declared at the Birmingham Conference showed 445 801 votes for giving notice 115 721 against—majority 330 080 South Wales alone giving a majority of 85 107 for stopping work—And on February 2 1012 after considerable discussion of the minimum rates asked for the following schedule was approved—

	District Rate Demand Approved			District Demand	Rate Approved
Yorkshire Lancashire Midlands Derbyshire Nottinghamshire North Wales Leicestershire South Derbyshire Somerstshire	Demand A 8. d 8 7 5,6-7/1½ 8 8 7 7½ 6 -7 6	Approved s. d 7 6 7 6-7 7 1½-7/6 7/6 6 7/6 6 7/6 6 4/11	Bristol Cumberland Scotland South Wales Northumberland Durham Forest of Dean Cleveland	Demand s d 6 6 6 6 8 6 -6/9 6 11 6	Approved s d 4 II 6 6 7 1½-7/6 6 -7/2 6 I¼ 5 IO 5 IO

The coal owners met on February 7th and the Welsh owners then refused to discuss the minimum wage and retired from the conference. This made a strike inevitable since the miners were not prepared to settle with any but the whole Federated area and notices were given accordingly the public being faced with a prospect of a complete The Prime Minister on February 20th invited both sides cessation of coal supplies to meet him to discuss means of averting a national stoppage and their representatives met him on February 22nd but to no purpose and on February 26th the first miners went on strike at Alfreton the rest soon following in spite of the announcement that the principle of a minimum wage was now adopted by the Government and that they would take steps to give it Parliamentary sanction unless an agreement were arrived at On this point a split occurred between the coal owners those of Durham and the Federated districts being prepared to fall in with the proposal of the Government and the others refusing On March 1st over a million coal miners were out (Yorks and N Midlands, 235 000, S Wales 220 000, Scotland 130 000, Northumberland 1 0 000, Durham 110,000, Midlands and South, 105,000 N Wales 70 000 N and E Lancs 45 000) and during the whole month the country was convulsed by the calamity

At last after the Government had made a further unsuccessful attempt, by a con ference, to bring owners and miners to agreement on March 19th Mr Asquith introduced in the House of Commons a Minimum Wage Bill as their last resort It provided that in the coal industry every contract for employment should involve the payment of a minimum rate to be settled for each district by a joint board set up under the auspices of the Board of Trade The Bill was read a second time on March 21st after a motion for its rejection by Mr Baltour, on behalf of the Opposition, had been deteated by 348 votes to 2 5 and it had passed both Houses on March 28th Having made their protest against a piece of revolutionary legislation which introduced so novel and farreaching a principle into industrial economics the Umonists left the responsibility to the Government and the only Parliamentary difficulty was caused by the Labour party, who fought for the inclusion of a precise definition of the minimum in the shape of 3s a day for adults and 2s for boys, as the Government refused this and insisted on the rates being fixed by the district boards the Labour party opposed the third reading which however was carried by 13 to 48 There was acute dissatistaction among the miners at the failure of the Labour party to get their own minimum schedule of rates adopted and for a time the result was doubtful but it was decided to take a ballot (April 1st) on the question of returning to work and though a majority still voted for staying out (44 011 to 201 013) it was not large enough (two thirds being required by the rules) and the abstentions were significant

The fact was the funds were exhausted and the men had had enough of the struggle The conclusion of Sir A Markham the Liberal MP and coalowner writing in the Quarterly Review for April 101 is probably the verdict of history he considered that the ground of attack was ill chosen the men should have stood to their original demand the payment on account of abnormal places or losses due to bad management. If in addition they had asked for an increase of wages equivalent to 10 on the basis rates to meet the increased cost of living they would have occupied strong ground great mass of men came out to obtain higher wages and for no other reason and when they voted for the formula 'minimum wage nine tenths did not know what they were The result as the year went on and the minimum rates were settled not voting for without friction was a profound disgust among the coal miners generally with the operation of the new Act which was found to do very little to increase the amount paid in wages but it had done its work for the moment the crisis being over moreover an agreement was arrived at between representatives of miners and coal owners of the English Federated area by which about 400 000 workers would at once receive an advance of a shilling a week in wages This was the outcome of discussions before a Conciliation Board which had been in existence for some years and was now renewed for a further period and this addition of about fix ooc ooo a year to the wage fund was worth more than all the haggling about minimum rates

The Transport-workers Strike of 1912 -In connection with the opening phases of the railway strike of 1911 allusion has already been made to the sporadic strikes of other sections of transport workers 'earlier in that year and the general dock strike which began in London on May 20 191 was really the concluding phase of the unrest which had only been partially quieted during the previous August First the lightermen came out and then a 'sympathetic strike involved all the other unions of transport workers connected with the Port of London The nominal reason for the lightermen ceasing work was their objection to one man employed as a watchman having no 'Federation ticket" he belonged to the Foremen's Society a union not affiliated to the Transport workers Federation but refused to join the Lightermen's Society which was so affiliated and when the lightermen demanded his dismissal on the ground that they would work only with men who belonged to the Federation his employers naturally refused This was however in reality only the culmination of a number of grievances put forward by the men who complained of being victimised under the terms of the existing agree ments Unsuccessful negotiations had for some time been going on between their secretary Mr Gosling (himself actually a member of the Port of London Authority)

and the Board of Trade, with a view to pressure being put on the employers and the declaration of a strike on May 20th for the reason given was prompted by the hope that the hands of the Government would be forced. In taking this step the lightermen rehed on their privileged position in the Port of London. Their Society held an old licence from the Watermen's Company whose functions were transferred in 1908 to the new Port of London Authority, and the law was that unlicensed men should not be employed so long as licensed men were available, so that apart from the difficulty of obtaining substitutes in an emergency, the employers, as they knew would have to reinstate them when the strike was over (One result of the strike was that the Port of London Authority took steps to get this law altered)

The Federation of Transport Workers now took up the Lightermen's cause and in doing so put forward a further grievance on behalf of the Carters. Union by whom an agreement had been made with the Master Carters. Association when the strike of the previous August was settled. The complaint was that one firm which had joined the Association had dismissed their union men contrary to the terms accepted and had resigned from the Association when it called them to account so that the agreement was useless. The Union demanded accordingly that all employers in the Port should be obliged to belong to a Masters. Federation which would have power to guarantee the carrying out of agreements. As no concession on this point was forthcoming notice of a general strike of all members of the Transport Workers.

The Government at once took action by appointing Sir Edward Clarke K. C. to hold an enquiry on May 4th in order that the issues, which at the moment were decidedly confused might be somewhat better defined and in the hope of checking the development of the conflict He sat to hear evidence from both sides at Fishmongers Hall and made his report on May 28th to the effect that while the lightermen were wrong in supposing that the award of the previous August meant that none but members of their Federation should be employed and they themselves had broken their agreement by striking without recourse to arbitration still there were several points on which the Transport Workers had legitimate grievances, owing to the employers not having carried out certain terms of their agreements also The Government on May ooth suggested a conference between the two sides which was however declined by the shipowners who insisted that the only point really at issue was the lightermen's breach of agreement in suspending work and thus dislocating the whole business of the Port Meanwhile a general strike of transport workers was in progress at the docks some 80 000 men being affected and the whole food supply of London was threatened but the shipowners actively engaged free labourers in spite of trade union picketing and intimidation, and day by day managed more efficiently to get their ships unloaded cussion influenced by Sir Edward Clarke's report and its criticism of both sides, centred round the apparent necessity of providing alike for masters and men some guarantee against breaches of agreements and Mr Lloyd George who in Mr Asquith's temporary absence in the Mediterranean dominated the Government policy made proposals which he explained in the House of Commons on June 5th for a Joint Conciliation Board, combined with pecuniary guarantees on both sides. Mr Gosling on behalf of the Transport Workers gave a general assent to this suggestion but the employers and the Port of London Authority (with Lord Devonport -formerly Mr Hudson Kearley, a well known Liberal MP —as chairman), after careful consideration rejected it on June 10th It was pointed out by them that there was no proper basis under the con ditions prevailing at the docks for such a Board the trades concerned being very different and the employers (some of whom were foreign firms) themselves being competitors, the Port of London Authority moreover was a statutory body with distinct obligations and responsibilities and could not well enter into such an arrangement any more than a Government Department could—the Post Office, for instance—with the men in its employment. This was not a case of a strike against some individual firm which had given legitimate cause of offence but a general strike against the whole Port, on the part of a heterogeneous body of workmen, most of whom had no actual quarrel

with their employers and who had stopped work in defiance of existing agreements Negotiations now broke down altogether and the leaders of the Transport Workers Federation declared a national strike and tried to call out all its allied members at other ports as well as London But though some 30 000 men responded altogether at Manchester Southampton Bristol Plymouth and Swansea this appeal for a "national strike was a thorough failure the railway unions had had enough fighting the year before and the seamen and firemen as a body were not prepared to come out violence were of daily occurrence between unionists and free labourers at the London docks and in the East End, where the cessation of employment was causing great distress it became necessary to cancel the King's intended visit to open the Royal Albert dock on June 17th, but by June 18th it was clear that the Port of London Authority and the employers aided by police protection (which Mr McKenna the Home Secretary provided however somewhat grudgingly) had the strikers well beaten having obtained a sufficient supply of labour for the handling of cargo From this point the strike de generated into sheer anarchism under the leadership of Mr Ben Tillett the Secretary of the Dockers Union whose revolutionary and inflammatory speeches—and especially a passionate prayer uttered by him for Lord Devonport's death-disgusted not only the public but also the Labour party in Parliament, and embarrassed their attempts to get the Government to intervene Serious conflicts occurred in which revolvers were used in self defence by the free labourers, notably on July 24th and on July 31st but by degrees the Strike Committee realised that their efforts were in vain mended a return to work on July 27th, but a mass meeting in Hyde Part next day refused to comply with this advice and it was not for a week later that all pretence at continuing the strike was abandoned On July arst the lightermen decided to give in and the riot among the dockers that day was mainly due to their finding that their old places had been filled up and that it no longer rested with them to say whether they were wanted any more or not On behalf of the employers however and of Lord Devonport a general assurance had been given that if the strike were abandoned unconditionally any out standing grievances under the old agreements would be inquired into and reinstatement effected as soon as possible for men who had formerly been m regular employment and as the Strike Committee and the leaders of the Transport Workers Federation could hold out no longer further resistance came to an and

The real object of the strike in so far as it aimed at being a national "one was to compel Parliament to legislate as it had done for the coal miners In this case however the Labour politicians and their sympathisers were impotent. The discussions in the House of Commons turned mainly on Unionist criticism of the Home Secretary for the apparent disinclination he showed for using force to preserve order and protect the free labourers On June 12th Mr Austen Chamberlain moved a vote of censure on Mr McKenna which was rejected however by 331 to 60 On July 1st Mr O Grady (Labour M P for East Leeds) moved a resolution that it was expedient that the representatives of the Employers and Working Men's organisations involved in the dispute hould meet with a view of arriving at a settlement" and Mr Asquith (who had now returned to England) left the matter to the House saying that he himself would not vote on it as he did not think Government intervention would be justifiable or expedient Law for the Unionists, having expressed his surprise that in those circumstances Mr Asquith did not oppose the resolution moved as an amendment 'that this House re grets the continuance of the strike and the consequent suffering, and approves of the declaration of the Prime Minister that the constitutional and normal attitude of the Government should be one of complete detachment and neutrality, and is of opinion that the intervention of this House in this instance can serve no useful purpose The amendment was rejected by 60 to 15 and the resolution was carried by 254 to This was the end however of any Parhamentary action The strike was already collapsing, and its only political result was to focus public opinion on the desirability of compulsory arbitration or at any rate some improved machinery of making (Hugh Chisholm) agreements once entered into, binding on both sides

V United Kingdom Finance 1905-1913 1

The history of English public finance for the period from 1905 to 1912 13 offers many aspects of interest and importance. The Salisbury Balfour administrations of 1895-100, have been followed by those of Sir Henry Campbell Bannerman (1905-8), and of Mr Asquith (1908-), and the transfer of political power is reflected in prominent features of the public finance of these periods

When Sir Henry Campbell Bannerman became Prime Minister on December o 1905 the financial position was still affected seriously by the events and work of the period just closed Public expenditure had been growing rapidly, and Period had reached a total which was substantially higher than the level of 1805 1895 1905. nor did there seem a prospect of any serious reduction In 1895-6 the total expenditure was £97 7 millions with grants to local taxation of £7 4 millions—a total of £105 1 millions in 1905-6 the expenditure was £140 5 plus £9 88 millions to local taxa tion, or a total of £150 4 millions The figures just given do not include sums spent on account of capital expenditure though annuities to meet that expenditure were included in the various estimates In 1895 there were only three items in this account, ma those for the Imperial Defence and the Barracks Acts of 1888 and 1890 respectively, and for the Telegraph Acts The total was only £810 000 of which £670 000 was under the Barracks Act In 1905-6 the sum thus spent was £6 r millions, but it had been higher for some years, and on these accounts there were pending among the liabilities of the State about £45 millions (In March 1912 the sum owing under this head had reached £50 millions but the only item added to those of 1905 was £3 millions, in part payment for the purchase of the National Telephone Company)

The growth of expenditure from £105 to £150 millions (with extras) in the decade had however been more serious than these figures themselves suggest. The South African War broke out in October 1800, and has left its mark on the finances permanent ly besides keeping expenditure at a higher level. Large sums were paid toward the war from current revenue the rest being borrowed in various ways The borrowings to the end of 1902-3 (March) amounted to about £160 millions but the direct cost of that War must have exceeded £230 000 000 Internationally moreover, relations were strained in Europe leaving a legacy in higher expenditure on the services in time of peace and British trade was checked in a career which had promised very favourably The surpluses of 1895 to 1899 gave place to the dencits of the war time for five years (but reappeared before Mr Balfour left office), and meantime new taxation had been imposed up to 1902-3 to about $£75\frac{1}{4}$ millions which included additions to the tea tobacco beer, and spirit duties the imposition of taxes on sugar coal (export) corn and flour and the raising of the poundage of the Income Tax first by 4d then by 2d, and then by a penny more (7d in the f altogether) to is 3d. The South African War, in short disorganised finances and necessarily caused difficulties at home and abroad nor can its effects cease for some years. On the other hand, it is a surprise to many how re markably strong the recovery has been since peace was signed at Vereeniging in 1902 To this period also 1901 and 1902, belongs the Boxer outbreak in China, which involved an expense to the United Kingdom of over £6 millions

But the South African War does not account for the whole of the growth in expenditure up to 1903-6 The debt service at £28 millions was £3 millions higher and was a war charge. The cost of the Army in 1895-6 was £18 4 and in 1905-6 £28 9 millions, that of the Navy £10 7 and £33 3 millions. All the civil services exhibited a growing cost and especially the revenue departments which had heavier work in collection, but special mention of the education services is required which went up from £11 to £16 millions and of a sum of £6 5 millions in 1901-2 with another of £8 millions in 1902-3 (or £14 5 millions in all), granted to the Transval and Orange River Colony to aid reorganisation. This last was virtually a part of the war's expense.

1 See E. B 1x 458 et seq

though overwhelmed by war from 1899 to 1902-3 and moved from £109 4 millions in 1805-6 to £153 8 millions in 1905-6. The Corn Duty had been withdrawn and the Income Tax at 18 3d in war time reduced to 11d but raised again to 18. Only the resources of a wealthy country could have borne the strain implied in these facts, and it seems as though the rapidly expanding expenditure which marks the period had been sealed and made permanent by the establishments set up during the War. It was acknowledged at the same time that the 4rmy was in pressing need of reorganisation.

Mr Asquith succeeded Mr A Chamberlain in December 1005 as Chancellor of the Exchequer, and held the office until he became Prime Minister on the resignation of Sir Growth of Expenditure of the Henry Campbell Bannerman in April 1908 being succeeded in turn by Mr Expenditure is that for the latter year the total expenditure for revenue was placed at \$186 \text{ millions} to which \$\frac{1}{2}00000000 \text{ motor more had to be added for Naval purposes. To this should also be added \$\frac{1}{2}085000 \text{ motor maccount of capital expenditure but it is only fair to add that during the whole period such extra expenditure was discouraged and in the case of military and naval outlay the year's expenditure was placed wholly on the estimates. For such a purpose as the undertaking of the National Telephone Company, which was taken over by the Post Office in January 1912 resort was had to borrowed capital \$\frac{1}{2}\text{ millions being taken in 1911-12 \$\frac{1}{2}\text{ T}\text{ millions more in 1912-13 while a much larger sum was due for the undertaking the total amount being still in dispute at the end of 1912 and subject to decision by an arbitration court

It will be convenient to deal separately with Mr Asquith's and Mr Lloyd George's management of the national finances though they seem to embody a continuous policy. It will be necessary to draw attention to the way in which £38 millions more were added to the annual expenditure of the United Kingdom between 1905 and 1913 and to emphasize the fact that new state services have been undertaken

Mr Asquith was responsible for three budgets 1906-7 1907-8 and 1908-9 representing a period of consolidation Retrenchment had been advocated by him in opposition Mr Asquith s and the expenditure was watched and checked carefully as was essential three budgets after the costly war The measures taken to this end may be judged by the following facts From £150 4 in 1905-6 the budget expenditure rose to £132 3 millions in 1908-9 though it had been below the 1905-6 level meantime. In the interval the Post Office charges rose from £15 9 to £18 1 millions but were more than covered throughout by revenue. The Army estimates were reduced though Mr Haldane was reorganising the whole service and the cost fell from £28 8 to £26 8 mil The cost of the Navy too was reduced—declining from £33 3 to £3 2 millions in this period and extras on capital expenditure were discouraged nothing being added There was a growth indeed in the cost of the Civil Services to former commitments from £28 4 to £32 3 millions The principal causes of this apart from a normal tendency upward in the expense of administration were the Education estimates which showed a growth of about {r million and the initiation of the Old Age Pension system at the opening of 1909, toward which £2 I millions were found necessary ultimately to meet the expense of the quarter from January to March By this time the expenditure under capital during the year had fallen to £2 6 millions but the outstanding total under this head was still for 4 millions

The revenue fell from £153 8 in 1003-6 to £151 5 millions in 1908-9 but had been as high as £156 5 millions the year before and when the circumstances are considered it was surprising to find that surpluses aggregating £15 millions had been realised from 1904-5 to 1907-8. The result of 1908-9 proved eventually to have been a deficit of £14000 as receipts were much lower than the estimate. This deficit may be accounted for in part by the changes made during this period in taxation and on the other hand by the foundation of Old Age Pensions for which only temporary provision had been made. Mr Asquith's operations in taxation were important. In 1905-6 Mr A Chamberlain had reduced the Tea Duty from 8d to 6d per lb', and also some warehousing charges, at a total cost of nearly £2 millions. In

1906-7 Mr Asquith fixed the Tea Duty at 5d readjusted the rebate on stripped tobacco and repealed the export duty on coal at a cost of about £3 8 millions This was followed in 1907-8 by changes of much interest. Income Tay was at a shilling in the f. at which it had been left by Mr Chamberlain in 1904-5. Mr Asquith now fixed the duty on earned incomes which do not exceed £2 000 at 9d, provided the taxpayer claims the re duction by September 30th a concession which was computed to cost £11 millions That was balanced however by reframing the scale of ascending charges for Estate Duty more severely (fr per cent up to £500 froup to fr million and fro for fr million and 15 per cent on sums above that when the total exceeds £3 millions) to bring in £1 2 millions to revenue Several minor concessions were also made on income tax most important budget reform however was the power taken to pay the sums hitherto transferred directly to the Local Taxation Account into the Treasury whence in future there should be paid to local authorities a fixed sum equal to their share in this year (1907-8), by this method an automatic growth of these grants was checked and the taxation by which the money had been raised accounted for without any interception in the Consolidated Fund In 1908-9 again reductions of taxation were made Sugar Duty of 1901 was reduced to 19 10d a cwt from 4s 2d at a cost of £3 6 millions the Establishment Licences transferred for collection to County and Borough Councils (which had received them before by transfer from the Treasury) and marine insurance stamps reduced from 3d to 1d per cent The Licences represented a loss of £1 650 000, and when the duty on glucose and on saccharme had been adjusted to the reduced sugar duty the total concession for the year was computed at £5 450 000 During the three years therefore remissions of taxation (including the licences transferred) amounted to fro 500 000 the additions fr 2 millions or a total reduction of fo 3 millions but it should be observed that this involved a shifting of a weightier portion to death duties while duties on tea coal and sugar were either reduced or repealed. It may be added that provision was made for an excise duty on tobacco grown in Ireland and for the transfer of the care of excise duties from the Inland Revenue to the Commissioners of Customs and Excise"

Mr Asquith s tenure of the Exchequer was distinguished also for his operations on the National Debt During the South African War the Sinking Fund had been sus-Reduction of pended for two years but interest on War Loans had been paid for two National other years the sum devoted to the service of the debt had been reduced from Debt. £ 5 to £23 millions From 1903-4 interest on the War Loans had been included among the permanent burdens on this charge which was raised first to £27 millions in that year and to £28 millions in 1905-6 Mr Asquith pursuing the rein statement of credit for the period 1906-9 kept this charge at £ 8 5 £ 9 and £28 millions respectively thus devoting the largest amount recorded to swell the 'New' Sinking The result of this policy may be gathered by the figures of the triennial period 1905-6 to 1907-8 (inclusive) These were years of large surpluses, allocated to the "Old Sinking Fund and amounting to nearly £14 millions for the period and these payments together with large sums applied from the charge for the debt coupled with the purely financial operations of the Debt Commissioners reduced the dead weight ' debt from £755 millions at which it had been left in 1905 to £711 4 in 1908 (March) or a reduction of £43½ millions On the other hand the habilities on capital expendi ture had matured and grown from £41 6 to £50 8 millions, but as the policy by which they were incurred had been reversed by this time, the reduction on the 'dead weight debt was so much gained

When Mr Asquith handed over the work of the Exchequer to his successor in April 1908, the financial position had undoubtedly improved very considerably since 1905. At the outset affairs were still in the shadow of the war and though trade was growing and even buoyant amid the shocks which it had to endure, public credit was low and public expenditure at a high figure. Consols, which had been at 113½ in May 1897 were 80½ in December 1905 (but in 1903 had been reduced from a 2½% to a 2½% security). In that situation a policy of caution and re

trenchment was justified. As the revenue was elastic and the wastage of the war had been great it was wise to fortify the position by reducing debt and thus to aid if only to aid recovery. It is probable that the still expanding imports and exports owed some thing to this though they dropped again in 1908 as compared with the bounteous year, 1907. Still amid undoubtedly great commercial prosperity Consols were only at $83\frac{1}{16}$ in December 1908 and they had been as low as $82\frac{1}{32}$ in prosperous 1907. During the war years however the progress of social reform was checked and while Mr. Asquith was strengthening the finances the demand for amelioration in the condition of the working classes became insistent. Hence the institution of the Old Age Pension system by Mr. Asquith in 1908 followed by the provision of Labour Exchanges in 1909 and later measures. Mr. Asquith had left £1 200 000 to meet the cost of the Old Age Pensions during the first quarter of 1909 but it was found that £2 1 millions were required

The Old Age Pensions scheme was designed to supplement the Poor Law by giving pensions to qualified persons of 70 years of age and upwards As originally passed it did not extend to persons who had been in receipt of poor relief but after Old Age 1910 by an amending Act they were included The chief qualification is Peasions that a pensioner shall not possess means above £31 10s a year (or 12s 1d per week) when a shilling a week will be payable and a further shilling for every shilling per week by which the means are shown to be less up to 5s each person when the means do not exceed £ 1 a year (or 8s 1d per week) A weekly 5s is the highest pension per person Up to March 1912 there were about 942 160 who had been awarded a pension, but from the first the number awarded in Ireland was relatively much higher than in other parts of the Kingdom The total cost has been much higher than the original estimates and apart altogether from the extension of the Act The first quarter cost about £2 000 000 the vear 1000-10 f8 7 millions 1910-11 £9 8 millions 1911-12 £11 7 millions and 1912-1, about £1. 2 millions It is reckoned that the services rendered by other State departments to the Pension service cost £450 000 in addition On the other hand the reduction in the number of paupers receiving poor relief should be set off against this total —say 200 000 at £17=£3 400 000 This scheme of Old Age Pen sions was the first of the Liberal attempts to realise a constructive social reform pro gramme the effect of which upon the finances will be noticed later

In April 1908 Mr Lloyd George went to the Exchequer (though the budget that year was Mr Asquith s) and the Social Reform programme was further developed under him The season of careful retrenchment was over and the Pensions Mr Lloyd Act was the harbinger of a still more important reform involving increased the Ex expenditure Under the Unemployed Workmen's Act 1905 the Local Government Board had been entrusted with a sum of money annually to be used in relieving distress by assisting to open relief works. For some years that sum was £200 000 but for 1912 it was only £100 000 as unemployment had decreased sub This was partly due to the Labour Exchanges Act 1909 But apart from the great reform Mr Lloyd George had in contemplation which took shape in the National Insurance Act 1911 it was his task from the first to finance a Liberal social programme and this policy left its mark deeply on the revenue and expenditure from Mr Asquith had provided only for the first quarter of 1909 for the cost of the Old Age Pensions and the new Chancellor of the Exchequer had at the out set to find means to defray an expenditure which was a novelty upon the estimates

The total gross expenditure for 1908–9 was £1523 millions that for 1911–12 was £1785 and the estimates for 1912–13 £1869 millions which with a further £900000 for the Navy and other supplementary demands brought the total to £188 millions. Nearly £36 millions of the £38 millions of increase since December 1908 13 1905 fall therefore to be accounted for under the second Chancellorship of the Liberal Administration. Just as £2 millions were for postal purposes in Mr. Asquith a period so may £58 millions be accounted for as the Post Office required £238 millions in 1912–13 a sum including the administration of the newly acquired telephones. This comparison requires correction on the other hand for though Mr.

Asquith left the Debt service at £28 millions in 1912-13 only £24.5 millions were applied to that object. There is also the necessity to replace the £1.650.000 which the transfer of the Establishment Licences involved which sum was now omitted from the gross expenditure. This would leave about £35½ millions of increased expenditure to be provided for in 1912-13 as compared with 1908-9. For the reduction of the Sinking Fund it was pleaded that Mr. Asquith had provided so largely during the previous three years but obviously the new expenditure which was decided upon called for a larger free income. As usual such a transfer as that of the Licences and the suspension of the Sinking Fund disguised and understated the increase of expenditure.

As the Debt, the Consolidated Fund services grants to local taxation, and such fixed services show a decreased total, the increased total expenditure must be sought

The Trend of Expendiin the supply services for each year Expenditure under Capital does not call for further notice for with the exception of operations for telegraphs and telephones, that expenditure had not been allowed to continue Turn

ing to the supply services the Army took £28 8 in 1905-6 £06 8 in 1908-0 and £27 8 millions in 1912-13 We may look back usefully to 1895 and find that the Army then cost £17 8 millions The Navy too which took £17 5 in 1895 required £33 3 in 1905-6, £32 2 in 1908-9, and £45 millions in 1912-13 The Revenue depart ments which cost £3 1 in 1905-6 took £3 3 in 1908-9, and £4 2 millions in 1912-13 The general Civil Services which took £284 in 1905-6 needed £3°3 in 1908-9 and nearly £50 millions in 191.-13 These facts enable us to trace the increased expendi ture, and the swift channels in which it ran Army expenditure is still below that of 1905-6, though £1 million above 1908-9 but since 1895 the cost had increased by over 56° Naval expenditure is now nearly £12 millions more than 1903-6 and £13 mil lions higher than in 1908-9 comparing with 1895, it has increased by $£2,\frac{1}{2}$ millions or 15' in a little over 17 years As for the Civil Services and the Revenue departments together which cost £31½ millions in 1005-6 and in 1912-13 about £54 millions we find that as the cost was only £35 6 in 1908-9 some £18½ millions of the increase had been registered since then and £ 3 millions or so (about 71 per cent) since 1905-6 If to the $f_{3\frac{1}{2}}$ millions taken from the Sinking Fund and f_1 6 millions less for licences placed in the total we add the increases on Army Navy and Civil Services the additions made from 1908-9 to 1912-1, amount to about £3, $\frac{1}{2}$ millions

A further analysis of the £18½ millions added to the cost of the Civil Services as shown in 1912-13 is required. About £1 million was on account of the Revenue de partments a large portion of which £530 000 means the Valuation department of the Inland Revenue. Old Age Pensions £12¼ millions is however the largest item. Na tional Insurance and Labour Exchanges appear for £28 millions (and the cost of medical benefits seemed likely at the end of 1912 to be £1½ millions more) while Education takes £1½ millions. The rest of the £18½ millions of increased expenditure about £13 millions may be traced to the various official bureaus.

This analysis of the trend of expenditure during 1908-9 to 1912-13 will serve to exhibit the position as conceived at the opening of this period. The House of Commons had been committed to a large and somewhat indefinite expenditure on Old Age Pensions for which no permanent provision had been made a further extension of the social programme was in contemplation there was uneasiness in the international situation, and a prospect of the growth of armaments administration was becoming more expensive. What steps were taken to adjust the national finance to the national needs?

Expenditure depends largely on policy and the taxation to meet it is intimately related to that policy. The measures taken to raise revenue in the budget of 1909 afterwards found in the Finance Act of 1910 together with the Constitutional crisis which resulted will always be famous in English history Before giving a summary of the changes made in the revenue laws it may be well, however to give a brief account of the revenue to the end of this period

The revenue in 1908-9 was left at £151 5 it was £131 6 in 1909-10 and £203 8 in 1910-11 (both abnormal figures as explained below), and in 1911-12 £185 millions

The estimate for 1912-13 amounted to £187 I millions the borrowing for capital expenditure being about £29 millions principally for telegraphs and telephones. On 1908-9 there was a budget deficit of £714 000 but on the combined years 1909-10-11 there was a surplus of £56 millions, and on 1911-12 a surplus of £65 millions. The figures already given show that the relation between revenue and expenditure in 1912-13 was tighter, but trade was favourable the revenue returns showed much elasticity in certain directions and yet expenditure as has been shown, had not ceased to grow These figures show plainly that this was a critical time when the due working of the Treasury was much disturbed. An account of Mr. Lloyd George's budget of 1909-10 and its changes in taxation will go far to account for that disturbance, especially as the Budgets of succeeding years made no changes of importance in the revenue laws

The Finance Bill of 1909 was introduced on May 26th (after the discussions on the Budget statement of April 30th), and was read a third time on November 4th only to be rejected on the 30th by the Lords, who wished to have it submitted The Finance to the country The budget statement anticipated a total revenue of BIII 1909 10 £162 5 millions as against £151 5 realised for 1908-9. The actual revenue proved to be £1,16 in 1909 consequent upon the rejection of the Bill by the Lords for the custom of collecting the Income Tax and tea duty which are annual taxes on the authority of a resolution of the House only had to be suspended—a custom judicially declared since (Nov 1912) not to have any legal warrant. Some £30 millions of the huge revenue of 1910-11 was therefore arrears of the revenue of 1900-10 After the general election of January 1910 which maintained the government in office the Finance Bill (1909-10) was reintroduced on April 20th and the Lords agreed to it without amendment on April 29th There was a second Finance Act of 1910, the ordinary one for the year but it made no change in revenue laws

According to Mr Asquith (May 5th) the budget of 1000 contained proposals ade quate for the year and for the prospective necessities of years to follow without deviat

Provisions of Planace Bill 1909 10 ing from the principles and practices of free trade and without imposing additional burdens upon the necessaries of the people. The Chancellor of the Exchequer too on the third reading (Nov 4th) said that the taxes had

been arranged to meet the requirements not only of the year but also of the future. A summary of the provisions for new taxation may now be given by which it was proposed to increase the revenue, while at the same time £3[±] millions were saved by reducing the Sinking Fund by that amount

Beer duty was increased from 8s to 8s 3d per barrel Spirits home from 11s to 14s 9d per proof gallon and imported from iis 4d to is id Tobacco 8d per lb added to 38 with adjustments in Ireland and Scotland and on cigars &c Motor Spirit 3d per gallon with certain rebates Liquor Licences were increased and the whole code reframed Motor Car Licences were also increased and graduated according to horse power Estate and other inheritance duties were revised again more severely especially the scale on Estates exceeding £5 000 in value Settlement Estate Duty was increased from 1 to 2 per cent and powers of disposition were amended the rates of Legacy and Succession duties were made higher In Stamps the duties were doubled on Conveyances and Leases and on Bearer securities while those on Contract notes were increased and graduated from 6d to fr according to the amount in question The Income Tax waraised from is to is 2d in the £ and abatements on the income of those resident out of the United Kingdom abolished A Super Tax of 6d was imposed on incomes over £5 000 assessable on so much as exceeds £3 000. On the other hand the concession of a rate of 15 in the f on earned incomes which exceed f2 000 but not f3 000 extended this innovation regarding earned incomes (this in 1010-11 was a concession which involved $f_{87,500}$) there was an allowance of f_{10} on the assessment for every child under 16 on incomes between £160 and £500 and additional relief was granted under Schedule 4 on account of the cost of maintenance repairs insurance &c The chief novelty of the Budget was the Land Value Duties the provisions respecting which are somewhat com pheated with regard to assessment which also involved a scheme for securing a valua

tion of all land in the United Kingdom. The principle to be applied was easily stated, but in application is found very complex, while the terms of the Act in these sections are confessedly difficult not to say obscure. The duties imposed were four, viz the Increment Duty of 20°_{0} on the increase in value of the land site, the Undeveloped Land Duty of $\frac{1}{2}$ d in the £ on capital value the Reversion Duty of 10 per cent on benefits accruing at the termination of a Lease and Mineral Rights Duty of 15 in the £ on mineral rents, way leaves &c. These land value duties are not payable on agricultural land

There were some general provisions touching this revenue which deserve notice, such as the instruction that premiums on the grant of new on liquor licences shall be paid into the Exchequer that 5% shall be paid to county councils in Ireland on the amount of the duty levied on motor cars and that the proceeds of the duties on motor spints and on motor car heences shall be paid to a fund as a grant (under the Develop ment and Road Improvement Funds Act 1900) for road improvement. It may be added that when the House of Commons passed the Bill a second time provisions were added to confirm the collection of taxes while the Bill was passing the legislature

Whatever might be the political objections to the Budget of 1909 it has already been shown that its operation resulted in raising the gross revenue from £151 5 in 1908-9

How the sources of revenue were af fected

to £187 1 millions estimated in 1912-13 thus showing a growth of £356 millions in the interval A certain amount of the increase arose however from non tax revenue £7 millions from Postal Services alone. The tax revenue in 1908-9 was £1255 in 1911-12 (a normal year) it was £155 millions in 1912-13 about £153 8 millions. The only change of substance in

1911-12 was the withdrawal of the 2d per lb customs duty on ground cocoa which involved about £60 000 only but the tax revenue for 1912-13 showed an expectation of £283 millions above 1908-9 A revised estimate in 1909-10 of the anticipated effect of the new taxes gave a total of £1 ½ millions for that year and £177 millions ultimately but this last was exclusive of spirits, liquor A comparison of the differences between the heences and the land value duties revenue derived from various chief heads in 1908-9 and in 1912-13 will be instructive Customs yielded more by £4.7 Excise by £4.1 Estate Duties by £1.1 Stamps by £17 and Income Tax (including Super Tax which yielded £3 millions in 1911-1) by The House Duty also continues to show a growing yield £10 2 millions remarkable figures no doubt and speak much of the resources of the country Each of these items too when compared with the expectation of 1909 shows a fulfilment of hopes with the doubtful exception of the Excise while the changes in Income Tax estimated to produce an extra £64 millions actually produced £104 millions The Land Value Duties on the other hand which were originally estimated to produce £600 000 in the first year (and much more ultimately) proved disappointing the results being $(1910-11) \pm_{5-0} 000 (1911-12) \pm_{481} 000 (1912-13)$ estimated) $\pm_{545} 000$ Much revenue from this source could not be expected indeed until the land valuation of the whole kingdom affording a datum for the duties had been completed which could not be Meanwhile the larger part of the revenue from those land value du earlier than 1015 ties is derived from the Mineral Rights Duty the yield of the others being small

Both direct and indirect sources were appealed to for the additions to revenue new indirect taxes (tobacco alcoholic drinks and liquor licences) contributed £8.8 out of the £28.3 millions by which the revenue of 191.—13 exceeded that of 1908—9. On the direct side there are additions to taxes on property like the Estate duties and largely the Stamps and the half million from Land Value duties and finally the high rate of 18.2d. in the £ on income tax (coupled with a super tax) which in 1912—13 yielded over £44 millions. The concrete results of the Budget of 1909—10 which for 1912—13 drew additional revenue of £8.8 millions from indirect and £19.5 millions from direct taxation, were naturally pointed to in 1912 by Mr. Lloyd George as justifying his policy

Not unconnected with the incidence of the new taxation were some applications of the revenue to be raised such as the provision of a Development Fund and of a Road Improvement Fund In 1909 an Act to form Boards, &c. to manage these Funds was

passed which directed that a sum of £500,000 should be placed to the credit of the Development Fund annually for four years beginning with 1910-11 and the Finance

The Development and Road Im provement Funds Act of 1909-10 transferred a sum equal to the "net proceeds of the duties on motor spirit and in licences for motor cars to the Road Improvement Fund According to the Act of 1909 £400 000, in addition to the £500 000 granted by that Act was voted to the Development Fund and the Board in 1910 was made to consist of 8 members instead of five. The

half milhon was paid into that fund again in 1911–12, but by the Finance Act of 1911, $f_1 \frac{1}{4}$ milhons were set aside from surplus revenue to be paid to this fund during the years ending in March 1913 1914 and 1915. To the Road Improvement Fund was paid in 1910–11 over $\frac{1}{2}860000$ and in 1911–12 f_1 209 800. In 1912–13 this fund was estimated to reach f_1 225 000. The functions and duties of the Road Board are indicated by its title. As for the Development Fund that is used for the promone, by government departments colleges institutions or persons not trading for profit by means of a grant or a loan of agriculture forestry, drainage harbours, fisheries transport stock, and so forth in many cases by way of experiment. By means of these two Funds about $f_1 = \frac{1}{4}$ milhons a year are now used so as to benefit property and that aspect may have to be reconsidered in any reform of local taxation.

The National Insurance Act of 1911 though a measure of great social and manical interest does not enter into the finances of this period beyond the appropriation of £ 8 millions in 191 -13

The National Debt which was left at £711 4 in 1908-9 had been further reduced to £9,4, millions in March 1912 the total dead weight. Debt being lower by £36,7 millions. Together with the £43½ millions paid off under Mr. Asquith (in

National Cluding £11 8 millions for 1905-6 as provided in Mr A Chamberlain's Budget) this makes a reduction of over £80 millions during seven years.

The disposal of the surpluses of the second period is worth notice. The

small deficit left by Mr. Asquith in 1908–9 was followed by the confusion of the finances in 1909–10 at the rejection of the Finance Bill by the Lords but the conjoint years 1909–10–11 yielded a surplus of £5 6 and 1911–12 yielded £6 5 millions which strictly should have gone to the Old Sinking Fund From the first of these two as already stated £1 $\frac{1}{2}$ millions were placed to the credit of the Development Fund Another £1 $\frac{1}{2}$ millions vere used to provide Sanatoria for the treatment of tuberculosis and £50 000 as a loan to the East African Protectorate In June 191 the Chancellor of the Exchequer an rounced that from the 1911–12 surplus of £6 5 millions nearly £1 million would be required for Naval purposes and £500 000 would be advanced to Uganda and East Africa is a loan. In this connection also it should be recollected that not only was the action of the New' Sinking Fund suspended in part in 1909–10 owing to the confusion of that year but that the Debt Service Charge was reduced from £28 to £24 5 millions

The political controversies which have centred round Lloyd George finance ' are still too acute for final criticism To it are attributed by its opponents the largely in creased export of British capital and the fall in the value of Consols and other 'gilt Whether the incontestable growth of British investments abroad is edged securities a good thing or a bad thing for the nation is however itself a matter of controversy The price of Consols, whatever may have been the influence of politics has undoubtedly been affected by a number of other causes such as the extension of trustee stocks and particularly the opportunities offered by a bounding commerce for more remunerative investments The drop from 113½ in 1897 when the interest was 2¾ or even from 89¼ in December 1905 when the interest was \frac{1}{2} per cent, to 72\frac{1}{2} in October 1912 is in itself a serious one But it points rather to the importance of maintaining the Sinking Fund than to any actual decline in British credit In so far as the price of Consols is a test of British credit they compare favourably with any national securities elsewhere On November 15, 1012 Consols at 1% were 752 (equivalent to over 90 at 3°) and Ger man 3° were ,6-78

BRITISH OBITUARY 1910-12

A few additions may be made here to the record of British obituary already contained in the E B in respect of the period (1909-10) when the 11th edition was passing through the press

The deaths of Bishop Alfred Barry, formerly primate of Australia (b. 1826 d. at Windsor April I. 1910 see E. B. ii. 444). General Sir William Butler the Irish soldier and writer (b. 1839 d. in Tipperary, June 7. 1910 see E. B. iv. 888). Prof. J. E. B. Mayor, the classical scholar (b. 1825 d. at Cambridge December I. 1910 see E. B. xvii. 937). and Sir Walter Palmer 181 Bart of Huntley & Palmers (b. 1858 d. in Berkshire April 16. 1910 see E. B. xv. 645). may be noted in connection with the biographical articles referring to them.

E B xx 645) may be noted in connection with the biographical articles referring to them In the case of other people referred to in the E B as then living the deaths occurred in 1910 of Lieut Boyd Alexander, the African explorer (b 1873 killed by natives at Nyeri in Wadai April 2 see E B i 353) Col Claude Regnier Conder, RE LL D the Palestinian geographer and archaeologist (b 1848 d February 16 see E B xi p vi) Reginald Frank Doberty, the lawn tennis player (b 1874 d in London December 29 see E B xi 303) Sir Thomas Drew, the Irish architect president of the Royal Hiberman Academy (b 1838 d in Dubhn March 13 see E B ii 441) Rev Hereford Brooke George, the New College (Oxford) tutor military historian geographer and Alpine climber (b 1848 d in London November 1 see E B xx 500) Frank Podimore, the associate of Gurney and Myers in psychical research (b 1856 d near Malvern August 14 see E B xxi 15) Admiral Sir Harry Rawson, governor of New South Wales 1902-09 (b 1843 d in London November 3 see E B in 738) and Dean Edward C Wickham of Lincoln ex headmaster of Wellington (b 1834 d in Switzerland August 18 see E B xii 72)

Archbishop William Dalrymple Maclagan, who had resigned the archbishopric of York in 1908 died in London on the 19th of September 1910 Born in Edinburgh in 1826 he had begun life in the army retiring as lieutenant in 1852 in order to enter the church and

had begun life in the army retiring as lieutenant in 1852 in order to enter the church and after studying at Cambridge he became a London rector first at Newington and then at St Mary Abbott's kensington where his success led to his selection as bishop of Lichfield in 1878. In 1891 he was made archbishop of York. Both as bishop and archbishop Mac largan did much to stimulate Church work both among the clergy and the laity in 1899 he sat as assessor with Archbishop Temple of Canterbury when the decision was given against the use of incense and other ritualistic practices (ee E B xiv 37°) and though personal ly a strong High Churchman he loyally upheld the Primate's opinion in his diocese.

Mention must be made here too of the death in London on December 12 1909 of the constraint collector George Salting (h. Australia, 18,6), where never collector George Salting (h. Australia, 18,6), where the collector George Salting (h. Australia, 18,6), wher

eccentric art collector George Salting (b. Australia 1836), whose name will endure because of his bequest to the nation of his unique treasures porcelains etc. now housed in several

rooms of the Victoria and Albert Museum

The premature death in London on December 29 1910 of Samuel Henry Butcher, the classical scholar and MP for Cambridge calls for a fuller notice. He was the eldest son of Samuel Butcher classical tutor and lecturer at Trinity College Dublin and subse quently Bishop of Meath Born in Dublin on the 16th of April 1850 he went to Marl borough in 1864 and won an open scholarship for classics at Trinity Cellege Cambridge in borough in 1864 and won an open scholarship for classics at Trinity College Cambridge in 1869. In 1870 he won the Bell scholarship at Cambridge in 1871 the Waddington scholar ship and in 1871 and 1872 the Powis medal. In 1873 he graduated as senior classic and won a Chancellor's medal. He took an assistant mastership at Eton for a year but returned to Trinity Cambridge as fellow and lecturer in classics. On his marriage in 1876 to Rose daughter of Archbishop Trench of Dublin (see E. B. xxvii 242d) he had to resign his Trinity fellowship and was then elected tutor and married fellow at University College Oxford. In 1882 he succeeded Prof. Blackie as professor of Greek in the University of Edinburgh. During his tenure of this chair he became widely known not only as a scholar but as a suddicious administrator and edin attoral reformer. He was a member of the royal but as a judicious administrator and educational reformer. He was a member of the royal commission which was appointed after the passing of the Scottish Universities Bill in 1889 to reform the whole academical system in Scotland and which reported in April 1900. In 1902 Mrs Butcher died and two years later he resigned his professorship and went to reside He had been a member of the Royal Commission of 1901 on University Educa the condon right and open a member of the Royal Commission of 1901 of Membership Education in Ireland which produced an abortive report with 8 reservations in 1903 and he was also included on the Royal Commission of 1906. In the latter year on the death of Sir Richard Jebb he was chosen as a Unionit to represent the University of Cambridge in Parliament where his brother J G Butcher (b 1853) a well known barrister had sat for many years as Unionist member for York he made an effective maiden speech on the Irish University Bill and frequently took a valuable part in debate. His grave and thoughtful style and gift of natural eloquence were combined with a charm and sincerity which won him universal respect and affection no less in public than in private life. He was however above all a fine Greek scholar full of the true spirit of classical learning with a remarkable

power of literary expression shown especially in such publications as his Aspects of the Greek Genius (1891) Aristotle's Theory of Poetry and Fine Art (1895) Greek Idealism in the Common Things of Life (1001) Harvard Lectures on Greek Subjects (1904) and his prose train lation (with Andrew Lang) of the Odvisey (1879). In 1907 he was president of the English Classical Association of which had been one of the principal founders in 1903. He was also the first president of the Irish Classical Association and an original member of the British Academy becoming its president in 1909. In 1908 he was appointed a trustee of the British Museum. Two years later his health began to fail and he made his last public appearance and delivered his last speech on the 21st of October 1910 at the dinner to celebrate the publication of the 11th edition of the Encyclobredia Britamina hu given to celebrate the publication of the 11th edition of the Encyclopaedia Britannica by the Cambridge University Press

IOII

The following persons of whom separate biographical notices are given in the E B,

died in 1911

Edwin Austin Abbey (b. 1851 see E. B. 1.11) the Anglo American painter on August I in London. Besides bequests to the Corcoran Art Gallery. Washington the Boston Art Museum and the British National Callery. Mr. Abbey left his house in Chelsea. London after the death of his widow to the Royal Academy for the use of the president. Wilham Alexander (b. 1824 see E. B. 1.65). Protestant Archbishop of Armagh and Primate of Ireland at Torquay on September 12. He had resigned his see on January 30 and had been created a G.C.V.O.

The oth Earl of Carliele (b. 1844 see E. B. 1.44), in London on Agril 16th.

The 9th Earl of Carlisle (b 1844 see E B v 341) in London on April 16th Edward Dicey (b 1835 see E B vin 178) the publicist in London on July 7th Sir Charles Dilke (b 1841 see E B vin 271) the Liberal statesman and author in London on January 26th

Sir Francis Galton (b. 1823) see E B vi 427) the anthropologist and founder of eugen

ics at Haslemere on January 17th
Sir William Gilbert (b. 1836 see E. B. vii. 10) author of the Bab Ballads and collaborator with Sir Arthur Sullivan in the Savov operas on May 29th being drowned in trying to rescue

a lady from a pond in his grounds at Harrow Weald

Sir Eldon Gorst 'b 1861 see £ B xii 261) Lord Cromer's successor as British Agent
and Consul general in Egypt on July 12th at Castle Combe Wiltshire. He had resigned
his position in Egypt shortly before he died being succeeded by Lord Kitchener

Sir Robert Hart (b 1835 see E B xiii 30) long the head of the Chinese Customs at

Great Marlow on September 20th

Sir Joseph Hooker (b. 1817 see E B xiii 671) the eminent botanist at Sunnydale on December 10th

Baron James of Hereford (b. 1829) see E B xiv 144) the Liberal Uniquist statesman and lawyer at Epsom on August 18th

Thomas Rupert Jones (b 1819 see E B xv 500) the geologist and palaeontologist at

Chesham Bucks on April 13th

Alphonse Legros (b 1837 see E B xv1 380 1x 806) the artist on December 8

Sir Alfred Lyall (b 1835 see E B xv1 148) the Anglo Indian administrator and man of letters in the 18te of Wight on April 11th

The Brown Beton (b 1830 see E B xv1 148) the Congregationalist divine on Innuary

John Brown Paton (b. 1830 see E. B. xx 930) the Congregationalist divine on January The 1st Baron Northcote (b 1846 see E B xiv 280) Governor general of Australia

1903-08 at Ashford on December 20th
The 4th Earl of Onslow (b 1858 see E B xx 113) formerly a Conservative Cabinet
Minister and governor of New Zealand on October 23
William Clark Russell (b 1844 see E B xxiii 865) the writer of sea stories on Novem

ber 8th Edward Whymper (b 1840 see E B xxviii 617) the artist and Alpine climber at

Chamounix on September 16 "John Strange Winter" (Mrs Arthur Stannard b 1856 see E B xxviii 734) authoress

of Boolles Baby in London on December 13
The 1st Viscount Wolverhampton (b. 1831 see E. B. xxviii 781) the Liberal statesman on Februars. 25
He had retired from the Asquith Cabinet early in 1910

References are also made in the E B to the following who died in this year

Hermann Adler (b. 1839. d. July 18) the Chief Rabbi of the United Synagogue London (see E B xxv1 292a)

James Aumonier (b 1832 d October 4) the landscape painter (see E B xx 501c) His Sheep Washing and Black Mountains are in the Chantrey Bequest collection at the Tate Gallery

Charles Frederick Moberly Bell (b. 1847 d. April 5th) the managing director of the T mes (see E B xix 558a) Born in Alexandria the son of an Egyptian merchant he was educated in England but in 1865 went back to Egypt and engaged in business. He

soon began sending occasional correspondence to the London Times and from 1875 onwards devoted himself mainly to journalism By 1880 when he founded the Egyphan Gazette he had become the regular correspondent for the Times in Egypt He also published Khedwer & Pashas (1884) Egyphan Finance (1887) and From Pharaoh to Fellah (1888) In 1890 he was summoned to London to take the post of manager (nominally assistant manager) 1890 he was summoned to London to take the post of manager (nominally assistant manager) of the paper at a time when it had suffered heavy financial losses over the proceedings connected with the Parnell Commissions (E B xx 858). From that date he devoted all his masteriul energies to the journal he served and up to his death his was the personality most prominently associated with it in the public eye. When the Times Publishing Company was formed in 1908 and mainly through his personal exertions the financial control passed from the Walter family to Lord Northcliffe he became managing director. Sir Rubert William Boyce (b 1863 d June 16) the bacteriologist and pathologist (see E B xx 779). Born in London he was educated privately in Rugby and at Paris and afterwards at University College London where he took his M B in 1889 and was in 1892 appointed constant professor of pathology. In 1894 he became professor of pathology in University. College Liverpool and in 1898 bacteriologist to the Liverpool Corporation He did much to promote the foundation of Liverpool University in 1902 and the endowment

He did much to promote the foundation of Liverpool University in 190. and the endowment of the four chairs of bio-chemistry tropical medicine comparative pathology and medical entomology. He had in 1898 worked with Sir Alfred Jones to establish the Liverpool School of Tropical Medicine and in 1901 organised a series of expeditions to the tropics to investi gate disease In 1905 he went himself to New Orleans and British Honduras and in 1910 to West Africa to examine epidemics of vellow fever
He published Mosquito or Man (1909)
Heal h Progress and Administration in the West Indies (1910) Yellow Fever and its Preven
tion (1911) and many papers for scientific societies
Sir Percy William Bunting (b 1836 d July 22) editor of the Contemporary Review
(see E B it 802 b)

Sir Caspar Purdon Clarke (b 1846 d March 29) the art expert Educated privately at Sydenham and Boulogne in 1862 he entered the art schools at South Kensington and was trained as an architect. In 1865 he entered H M Office of Works and in 1867 was attached to the works department of the South Kensington Museum. He travelled extensively for the museum purchasing objects of art and at the same time carried on his profession as an In 1883 he became keeper of the India Museum at South Kensington in 1892 keeper of the art collections at South Kensington in 1893 assistant director and in 1896 director. This post he held until 1905 when he became director of the Metropolitan Mu seum New York (E. B. xix 614) resigning in 1910. He was knighted in 1902.

Ernest Crofts, R.A. (b. 1847. d. March 19) the historical painter (see E. B. xx. 500d)

Ernest Crotts, R.A. (b. 1847 d. March 19) the historical painter (see E. B. xx. 500d)

He had been keeper of the Royal Academy since 1898

John Passmore Edwards (b. 1823 d. April 22) newspaper proprietor and philanthro
pist. The son of a Cornish carpenter and mainly self educated in 1844 he became London
representative in Manchester of the Sentinel an Anti Corn Law weekly newspaper. A year
later he went to London and began lecturing together with the practice of journalism
starting several small periodicals which in succession failed until in 1862 he bought the
Building News which by 1866 had made a handsome profit. In 1876 he bought the London halfpenny evening newspaper the Echo and controlled it for 20 years He was an ardent peace advocate and supported a number of humanitarian and philanthropic objects endow ing various libraries and other institutions which bore his name notably the Settlement in Tavistock Place Bloomsbury. He also founded a Passmore Edwards scholarship at Oxford for the conjoint study of English and classical literature. He published privately an autobiography A Few Footprints (2nd edition 1906).

Edward Mills Grace (b. 1841 d. May 20) the cricketer. A brother of Dr. W. G. Grace (see E. B. xii 308d) he was a player of first-class cricket for 35 years (see E. B. vii 441). He had been Coroner for West Gloucestershire since 1875.

Lady Halle (Madame Norman Neruda) the famous violinist (b 1839 d April 15)

(see E B xii 853b)

John Lockwood Kipling (b 1837 d January 30) the Anglo Indian artist curator of the Lahore Museum 1875-93 and father of Mr Rudyard Kipling (see E B xi 825)

Sir Charles Bennet Lawes-Wittewronge, 2nd Bart (b 1843 d October 6) the sculptor (see E B xxii 503b and 506)

The only son of Sir John Lawes of Rothamsted (see E B xii 300b) he was educated at Eton and Cambridge where he was a notable athlete. Sub sequently he devoted himself to sculpture, while doing much also to turther the scientific side of the Lawes Agricultural Trust founded by his father of which he was chairman. In 1882 he was defendant in a famous libel action brought by another sculptor. Mr Belt for a criticism published in Vanity Fair imputing dishonesty to Mr Belt in taking credit for work done by another man The question of how much a sculptor may be aided by others in work to which he attaches his name was inconclusively debated through a long and costly trial and the verdict of the jury awarding £5 000 damages to the plaintiff was much dis cussed at the time

General Sir Robert Cunliffe Low, GCB (b 1838 d August 4) a famous soldier Entering the Indian army in 1854, he served through the Mutiny — As Director of Transport

he organised the mobilisation of troops for the campaign of 1880-81 including the march from Cabul to Kandahar After some years of service as Lieutenant he commanded the Chitral Relief Expedition of 1895 (see E B vi 252) Returning in 1905 he was appointed

George Robert Mine Murray, FRS (b. 1858 d. December 16) the well known botan 18t younger brother of A. S. Murray (see E. B. xix 38). As keeper of the Department of Botany at the British Museum his researches were principally devoted to algae and

Botany at the British Mitsetin his tescarches were principally devoted to argae and cryptogams in the pursuit of which he made several voyages notably in 1901 as scientific director to Capt. R. F. Scott's Antarctic Expedition

Frederick Wilham Pavy (b. 1829. d. September 19). the well known physician. He was for years the chief authority in Europe on diabetes (E. B. xviii. 62). and wrote various

works upon digestion and the metabolism of the carbo-hydrates

Sir Herbert Hope Risley (b 1851 d September 30) the Anglo-Indian Civil Servant
and anthropologist

His principal work was done in connection with Indian ethnography the discussion of the caste system etc and he published under Government auspices some

the discussion of the caste system etc. and ne published under Government auspices some important volumes of anthropometric data. He had charge of the Indian Census operations of 1901. He was appointed Secretary of the Judicial Department of the India Office in 1910. General Sir Frederick Charles Arthur Stephenson, GCB (b. 1821. d. March. 10). Constable of the Tower of London since 1898. He fought in the Crimea and served in China from 1857 to 1861. From 1883 to 1888 he commanded the army of occupation in Egypt., ee E B ix 123. 126).

Meredith White Townsend (b. 1831. d. October 21). the well known journalist. Born School and China from 1852 to 1868.

in Suttolk and educated at Ipswich grammar school in 1848 he went out to India and four years later became editor of the Friend of India acting all o for some years as Times correspondent. In 1860 he returned to England and purchased the weekly Speciator (E. B. xix 562). With R. H. Hutton (E. B. xiv 16d) he was joint editor until 1898, and he was largely instrumental in making it an established success.

Bighop India Wordsworth of Salabhary (b. 1842). A Appret 161, the classical salabhar is a supplied to the classical salabhar.

Bishop John Wordsworth of Salisbury (b. 1843. d. August 16) the classical scholar and divine son of Dr. Christopher Wordsworth (afterwards Lishop of Lincoln) and grand August 16) the classical scholar

nephew of the poet (see E B xxviii 8251)

The obituary for 1911 also included the following names of people of public interest

concerning whom brief biographical data are appended

Sir John Aird, 1st Bart the famous engineer and contractor d January 6th Born in I ondon on the 3rd of December 1833, the only child of John Aird Contractor for gas and water plant he joined his father's business at eighteen. He was entrusted with the removal of the Crystal Palace buildings for the Great Exhibition of 1851 from Hyde Park and their of the Crystal Palace buildings for the Great Exhibition of 1851 from Hyde Park and their reference and took part in many large enterprises at home and abroad such as the Hampton and Staines reservoirs the water works of Amsterdam Copenhagen Moscow Bahia Para Calcutta Simla and Berlin and later (in the joint firm of Lucias & Aird afterwards John Aird & Co.) the St. John's Wood Railway the Hull & Barn ley Railway and Docks the West Highland Railway and the great Assuan Dam across the Nile (see E B xix 850a). He represented North Paddington in Parliament as a Unionist from 1821 to 1005, and was the first mayor in 1000. from 1887 to 1905 and was its first mayor in 1900. In 1901 he was created a baronet

William George Aston a well known authority on Japanese literature b 1841 d Nov

22nd He entered the British consular service in Japan in 1864. His Japanese grammars and translations were the first good I nglish books on the subject.

Harold Kyrle Bellew, the actor d at Salt I ake City Utah November 2 B in 1855 in I ancashire he first appeared on the stage in Australia in 1874, and after several. London engagements he joined Henry Irving for two years at the I yeeum in 1878. He had the reputation of being the handsomest man on the stage. In 1888 with Mrs. Brown Potter's company, he toured round the world. For the last ten years of his life he had been playing in the United States in romantic and modern plays

Sir Nathan Bodington, vice chancellor of Leeds University b 1848 d May 12th A graduate of Wadham Oxford he became a fellow of Oriel and in 1882 professor of Greek and principal of Yorkshire College I eeds. It was owing to his efforts that the college was

endowed and chartered in 1903 as a university

Colonel Sir Edward Ridley Colborne Bradford 1st Bart the Anglo-Indian soldier and 1 ondon Police Commissioner d May 13th Born in Buckinghamshire on the 2,th of July 1836 and educated at Marlborough in 1853 he went to India as a cadet in the East India Company's service and joined the 2nd Madras light cavalry

He served with distinction through the Indian Mutiny and till 1863 when he lost an arm in tiger shooting he then ac cepted political offices serving as political agent chief of native police and after 1878 chief commissioner of Ajmere and in control of all relations with the Rajput chiefs In 1887 he was recalled to the India Office in London and from 1890 to 1903 he was commi sioner of the I ondon Metropolitan Police He was created a baronet in 1902

Biographical notes may be added concerning others who died during the year —

By the death of Henry Du Pre Labouchere, the Radical politician and proprietor of Truth in Florence on the 15th of January a famous figure passed away. Born in London in 1831 the son of John Labouchere of Broome Hall and nephew of Lord Taunton (E. B. Born in London xxvi 453a) he was educated at Eton and after spending a short time at Cambridge entered the diplomatic service in 1854 becoming in 1863 second secretary to the Littish Embassy at Constantinople. In 1864 he abandoned diplomacy for politics and in 1865 was elected Liberal member for Windsor but we unscated on petition. In 1866 he won a by election for Middlesex, but failed to be re elected in 1868. In 1880 he again entered the House of Commons as Radical member for Northampton with Mr. Bradlaugh as his colleague, and this seat he retained until his retirement in 1905. He began his journalistic career with the Daily News of which he became part proprietor just before the Franco German war and he was him elt the author of the Letters of a Besieged Resident sent to it from Paris by ballion post during the siege addressed to his wife in London In 1874 he bucame associated with Edmund Yates on The World (see E B xxxiii 908b) but two years later he started Truth as a rival society paper destined as he himself said to be another and a better World It had a remarkable record in the exposure of shams and organised impostures especially frauds on the charitable Many libel actions were brought against it but in 25 between 1897 and 1907 only 3 verdicts were given definitely against the paper. For many years Mr Labouchere himself contributed racy articles and note and he was to the end popularly identified with Truth though in fact he left the direction in later years first to Mr Horace Voules and then to Mr Bennett and took no active part either in writing or editing was a thorough Bohemian and after his death the whole stary of his life connection with Truth was very candidly told in a series of admirable articles in its columns. As a politician Labby was the chartered jester of the House of Commons but his pungent and somewhat cynical speeches were the expression of highly independent democratic convictions deeply opposed to all forms of social privilege or Jingo Imperialism. He was a sectious advocate of the abolition of the House of Lords (see $E B \times 8450$ 846b) at the time of the Parnell Commission ($E B \times 8580$) he had much to do with the unmasking of Pigott and he was a member of the Inquiry into the Jameson Raid his hostility to Mr. Chamberiain being as pronounced as against Lord Rosebery when the latter became leader of the Liberal party. He considered himself entitled to office when his party was in power and was decidedly mortified at not getting it from Mr. Glaistone. In 1868 he had married Mis. Henrietta Hodson a popular actress After 1903 he lived mainly in Italy at a villa near Florence where he died. He left a fortune of some two million sterling to his daughter who had married a son of the Marquis di Rudini

Among other people of political prominence the following may be noted -

the daughter of the first Marquis of Clanricarde her mother being a daughter of George
(anning She was married in 1853 to Lord Dungarvan afterwards of the Earl of Cork and Or
rery and was the mother of three sons and five daughters Possessed of great beauty and a
brilliant talker she gathered round her a wide circle of men of letters and politicians espe
cially among the Whigs to which party her husband belonged She was the writer of
occasional papers and of a little volume of verse Memories and Thought (1886)

ENGLAND AND WALES1

Including General Statistics for the United Kingdom

Population -- The census of the United Kingdom in 1911 of which tabular details are given below revealed a greater aggregate increase in England itself during the decade 1901-11 than during that of 1891-1901, but the increase per cent of the popula A tendency is suggested towards a state of equilibrium as between urban and rural districts as was also indicated in the earlier decade Thirteen administrative counties returned decreased populations in 1901 but these with the exception of West Suffolk and Westmorland showed an increase in 1911 In addition to these Cumber land Carnarvon and Radnor returned a decrease in 1911 though not in 1901 and among Welsh counties Cardigan Montgomeryshire and Merionethshire showed a decrease at These counties indicate the existence of three main areas of decreasing or unstable population a north western an East Anglian and a Welsh area But the census report points out that in the agricultural counties the returns of increase for 1901-11 compare favourably in nearly all cases with those recorded in the earlier period and the fact is particularly noteworthy in Bedfordshire Lincolnshire and Rutland Buck inghamshire and Oxfordshire and Dorset On considering the chief mining and indus trial counties the argument is found to hold good, excepting in South Wales enhanced rate of increase in the industrial area of South Wales causes the rate for the whole of Wales to grow from 13 3 per cent increase in 1901 to 18 1 per cent in 1911 in Nottinghamshire the rate is fairly steady moving slightly up in North umberland and Durham Lancashire, Staffordshire and the West Riding of Yorkshire it is markedly down (Geog Jour xxxviii, 399) The average rate of increase in the population of 98 towns with populations exceeding 50 000 has declined from 15 3 per cent in 1891-of to 87 per cent in 1901-11 and has fallen in all the 15 towns whose population exceeded 200 000 except Portsmouth The greatest increase of all is at Southend on Sea (pop 62,723 increase 117 4 per cent) Ilford, Ealing and Acton Cov entry Wallasey and King's Norton follow Three of these towns are on the outer ring of London Southend is practically so, and Wallasey and King's Norton are also ring The radiation outward from London and other great urban centres is going on at the same time it is surging over some of the ring towns which were at the height of their growth about 1901. Thus the rate of increase has fallen in Ilford from 277 6 per cent to 89 6 per cent in East Ham from 193 6 per cent to 39 1 per cent in Walthamstow from 105 3 per cent to 31 per cent As to the gross decrease in the County of London the report puts the matter geographically- The process of decentralization which at first affected the inner districts of London only has gradually affected a much wider area until in 1901-11 only nine of the twenty-eight Metropolitan boroughs showed an increase of population These boroughs, which are mainly those furthest removed from the centre, are Hampstead, Hackney, Fulham Hammersmith Wandsworth, Camber well, Greenwich, Lewisham and Woolwich' ' (Geog Jour xxxviii, 400)

¹ For earlier information on England see E B ix 408 et seq for Wales xxviii 258 et seq for general statistics for the United Kingdom xxvii 598 et seq. See also E B articles on the counties and towns and sections in articles on special subjects

The 1911 census figures for the United Kingdom showing a combined area of 1 1 301 square miles and a total population of 45 360 822 (22 010 004 males 23 350 818 females) with an increase of 9 1 per cent in population since 1901 are analysed in Table 1

² Pasture and mountain grazing

³ This census was provided for by the Census of Production Act 1906. It is under the direction of the Board of Trade and the first census was taken in 1908. The results so far as applying to agriculture were issued by the Board of Agriculture

The total value of farm crops grown in 1908 is calculated at £125 000 000 but the portion actually sold realised (as shown in Table IX) £46 600 000 the remainder of the produce being used to feed the stock and maintain the fertility of the land

A further return of the Census of Production analysed the labour employed on the farms of Great Britain (Table X)

Table X

	Males	Females	Total
Members of Family Other Persons	313 000 576 000	189 000 95 000	502 000 671 000
Total permanently employed Temporary Labourers Occupiers	889 000 127 000	284 000 40 000	1 173 000 167 000 500 000
Crand Total			1 840 000

The gross output amounted to £90 per head if occupiers are included and temporary labourers excluded
Engines employed in agricultural pursuits numbered 34 450 with a total H P of 213 525

The number of agricultural holdings in the United Kingdom as returned by the Census of Production is chosen in Table XI.

of Production is shown in Table XI

Table XI — Agricultural Holdings 1008

	1-5	5-50	50-300	Above 300
	Acres	Acres	Acres	Acres
England	79 837	165 265	109 830	14 651
Wales	10 121	31 953	18 034	390
Scotland	18 136	34 601	23 138	2 673
Ireland	61 730	364 549	9	0 617

The census of production has rendered available a mass of statistics which have not previously been compiled. Thus it is now possible to view the estimated production of crops in order of their gross value for Creat Britain in 1908, the principal being shown in Table XII

Table XII - Crops 1008

	Quantity	Value in Thou sands		Quantity	Value in Thou sands
Turnips and Swedes Meadow Hav Oats Clover and Seed Hay Straw Wheat	Tons 23 768 000 6 213 000 Qrs 15,453 000 Tons 3 507 000 7 000 000 Qrs 6 567 000	£23 768 19 106 13 264 12 712 12 660 10 370	Apples Peas	Fons 3 918 000 Ors 6 840 000 Tons 8 995 000 Ors 1 161 000 Tons 224 300 Ors 765 000 Tons 23 540 41 450	£9 892 9 177 7 196 1 735 1 490 1 130 1 059 1 036

Below the tabulated category follow cabbage £760 000 vetches or tares £439 000 nuts and mixed orchard fruits £406 000 plums £357 000 a group of vegetables including articlokes cucumbers marrows, etc. £352 000 raspberries £309 000 lucerne £276 000 mixed small fruits £252 000 rye £220 000 and gooseberries £208 000 Between £200 000 and £100 000 follow chernes rape rhubarb carrots crops under glass crops for seed black currants broccol and cauliflower celery red currants and Brussels sprouts and below the last figure asparagus parsnips lettuce scalale kale bestroot (but the subsequent exten sion of beet cultivation should be borne in mind) buckwheat maize and flax

It is found that the number of cattle slaughtered for meat in Great Britain was I 489 000 calves 639 000 sheep 7 638 000 lambs 1 915 000 and pags 4 418 000. The total British supply of meat amounted to 1 051 000 tons representing an average supply per head of the population of Great Britain of 26 3 lb of beef and yeal 14 5 lb of mutton and lamb and 17 5 lb of pig meat (total 58 3 lb) the average of imports in the same year (1908) being 20 44 lb of beef and yeal 11 23 of mutton and lamb 18 69 of pig meat (total 50 36 lb)

A farm-yeard-census has also been taken which so far as concerns birds is summarized an Table XIII the interesting companies for Ireland being added. Table XIII was

in Table XIII the interesting comparison for Ireland being added. Table XIV gives particulars of dairy produce and Table XV those of timber

Development Commission —The Development Commission was instituted in May 1010 under the provision of the Development and Road Improvement Fund Acts of that and the previous year. It consists of eight commissioners appointed for ten years one (who is eligible for re appointment) retiring every two years. In the order in which they were to retire, the commissioners were as follows. Mr. H. J. Davies, Sir S. Eardley Wilmot. Mr. M. A. Ennis. Mr. W. S. Haklane. Mr. A. D. Hall. F. R. S., Mr. Sidney Webb. Lord. Richard Frederick. Cavendish (chairman) and Sir Francis Hopwood (vice chairman). Mr. Vaughan. Nash. who had been private secretary to the Prime Minister, Mr. Asquith. succeeded to the vice chairmanship in 1912. The function of the Commission is to consider the development of agriculture and other economic resources of the kingdom and to advise the Treasury as to the disposal of grants and loans for purposes connected with agriculture forestry, reclamation of land. rural transport other than roads canals harbours and fisheries. The sums available are partly voted by parliament partly charged on the consolidated fund and partly received by way of interest on and repayment of loans and of profits received (if so provided) on works started by a grant or loan from the Commission

Agricultural Progress 1—In Norfolk the inception of sugar beet growing on a consider1 See also Agriculture in Part I of the Year Book

able scale is the outstanding agricultural development A large sugar beet factory at Cantley on the banks of the Yare some ten rules from Norwich, was opened in 1912 Despite the torrential rains in August of that year samples of Norfolk grown beet yielded looked askance at the new venture, have since offered land freely. Beet sugar experi ments Lave also been made in Kent and Sussex the Maidstone Farmers Club reported in 1912 that satisfactory crops could be grown and in Sussex it was proposed to form a company to develop the industry on condition that 2000 acres should be placed under A factory has been established at Hayle in Cornwall the crop for five years

Recently tobacco growing has been inaugurated at Methwold in south west Norfolk on a soil previously thought valueless except for game preservation. Some experts are of the opinion that this may turn out to be one of the most promising experiments in Fast Anglian agriculture. In the protracted drought of 1911 the Methwold tobacco prospered well but in the wet summer of 1912 it succeeded even better the sandy porous soil absorbing rain

very_quickly

Heavy losses were sustained by Hampshire agriculturists and market gardeners owing to the dry summer of 1911 and the long continued rains of 1912 but the cultivation of straw berries did well. The fruit is grown at Swanwick and at Sarisbury, and is sent to market a week or more before the Kent crop. In some cases the plantations yielded a profit of £50 an acre the culture not being confined to small holdings but carried on extensively on large farms where strawberries have displaced some of the usual crops The Hampshire County Council purchased 264 acres at Sparsholt near Winchester for use as a farm school and have established a system of agricultural scholarships

Considerable disturbance in the agricultural industries of Cheshire and Shropshire is reported owing to the change in ownership of thousands of acres of agricultural land through

owners of great estates putting them on the market

A wide scheme for the reclamation of waste lands in the north of the Isle of Man the creation of small holdings and the development of an export trade in the produce to English

markets has been under consideration

In the direction of agricultural education mention may be made of the extension of facil ities by the university of Bristol in adjacent counties. A large technical school with an agricultural department has been established by the Essex Education Committee. The new buildings of the Cheshire Agricultural College and Norris Midworth Museum were opened on July 22 1912

Dr Clement Stephenson FRCVS in February 1912 gave £5000 towards buildings for a new agricultural department at Armstrong College Newcastle upon Tyne

Mining and Manufactures — Table XVI shows the total number of persons employed at mines in the four divisions of the United Kingdom in 1911

A national strike of miners lasted from March 1 to April 6 1912 (see under History above) The following report from the northern coal fields may be taken as an illustration of some of its effects. The Northumberland Miners Association disbursed in strike pay \$\int_{156} 000\$ its total funds including investments from which it had been deriving \$\int_{400} 000\$ annually in interest. The funds of the Durham Miners Association amounting to over \$\int_{400} 000\$, were also seriously depleted. The loss to colliery owners and to trades dependent on coal supplies was enormous. This strike occurred during a period of prosperity. Northumberland miners wages in August 1912 were 36 per cent above the 1819 basis—the highest recorded for many years previously

In the week ending July 13 1912 the King and Queen travelled in the West Riding of Yorkshire to inspect the social and industrial life of the people including Halifax Huddersfield Rotherham, and many colliery centres, among them Cadeby Colliery Conisborough which they visited on hearing of a series of explosions which occurred on July 9 1912 resulting in the loss of 86 lives — Among those killed were Mr W H Pick ering, chief inspector of mines for Yorkshire Mr H R Hewit government inspector for Sheffield and Mr J Y Fickle government inspector of Doncaster

A remarkable colliery development has taken place in the Doncaster district in the last two years Numerous pits have been sunk and coal has been reached in several of them Former villages have grown into populous places and Doncaster is becoming the centre of a large population. Again the developments which have taken place in the neighbouring north Nottingham coalfield have largely altered the industrial character of that part of the country Within a radius of five miles of Mansfield eleven collieries have been sunk and twenty others in the ten mile limit. The Mansfield colliery itself was responsible for the output of 1 183 876 tons in 1911 an increase of 40 756 tons over the previous year. The beautiful Dukeries have been invaded and in 1912 negotiations were completed for a pit between Warsop and the forest village of Budby to be known as the Welbeck Colliery To cope with this advance the Mansfield tramways have been extended and a new railway touching that town and Sutton is in course of construction

Progress has been made in the kent coalfield and four new seams were reported as proved within the boundary of the kent Coal Concessions Ltd in August 1911

The outlook in the South Wales coal was better towards the close of 1912 than it had been for some time In 1911 the trade suffered on account of a succession of strikes which probably affected this district more than any other. Thus while there was an increase of shipments of coal from the United Kingdom there was a decline from South Wals. The details of foreign shipments were as follows - Cardiff 16 127 777 ton (dec 829 979) port 4 324 917 tons (inc 550 555) Swansea 2 929 982 tons (inc 218 188) Port Talbot 1 650 538 tons (inc 65 858) The coastwise trade was as follows—Cardiff 2 644 520 tons (dec 222 912) Newport 689 960 tons (dec 48 781) Swansea 272 331 tons (dec 39 516) Port Talbot 164 791 tons (dec 18 350) These decreases are unusual and due entirely to the unrest in the labour world. Their significance may be realized from the fact that the output of one coalfield despite the strike amounted to 50 -00 000 tons as compared with 48 699 982 tons in 1910 and that the number of persons employed in one coalfield has risen from 150 394 in 1901 to 213 252 in 1910 The North Wales coal mines have been holding their own whereas metalliferous mines and slate quarries have been doing badly

Other Minerals --- Metals were obtained from British ores as in Table XXI

	Iron	Tin	Lead	Zinc	Copper	Silver	Gold
Quantity	Tons 4 975 735	Tons 4 797	Tons 21 522	Tons 4 168	Tons 449	Oz 136 665	Oz 2 4°7

Table YYI __ Restich Metals rore

Iron - The production of iron ore in the chief producing counties of England in 1910 is shown in Table XXII Wales produced 41 455 tons (percentage of total U K 0 3)

Table XXII	—Counties	Producing	Iron	07E
------------	-----------	-----------	------	-----

	Tons	Percentage of Total U K		Tons	Percentage of Total U K
England Cumberland	14 471 108		Northampton Oxford and	2 649 539	17 4
Lancashire Leicester	408 090 560 410	2 7	Rutland Stafford	242 29I 913 006	1 6 6 0
Lincolnshire	2 128 161		Yorkshire	6 198 411	40 7

Salt —Affecting the Cheshire salt industry a parliamentary bill was promoted in 1912 by the Cheshire County Council and other bodies to restrict the conveyance of brine by pipe from the salt manufacturing areas of Northwich and Winsford to Weston Point which offers advantages of cheaper transport by Manchester Ship Canal and the combined manufacture of salt and electricity (At Weston it was stated the Salt Union was receiving £15 000 a year from the sale of electricity made by steam going on its way to boil the brine) By the House of Lords' Committee the Bill was rejected Incident ally there was mentioned a discovery of brine and large deposits of rock salt at Lymm

Tin —The steady rise in the already high price of tin has maintained the prosperity of the Cornish mines of established position while the most noteworthy new progress has been the development of alluvial workings following on the success of this method of operations on the Goss Moors A large electric power station at Hayle is now supply

ing current through west Cornwall from Camborne on the east to St Just with a branch The wires are carried across country on overhead standards to Penzance on the west At present the chief users are the mines The whole of the mining schools of Cornwall have been combined in one school of metalliferous mining at Camborne and the local schools at Redruth Truro and Penzance are now closed for mining education

Important developments are anticipated from the recent discovery of radium in the famous hot springs at Bath A discovery of gold was reported in Jersev in 1911

Manufacturing Industries The Midlands -In all branches of trade in the Birming ham district there has been an improvement during the past two years Staffordshire iron trade has experienced a remarkable revival The former preference of steel over iron has in many cases disappeared whereas the open hearth process for steel has also regained tayour to the advantage of this district. In bars, billets and all other classes of semi raw and finished material there have been repeated advances of selling prices and during 101 the price of pigiron moved slowly but steadily upwards The insufficient supply and high price of coke has seriously handicapped the iron trade during the past year Ironworkers have received several advances in wages Foreign competition in bar iron steel billets etc. has diminished considerably during 191

In the copper brass and metal trades there has been constantly increasing activity By the formation of as ociations and manufacturers combinations selling prices have been improved Repeated advances in selling prices were declared in 1912 though without a corresponding increase in profits owing to the high prices of fuel and raw materials

The selling prices of metal bedsteads have been increased through the formation of an

alliance embracing all the principal factories

The cycle and motor trade have increased in prosperity. The trade in bicycles fell off a little in 1911 but revived in 1912, while the popularity of the motor cycle has greatly augmented busines. Many motor car manufacturers have turned their attention to vehicle for heavy traffic others again are making special efforts to produce cheap cars in order to meet American competition. The amalgamation of the Daimler Company (Coventry) with the Birmingham Small Arms Company has proved successful.

The Birmingham gun trade has fully recovered its former prosperity and the caport demand for good sporting guns and rifles have steadily improved. A difficulty is found however in obtaining killed men. Belgian and other foreign competition has been largely met by the designing of cheap machine made guns with standardised parts. The Gun Trade Technical School has been placed under the Birmingham Education Committee though it still receives financial support from the guardians of the Proof House

The jewellery trade of Birmingham has experienced some fluctuations but the average

volume of business tends to increase Several new factories have been erected

In the button trade which has suffered from changes in tashion, employment at the end of 1912 was exceedingly good. All the fancy and miscellaneous trades have been busy

In all the metal trades wages have been advanced the advances ranging from 5 to 20 cent. Strikes have been comparatively few and unimportant. The most notable was per cent Strikes have been comparatively few and unimportant. The most notable was that of the Birmingham Small Arms Company employes in October 1911 which affected over 3 000 persons and lasted four weeks. It was ended by important concessions

Electrical engineering and trades accessory to it have grown enormously in the Mid

lands during the past two years and export business has been unprecedented

In the saddlery and harness and general leather goods trades of Walsall which was recently in a depressed state there has been a return to prosperity especially in connexion with the export trade Prices have advanced considerably not only on account of demand but also through the very large increase in the cost of leather and other materials engineering and hardware trades of the town and neighbourhood have also prospered

At Coventry the watch trade has been exceedingly busy owing to the growing preference

A coverity the watches are receedingly busy owing to the glowing preference for English made watches. The artificial silk trade is increasing and the general engineer ing trades have done well. A large electrical industry appears likely to grow up.

The trade of Leicester shows progress boot and shoe exports being heavier than previously and hosiery and elastic webbing employing many hands. Large works for general electrical engineering constitute an important new industry in Northampton The growing electrical engineering constitute an important new industry in Northampton. The growing industries of Peterborough include a large shop fitting factory. In Northampton the tendency of lace making firms to erect factories in outlying districts has arted as a stimulus to new industries. Blouse and robe-making have become of great importance engineering and wood working occupy much labour and in 1912 there was introduced a new machine for the making of embroidery. It was announced in October 1912 that a large lace manufacturing business would be removed from Beeston (Notts) to Raab in Hungary as a result of the effect of hostile tariffs and that facilities and remission from taxation had been granted by the Hungarian government Through the activity of the Derby Borough Development

Committee new industries have been introduced there one of great importance being the manufacture of filament electric lamps. The ironworks industry at Hawarden Bridge Flinishire has continued to develop and connected with it a garden city at Sealand has been partly built and occupied. Another ironworks industry is flourishing at Ellesmere Port Cheshire where water-transit facilities have also developed corn milling. The population has increased in ten years by 6 og1.

Lancashire and Yorkshire—New cotton mills are building in such centres as Turton Leigh Nelson Hastenlae and Livesey (Blackburn) Hashingden, &c, while steel works at Partington and salt works at Runcorn are to be included among other industrial developments. The Lancashire cotton trade enjoyed in 1911 its most prosperous year since 1907 and this prosperity was reflected in the iron founding and engineering industries which are more or less closely alhed to the staple industry of the county. At the end of 1911 however a dispute occurred in the cotton trade which was only brought to a close on January 19 1912 after a lock-out of the operatives lasting nearly a month. All the Sheffield industries have shown remarkable activity the volume of trade in the last three years being larger than at almost any previous period. To protect them selves against infringers of trade marks a special fund of \$15,000 has been raised by manufacturers and several prosecutions have been successfully initiated. A new society called the Sheffield Electro Metallurgical Society was formed in 1910. Many new mills have been erected at Huddersfield where the cloth and other trades have been active

Northern Counties —Ship building on the north-east coast from Blyth to the Tees has reached a very high point, 349 vessels of 10/1/43 tons being launched in 1911 compared with 226 vessels of 654 789 tons in 1910. After an interval of five years the blue riband—for the largest amount of construction by one firm in the United King dom came to the Tyne in 1911 this distinction being obtained by Messrs. Swan Hunter and Wigham Richardson—whose production aggregated 125 050 tons—New methods of marine propulsion during the period under review include the geared turbine of Sir Charles Parsons the Diesel oil engine as exemplified in the Wallsend built ship—Toiler—and the gas engined vessel—Holzapfel I—built at South Shields—At the close of 1912 Messrs. Swan—Hunter and Wigham Richardson were building for a Scotch firm a vessel for the Canadian lakes on the new principle of a Diesel engine supplying electrical power.

Naturally with ship-building so active in 1911 the sister indu try of marine engineering was correspondingly brisk. One firm on the Tyne Messrs R J W Hawthorn Leslie and Co held the record over the kingdom for the year their turn out of engines amounting to 150 200 shaft horse power. Since 1910 the various sections of labour engaged in ship building have had their wages increased three times representing 3s per week per man. Ship vard workers discharge notes were discontinued at the request of the men in the early part of 1912 and their demand along with the engineering trades is for an eight hours day. East Anglia etc.—Among recent industrial developments in this part of England are

East Anglia etc — Among recent industrial developments in this part of England are the establishment of blast furnaces and rolling mills at Scunthorpe Lincolnshire and of electric steel furnaces at Braintree Essex — Among industries recently established at Chelms ford are works of the Marconi Wireless Telegraph Co and other electrical works the National Steam Car works etc — At Rochester large works for the manufacture of cement making machinery were established by an Anglo-German firm in 1911

South Wales — The revival of prosperity in the tin plate trade which began in 1898 continues unchecked. The annual amount paid in wages to South Wales tin plate workers is now about \$\frac{1}{2}\$ 300 000. Of the 569 mills engaged on the manufacture of tin plates in England and Wales 96 per cent are situated in Glamorgan. Carmarthen and Monmouth. In 1911 the Welsh tin plate trade broke all records.

Labour Exchanges —The system of labour exchanges was inaugurated on February 1 1910 By the end of 1911 there were .61 exchanges at work and during that year the number of vacancies notified by employers was 757 109, and the number filled by the exchanges was 580 770 The demand for workers exceeded the supply in the cotton woollen and worsted trades as well as, during certain seasons of the year in the coach building and engineering trades and the Clyde ship building industry while female workers were also found scarce in the clothing and laundry industries

Fisheres — The great herring industry at Yarmouth has now a fleet of 1000 boats principally steam drifters A Yarmouth boat broke all records in September 1912 with a haul of 320,000 herrings, a catch that realised £520 Not less than 10,000 fishermen are engaged in the Yarmouth fishery In the season of 1911 the catch at Yarmouth

totalled just upon 550 000 000 herrings but the catch in 1912 exceeded that and all pre Protests have lately been made against the practice of trawling for vious records herrings and the consequent destruction of immature fish the matter was the subject of a deputation to the president of the Board of Agriculture and Fisheries (Mr Runci man) in October 1912 and the difficult questions involved may result in legislation and international action A movement has been started to organize steam trawling on co lonial fishing grounds in connection with Grimsby A new trawling industry was initiated at the port of Blyth at the beginning of 1919 A consideral le number of Cornish fishing boats have been fitted with motors including some of the larger craft engaged on mackerel fishing in the Mount's Bay ports and new boats for the pilchard and inshore fisheries are being built with these engines along the south coast of Cornwill especially in the eastern ports, and in Devonshire

For the English and Welsh fisheries the total weight of wet fish landed in 1911 was 14 418 904 cwt and the total value £8 051 486 representing an increase in comparison with the previous year of practically 10 per cent in weight but only 1 per cent in value topal fish wree—cod 2 56. 182 cwt (£1.91.95) haddock __114_87 cwt (£1.269.45.)
herring 4 995 976 cwt (£1.474.065) plane 955 165 cwt (£955.998) hake 732 365 cwt
(£564.769) sole 61 817 cwt (£403.637) The total value of shell fish was £273.012 making a grand total value for all fish of 18 324 498 (an increase of 3.7 per cent on the average for 1900-10). The principal shell fish were 4.785 984 crabs (£54 034) 50 1.4 lobsters (£27 435) 26 338 115 overes (£79.70). The imports of fish into the United Kingdom decreased by 10 per cent in value in 1911 to £3 900 0.0 whereas the experts of fresh it h increased by 66 per cent to £1 308 2)5 and those of cured or salt fish by 15 per cent to £5 118,825

Commerce - British trade has had three record years in 1910 1911 and 191 each surpassing all others before it in the figures for imports and exports 1911 are analysed below but the totals for 191 as disclosed by the final monthly Board of Trade returns issued on January 7 1913 may first be given. The imports were valued at 1,44 806 14 (nearly 6, million pounds more than 1911) the British exports at 448, 434 og (over 3, millions more) and re exports at 4111 837 905 (over 9 millions more) the total exports being £599 > 1 901 (over 4 millions more) It may be useful to show by comparison with previous years the enormous expansion that has taken place as shown by the import and export figures (in million pound) in Briti h trade —

	1912	1911	1910	190	1902	1897
Imports	744	680	678	645	5-8	45I
Total Exports	599 487	556	534	517	349	294
Briti h Exports	487	454	430	426	283	-34

It will be seen that in fifteen years the exports of purely British products have more than doubled

During 1912 the principal increases in imports were recorded in the following groups—grain and flour $+ \frac{1}{4}1.746 \, _{\circ}68$ non dutable food and drink (other than meat grain and flour) $+ \frac{1}{4}36 \, _{\circ}8390$ tobacco $+ \frac{1}{4}1088 \, _{\circ}933$ wood and timber $+ \frac{1}{4}2 \, _{\circ}890$ 144 raw cotton $+ \frac{1}{4}908 \, _{\circ}94$ to textile materials o her than cotton and wool $+ \frac{1}{4}3967 \, _{\circ}94$ oil seed etc $+ \frac{1}{4}2 \, _{\circ}39 \, _{\circ}31$ indes and undressed skins $+ \frac{1}{4}2 \, _{\circ}613 \, _{\circ}386$ iron and steel and their manu factures $+ \frac{1}{4}3 \, _{\circ}618 \, _{\circ}654$ cutlers and hardware $+ \frac{1}{4}1 \, _{\circ}717 \, _{\circ}52.$ machinery $+ \frac{1}{4}1 \, _{\circ}652 \, _{\circ}82$ chemicals dives etc $+ \frac{1}{4}1 \, _{\circ}50 \, _{\circ}61 \, _{\circ}618 \, _{\circ}6$ During 1912 the principal increases in imports were recorded in the following groups -

exceeded those in 1911 by 4 401 543 tons and those cleared with cargoes by 2 746 369 tons

The appointment was announced in April 191 of a royal commission to inquire into the natural resources and improvement of the trade of the Empire, following upon a resolution passed at the Imperial Conference in May 1911. The following were appointed for the United Kingdom Lord Inchcape (Chairman) Sir Edgar Vincent Sir Charles John Owens Sir H. Rider Haggard Mr. Tom Garnett (of Manchester) and Mr. William Lorimer (of Glasgow) for Canada Mr. George Eulas Foster minister of trade and customs for Australia Mr. Donald Campbell formerly a member of the legislature of South Australia for New Zealand Sir Joseph George Ward recently prime minister of the Dominion for South Africa. Sir David de Villiers Graaf minister of posts and telegraphs for Newfoundland. Mr. Edgar Bowring M. L. C.

Import and Export Trade (United Kingdom 1911)—The total imports into the United Kingdom in 1911 were valued at £680 157 527 an increase of £1 900 503 (+0 27 per cent) on 1910. Of this total British possessions contributed £171 453 587 (an increase of £815 971 or +0 47 per cent) and foreign countries £508 703 940 (an increase of £1084 532 or +0 2 per cent). The total exports in 1911 were valued at £556 878 432 an increase of £22 732 615 (+4 082 per cent) on 1910. Of this total British possessions took £169 745 187 (an increase of £12 289 933 or +/2 per cent) and foreign countries £387 133 245 (an increase of £10 442 682 or +2 69 per cent). The proportion per head of population of the value of imports into the United Kingdom in 1910 was £15 21 and in 1911 £15 0 4 that of exports of native produce only (£430 384 772 in 1910 and £454 119 298 in 1911) was £9 11 8 in 1910 and £10 0 7 in 1911 and that of net imports (in eless re exports) was £12 15 10 in 1910 and £12 15 0 in 1917. Bullion and specie are excluded. Table XXIII shows the trade with British possessions and Table XXIV with foreign countries.

Shipping—In 1911 the total net tonnage of vessels entered and cleared with cargoes and in ballast at ports of the United Kingdom was as follows showing increase or de crease per cent on 1910 Steam, entered 67 253 999 tons (+39) cleared 67 844 960 (+37) Sailing entered 1 910,516 (-22), cleared 1,899 866 (-25) Total entered 69 164 515 (+37) cleared 69 744 826 (+35) Of these the British vessels alone represented entered 40 777 476 tons (+28), cleared 41,107,978 (+23)

The total net tonnage of British vessels with cargoes entered and cleared in ports of foreign countries in 1911 was as follows entered 21 534 126 tons cleared 29 237 582

In British ports abroad entered 7 920,081, cleared 7 856,500

The principal ports of the UK with the tonnage of vessels cleared and entered in 1911 are shown as follows with the increase or decrease per cent on 1910 — London ent 11 973 249 (-1 5) cl 9 004 974 (+0 05) Liverpool and Birkenhead ent 7 887 719 (+3 0) cl

Recent Developments at English Ports -London -In 1909 the value of the imports into the port of London represented 3° 0 per cent and the exports 18 5 per cent of the total for the UK The Port of London (Registration of Craft) Order Confirmation Act 1910 authorised the Port of London Authority to impose fees in respect of the registration or licensing of craft on the river Thames In 1911 the Port Authority de cided to construct a new dock estimated to cost £1 400 000 and the King undertook to perform the ceremony of cutting the first sod on July 17 191 but this was prevented by the Transport Workers strake On February 1 1911 HMS Thunderer the first super Dreadnought vessel constructed on the Thames was launched from the yard of the Thames Ironworks Ship building and Engineering Co

Mersey-Important developments of the north end of the Liverpool Dock Estate include the Gladstone Dock at Seatorth begun in September 1910. It was decided early in 191 to construct a deep water approach taking vessels 1 100 feet long Cladstone Dock is to be convertible into a graving dock two branch docks and a half tide dock together with a lock 645 feet long communicating with the Hornby Dock are included in the scheme the estimated cost of which is foo ooo New works have also been undertaken at Brocklebank Branch Dock including the extension of quavage railways and sheds The proposal to con truct a bridge between Liverpool and Birken head was revived in 1912 but the scheme for the erection of a custom house at the pier head has been abandoned owing to failure of the negotiations for the site the Port of Manchester have been extended at Trafford Park and elsewhere on the canal and seed crushing works have been undertaken at Partington and elsewhere Cornbrook wharf was extended in 1911 The Manchester Cotton Association is active ly fostering the import trade in raw cotton

Dee -An improved waterway for shipping in the Dee estuary has long been con templated and in 1912 a conference of representatives of Flint and Denbigh County Councils Chester Town Council, Dee Conservancy Board and other bodies gave general approval to a scheme for a navigable channel near the Flintshire shore and agreed to press the Development Commissioners to grant £30 000 towards the estimated cost of £75 ∞0

Southampton —Increased size of the Atlantic liners calling at Southampton necessi tated the construction of a dock of 16 acres which was used for the 'Titanic' Con siderable loss has been sustained by strikes of dockers

At Dover, trials were made in 1910 for the running of trains serving passenger vessels on the Admiralty Pier extension It was decided in September 1912 to close the west ern entrance to Dover harbour with a view to improving the shelter in rough weather and to extend or duplicate the eastern entrance

Bristol continues to direct its chief effort to the development of the dock estate owned by the municipality New traffic has been attracted The Canadian Steamship Ltd. (Royal Line), established in 1910 has been very successful particularly in the emigration branch and large numbers of agriculturists from the west of England have been settled in Canada There has also been considerable increase of the imports of frozen meat. The port dues grew from £146,565 in 1911 to £155 284 in 1912. The latter figures are the highest on record and the trade has doubled since 1882. Grain and provisions continue to be among the chief imports and petroleum and fruit have been imported in increasing quantities of late. There is still a heavy call on the rates to meet the deficiency in dock revenue the amount of aid in 1912 being £140 000 compared with £154 000 in 1911. The city is indebtedness considerably exceeds £8 000 000 over £5,50,000 being for docks after allowing for accumulations in the Sinking Fund.

Humber and Lincolnshire Coast —At Hull an important addition to the facilities for the coal export trade was made in 1910 by the installation of coaling beds at the Victoria Docks—This method of shipping coal the appliance for which has a capacity of 600 tons per hour, had not previously been employed in England—The extension of the joint dock was completed in 1912

The greatest undertaking on the east coast has been the construction by the Great Central Railway of the Immingham Dock opened by the King on July 22 1912 Six miles from Grimsby and nine miles nearer the North Sea than Hull Immingham possesses many advantages providing free ingress and egress at any state of the tide. The area of the dock property which is two and a half miles in length and one mile in breadth is just over 1 000 acres and the railway sidings and lines extend to 170 miles being sufficient to take 11 600 waggons carrying upwards of 10 000 tons. The water area is 45 acres. There are eight hydraulic steam hoists capable of shipping 5 600 tons per hour. From Grimsby itself the coal shipments to foreign ports in 1911 exceeded 1 500 000 tons. At Boston dock extension has been taken in hand.

Wrecks—The number of vessels belonging to the United Kingdom totally lost at sea in 1910 was 319 of 150 142 tons (sailing 195 of 32 547 tons steam 124 of 117 595 tons)

Communications —Railways — Table XXVIII gives particulars for the railways of the United Kingdom in 1911 the figures being also analysed under the three divisions of the kingdom for purposes of comparison

The percentage of working expenditure to total receipts was 62 for the whole kingdom 63 for England and Wales 56 for Scotland and 62 for Ireland

of the Lagrand and wales 55 for Scotland and 62 for freiand. The Great Western Railway company having shortened its route between Birmingham and London by making a new line via Aynho has spent upwards of £2 000 000 in the Birmingham district in widening and improving the line north and south of the city rebuilding Snow Hill Station and constructing a new passenger station and a large goods station at Moor Street near the public markets. The London and North-Western Railway company are preparing an important scheme for the improvement of New Street Station. Birmingham and the extension of the adjoining Queen's Hotel. A new line is projected from Coventry to Arley in conjunction with the Whitaere and Nuneaton branch of the London and North Western for the purpose of developing the coalfield in the neighbourhood of Coventry. In connection with recent labour disputes it may be mentioned that the North Western company

¹ Excluding season ticket holders

appointed a grievance hearer (Feb 1912) to inquire into minor complaints. The extension of a branch line of the Great Northern Railway north of Enfield to Cuffley and beyond is opening up a new residential district for London. Other railway enterprises include the reopening (April 13 1911) of the Shrop hire and Montgomeryshire Light Railway from Shrewsbury to Llany mynech after lying direlect for thirty years and the opening of a line (July 1 1912) 13 mile long connecting Holywell Flintshire with Holywell Junction station on the L. & N. W. line from Chestur to Holyhead. An extension of the electrification of part of the Lancashire and Yorkshire railway system was opened in March 1911 between Maghull and Town Green and a scheme for the electrification of the Manchester South lunction and Altrincham line is in hand. A bill was promoted in 1912 by local landowners for a railway between Richmond and Reeth in the valley of the Swale Yorkshire.

Canals etc.—The final report of the Royal Commission on Canals and Inland Navi gation has received much attention in the midlands and a Midland Waterways Association representative of all the towns and interests concerned, has been formed to press forward the scheme of the Commission for improved water communication with Hull I iverpool London and the Severn ports. A committee has also been formed to promote the restoration of the Warwickshire Avon as a commercial waterway.

London Truffic—In 1910 the mileage of tramways in London was 130 48. Motor omnibuses have practically super eded the horse omnibus, in 1890 there were five motor omnibuses licensed by the Mctropolitan Police while in 1910 this number swelled to 1 200 and the number has greatly increased since. The streets of London extend to 1,151 miles. In some of these the congestion of traffic is exceedingly severe. The number of accidents and consequent agitation in parhament and elsewhere in the autumn of 1012 drew the serious attention of the Home Office and other authorities to the matter and it was considered whether statutory powers should be created for the limitation of the number of public vehicles in certain thoroughfares. The recommendation of the Royal Commission on London traffic in favour of a Traffic Board for London was strongly revived but did not receive the support of the government.

Practically all the drivers of motor cabs in London struck in October November 1911 and the dispute was settled by an arrangement the principal points of which were that the drivers should ritting extrast which are chargeable by statute upon passingers and that observers whose duty it was to report to the cab companies and defalcation on the part of the drivers should be abolished. A further dispute arose in March 1912 with the drivers and two of the companies and a settlement was only effected on April 15th and at the end of the year another strike took place.

The Piccadilly the Baker Street and Waterloo and the Hampstead "tube rail wavs were amalgamated as the London Electric Railway Company in 1910 under the control of the Underground Electric Railways Company the tusion of the latter company with the London General Omnibus Company (which has absorbed a number of competing omnibus companies since the introduction of motor traction) was subsequent to arranged and in November 1912 it was announced that it was intended to amalgamate the Central I ondon and the City and South London tubes with the underground system and the London United Tramways with the Metropolitan Electric Tramways The chairman of the Underground company is Sir Edgar Speyer

Road Board — Inder the Development and Road Improvement Act (1900) the Road Board was created for the improvement of roads and the administration of a grant for that purpose consisting of the proceeds of duties on motor spirit and of part of the duties in respect of carriage licences. The Commissioners appointed in May 1910 were Sir George S. Gibb (chairman) Lord Pirite Lord Kingsburgh (Sir J. W. Macdonald), Lord St. Davids and Sir Charles D. Rose Bart. The Board has power to act on its own initiative or through existing highway authorities and has already carried out much important work, not only in the direction of improving roads but in such other directions as inquiry into the best forms of road crusts.

One proposal which has attracted wide attention and was the subject of a conference in February 1912 under the chairman of the Board and including representatives of the Board of Trade and local authoritie interested is that of a new approach to London from the west extending from Hounslow to the West Cromwell Road and avoiding among other crowded points the narrow High Street of Brentford The cost was estimated approximately at

£1 750 000 but alternative schemes are in the field. Mention may also be made of the adaptation of disased portions of the Roman Foss Way in Lincolnshire for modern traffic.

The system of propulsion of electric vehicles without rule by means of overhead trolleys.

has received much attention and has an example in Leeds where a public service on this principle was mangurated in June 1911

Tramways of the United Kingdom - The total length of tramways open at the end of 1911 was 2507 the paid up capital £74 725 440 the gross receipts £13 777 001 (an increase of 5 3 per cent on the preceding year) Working expenses amounted to £8 500 941 (increase 4.5 per cent) net receipts to £5 276 060 (increase 6.6 per cent) The number of passengers carried during the year was 2 907 177 120 an increase of 9 2 per cent

Post Office —With the close of the year 1911 the telephone system of the National Telephone Company passed under the control of the Postmaster General whose de partment under this arrangement entered into possession of some 1 500 exchanges and undertook the service of 400 000 subscribers in addition to about 80 000 who were pre viously served by existing post office exchanges. With very few exceptions the company s staff was transferred to the government service the total personnel amounting to about 18 000 The rates were not immediately affected by the change but public opinion was freely expressed that the efficiency of the service had deteriorated

opinion was freely expressed that the efficiency of the service had deteriorated. The following statistics relate to the year ending March 31 1912. The total number of letters delivered in the United Kingdom was 3186.8 millions (in England and Wales 2729.8 Scotland 273.8 and Ireland 183.2 millions) an average per head of the population of 75 in England and Wales 58 in Scotland and 42 m Ireland or 70 for the whole kingdom. There were also delivered in the Kingdom 1265.5 million newspapers and half penny packets 905.500.000 postcards and 124.254.092 parcels with an average postal rate of 4.84d providing a revenue of £2.505.068 of which £1.122.605 was paid to railway companies. The length of telegraph lines in 1910–11 was 52.413 miles overhead 5569 under ground and 3314 submarine but these figures represent lengths of wire of 440.315 miles overhead 787.553 underground and 10.727 submarine. Telegraph business was transacted at 13.959 postal and other offices and telegrams numbered 76.029.000 inland (a decrease of 506.000) and 15.585.000 foreign (an increase of 478.000 on the preceding year). Receipts on 596 000) and 15 585 000 foreign (an increase of 478 000 on the preceding year) Receipts on telegrams and telephones amounted to £5 121 341 including £2 207 953 from inland telegrams and £1 952 537 from telephones (including royalties) expenditure on this department amounted to £6,352 281

Money orders were issued in 1911-12 to the amount of £35 260 390 in England and Wales £4 467 975 in Scotland and £2 367 366 in Ireland (total £42 095 731) and postal orders to the amounts of £41 337 000 £4 432 000 and £2 261 000 respectively (total £48 030 000)

The demolition of the old General Post Office in St Martin's le Grand London was undertaken in July 1912 It was hoped to preserve the façade which is of some architectural interest (E B xv1 945b) by its reference elsewhere

Finance (see under History above ad fin) For 1911-12 the total revenue for

the United Kingdom was £185,000 286, and the expenditure £178,545,100

The following were the details of revenue—Customs £33 649 000 Excise £38 380 000 Estate Duties £25 392 000 Stamps £9 454 000 Land Tax £750 000 House Duty £2 130 000 Income Tax £44 804 000 Land Value Duties £481 000 Post Office £19 650 000 Telegraphs £3 105 000 Telephones £2 945 000 Crown Lands £530 000 Receipts for Suez Canal shares etc £1 281 497 Miscellaneous £2 538 789

The following were the details of heads of expenditure—National Debt £24 500 000 Development Fund £1 709 859 To local taxation account £9 636 399 Cutil list £470 000 Annutites and Pensions £317 745 Salaries and Allowances £56 572 Courts of Justice £23 000 Miscellaneous £325 525 Army £27 649 000 Navy £42 858 000 Miscellaneous Civil Services £46 001 000 Customs and Excise £2 297 000 Inland Revenue, £1 654 000 Post Office (Telegraphs etc.) £20 547 000

The income brought under review for the assessment of income tax was stated as follows for the year ending April 5 1911—Schedule A (ownership of lands houses etc.) England £23 3906 688 Scotland £26 944 348 Ireland £14 971 877 Sch B (occupation of lands) England £12 282 010 Sociland £1 925 858 Ireland £3 231 092 Sch C (interest on securities etc.) United Kingdom £49 562 418 Sch D (profits from business professions etc.) England £509 578 244 Scotland £57 036,283 Ireland £16 697 542 Sch E (salaries etc.) United Kingdom £119 697,415

The National Debt on March 21 1912 consisted of —Fanded Debt £602 200 092 Term nable Annuties £33,044,389 Unfunded Debt £39 500 000 Other capital liabilities £50 061 947 Total gross liabilities £724 806 428

Parliamentary Electors—In 1012 the registered number of parliamentary electors

Parliamentary Electors —In 1912 the registered number of parliamentary electors

was 7 984 600, or an average of 11,917 per member of parhament (670 seats) Thev were distributed as follows (A) England and Wales countres (253 seats) 564 8r owners 3 106 370 occupiers, 130 302 lodgers total 3 800,953 boroughs (237), 22 986 freemen freeholders etc ^ 445 387 occupiers, 185,601 lodgers, total 2,653 974 universities (5) 20 816 Total 6 475 743 (B) Scotland counties (39) 63 884 owners 37-913 occupiers 34,116 lodgers total 4,0013 boroughs (31) 30265 freemen etc 255420 occupiers 32044 lodgers total 317738 universities () 23801 Total 812452 (C) Ireland countres (85) 8 918 owners 556 535 occupiers 4 9 6 lodgers total 570 379, boroughs (16) 2535 freemen etc, 113803 occupiers, 4,691 lodgers, total 121020 universities (2) 4 997 Total 696 403

Defence - The cost of imperial defence in relation to national wealth and income, is

summarized in Table XXIX1

Na v (see also Navies in Part I sect i of the Year Book) -The creation of a Naval War Staff was announced in January 1912 Its advisory functions were outlined in an important memorandum by the First Lord of the Admiralty Mr Winston Churchill in which he foreshadowed a scheme of collaboration between the Naval War Staff and the General Staff of the army Some staff officers were to be appointed in mediately and appointments were to be made subsequently after a special course of training at the War College At the same time the appointment was announced of Sir Francis Hopwood as additional Civil Lord of the Admiralty to deal with the business and commercial transactions of the Board the appointment being permanent and non political Rear Admiral E C T Troubridge was appointed Chief of the War Staff Captain G Ballard Director of the Operations Division and Captain E C Jackson Director of the Intelligence Division

Admiral of the Fleet Sir A K Wilson formerly First Sea Lord, retired from the active list on March 4, 1912 on attaining the age of seventy He was succeeded as First Sea Lord on November 20 1911 by Admiral Sir Francis Bridgman, whose resigna tion on the ground of ill health2 was announced on December 6, 1912 He was succeeded

1 After Mr Fdgar Crammond in the Nineteenth Century and After (Aug. 1912)

1 After Mr Fdgar Crammond in the Nineteenth Century and After (Aug. 1912)

The resignation of Sir F Bridgeman on Dec. 4th was the subject of several questions to Mr Winston Churchill in the House of Commons and led to an animated debate on Dec. 20th. Mr Churchill had originally stated that Sir F Bridgeman resigned for reasons of health but under pressure admitted that he had himself taken the initiative in asking for the First Sea Lord's resignation and he was sharply attacked by Lord Charles Beresford who suggested that Sir F Bridgeman had been improperly treated and that he had been removed because he disagreed with Mr Churchill on questions of navel policy. The full disclosure of the facts on Dec. 20th showed that these charges were untenable. Mr Churchill disclosure of the facts on Dec 20th showed that these charges were untenable Mr Churchill had reluctantly been forced to the conclusion that the Admiral's health was not equal to the grave responsibility attaching to his office at a time of severe strain and he was bound un

by Admiral Prince Louis of Battenberg, who was followed in the office of Second Sea Lord by Vice admiral Sir J R Jellicoe Among other recent appointments Admiral the Hon Sir H Meux succeeded Admiral Sir A Moore as Commander in Chief of Portsmouth and Admiral Sir A Berkeley Milne succeeded Admiral Sir E Poe as Commander in Chief in the Mediterranean (announced in April 1912)

The personnel of the Royal Navy for 1912-13 is shown as follows (1) Sea Service (a) The personne of the Royal Navy for 1912-13 is shown as follows (1) Sea Service (a)
Fleet—flag officers 28 commissioned officers 4727 subordinate officers 740 warrant officers
2070 petty officers and seamen 97811 boys (service) 2 601 total 107977 (b) Coast
guard—commissioned officers 99 chief officers and second matcs 205 petty officers and
seamen 2796 total 3100 (c) Royal marines—commissioned officers 420 warrant officers
67 staff sergeants and sergeants 1300 band ranks buglers and musicians 1708 rank and
file 13,296 band boys 272 total 17063 total for sea service 1.8 140 (2) Other services
7860 (3) Addition under supplementary estimate 1500 Total personnel 137 500

4rmv - In February 1912 a joint Army and Navv School of Aviation was estab lished for the instruction of officers in both services. A British aeronautical service was instituted and designated the Royal Flying Corps with naval and military sec tions and a central flying school on Salisbury Plain administered by the War Office The Army Aircraft Factory was renamed the Royal Aircraft Factory

General Sir C W H Douglas succeeded General Sir J French as Inspector General of the Home Forces on March 5, 1912

The following figures show the personnel of the Army on October 1 1911 the numbers wanting to complete the strength being given in brackets where necessary—(a) Regular Army—British establishment 176 539 (4271) Indian establishment 77 770 and 1 886 supernumerary staff and departments etc 2474 (106) army reserve 138 531 special reserve 60 931 (30 288) (b) Territorial Force—officers N C Os and men 264 911 (49 445) 1 permanent staff 2786 (15) reserve 656 The above figures give a total of 724 598 There are also to be added—militia 1655 reserve 205 militia (Channel Isles Malta and Bermuda)—permanent scaff 178 (1) and militia 5243 (319) volunteers (Bermuda)—permanent staff 4 (1) and volunteer officers and volunteers 225 (89) Grand total 732 108

Local Affairs and Finance United Kingdom 1000-10 -For England and Wales the revenue of local bodies amounted to £168 15, 3352 and expenditure to £166 104 559 for Scotland to £18 854 650 and £18 918 681 respectively and for Ireland to £8,52 498 and £8 598 435 respectively Outstanding local loans in England and Wales amounted to £536 002 520 including £49 529 222 in respect of loans taken over or raised by the Metropolitan Water Board for Scotland the figure was £65 827 182 including capitalised values of annuities and for Ireland £ 2 066 834 Total £623 896 545

London Government — The assessable value in the county of London in 1911 amount ed to £44 669 41? The net outstanding debt of central and local bodies on March 31 1910 was £111,043 088 The central rates for the administrative county (excluding the City of London) for the year ending March 31 101 amounted to 55 3 905d in the pound leaving to be raised locally differential rates in each borough The amounts of the localised rates varied from is 0 005d in Westminster (St. James) to 6s 0 005d in Poplar the amount of the total rates varied from 6s 4d m Westminster (St James s) to 115 4d in Poplar A return published by the London County Council in November 1012 compared the cost of the municipal services in London and six other large cities The total net cost per head of the population was found to be highest in London £3, s 9 5d, against £2 16s 11 9d for Manchester £2 8s 9 7d for Leeds £2 5s 5 5d for Liver pool; £2 38 6 1d for Bristol £2 38 - 9d for Birmingham and £1 188 8 4d for Sheffield) those circumstances to act as he did after consulting with the Prime Minister and inform ing the King whose sanction had been obtained. After conveying his view to Sir F Bridge man in so kind and diplomatic a letter that the gallant Admiral at fir t failed to realise the situation he had then put it so bluntly—as Mr Bonar Law considered british british. satuation he had then put it so bluntly—as Mr Bonar Law considered brutally—that no misunderstanding was possible. But after the full explanation given by Mr Churchill it was clear that if his method was open to criticism his action was not and that the attacks on him in other respects were unsupported by any material evidence.

Includes both permanent staff and territorial officers for OTC. The Territorial officers are stated to include 9236 officers and 252 152 N C O s and men on October I 1912 grving a total of 261 388 and a decrease of 3523 on the total of the previous year.

Including \$22 570 459 of loans and \$2 679 183 of other receipts accounted for by the Port of London Authority

but the cost per f of assessable value is lowest in London (6s 5 od ranging up to 10s 4d Education is found to cost 6s 7 6d per head more and police 3s 10 d more in London than the average for the other cities Higher prices salaries, wages, and cost of lands and building are adduced as explanations of the higher total cost per head

Alderman Sir David Burnett (an auctioneer and surveyor by profession, was elected Lord Mayor of London on September 28 1912 in succession to Sir Thomas Boor Cros The London Borough Council elections took place on November 1, 1912 and as the result the Municipal Reform party retained the general ascendancy which it had previously held To a total number of 1362 seats in the 28 borough councils there were returned 1002 Municipal Reformers 252 Progressives 33 labour representatives, 15 socialists 23 independents and 37 non party members (the borough of Stoke Newington electing a non party council of 30) The Progressives outnumber Municipal Reformers in the councils of Bethnal Green, Southwark and Battersea the result in the borough last named constituting a Progressive gain on the other hand that party lost its previous majority over the Municipal Reformers in Hackney

Municipal Boundary Alterations England and Wales—Among recent changes adopted or proposed in the boundaries or constitution of boroughs the following may be noticed. The area of the city of Bath was increased at the expense of the county of Somerset by 1767 acres in 1911 a population of 18 454 and a rateable value of £81 043 were thus added. The Greater Birmingham scheme came into operation on November 9 1911. The effect of the scheme was to include in the city the borough of Aston Manor and the urban district of Erdington (Warwick hire) the urban district of Handsworth with Perry Barr (Stafford shire) the rural district formed by the parish of Yardley and the greater part of the urban district of King's Norton and Northfield (Worcestershire). Quinton (Worcester) had been absorbed in 1909. The whole of these districts thus became part of the geographical county of Warwick. Birmingham by this extension was made the second largest city in the empire but it only maintained that position until November 1912 when the extension of the bound aries of Glasgow (qt) raised the Scottish above the midland city. The area of Birmingham aries of Glasgow (qt) raised the Scottish above the midland city. The area of Birmingham was increased from 13.478 acres to 43.601 acres. The population in 1911 was 840.202 Without the added areas it would have been 525.833. The population at the end of 1912 was estimated at about 854.000. The corporation now consi is of a Lord Mayor thirty aldermen and ninety councillors and the city is divided into 30 wards. The water gas and closter the between the constraints of the state of the constraints of the constraints. aldermen and ninety councillors and the city is divided into 30 wards. The water gas and electric lighting and tramway undertakings belong to the corporation. The whole of the city with the exception of Handsworth (which remains in the West Bromwich Union) forms one parish for poor law purposes

Application has been made for a charter of incorpora on or Buxton or which the Duke of Devonshire was mayor in 1910-11 the borough boundaries have or which the Duke of Devonshire was mayor in 1910-11 the borough boundaries have been considerably extended the area being increased from 1212 to 2611 acres and the population by some 10 000 to 37 429. A scheme for the exten ion of the borough of Dudley is under consideration. The borough of Eastbourne was extended in April 1911 to include part of the part h of Willingdon. A scheme is being promoted for the extension of the borough of Kidderminster. By a provi ional order granted in May 1912. Roundhay Sea croft Shadwell and part of Crossgates have been incorporated in Leeds extending the area of the city by 4670 acres, and adding 7020 to the population while the rateable value is increased by 4670 acres, and adding 7020 to the population while the rateable value is increased by 450 600. Northampton was redivided in 1912 into 12 wards instead of 9 and the number of town councillors was increased from 36 to 48. In 1011, besides being the increased by 450 040 Normampion was redivided in 1915 into 12 wars insit and of 9 and the number of town councillors was increased from 36 to 48. In 1911 busides being the sene of the coronation review and providing ho pitality for ships of foreign navies. Ports mouth entertained the British Association British Pharmaceutical Society. Institute of Auctioneers National Free Church Council Co-operative Congress Incorporate Municipal Flectrical Association. South Eastern and Metropolitan Poor Law Conference and smaller bodies. It was considered opportune that Portsmouth should be raised to the rank of a city, but the petition was refused. In 1912 Rending relayed the boundaries by metalgree city but the petition was refused. In 1912 Reading enlarged its boundaries by including Caver-ham and part of Tilehurst in spite of some opposition. Its acreage has been increased from 5876 to 9107 acres and its population from 75 214 to more than 88 000 The union of Rochester Chatham and Gillingham as a county borough has been considered In the census of 1911 Sheffield was found to be the largest city in Yorkshire with a population of 454 603 as compared with 445 568 in Leeds which had previously held the first position. On April as compared with 445 568 in Leeds which had previously held the first position. On April 1 1912 Tinsley was added to Sheffield giving an additional area of 685 acres a population of 5270 and a rateable value of f42 659. A movement is on foot for the incorporation of Stourbridge. In Cheshire the urban district of Wallassey virtually a residential suburb of Liverpool which since 1901 has increased its population by 24 935 (pop in 1911 78 514) was constituted by charter dated July 27 1910 a municipal borough and will become a county borough on April 1 1913. The borough of Wallsend was increased in October 1910.

by the addition of the former urban district of Willington Quay and part of the rural district

of Tynemouth

Channel Islands — The Guernsey States (the legislative body) approved a resolution for
the adoption of English weights and measures in 1910 to the exclusion of the old local stand
ards but a petition for the adoption of British coinage as the only legal currency was rejected
in 1911 Major E O F Hamilton C B succeeded the late Major General R Auld C B

in April 1911 as leutenant governor and commander of the troops in Guernsey and Alderney. Isle of Man—In April 1911 the Home Secretary appointed a committee to report upon a petition from the House of Keys for reforms in the Manx Government. It was proposed to limit the lieutenant-governorship to a term of years (seven or eight) to extend the powers of the Tynwald and to constitute the legislative council of four members elected by the keys together with the Attorney General the Bishop and two judges. The Tynwald with the approval of the Board of Trade passed in April 1912 a resolution imposing a duty on passengers entering or leaving the ports of Douglas Ramsey. Peel Laxey and Port St. Mary and devoting the proceeds to the improvements of the ports.

Water Supply—In London the Metropolitan Water Board (New Works) Act 1911 authorised the Board to construct new storage reservoirs at Staines Laleham and Shepperton new service reservoirs on Horsendon Hill Greenford and on Barn Hill Wembley and to construct numerous conduits and aqueducts—The Island Barn reservoir near West Molesley constructed by the Board was opened on November 4 1911

The corporations of *Derby Leucester Nottingham* and *Sheffield* are jointly responsible for the Derwent Valley Water scheme of which the cost is estimated at £6 000 000 and which began the impounding of water on January 1 1912. The first two reservoirs are the Howden and the Derwent the former having a capacity of 1 886 million gallons and being 14 miles in length and the latter a capacity of 2 000 millions with a length of 1½ miles. The proportion of water allotted to Leicester is 35 72 per cent providing for a daily yield of 9 800 000 gallons to Derby 25 per cent to Nottingham 14 28 per cent and to Sheffield 26 per cent. Derby shire water has also been laid under contribution for the supply of *Stockport* a new source at Kinder Hayfield being opened on July 11 1912.

Improvements undertaken in the Liverpool water supply system include the construction of a reservoir on Lake Vyrnwy aqueduct near Malpas and a water tower (1911) and high level tank at Woolton Hill Similarly at Manchester for which water is drawn from Third mere in the Lake District it has been necessary to undertake extension of the works by laying a third conduit from the lake to the city. Works are in progress for a water supply from the river Alwen in North Wales for Birkenhead

On October 4 1911 the new Lincoln water supply was inaugurated being obtained from the red sandstone near the village of Elkesley Nottinghamshire 22 miles from the city at a cost of about £250 000

Housing and Town planning—In London improved communications and the working class dwellings provided in the outskirts (as at Norbury Totterdown and White Hart Lane) by the London County Council have facilitated the efflux of population from the centre to the border of the county—The tenements in dwellings belonging to the London County Council on December 31 1910 numbered 9 217 the total number of rooms was 25 022½ the average rent per week per room was 25 10½d—A scheme for the establishment of a garden city on land belonging to King's College, Cambridge at Ruishp Northwood was authorised by the Local Government Board in March 1911 and a plan was adopted after competition—It was proposed to devote two-thirds of the estate of 1300 acres to building and one third to open spaces—The extension of the Garden City movement in the neighbourhood of London is also illustrated by the plan adopted in April 1912 for a garden city 28 factories have been established

At Birmingham town planning schemes have been adopted for Quinton Harborne Edgbaston and Last Birmingham In 1911 the town council of Coventry adopted a scheme for artisans dwellings estimated to cost £30 onc Portsmouth Wanchester and Bournemouth have adopted town planning schemes and at Portsmouth it was found feasible to clear a large slum area and crect model dwellings without adopting the Housing Act A garden village has been founded in the Far Cotton district of Northampton at Hunsbury Hill on the Bouverse estate In Liverpool mention may be made of the laying of the foundation of a housing scheme, the largest of six undertaken by the Liverpool City Council by the Rt Hon John Burns in November 1910 Housing is provided for 1372 persons The development of a garden city at Wavertree is in progress and a number of streets have been

widened in connection with this. The Town Planning Act is in operation at Sheffield and various districts are scheduled but not yet developed. A new road along the Rivelin Valley some three miles long has been made by the Water Committee of the corporation and the surplus land on each side is to be developed in accordance with modern town planning methods. The recent census returns confirm the trade statistics in their evidence of the prosperity of South Wales and Monmouthshire. The counties of Monmouth and Glamorgan show a higher percentage of increases of population than any other typically commercial and industrial county in England and Wales. Between 1901 and 1911 the increase per cent in Monmouthshire was no less than 32.8 or nearly double that in any English county Clamorgan makes a good second with 30.3 per cent. It is largely due to the rapid growth of the chief centres of population that the housing conditions are so notoriously bad. The local authorities are now trying to meet the need with municipal housing schemes but despite improvement in some towns the general conditions remain the worst in Britain. One result is that according to the most recent statistics the infantile mortality rate in Car marthenshire 136 per 1000 births is the highest county rate in England and Wales despite the fact that the chief industry there is agriculture.

Open Spaces —In 1912 the London County Council and the City Corporation decided to co operate with the King Edward VII Memorial Committee with a view to the conversion of the site of the Shadwell Fish Market into an open space for the purpose of a memorial in the East End of London to King Edward VII On February 19 1910 twelve additional acres of land adjoining Ruskin Park Denmark Hill were thrown open for the use of the public In the same year the London County Council decided to acquire and preserve the Sir Robert Geffrey's Almshouses in Kingsland Road and certain property in Maria Street The open space has been laid out and is known as Geffrey's Garden The Council have also decided to acquire the Grange estate, Kilburn The estate extends to 83 acres 7 of which are laid out as a park

The break up of large estates in the neighbourhood of Bournemouth Lymington, Portsmouth Gosport and other Hampshire towns has enabled the public bodies to acquire numerous open spaces though it is to be regretted that around Bournemouth and in the New Forest the picture-que features have suffered. Near the first named town and on the Crown lands woods have disappeared. A movement was started to make the New Forest a sanctuary like Epping Forest but was not supported by the Hants County Council.

Loxley Chase (74 acres) has been presented to Sheffield as a public park

Public Buildings and Other Undertakings—London 1 In October 1912, it was an nounced that the front of Buckingham Palace was shortly to be refaced in stone from designs by Sir Aston Webb The Queen Victoria Memorial in front of the palace was completed and unveiled by the King on May 16 1911

The King laid the foundation stone of a new County Hall at the south end of West minster Bridge (Belvedere Road Lambeth) on March 9 1912 In the course of excava tions on the County Hall site the remains of a Roman boat were discovered together with various Roman objects The boat and objects are preserved at the London Muse um Kensington Palace opened by the King on March 21 1912 A stone bearing the inscription Lambeth Boundary of Pedlar's Acre 177/ was also unearthed

Among other new London buildings may be mentioned the premises of the Roval Society of Medicine (Wimpole Street) opened by the King on May 21 1912 the lecture hall and museum at the Horniman Museum Forest Hill (Jan 27, 1912) and the London Opera House in Kingsway (1911) Mr Oscar Hammerstein of New York for whom this opera house was built decided to close it after his season in 1912 Cinemato graph theatres are now subject to licence (Cinematograph Act, 1909) and about 250 halls have been licensed in London The Young Men's Christian Association has opened a new building in Tottenham Court Road, and with the object of disposing of the

1 Among recent works on London see —Sir Walter Besant London North of the Thames (1911) London South of the Thames (1912), Sir Laurence Gomme The Making of London (1912) E Beresford Chancellor Annals of Fleet Street (1912) Calendar of Letter Books preserved among the archives of the Corporation of the City of London as the Guildhall (A K) (circa 1275-1464) The London County Council—Various annual publications The Survey of London (Vol 11 the Parish of St Giles in the Fields) (1912) Indications of Houses of Historical Interest (parts 1 to xxxvi)

debt upon it at the outset an attempt was made in January 1912 to raise a fund of £100 ooo m 12 days by means of an organised campaign which was not however fully success The Port of London Authority adopted in July 1912 a design by Mr Edwin Coop er for chief offices to be erected in Trinity Square E C In January 1912 the London County Council sold the site at the eastern junction of the Strand and Aldwich to the Commonwealth of Australia for £379,756 for the erection of offices

The Corporation of London (Bridges) Act 1911 authorised the Corporation to con struct a new bridge over the Thames between Southwark and Blackfriars bridges to widen St Paul's Churchyard and to carry out other improvements in the city of Lon The new bridge will be probably known as St. Paul's bridge. On June 1 1911 the subways constructed to reheve the traffic at the Elephant and Castle were opened for pedestrian traffic and on October 26 1912 a tunnel beneath the Thames at Wool

wich was opened for foot passengers

Other public buildings and municipal enterprises have been reported as under -

Burmingham -In July 1912 was opened an extension of the Birmingham Council House upon land on the opposite side of Edmund Street. The scheme still in progress at the end of the year has cost upwards of £200 000 out of which £50 000 was provided out of a bequest by the late John Feeney (proprietor of the Birmingham Dails Post) for an extension of the Art Gallery Provision has been made for a museum of Natural History Blackpool —The new promenade known as Princess Parade was opened in 1912 extending

from the north pier to Cocker Street the cost was \$25,000

Cardiff—The visit of the King and Queen to South Wales in 1911 was an occasion of gratification to Welsh nationalist pride. The King laid the foundation stone in Cardiff of the National Museum which with the University College and the National Library are the outward signs of a great Welsh renaissance. In two other important respects the right of Wales to be treated as a distinct autonomous unit has been recognised. For the purposes of the Insurance Act Cardiff has been selected as a centre for the principality with its own commissioners and staff and the Welsh National Memorial Association which has a fund of more than £200 000 publicly subscribed for a campaign against tuberculosis has received a royal charter and the full status of a national institution

Chester — Municipal progress includes a hydro-electricity scheme (1912) for utilizing by

means of turbines the water power at the Dee Mills for an auxiliary supply of electricity

Dudley—The corporation received in 1912 a bequest of £30 000 from the late Mr Brooke Robinson (formerly MP for the borough) for an art gallery or museum

Hereford—The city library has been extended by the addition of an art gallery provided by the late Sir Joseph Pulley and Mr C T Pulley High Sheriff (1912)—The Roman site of Dinedor Camp near the city has been purchased for a public pleasure ground

Hertford—In May 1911 Lord Salisbury offered the castle and ground at Hertford to the corporation for public use at a nominal rent and the transfer of the building in which the

municipal offices are established took place in the following year

Hull—An art gallery was opened in 1910 by Mr T R Ferens M P who has largely contributed to its erection and upketp and also presented to the town in 1911 twel alms houses as a memorial to King Edward VII and a playing field near the East Park. A new who has largely

museum has been designed to illustrate the shipping and fishing industries

Leucester —A great fire in October 1911 destroyed St. George's Church and an important

hosiery factory A scheme has been put forward for a public hall near Victoria Park.

Liverpool — The cathedral has been enriched by the gift of a reredos by Mr. Mark Wood from designs of Mr. Gilbert Scott — It was decided in the autumn of 1912 by the cathedral commutee to proceed with the building of the first transept A representative exhibition of the works of Albrecht Durer was held in the Walker Art Gallery in April 1910 Mr Andrew Carnegie in August 1911 opened at Sefton Park a library worked by a staff of women

Manchester—Mr Carnegie also in the same year presented £15,000 to Manchester towards the establishment of three branch libraries. A church house with a hall seating 2,000 persons was opened in October 1911 by the Archbishop of York

2 000 persons was opened in October 1911 by the Archdishop of York

Middlesbrough —A transporter bridge across the Tees erected by the Corporation was

opened by Prince Arthur of Connaught in October 1911

Northampton —Among important new building are a Carnegie library costing £15 000

in Abington Street a theatre and new buildings for the grammar school (1911)

Normach —Serious damage was caused and much suffering occasioned by a great rain

storm and floods on August 26 1912 At Brundall near the city 8 06 in of rain fell and more than 7 m. over an oval area including Norwich and the district of the Broads damage to communications was enormous Large relief funds were raised

Notingham. - A number of improvements have been carried out in Nottingham among the most noteworthy being the widening of Carrington Street and Great Friar Gate at a cost of £60 000 A still larger scheme is that in the Carter Street area estimated to cost £139 000

Penzance -By a legacy under the will of the late Prebendary Hedgeland the Penzance had cost about \$\frac{1}{25}\$ ooo towards which Mr Andrew Carnegie gave \$\frac{1}{25}\$ ooo towards which Mr Andrew Carnegie gave \$\frac{1}{25}\$ ooo Reading —The Berkshire County Council has built new offices at Reading a fine build

ing in the Queen Anne style near the medieval gateway of the abbay Fown Council resolved on June 24 1912 to apply for sanction for a loan of £12 000 to widen

Shreusbury -A weir has been constructed on the Severn to improve hoating and the

the English bridge over that river Stoke on Trent -In 1911 the Duke of Sutherland offered Trentham Hall and a large portion of its grounds to the corporation but the offer was declined The hall was therefore

demolished and its chimney pieces and other carvings and fittings were sold

*Wakepeld**—The County Hall has been extended at a cost of £32 000

*Worcester**—Important street improvements have been effected principally in the widen ing of The Foregate High Street The Corporation has acquired Pitchroft (including the r icecourse) for a public pleasure ground and has purchased land for a recreation ground

Ancient Sites and Buildings -London -In the course of work on the fine Norman western porch of the Temple Church it was found that the carving had been coated over and it has now been revealed in almost its original state by the removal of the coating

Rochester — The restored north aisle of Rochester Cathedral was dedicated on March 10, 1911

Salisbury —Old Sarum the former city of Salisbury lies buried a mile and a half from the present town and interesting excavations were made in 1912 The area is in the care of archaeologists, under Col William Hawley FSA and the history of the site is gradually coming to light The most recent excavations reveal a good outline of the south wing of the transept of the great church and many graves have been met with most of them very near the surface. Their depths vary considerably but none seems to be more than three feet while stone coffins must have been actually on the surface For the present all the coffins have been covered up to receive attention later but it is doubtful whether anything definite will be ascertained of the occupants as the covering tones have in all instances been taken away and doubtless the contents have been inter Other things unearthed include some very fine gargovies found in the tran ept cutting The intention of the excavators in 101 was to get a general outline of the close and the cathedral and to open out the entire basement of the building when work was resumed in 1913. It was hoped that the work would be completed by 1915

Lake House near Salisbury a fine example of Elizabethan stone architecture in the occupation of Mr P W Illingworth M P was destroyed by fire on March 29 1912

After much public interest had been aroused Tuttershall Castle with its famous carved stone fire places was purchased in 1912 by Earl Curzon of Kedleston The firepla es were brought back in June and Lord Curzon intimated that he intended to restore the mansion

to its original condition and make it accessible to the public

U inchester - In July 1912 a service was held in Winchester Cathedral at which the king and Queen were present to celebrate the completion of the restoration of the cathe The eastern arm of the cathedral was practically built over a peat bog upon a raft dral which after eight centuries subsided and in 1905 the whole building threatened to collapse Over £113 000 was raised to meet the cost of restoration. New buttresses were erected and a diver working in darkness for six hours a day for six years and much hampered by sub terranean springs laid a solid bed of concrete under the piers and walls

Education — For the year ending July 31 1911 the total number of pupils in schools comprised under the national system of public elementary and higher elementary educa tion in England and Wales was 6 067 075 of these 350 621 were aged 3 to under 5, 1 301,267 aged 5 to under 7, 3 311 756 aged , to under 12 1 096 474 aged 12 to under 15 and 6 957 aged 15 and over There were 8 046 Council' elementary schools with accommodation for 3 980 046 pupils 12,734 'voluntary' elementary schools (main tained by local education authorities) with accommodation for 2 808 795 and 66 ' voluntary " elementary schools (not so maintained) with accommodation for 17 790 Also 46 "Council" higher elementary and 285 other schools with accommodation for 12 207 and 19 391 respectively and 1 voluntary higher elementary and 116 other schools with accommodation for 40 and 1 742 respectively Of the 1 734 volum elementary schools 10,941 (with accommodation for * 245 143 pupils) were

Church of England 225 (for 60 322 pupils) Wesleyan 1 075 (for 375 535) Roman Cath olic and 12 (for 9 863) Jewish The parliamentary grant for elementary education was £11,445 055 the additional amount provided by rates and borough funds being £11,635 725 for higher elementary the receipts were £1,129 699 from parliamentary grants, and £1 85, 955 from rates and borough funds

It was announced on November 28 1911 that Sir R Morant who had been secretary and chief permanent official of the Board of Education since 1903 had been appointed Chairman of the new Board of Commissioners under the National Insurance Act He

was succeeded at the Board of Education in 1912 by Mr W A Selby Bigge

On July 2-5 1912 a congress of the universities of the empire was held in London under the chairmanship of Lord Rosebery Lord Curzon Lord Rayleigh and Lord Strathcona Fifty two universities were represented. It was resolved to establish in London a bureau of information concerning the universities of the empire

In local educational circles some of the principal events of 1910-12 may be noted Oxford University -The question of the continuance of the study of Greek by mathe matical and science students has been much discu sed and at a large meeting of Convo cation it was decided in the affirmative by a great majority The preamble of a statute making Greek optional in Responsions was rejected however by 188 votes to 152 at a Congregation on November _ 1910 The new buildings of Oriel College provided by the munificence of Cecil Rhodes were opened on September 28 1911 and form a new feature of High Street opposite St. Mary's Church. The Union Society new buildings were opened by Lord Curzon the Chancellor on June 1, 1911 He also maugurated some new buildings at Lady Margaret Hall on October 22 1910 A new electrical laboratory presented by the Drapers Company of London was handed over to the University on June 22 1910 The front of Christ Church has been restored Principal of Brasenose Dr C B Heberden D C L was elected Vice Chancellor in 1912 in place of the President of Magdalen, Dr T H Warren DCL board for the University has been formed Mr Falconer Madan senior sub librarian was recommended in June 1912 by the curators of the Bodleian Library to the office of Bodley's librarian vacated by the death of Mr E B Nicholson The Prince of Wales entered Magdalen College as an undergraduate in October 1912

The milienary of the city of Oxford was celebrated at the beginning of July 1912 when a historical exhibition was collected the city entertained members of the university and others and degrees hanoris causa were confurred upon the mayor and the town clerk

Cambridge University — During 1911 Mrs Butler widow of A J Butler Fellow of Trinity College presented to the library a valuable collection of the early editions of the works of Dante Mr E W Hunnybun presented his unique collection of drawings of the flowering plants of the British Isles Mr J Willis Clark late Registrary of the University bequeathed to the library his valuable collections relating to the town county colleges and university of Cambridge including his manuscript collections. Sir Harold Harmsworth's offer to found a professorship in English literature took shape during the Michaelmas term of 1911 in February 1912 Dr A W Verrall was appointed and on his death Sir A Quiller Couch the novelist ('Q) was chosen professor in October Following a promised anonymous donation of £125 for ten years towards the stipend of a Reader in Modern History the readership has been established. A new lecture rooms building was completed and brought into use in the year 1911—12 A munificent offer of the Drapers' Company to provide a physiological laboratory was accepted by the Senate and the erection of the building was begun with this is connect ed a laboratory of experimental psychology

Other Universities—In the new buildings of Birmingham University at Bournbrook a statue of King Edward VII (the gift of the pro-vice chancellor Alderman & Clayton) has been erected to commemorate the opening of the buildings by his Majesty and Queen Alexandra on July 7, 1909. These buildings include departments of mining and metallurgy mechanical engineering chemistry and physics together with foundries and other plant for experimental purposes on an unusually complete scale and an experimental mine. There is also a large hall and library and the buildings (from the designs of Sir Aston Webb and

Mr Ingress Bell) are surmounted by a lofty clock tower Alderman C G Beale Vice-Chancellor of the University died on September 1 1912

The late Mr H O Wills has been succeeded by Lord Haldane as Chancellor of Bristol

In December 1911 intimation was given of the decision of Durham University to admit all students professing the Christian faith to Divinity degrees hitherto limited to the Church

of England

A large extension of the textile department of Leeds University has been made through the generosity of the Clothworkers Company Sir Nathan Bodington Vice Chancellor of the university died May 12 1911 at the age of 63 He was succeeded by Professor M E Sadler C B the well known educationalist (b 1861) Lord Airedale formerly Mr Jas Kitson one of the governing body of the university and head of the Airedale Foundry Leeds died in March 1911 Sir William Hepton Lord Mayor of Leeds who was knighted at the opening of the university extension met with a fatal accident while fishing in France on May 23 1911 A new training college for teachers has been established at a cost of nearly a quarter of a milhon

At Li erpool Uni ersity the foundation stone of a new engineering laboratory was laid on October 22 1910 The Liverpool School of Tropical Medicine in 1910 offered to the university the endowment of a chair in tropical entomology and in the following year Professor R New tead was appointed from the school to the new Dutton Memorial Chair of Entomology A new lecture-hip in education preparatory for teaching in secondary schools was filled by Mr. Kenneth Forbes (St. John's College Oxford) in July 1911. In the same year the cost of building a central hall for the Undergraduates. Union and of furnishing the Union was undertaken by Captain Gilmour. Sir William Hartley presented a wireless telegraphic installation for the purpose of experiment and research in 1912. A plant for tests in connection with the erosion of metals has been established in the metallurgical department a certificate in architectural design and a diploma in ophthalmic surgery have been instituted

London - Under the king s College London (Transfer) Act 1908 this college apart from the faculty of theology was incorporated in the University of London on January 1 1910 King's College hospital and medical school were separated from the college in the previous year King's College for Women became a separate institution and a site is under con sideration for new buildings to include laboratories for a home science department in connection with Queen Mary's hostel for practical training in domestic arts for which it was announced in February 191. that £100 000 had been privately subscribed. A further change in the arrangements of King's College took place in June 1911 when King's College

School at Wimbledon became a separate corporation

Proposals have been put forward for the acquisition of a site for London University to the north of the Briti h Museum in Bloomsbury and Lord Haldane as chairman of the Royal Commission on university education in London stated in Max 1912 that large sums had been offered by private donors for this purpose but alternative sites have been considered and the whole question has given rise to some dispute the reconstitution of the university being sub judice pending the report of the commission

A building tund of £100 000 was completed in February 1912 for Bedford College for Women one of the schools of London University

At Manchester University a new botanical laboratory was opened in 1911 and a physical laboratory in 1912 The engineering buildings have also been extended. An extension of the Manchester mu eum was opened on October 30 1912 providing accommodation for

geological anthropological and Egyptian antiquarian collections

Sir Charles Eliot first vice-chancellor of Sheffield University accepted in March 1912 the ossition of principal of the Hong Kong University and in November Mr. H. A. L. Fisher of position of principal of the Hong Kong University and in November 1917 in the Pisues of New College Oxford was selected to succeed him in the office. Sir Frederick T Mappin Bart one of the first pro chancellors died in March 1909. He was a generous donor to the university and the Mappin Art Gallery. The University Library erected at a cost of \$10,000. The Mappin Art Gallery are opened in 1000. He has also given a medicomechanical by Mr William Edgar Allen was opened in 1909 He has also given a medicomechanical institute the first established in England to work in connection with the hospitals New buildings to be used chiefly for the study of mining and non ferrous metallurgy were opened in 1912 in connection with the applied science department. The Company of Drapers contributed £15 000 to the cost and the corporation make an annual grant of £1 000 for ten years. A training college for teachers has been completed and equipped

University Colleges — Earl Grey who returned to Northumberland at the end of October 1911 after several years governor generalship of Canada was shortly afterwards appointed president of Armstrong College Newcastle upon Tyne

At Brighton a movement was set on foot in 1911 to establish a university college and in January 1912 it was proposed to make it a college of the University of London with courses in the arts sciences education and pedagogy at first and subsequently in medicine and law Harriey University College at Southampton threatened with the withdrawal of the Treasury grants owing to the lack of the usual support was able to collect £32 000 partly by

grants from the County Council and Southampton Town Council for the erection of a college and school of art on Southampton Common.

Educational needs have been met in Nothingham by several new schools and the university college is extending its utility by a mining department and a Byron Chair of Literature in connection with which the American ambassador (Mr. Whitelaw Reid) paid a visit to the

institution in November 1910

The expansion of the work of University College Reading is a remarkable feature of the educational work of Berkshire It has adopted the hostel system the chief institution the educational work of personne in has an opted the moster system the chief distinction being Wantage Hall, built and permanently endowed by the generosity of Lady Wantage of Lockinge. The Rt Hon G W Palmer and other members of his family have enriched the college with buildings and lands. The college has undertaken the important work of improving agriculture. It has a well-equipped experimental farm at Shinfield and in 1910 in connection with the Berkshire County Council sent a deputation to visit selected centres. of agricultural and horticultural education in the United States and Canada The college has over 1 000 students The Berkshire Education Committee has made provision for the instruction of those engaged in agricultural and horticultural work and provided an expert to teach employees on farms A travelling farnery school has also proved useful

The opening of the new buildings of the University College of North Wales Bangor by

the King took place on July 14 1911

Among other recent educational developments may be mentioned the addition of a new textile department to the Bradford Technical College opened by Lord Rotherham on October 25 1911 a residential school for the blind has been established by the education committee in the same (rty was opened on July 5 1912 At Shrewsbury School a new speech hall was opened on May 5 1911 and science buildings on October 20 of the same (yet Evisham grammar school one of the oldest in Womestarshire opened one of the oldest in Womestarshire opened on May 1911 and science buildings on October 20 of the same year Evisham grammar school one of the oldest in Womestarshire opened one was present and the oldest opened on of the oldest in Worcestershire opened new buildings in 1911 An anonymous don ation has been made (in July 1912) of £10 000 to the Chancellor of the Exchequer for educational purposes in Wales

In September 1911 a strike of school boys took place in Newcastle upon Tyne and

other places in the neighbourhood

Crime — The criminal statistics for 1911 show the following figures — England and Wales committed for trial 13 644 (males 12 301, females 1 343) convicted 11 338 Scotland committed for trial 1 401 (males, 1 215 females 186) convicted 1 1 2 Ireland committed for trial, ...,114 (males 1804 females 310) convicted 1 496

Police numbered in 1911-in England and Wales 51 203 in Scotland 2 654 and in

Ireland 11 865

Paupers -The number of paupers (exclusive of casual paupers) in receipt of relief in the United Kingdom at comparable periods was as follows England and Wales (July 1, 1911) 749 777 Scotland (Sept 15 1911) 105 478 Ireland (first week of July 1911) 75 317 England and Wales (Jan 1 1912) 792 149 Scotland (Jan 15 1912) 100 060 Ireland (close of first week of Jan 1912) 78 652 The proportion of paupers per 10,000 of the population of the United Kingdom in the summer period of 1911 was 205 and in January 1912, 216

In England and Wales for the year ending March 31, 1911 the total expenditure on rehef of the poor by the Guardians and Poor Law authorities amounted to \$15,380,420 (London £3 888,684) Of this sum in maintenance represented £3 600 327 (London £1,103,433) out-relief £3 300,319 (London, £28, 42), and lunatic asylums £ 545 189 (London £505 265) the balance being for salaries buildings loan charges etc

Old Age Pensions -The Old Age Pens on Act 1908 was modified by a further act of 1911 The pauper disqualification was removed as from January 1 1911 and poor law authorities in England and Wales were thereby reheved of the charge of 122 415 paupers in that month Qualifications for an old age pension include the age of 70 years the status of a British subject for 20 years previously to the receipt of the pension and residence in the United Kingdom (subject to certain exceptions) for 12 years out of that period The pensions are Kingdom (subject to certain exceptions) for 12 years out of that period. The pensions are arranged on a sliding scale from 5s a week for those who possess incomes not exceeding f21 a year down to 1s a week on incomes over £28 17s 6d and up to £31 10s od. The numbers of pensions payable on March 31 1912 were—in England 602 441 in Wales 40 083 in Scotland 94 319 in Ireland 205 317 and the proportion of pensioners per thousand of the census population of 1911 in that year was 17 81 in England and Wales 19 82 in Scotland and 46 86 in Ireland. According to the appropriation amounts for the year ending March 31 1911 the grant for pensions was £9 820 000 for expenses of pension committees £100 000 while the actual expenditure was—for pensions £9 682 526 for expenses £74 155 for sums irrecoverable £798 and for extra statutory payments £117—total £9 757 596. The civil service estimates for pensions for 1911-12 were £12 350 000 and for 1912-13 £12 135 000 (decrease £215 000) the pension committees in addition costing £65 000

Hospitals etc.—Memorials to King Edward VII have given an impetus to the building or extension of fospitals and among other schemes the following have been reported. A new infirmary at Bristol erected at a cost of £70 000 was opened by the King and Queen on June 28 1912. The citizens of Birmingham have raised a fund out of which will be provided a new building in Ladwood Road for the Children's Hospital in addition to a statue of King Edward by Albert Toft RA a native of Birmingham. As a Warwickshire memorial a sanatorium on Binton Hill near Stratford on Avon was decided on the Worcestershire memorial takes the form of an enlargement of the sanatorium for consumptives at Kinght wick. The North Wales counties joined the scheme of national sanatoria for the treatment of tuberculosis the Shropshire memorial took the form of a sanatorium Cheshire's memorial fund was apportioned to existing hospitals and Chester and Stockport embarked on infirmary extensions costing respectively £40 000 and £10 000. A subscription was promoted at Leeds to raise £150 000 for the reconstruction and extension of the General Infirmary and two thirds of this sum having been received the work was started in 1912. This also involves an extensive street improvement undertaken by the City Council in the neighbourhood of the Town Hall clearing away a considerable amount of slum property.

Among other institutions the erection of a home for consumptives on a site between the Lickey and the Clein Hills was started in 1912 at a cost of £14 000 by the Birmingham Hospital Saturday Committee as a memorial of the late Alderman Sir William Cook who was chairman of the Committee (also of the Health Committee of the Corporation) for many vear. To perpetuate the memory of Edwin James Oates his sisters have presented £10 000 to Halifax towards an open air school and a convaliscent home. There was opened at Crewe (Dec. 18. 1911) a railway orphanage built and endowed out of the residue of the estate of the late Mr. F. W. Webb chief mechanical engineer. L. & N. W. Railway. The Berkshire Hospital has considerably enlarged its building and now provides 200 beds and is one of the best equipped in the country. The Radchiffe Infirmary at Oxford has also begun some new buildings at a cost of £20 000.

Portsmouth was the first municipality in the United Kingdom to start a tuberculin dispensary (1911) with treatment for out patients an open air hospital and a stock of shelters disinfecting appliances etc. lent to patients visited at their own homes, the inclusive cost being £1000 a year

cost being £1000 a vear

SCOTLAND1

Population — The most significant feature in the recent economic development of Scotland is the progress of the country in industrial enterprise and its gradual decline in agricultural activity The townward trend of the rural population which has been in progress for many years is emphasised by the latest census returns The population of the country in 1911 (details of which are furnished in Tables A and B) was 4 759,445 and of this total (of whom 2 302,865 are males and 2 446 808 females) about 77 per cent live in towns and 21 per cent in the country Scotland like other parts of the United Kingdom, has felt the effect of a slackening birth rate and in the last census year the number of births registered was smaller than in any year since 1873 the year 1890 except ed and the birth rate was the lowest recorded since 1885. The total increased population The falling birth rate has of course a vital bear was less than at any census since 1861 ing on the comparatively moderate increase of the population generally but the dwin dling of rural communities cannot be wholly attributed either to it, or to the call of the Scotland has suffered seriously within recent years from emigration In 1911 alone 57 417 passengers of Scottish nationality left Scottish ports in itself a disquieting enough fact But in order to appreciate the effect on the country of the drain of emi gration, it is necessary to take a more distant view Going back a period of ten years it is found that 354,056 Scottish people left their native shores for permanent residence abroad and against that there was an immigration of 66 q21. In other words within the period mentioned Scotland was depleted by 287,135 persons

of course have made contributions to the multitude of emigrants but the effect of emigration has been chiefly felt in the purely agricultural counties
Thus compared with the census returns of 1901 at which period modern emigration enterprise had scarcely begun decreases are to be noted (Table A) in the following counties -Shet land Orkney Caithness Sutherland Inverness Elgin or Moray Fortar Clackmannan Argyle Bute Berwick Roxburgh Kirkcudbright Wigtown In those counties the staple occupations of the people are agriculture or fishing. A more cheerful state of things is revealed in the counties which contain the chief cities and towns and where the people are engaged in industrial pursuits. Thus Lanarkshire shows an increase of 107 786 Fifeshire 48,894, Dumbartonshire 25 966, and Renfrewshire 45 594 The Kingdom is unique among coun the most remarkable increase is in Fifeshire ties half of it being almost entirely rural and the other half chiefly industrial. In East Fifeshire farming and fishing are the principal occupations and its picturesque parishes and townships have suffered by the exodus of the sturdiest part of the population to other lands, a fact borne out by the decrease in the fishing communities, and the growing difficulty of procuring agricultural labour. The increase of population in Fifeshire is entirely in the West the seat of coal mining and the great linoleum manufactures

The deaths in the eight principal towns of children under one year numbered 5907. The births registered were 44 206 and the aggregate infantile mortality for the year was 134 per thousand. It ranged from 156 in Edinburgh 139 in Glasgow and Aberdeen to 112 in Greenock and 111 in Paisley.

Agriculture—The land system in Scotland is in some respects peculiar, and the huge estates and large farms on which it is based have proved a severe handicap to the enterprise of an uncommonly capable peasantry—The land agitation, a chequered history of economic struggle, which, particularly in the north, assumed a virulent and often violent form, has not however within recent years shown much vitality—The

problem of the Highland crofter is at least in process of settlement, and the operations of the Congested Districts Board have certainly had beneficial effect. The number of new holdings formed since the establishment of the Board (1898) is 611 while 1068 croft ers have obtained enlargement of holdings The last notable intervention of the Board followed on the dispute between Lady (athcart and her tenants at Castlebay, part of her Hebridean possessions, which resulted in what was known as the Vatersay Raid This the latest crofter rising in the Islands was at the time somewhat exag (soos) gerated although events proved that the tenants had reason for their action inhabitants of Castlebay eke out a slender livelihood partly by their labour on a pecuharly sullen soil and partly by fishing The land is barren and scarcely adequate to maintain one family on each holding The difficulty arose from squatters 'members of the crofter families who set up huts on the family crofts The inevitable congestion Opposite Castlebay is the Island of Vatersay, then occupied by grazing farms followed Some of the bolder spirits among the squatters "the pioneers being three lobster fishermen descended on Vatersay erected huts and proceeded to agricultural activity were some exciting encounters between the forces of law and the Vatersay 'raiders' culminating in the imprisonment of half a dozen of the latter who were however released before the expiry of their term of sentence The Congested Districts Board intervened purchased the Island of Vatersay where now is a contented crofter population, and thus the trouble ended But while the exertions of the Congested Districts Board and the Crofter Commissioners who fix fair rents have made for crofter contentment, the Highland land problem has not yet reached solution

There is still considerable heart burning over the question of deer forests The latest returns show that of those there are 198 with a total acreage of 3 360 936 Sutherland 'clearances which resulted in the compulsory emigration of fifteen thou sand people within a period of nine years still rankle in the Highland memory Doc trinaire land reformers are perhaps inclined to exaggerate the agricultural potentialities of the deer forest However the passing of the Smallholders' Act of 1911 will enable the fertility of those sporting estates to be put to the test. This Act, the most important piece of land legislation in Scotland for many years is a modification of the Pent land Bill which aroused much controversy. It by no means goes the length of that drastic measure although it retains its cardinal principle, enabling an agriculturist with small capital to obtain compulsorily a holding of 50 acres, the landlord being compelled to provide house and steading But although now on the statute book it will be some time before the Act can be operated to any great extent The leases of large farms will have to run out before the division of acres can be made. When however the Act does become operative it cannot fail to break up the historic land system of the country Among the smaller cultivators whose position in Scotland has been peculiarly hard their few and scattered acres being rented considerably in excess of the acreage of the great farms, the Act has naturally been hailed with satisfaction, nor has much opposition been displayed towards it by the large farmers

The truth is that farming on an extensive scale is no longer the profitable business it was, either for landlord or tenant. Agricultural rent in Scotland has fallen enormously, the rental of large farms being on an average only half what it was twenty years ago. And this drop, while seriously affecting the land owner has not benefited the tenant. The development of agricultural science and the growth of foreign competition have rendered farming on an extensive scale a costly and even a hazardous undertaking added to which the cost of agricultural fabour has greatly advanced. The wages of ploughmen have doubled, and in some cases trebled, and with the flow of emigration and the scarcity of labour in the rural districts they tend to increase. An important factor in the case is the altered standard of living among the rural population. The cheap and sustaining brose is now a rarity in cottar's house and bothy and even porridge has ceased to be the staple of the morning meal. On the other hand, much tea is drunk and there is a large consumption of butcher meat, a commodity almost entirely unknown among the Scottish peasantry of the past. Moreover, the Scottish hind has recently

become pervious to the influence of Trade Uniomsm, and in 1912 a rural Umon was started which already numbers thousands of members. That being the condition of things, the Small Landholders' Act makes a timely appearance. It should have the effect of stemming the tide of emigration checking the migration to the towns, and consequently re peopling the rural districts. Notwithstanding the disadvantages indicated the agricultural enterprise of Scotland shows astemshing vitality. The question of afforestation in which Scotland, like other parts of Great Britain is far behind other countries has recently been a subject of agitation and the Development Commissioners have recommended that grants should be given for the establishment of a central administration area, along with a school of forestry of not fewer than 5000 or more than 10 000 acres. The recommendation has already had practical effect the Government having agreed to purchase a tract of land in Arryleshire

Trade and Manufactures —In regard to trade a retrospect of 1910-12 reveals a period of prosperity tempered by the adverse influence of labour disturbances. Scotland is a country of multifarious industries but the staple of her trade consists of shipbuilding iron and coal mining all of which are interrelated. In the western part of Scotland of which Glasgow is the centre shipbuilding is of prime importance and the measure of activity in the Clyde wards is the truest measure of the industrial prosperity of the district. The Clyde may be described indeed as the industrial pulse of the country and the prosperity or otherwise of her vards is reflected in the national industry.

In the matter of shipbuilding the Clyde of course dominates Scotland During 1910— 1. there were improvements in the trade on the Forth and Tay but the increase of tonnage in those districts was infinitesimal when placed alongside the increase on the Clyde The following table shows the work done by Scottish builders in 1911 and 1912—

	1912			1911			
	\(\mathbb{l}\) es	Tons	IHP	\ es	Tons	IHP	
The Clyde	389	640 529	878 326	413	630 583	786 889	
The Forth	32	19 054	7 915	зĭ	ž1 319	9 ა55	
The Tay	28	17 388	10 400	31	17 303	14 770	
The Dee etc	71	11 217	18 100	31 82	12 419	23 614	
	520	688 188	914 741	537	671 624	834 628	

In the kindred branch of marine engineering a feature is the increasing share in the total output of turbines. In the record for Clydebank a typical vard the total engineering output in 1911 was 104 550 i h p. and of those 71 000 consisted wholly of turbines and 11 250 of combined turbines and reciprocating engines

In coal mining² the west of Scotland also continues to lead although its suprema y in this branch of industry is less secure. The most notable advance in output was in Fifeshire which in 1911 showed an increased production of 375 ooo tons and the industry in Fifeshire is advancing rapidly and is likely soon to outdistance Glasgow and the west of Scotland in the matter of shipment. The reason is due to the fact that the extensive Fifeshire coalfield is still in process of development whereas in Lanarkshire the coalfield is almost entirely covered with collieries and there are naturally no new developments. By the application of machinery however notably in coal cutting the capacity of the western mines has been increased. On the other hand, large new pits have recently been sunk in Fifeshire and their present output will certainly grow enormously. A feature of the Fifeshire shipping trade is the large and increasing exports to South America. The total shipments of coal from Scotland (export and bunker) amounted in 1911 to 1 680 ooo tons compared with 1 640 ooo tons in the previous year an improvement of fully 40 000 tons. The increase however

The following figures are taken from returns for 1912 with the increase (+) or decrease (-) per cent on the previous year. Acreage under corn crops 1 230 125 (+0 9) under green crops 615 361 (+1 4) clover and rotation grasses 1,465 514 (-3 0) permanent pasture 1 496 045 (-0 1), wheat 6.463 (-1 6 but in 1911 the greatest increase was recorded since 1899) barley 183 477 (+11 7) oats 949 143 (-1 5) turnips and swedes 439,185 (+0 1) potatoes 149 710 (+5 0) total under all crops and grass 4 821 249 (-0 5) Livestock—thorses 204 792 (-0 8) cattle 1 178 936 (-1 8) sheep 6 991,667 (-2 4), when 163 031 (-6) 100 (-2 4),

pigs 159,391 (+6 9)

2 Production in 1910 Argyll Dumfries and District 444 033 tons Ayr 4 018 119, Clackmannan, 405 912 Fife 8 674 404 Renfrew 132 756 Dumbarton 558 381 Linlithgow 2 059 433 Edinburgh 2,991 811 Haddington 1 088 364 Lanark 17,886 137 Stirling 3,075 782

was only about half that which took place in 1910 compared with 1909 and the falling off must be largely attributed to labour troubles. Glasgow and the west of Scotland took good position with an increase of fully 300 000 tons and in Ayrshire between the ports of Ayr and Troon there was an increase of 150 000 tons. On the other hand the Forth (excluding the Fifeshire ports) made a comparatively poor show. At Grangemouth there was a decrease of 260 000 tons and although (ranton improved its position by 130 000 tons due largely to an increasing trade with London Leith showed a falling off of 120 000 tons the condition in the Scottish coal trade on the whole is satisfactory an unpleasant factor

the condition in the Scottish coal trade on the whole is satisfactory an impleasant factor is to be reckoned with in German competition. At one time Germany constituted one of the best markets for Scotch coal but now she is entering into active competition. In the mineral oil industry, whose centre is West Lothian, the prospect is less bright. This is due chiefly to foreign competition which was severely felt during the past year with the result that prices of oil products never got a chance. The slackness of the Scottish oil market is best indicated by the drop in profits during 1909–1912. During that period off market is best indicated by the drop in profits during 1909-1912. During that period Pumpherston dividend has fallen from 50 per cent to 30 per cent Tabrax from 7½ per cent to 5 per cent Oakbank from 10 per cent to 5 per cent Young 5 Paraffin Oil Co and the Broxburn Oil Company paying percentages respectively of 4½ and 10 per cent Foreign competition is being felt also in steel manufacture. This is indicated by the

action of Scottish makers in introducing rebates (the outstanding feature in recent de velopments of the industry) with the object of limiting outside competition. It would be premature to judge of its effects and meantime it has not resulted in any marked improvement there being a falling off in supplies particularly to Canada owing to American manufacturers prices being lower than those of the home market A contingent effect of foreign competition is indicated by the continued slackness in locomotive building. The Scottish industry chiefly depended on the foreign market particularly the East and the foreign orders are dwindling although there is a slight improvement in colonial trade

The three trades already mentioned are the vitals of industrial Scotland Next to them may be ranked the various branches of textile manufactures. While the woollen trade of the borders has been in a state of almost unexampled prosperity the jute trade of Dundee during 1911 underwent one of the worst periods in its history but entirely recovered towards the end of 1912. The linen trade although satisfactory has been hard hit by foreign competition which has been felt in its chief seat Dunfermine and the cotton trade has suffered chiefly from the same cause. It is still located principally in the east end of Glasgow but many of the great mills of Bridgeton where once it flourished are now devoted to other enterprises and stand pathetic witnesses of a great decline. The thread industry however continues a huge industrial asset to the West, the headquarters of the great Coats combine being in Paisley Another branch of the textile trade that of dyeing has under gone a change. The Combine of a few years ago has resulted in the concentration of the in gone a change The Combine of a few years ago has resulted in the concentration of the in dustry and many of the smaller works at different points in the west of Scotland have been closed The total value of produce and manufacture from the chief Scottish ports was Glasgow £29 129 406 Leith £6 875 636 Grangemouth £2 239 581

A general consideration of the industrial outlook reveals the eastern part of the country

as portentous of greatest development and the increased activity here is almost entirely limited to Fifeshire. That county in its western area has grown enormously in industrial importance within recent years. The basis of its pro perity is the wealth and extent of its coalfields and within the coal area many important manufactures have spring up notably linoleum the staple trade of Kirkcalds and now extending to other parts of the Kingdom Fifeshire ports also continue to grow in importance notably Methil which with the completion of the new dock will contribute to make the Fifeshire ports of the Forth serious com petitors with the west in the export of coal and iron The establishment of the naval base

petitors with the west in the export of coal and from. The establishment of the naval base at Rosyth in process of construction since 1908 will stimulate industry in the western part of the county, and already in the neighbourhood of the dock a town is developing.

Fishing—The fishing industry of Scotland has changed greatly in the manner of its pursuit. Formerly, it was interwoven with the work of agriculture particularly in the Western Highlands, where crofters profitably combined the harvest of the waters with the harvest of the land. Those were in the days of sailing boats the possession of which was within the reach of thrifty fishermen. The advent of the steam drifter is gradually crushing out the modest sailing boats and their humble owners who find it impossible to compete counter highly engaged differs. Which represents highly engaged them, properful capitalist. against highly equipped drifters which generally have behind them powerful capitalist influence. The industry is now largely in the hands of large combines, who own a fleet of drifters and although the new order has doubtless proved beneficial to the consumer it has with the position as member of a drifter crew with little prospect of ever having a boat of his own The combine stem is rapidly spreading Salmon fishing on the Tay for example is now monopolised by wealthy companies whereas formerly the fishings were distributed among small fishermen. The effect is seen in the changed complexion of Newburgh whose community until a few years ago was almost entirely engaged in the Tay fishings
sunk to a town of little importance in salmon fishing and such prosperity as it still enjoys
is based on the manufacture of linoleum
For administrative purposes the Fisheries Board

of Scotland have divided the Scotlish Coast into three districts, namely (1) the East Coast—Eventouth Leith Anstruther Montrose Stonehaven, Aperdeen Peterhead Fraserburgh Banfi, Buckie Findhorn Cromarty Heimsdale and Wick (2) Orkney and Shetland (3) West Coast—Loch Broom Skye, Fort William Loch Fyne Campbeltown Rothesav Greenock Ballantrae Stornoway and Barrow The tonnage of boats belonging to those divisions is as follows East Coast, 101 721 Orkney and Shetland 22 517 West Coast 15 735 a total of 139 973 While the Fishery Board has rendered good service to the industry the undoubted grievances of native fishermen in regard to foreign trawling remains prepared the Scottish Board in 1885 obtained statutory powers to close portions of the unremedied The Scottish Board in 1885 obtained statutory powers to close portions of the territorial waters against trawling and a large area of east coast waters was closed in the interests of scientific experiment. It was found that the closing of those waters gave great interests of scientific experiment. It was found that the closing of those waters gave great satisfaction to both line and drift fishermen, and as the Board were anxious to encourage development of those methods of fishing in preference to beam trawling they secured further powers under the Herring Fishing Act of 1889 which enabled them to close against all forms of trawling not only the whole territorial waters of the Scotch coast but a large number of areas defined in the Scheduled Act as lying outside the territorial waters properly so called Among those scheduled areas were the Moray Firth and the Firth of Clyde By inter national law the power of a state to make regulations with regard to methods of fishing is limited to its territorial waters. There are a number of regulations existing with regard to the fishing boats working in the North Sea but these regulations have been made under International Conventions and are to be only obeyed by the subjects of the high contract But apparently Parliament can make regulations which are only obligatory to British fishing vessels. Hence while the latter cannot trawl within the Firth of Clyde or the Moray Firth except in a very limited area foreign trawlers may fish anywhere in the considerable area which lies outside the area known to International I aw as Scottish ter ritorial water Thus Dutch and Norwegian vessels at Fleetwood fish in the Clyde of them are doubtless bond fide foreign boats but for the most part they are English vessels registered either in Norway or Holland. Foreign trawlers find it convenient to work Scot tish waters and to land their catches in Fleetwood and they are enabled to do so owing to a flaw in the Herring Fishing Act of 1889. A slight amendment prohibiting the landing of fish in England as well as in Scotland by such vessels would remedy the difficulty

The fishing fleet comprises 9889 vessels with an aggregate tonnage of 139 973 and a total value of equipment and fi hing gear amounting to £5 000 028 the number of persons cm ployed in the Scottish fishing trade and industries subsidiary thereto is 92 060 and of those 39 208 man the fleet the remainder being engaged in operations on shore. Eleven vessels employing 4-4 men 145 of whom are British are engaged in whaling. In 1911 730 whales were landed and the value of the products amounted to £71 223. The outstanding feature is the continued decline in the number of boats the quantity and value of the gear and the numbers employed in the industry. The cause of this decline is chiefly due to the replace ment of sailing boats by steam and motor driven vessels but fishing like agricultural com munities have suffered considerably from the drain of emigration. It is difficult to get fishermen to divulge their earnings but the following figures may be regarded as authentic relating to a particular Scottish district. Steam trawlers (highest) £1610 (lowest) £000 (average) £1388. Motor Boats (highest) £1610 (lowest) £600 (average) £973. Anning Boats (highest) £910 (lowest) £120 (average) £412. The output of sailing boats stadily declines the number of vessels constructed in 1911 being 164 valued at £7940 compared with 193 valued at £8334 in the previous year. The total quantity of fish exclusive of shell fish landed in Scotland was 8 709 655 cwts valued at £3 100 387. Compared with 1910 this shows an increase of 1,286 470 cwts and an increased value of £211 280 the second highest result on record. In 1911 1.767 544 barriels of herring were exported 311 188 being Crown branded. The total of cod ling and dried fish exported was 104 058 cwts nearly all to Ireland. The total salmon carried on Scottish railways was 27 390 cwts. Railways—The profit earning capacity of the Scottish railways has declined due in large measure to the development of the tramway enterprise and the increased use of motor cars. Through the industrial parts of the country there is now a complete system of tram way communication linking districts many miles apart. The extent of the tramway under taking may be gathered from the fact that the passengers carried in 1911 numbered 276 munities have suffered considerably from the drain of emigration. It is difficult to get

taking may be gathered from the fact that the passengers carried in 1911 numbered 276 745 475. The effect on railway enterprise is obvious, and in order to meet the competition 745 475. The effect on railway enterprise is opvious, and in order to an arrangement which has resulted in a the different Railway Companies recently came to an arrangement which has resulted in a general increase in passenger fares considerable curtailment of competing trains, and a general increase in passenger fares. The most important decision in railway law in 1911-12 was that given by the Railway Com missioners sitting in Edinburgh on the demurrage case brought by the Scottish traders against the principal companies. The decision was almost entirely in favour of the Com against the principal companies. The decision was almost entirely in Tavour of the Companies, and its importance lies in the fact that it gives them full use of their wagons for their legitimate purpose thus setting loose a large capital previously locked up in rolling stock, which had virtually been seized by the trader as free storage accommodation.

The Scottish railways are behind those of England in regard to electrification a begin ming not yet having been made. On the other hand a series of successful experiments were carried out with a small electrical driven vessel and it is probable that the next step will be

the construction of a large ship for service. It is appropriate that this departure should find its home on the Clyde which 100 years age witnessed the initiation of steam propulsion with the launch of the Comet are event which was elaborately celebrated on the Clyde in 1912. While there has been intile in the way of railway development there has been a growing agitation for improved communication by water. An ambitious project has been advocated notably by Sir Charles Campbell that a ship canal should be constructed uniting the Forthwith the Clyde on the route of the present shallow canal or by a new route embracing Loch Lomond in its course. From a naval point of view it is urged that such a canal would be an important adjunct to Rosyth dock. So far the scheme has failed to win much support from the communities and obviously the sum that would be required for its fulfill ment is of such magnitude that it could not be ventured upon without Government subsidy

Education - The most remarkable feature of recent educational development in Scotland has been the growth of technical education Technical schools are now established in every important town and under the auspices of the county council the system has been extended to provide instruction for those in rural districts. The chief centre is naturally Glasgow, whose Royal Technical College (the 'Royal distinction was conferred upon it in 191) is the largest institution of its kind in the United Kingdom and among the largest in the world The work of the College is associated with that of the University and an endeavour is being made to bring the relationship still closer The Scotch Universities themselves are proving responsive to the new spirit in education and although strong as always in the Humanities they are extending their curriculum to include instruction of a more utilitarian sort This tendency is most marked in Glasgow whose greatest development has been in the direction of Engineering Science and Chemical Research St Andrews the most ancient seat of Scottish learning which celebrated its quin centenary in 1910 on an impressive if less imposing scale than the sister University of Aberdeen which celebrated her quatercentenary in 1906 remains largely a centre of pure scholarship but utilitarian tendencies are evident in the devel opment of the seats of learning in Edinburgh and Aberdeen The princely benefaction to the Scottish Universities made by Dr Andrew Carnegie in 1901 has tended to strengthen the democratic character of Scottish Academic life which never indeed has been so exclusive as in the great English universities. With recent developments in Secondary and Higher Grade Schools and the elaborate system of Continuation Classes the Scottish educational system may now claim to link in an unbroken chain the Ele mentary School with the University

The most notable legislative event of recent years was the Scottish Education Act of 1908. It greatly extended the powers of school boards in the direction of feeding necessitous children the medical inspection of pupils and the compulsory attendance at continuation classes. It has also to some extent checked the spirit of sectimanism the great church training colleges being now controlled by representative committees. Sectarianism however has never been a conspicuous blemish in the Scottish educational system and the great Presbyterian bodies the Church of Scotland and the United Free Church who formerly controlled the Training Colleges lovally fell in with the new National scheme. The Act has not however affected to any appreciable extent the old school board areas and it retains the system of cumulative voting which leads to many abnormalities in representation.

Administration —Scotland has a comprehensive system of county and municipal government but as regards the country generally there is a lack of co ordination and greater national control is obviously desirable. Thus it is still necessary when any great scheme of county or city development is promoted to have it considered by Parliamentary committees in London. The Private Bill Legislation Act passed some years ago, has mitigated only to a slight extent this old standing grievance. Perhaps however, it is in educational affairs that the system of administration proves most irritating. The headquarters of the Scotch Education Department are still in London although much of the clerical work hitherto done there has been transferred to Edinburgh. It is felt that the educational authority should be concentrated in Scotland and the desir ability of rearrangement seems obvious from the fact that there are in Scotland including Inspectors, 118 officers of the Education Department, and only 50 in London

In the sphere of municipal activity the most notable event has been the extension of Clasgow boundaries The total area of the city is now 19 082 acres an addition of 6107 and the population of the city has been increased from 784 456 to 1 010 000 The scheme as

IRELAND 594

originally formulated would have increased the area to 33 166 acres and would have embraced originally formulated would have increased the area to 33 166 acres and would have embraced large tracts of rural land the object of the promoters being to give effect to the provisions of the Town Planning Act. The original scheme was practically endorsed by the House of Commons Committee but it was curtailed to the extent indicated when it came before the Committee of the House of Lords. Greater Glasgow now includes the adjacent burghs of Govan and Partick and portions of the county areas of Lanark and Renfrew. The places absorbed however are all populous and the density of the population in the extended city is only slightly less being 52 8 per acre against 60 4 and it is still largely in excess of the other large cities of the kingdom. The valuation has been greatly increased. The latest valuation for the smaller area was £6 000 000 and the extension of boundaries is estimated to increase the bushous £2 000 000. Under the Roundares Act however it is stimulated that no this by about £2 000 000 Under the Boundaries Act however it is stipulated that no increase of rates can be imposed on the places annexed until the lapse of five years so that during that period the cost of improvements will fall upon the ratepayers within the old city boundaries. Dunfermline has also extended her boundaries to include Rosyth and an elaborate scheme of extension is at present under consideration by Dundee

Poor Law—The number of poor in receipt of relief in 1911 was 73 642 and 40 370 de pendents and the burden of local rates which steadily advances having increased during a period of 15 years by 1/5 4d or 48 9 per cent is chiefly due to the increase of the poor rate education and sanutation. The latest available returns 1911 shows the total amount paid on local taxation to be £1 286 396 The most recent development in the relief of the poor is under the Unemployed Workmen's Act of 1905 The total population of the areas in which distress committees are engaged is 1 989 951 being 41 81 per cent of the population of Sections. Scotland The total receipts from all sources from operations under the act amounted in 1911 to £29 182 which includes £14 300 from the Parliamentary Grant £5737 from the rates £2254 from voluntary contributions and £6315 from the work performed by the un employed The expenditure was £29 701

Religion —Presbyterianism continues the dominant faith in Scotland but recent years have witnessed a considerable growth of the Roman Catholic community and of the Scottish Episcopal Church Latest returns give the membership of the Church of Scotland (1687 Churches) at 706 653 United Free Church (1620 Churches) 501 573 Free Church (150 Congregations) 60 000 Episcopal Church (338 charges) 52 029 The Roman Catholic Church has 398 Churches Chapels and Stations 550 Priests and the Roman Catholic community is estimated at 1 000 000 Politically Scotland has never manifested any aggressive desire for national self government and she has undoubtedly benefited materially from the Union with England There have been frequent attempts to stimulate interest in Home Rule for Scotland but they have proved abortive owing to the apathy of the people. In another sense however, there has been within recent years an undoubted revival of national sentiment reflected in the widespread interest now taken in Scottish customs language and literature—It has found expression in the establishment of a Scottish Chair in the University of Glasgow to further which project a Scottish Exhibition was held in the city in 1911 resulting in a surplus of \$20,000 which with other contributions has enabled the foundation of a Chair of Scottish History and Literature—And although there cannot be said to exist a national demand for Home Rule in the form of a National Parliament there is as indicated widespread dissatisfaction with the present conduct of national ad ministration. The creation of the Scottish Office under a Secretary for Scotland has rather added to the confusion and among all sections of the community irrespective of party there is a strong feeling that the Scottish department should be situated in Edinburgh and under the control of a national administrative council (DONALD MUIR)

The material prosperity of Ireland reached a higher point in 1912 than at any period during the past century It is true that, according to the census returns published in 1911 the population is still declining but prosperity cannot be reckoned in terms of population alone The population of Ireland as given in these returns, which refer to the middle of 1910 is 4,381,951 (Details are furnished in Tables A and B) During 1911 the marriages registered in Ireland numbered 23 473 the births 101,758 and the The marriage rate was 5 37 per thousand of the estimated population deaths 72,475 an increase of 0 32 on the preceding year the birth rate was 23 3 per thousand the same as the preceding year, and the death rate was 16 6 per thousand, 0 5 below the rate of the preceding year. Since the census of 1001 the population has decreased by 76 824 or 1 7 per cent This is the smallest decrease known since the institution of the census Not only the decrease but the rate of decrease is rapidly slackening very unevenly distributed over the four provinces—36 966 in Connaught 43 103 in Munster, 7400 in Leinster, and 4254 in Ulster There is a large growth in the population. 1 See E B xiv. 742 st seq and articles on the various counties and towns

of the cities of Dublin and Belfast—over 18 000 and 36,000 respectively. In these cases the increase is due to internal expansion

In certain counties however, a slight but appreciable tendency on the part of the population to move from the rural to the urban districts may be noticed. This feature is especially marked in County Longford, the West Riding of County Cork. County

506 IRELAND

Cavan and County Sigo, where the urban population has increased by 6 per cent at the expense of the rural, County Roscommon 7 per cent and County Leitrim 8 per cent Allowing both for the natural growth of the more important towns and the urban expansion in these districts at the expense of the rural population the gross decline of agricultural population for the whole country during the decade is approximately 146 000 The total emigration represents a correspondingly large number but the figures for 1911—31 058—are the smallest on record since early in the century

Agriculture —Most of the decline represented by these alarming figures must be allotted to the earlier years of the decade. Since 1909 the rural decline has been sub stantially checked. The earlier years of decline in arable cultivation and consequently in agricultural population, were reflected in the increased production from pasture lands and of cattle feed generally and the material increase in the number of store cattle. The cattle industry no longer flourishes directly at the expense of cultivation.

The total area of corn and green crops including flax and fruit in Ireland in 1912 was 2 357 969 acres an increase of 9148 acres on the preceding year. The corn crop growing on 1 265 597 acres showed an increase of 11 166 acres. There was a decrease of 211 acres in the total area under wheat but this was entirely due to the heavy decrease—1110 acres—in Connaught. The area under oats showed an increase of 5736 acres. In Ulster the increase was 10 379 acres while the acreage had decreased in the other three provinces. The increase in barley—7186 acres—was distributed over the four provinces. The total area of potatoes was 595 218 acres an increase in the year of 3959 acres there were increases in Leinster and Ulster (876 and 3670 acres) and decreases in Munster and Connaught (1146 and 1441 acres). The acreage under turnips showed an increase of 956 acres to 271761. The total area of hay was 2479 159—a decrease of 33 244 acres in all the provinces. The approximate yield per acre was oats 51 i bushels barley 44 i bushels wheat 38 bushels. The total yield of potatoes was approximately 31 inflion tons and of hay 51 million tons. The area under flax had decreased by 11 701 acres in 1912 to 54 917 the decrease being general through out most of the flax growing counties. The area of pasture including mountain grazing was 12 418 867 acres—a decrease of 11 931 acres. There were in 1912 4 848 498 cattle in Ireland an increase in the year of 136 778 617 532 horses or +1201 3 828 829 sheep or -78 607 1 323 957 pigs or -91 162 25 525 724 poultry or +77 923

Two factors have to be taken into account in a consideration of the rural regenera tion of Ireland—the growth of co-operative principles and the effect of land purchase In 1908 the Irish Agricultural Organization Society became involved in a dispute with the Irish Department of Agriculture and Technical Instruction The political aspect of the question may be disregarded. Its economic aspect is contained in the charge that the Organization Society was an association trading for profit Russelli, who succeeded Sir Horace Plunkett2 as vice president of the Department in 1907 informed the Council of Agriculture in 1908 that he had decided to withdraw the Department's subsidy to the Society but he undertook to continue a diminishing grant for three years £3000 for the first year, £2000 for the second and £1000 for the third - The Agricultural Board later decided that the grant should be withdrawn at the end of 1908 Under the provisions of the Development Fund Act of 1909 the De velopment Commissioners were empowered to make advances for the organization of co operation either to a Government Department or through a Government to a voluntary association not trading for profit. In accordance with this provision, the Irish Agricultural Organization Society, like the similar societies in England and Scotland, applied for a grant in aid. The application was referred to the Department of Agriculture which reported adversely Much delay ensued but, nearly a year after the application was sent in the matter was submitted to the Council of Agriculture This body endorsed Mr T W Russell's action Mr Russell then proposed to the Development Commissioners that a grant should be made to the Department for 'non controversial co-operation ' The Commissioners rejected this proposal early in 1012, and decided a few weeks later to make the grant on their own responsibility to the Irish Agricultural Organization Society—a course which had been repeatedly advocated by

¹B 1841 Originally an Ulster Liberal Unionist (M.P for S Tyrone from 1886) and in 1895-1900 parliamentary secretary to Local Govt Bd in Unionist ministry but went over to Liberal side in 1905 A well known Temperance advocate

²B 1856 See E. B xxi 857

the Chambers of Commerce of Dublin and Belfast, both of which bodies repudiated, as did the Society itself the suggestion that the Society was entering into direct competition with legitimate traders. The Commissioners stipulated, however that certain changes should be made in the composition of the governing committee of the Society as a condition to the grant of a subsidy. The temporary loss of State assistance does not appear to have injured the vitality or the financial stability of the society. According to the statement made at its annual meeting in 1911, it has about 900 branches, a membership of 100 000, and a turnover of nearly £3 000,000. In the spring of 1912 a Commission of Inquiry began to investigate the system of agricultural credit instituted by the Society. In the course of its proceedings it was found that the Department of Agriculture had lost only £100 out of £18 000 advanced to credit societies, and this loss was more illusory than real since it did not include reference to the interest paid on advances. It thus becomes clear that the department is making a handsome profit out of the agricultural credit societies and that the system is working admirably

The most interesting event of Irish economic history during 1910-12 was the establishment in 1910 of a society called the United Irishwomen. This body is affiliated to the Irish Agricultural Organization Society and was founded in order to do on the social side of rural regeneration what the Organization Society has done and is doing on the economic. It was intended in effect to develop the principle of better living which is one tenet of the threefold faith of Irish rural reformers. Its policy includes the teaching of cookery poultry management and dairying and the encouragement of village crafts such as the making of furniture for cottages. Beginning with three branches and finding the district of Connemara one which especially eagerly awaited development the organizers of the United Irishwomen were able in a year to announce the existence of fifteen branches. This work is still rapidly expanding

Two incidents may be noted as indicating the growth of popular appreciation of Sir Horace Plunkett and his work. In the early summer of 1970 the Department of Agriculture combined with the Estates Commissioners to reconstruct a little patch of rural life in Castlerca. The first action of the new land holders was to combine with one another in order to apply co operative principles. This Mr. T. W. Russell admitted was but a sample of what is going on all over the West. The other incident was an

All Ireland Model Election conducted in December 1911 by the Proportional Representation Society of Ireland Intended as an 'All Ireland' election it was ultimately confined in operation to Ulster and the immediate vicinity of Dublin It resulted in the return at the head of the poll of a curious collocation of names—Mr John Redmond Sir Edward Carson and Sir Horace Plunkett

The new land purchase policy which was instituted by the Act of 1909 has not been The changes from the provisions of the Wyndham Act may be justified by results briefly reviewed Instead of cash payments landlords were to receive stock at 3 per This stock was issued on a falling market and cannot appreciate owing to the embarrassment of Irish estates about half of each issue has had to be thrown back on the market for the redemption of mortgages Instead of paying £3 58 per £100 tenants were to pay f3 10s without any reduction in the period of repayment A large propor tion of the holdings of Ireland are valued at less than £10 a year A presumption was created that all holdings below that value were to be deemed uneconomic,' with the result that the whole of Connaught with the counties of Donegal Kerry, and part of The Congested Districts Board charged with conducting Cork became 'congested purchase in this area is consequently swollen to unmanageable size. Comparisons between the work of the Wyndham Act and the Birrell Act show the following results From 1903 to 1909 the number of potential purchasers was 217 299 from 1900 to 1911, or a third of the previous time the number was only 8002—a decrease of over 80 per Under the Act of 1903 landlords were assisted in the repurchase of their demesnes after selling their properties Under the Act of 1903 the advances on resale to owners sanctioned by the Land Commission numbered 205, under the Act of 1909, up to the end of the financial year 1911, only two

Manufactures +- Although agriculture still is and must remain, the chief industry of the country, Ireland is continuing to fall into line as a manufacturing country. Irish expansion in this direction is largely due to the industrial revival movement local forces have been at work in recent years in forwarding this revival. They received a considerable stimulus from the date (1907) of the International Exhibition in Dublin There have since 1909 been exhibitions on a smaller scale but of a similar nature in Belfast, Cork Limerick, Drogheda Londonderry and elsewhere throughout the country The U1 Breasil exhibition at Ballsbridge in the summer of 1911 gave another immense impetus to the movement. It is a common fallacy to suppose that the industrial life of Ireland is confined to Ulster This is even less true at the present time than was the case four or five years ago. In many towns of the other three provinces thriving industries are to be found, small, indeed when compared with the industries of Great Britain, but still appreciable The Made in Ireland movement exercises an in creasingly strong protectionist influence. It is supported by various political and economic associations such as the Gaelic League, Sinn Fein, and the Industrial Develop ment Associations Irish industry covers a far wider range than is commonly supposed Industrial Development Associations have been formed in addition to the original ones at Dublin, Belfast and Cork in Limerick Waterford Wexford, Sligo and other smaller towns The Cork Association in its annual report for 1911 speaks of an exhibition of Irish goods at its offices as including samples of woollens linens flannelettes calicoes threads silk gauze maps stationery mosaics, marbles lead pipes etc. The Dublin Association is not unnaturally more successful than any other. This is illustrated by the reports for two consecutive years. In the 1910 report articles which could and ought to be manufactured in Ireland include paper bottles stained glass church and school furniture and accessories, shop-fronts general office requisites soap matches candles and flour In the report for the next year (1911) it is stated that all these arti obtainable in Ireland on competitive lines.

There are at present some twenty hosiery factories and as many tweed mills in Ireland These new industries appear to be making progress, though it cannot be specifically estimated. The wodlen making industry has consolidated its position. A factory in Galway paid in 1912 a dividend of twelve per cent. There are eleven tobacco factories besides the established ones in Belfast scattered over the West and South employing 3000 hands. All of them suffer from the competition of the Imperial Tobacco Trust, this reason was advanced for the closing of a Dublin factory, which employed 300 hands in August 1912. The Irish tobacco industry, receives a small subsidy from the Treasury, but this ceases in 1913.

for the closing of a Dublin factory which employed 300 hands in August 1912. The Irish tobacco industry receives a small subsidy from the Treasury but this ceases in 1913. The linen industry is by far the largest industry in Ireland. The number of spindles is returned approximately at 946 000. The number of power looms shows a large increase to 36 892 of which 21 000 are in Belfast 13 000 elsewhere in Ulster while the rest represent small factories in Dublin Cork Dundalk Drogheda and elsewhere. Next in importance

is the shipbuilding industry

The industrial troubles of 1911 and 1912 affected Ireland equally with the rest of the United Kingdom. In August 1911 a strike of the Dublin seamen and firemen interrupted the trade of the capital though only for a brief period. A railway strike (which had no connection with the strike in Great Britain but was begun in sympathy with a porterage strike) followed and there were several local disputes, of which the most serious were a bakery strike in Dublin and a transport workers stoppage at Wexford The coal strike of March-April 1912 which sent up the supply to famine prices, did an indirect benefit to Irish industry by causing a development which has since been par tially maintained, in the output from the collieries at Athy and Kilkenny

Fisheries —That the Irish fisheries are a valuable asset to the country is established by the fact that the total value of fish landed in Ireland and sold was according to recent returns £375 636 against a total of £363 801 in the preceding year But there has been a senous falling away in the number of vessels engaged in the Irish sea fisheries—a decrease of 324 vessels to 5652. The fisheries give employment to some 20 000 men. The Department of Agriculture and Technical Instruction has granted loans to fishermen for the purchase of boats and gear and the installation of petrol power. A station was established in 1910 at Courtmachierry where improved methods of curing, classification and packing are taught. The whale fisheries of Inishkea and Blacksod, which were decaying, have also been fostered.

Endeavours to extend the sale of fish in inland towns are by help from the Department being continued in 1911 there were about 150 towns on the Department's official list

being continued in 1911 there were about 150 towns on the Department's omicial list.

Commetce—In the fiscal year of 1909-10 the value of imports amounted to £63 779 709 and of exports to £60 946 186. In the fiscal year of 1910-11 the value of exports for the first time on record since the institution of these returns in 1904 exceeded that of imports Imports were returned at £65 044 477 and exports at £65 844 255—an aggregate of £130 888 732. This is nearly £28 per head of the population while the corresponding figure for Great Britain was just over £20. Excepting Holland Belgium Switzerland and New Zea land the external trade of Ireland is greater in proportion to its size than that of any country in the world. There is certainly no other country where the figures of external trade proportions are closely approximate to a measure of the actual productive prospective. The trade more closely approximate to a measure of the actual productive prosperity. The value of the export transit trade to Great Britain is officially estimated at four fifths of the total or about £52 600 000. There has been a substantial increase in the export trade. of varns especially to foreign countries The value for 1910 was £1 197 000 The increase was especially marked in the exports to the United States linen goods form two thirds of the Irish trade with that country In recent years largely as the result of the efforts of the Made in Ireland movement certain foreign countries have begun to show separate details for Irish imports in their trade returns. These returns illustrate the present variety and extent of Ireland's foreign trade. Those for 1910-11 are the latest available. The value of

French imports from Ireland was £141 000 (mainly salted meat pork cereals and yarns)
Belgian £4000 (iron steel and linens) Dutch £234 000 (yarn malt flax wool and grass
seed) Cuban £216 000 (cotton linen and woollen tissues) These figures represent the
direct trade. The actual trade is many times greater but the bulk of it passes through
Great Britain and is credited under that heading by the Customs authorities

The leading article of export from Ireland remains live stock. Nearly all of it is imported Reference has been made above to the causes of decline under this head by Creat Britain In the year ended March 31 1912 the numbers of the live stock export had decreased by more than 200 000 as compared with the preceding year. The numbers stood at 1 742 477 and the value at £13 5-0 754. Cattle accounted for 689 550 of the numbers and for £9 508 083 of the value. At the end of June 1912 the export of cattle to Great Britain came to an abrupt standstill in consequence of the discovery of foot and mouth disease in cattle de spatched from Swords County Dublin and the subsequent closing of English ports against Irish cattle The weekly loss to Ireland while this embargo (which was imposed at the height of the fat cattle season) rested was estimated at a minimum of \$20,000. The disease was isolated with more success by the Irish Department of Agriculture than was the case in Great Britain but during the first weeks after the outbreak the necessary standstill order resulted in the stagnation of the country fairs as well as the cessation of export. Six weeks after the outbreak all Irish ports except Dublin. Drogheda and Dundalk had been opened but only for immediate slaughter at the English ports of landing. As a result the fat cattle trade suffered enormously and as the season advanced the case of the store cattle trade became even worse The calamity concentrated the attention of Irish stock raisers on the ments of the dead meat trade whose establishment has been urged for several years past by the Irish Agricultural Organization Society. It was also recommended by a deputation of Irish farmers which in 1910 at the instance of the Department of Agriculture investigated the dead meat trade of Scotland. A dead meat trade was established experimentally at Wexford and Drogheda and has since flourished. Late in August 1912 a movement to organise the trade throughout the country was set on foot

The principal items of the Irish import trade remain chiefly the same as those of Great Britain in the past two years In the case of articles similar to those produced in Ireland however it is noticeable that the bacon import had declined in value (1910–11) to £1 659 000 The butter import for the same year valued £478 000 The decline during the past two years in the Irish butter export was not as an enquiry conducted by the Agricultural Oryears in the hish butter export was not as an endury conduction, but to an increase in home consumption for which the better living in rural districts which the Society promotes is responsible. In this connection the increase of deposits and cash balances in the Irish Joint Stock Banks. Trustee Savings Banks and Post Office Savings Banks (£1 910 000) in 1909 to £2 402 000 at the beginning of 1911) is worthy of notice Banking accounts also show much larger amounts under the head of advances to customers made mainly for

industrial purposes and land improvement

Communications -Railway traffic returns reveal similar features of expansion The total receipts for 1909-10 were £41 180 023 and for 1910-11 £41 302 720 These returns are the highest on record The railway strike in the summer of 1911 resulted in a slight are the nighest on record. The railway strike in the summer of 1911 resulted in a slight setback but this was successfully overcome. In 1910 the main railway companies met for the purpose of developing the inland sale of fish referred to above the demand for reduced freights and through rates for this traffic. The Great Southern Railway has made arrange ments for a junction with the proposed Athy and Queen's County Railway at Athy a project whose completion will benefit the coalfield of the district. The Widland Railway has required the doubling of the last harman Athanae and has completed the doubling of the line between Athenry and Attymon Junction and this

is now being used for traffic. This company contemplates the opening of a new station in County Mayo between Westport and Castlebar. The Dubba and South Eastern Railway has taken in hand the diversion of the line from Kulinev round Bray Head to Greystones space recent dangerous encroachments of the sea have rendered this course necessary. The Viceregal Commission on Irish railways issued its final report in 1910. Its majority report advocated State purchase and nationalisation but a minority report dissented from this recommendation. The Royal Commission on the Canals and inland Navigation of Ireland issued its final report in the following year. Here again State purchase and control were recommended. This report strongly urged that the problem of arterial drainage and relief from floods should also be attacked by a central authority. The pressing nature of the drainage question has been emphatically evidenced by the flooding during the winter of 1911-12 of the basins of the Shannon Barrow and Bann and the consequent wholesale damage to property and public health. Nothing has yet been done in any of these directions Projects for no less than 83 new railways were brought before the Viceregal Commission but even improvements of the existing light railway system had to be abandoned since there is no means of raising new capital under the system of legislation by which they were constructed. Road improvement proceeds slowly but surely under the local authorities. The Local Government Board of Ireland during the year 1911-12 made orders extending the limit of expenditure in 28 rural districts contained in 13 counties. In 16 cases the increase was required to permit road improvement by steam rolling to be undertaken in one case to provide for the repair of sudden damage by the sea and in one case for the widening of dangerous bog roads. Loans of a total amount of £71 500 were sanctioned. In these districts (all in the West) the extension of communication facilities has been rendered desir able by the fact that these

Local Government — The Local Government Board for Ireland had occasion up to 1012 to pass in its annual reports favourable judgment on the smooth working of the various bodies created by the Act of 1898 but the report issued in August 1912 contains nothing under this head from which it may be inferred that the Irish County Councils and District Councils are continuing to do satisfactory work. At the beginning of 1912 the restriction preventing women from being members of County and County Borough Councils was removed bringing the Irish law into harmony with that in force in England and Scotland The new Act became operative for the first time at the municipal elections of January 1912 Three women were successful at the polls one in Dublin (Miss S C Harrison, well known for her interest in distress work) and two in Waterford. New Acts in connection with local administration in Ireland which came into force, at the same time were an Act empowering the Dublin Corporation to strike a halfpenry rate for the maintenance of the Dublin Municipal Gallery of Modern Ari and air Amending Act to the Irish Labourers Act, which granted another £1 000 000 for the building of labourers cottages and enabled the Local Government Board to proceed with the scheme already lodged The working of the Labourers Act gave an oppor tunity to the United Irishwomen to turn their attention to the provision of a proper water supply in the proximity of labourers cottages an object in which an active interest was also taken by the Women's National Health Association the organization which the Countess of Aberdeen instituted in 1907 in order to combat the growth of tubercu This association has now 150 branches with about 19 000 members it has established two garden playgrounds in the most congested districts of Dublin and a third is in course of preparation it has established the Collier Memorial Dispensary for the prevention of tuberculosis which centralises the work previously carried on by the Dublin Hospital Tuberculosis Committee and formed the Dublin Samaritan Committee in connection with the dispensary besides several such committees in connection with different branches it has established a Preventorium at Sutton a Pasteurised Milk Depôt and numerous babies clubs in Dublin and throughout the country association has also undertaken in the interval before the County Councils construct the necessary machinery to work the sanatorium benefit under the Insurance Act, and has received £25,000 of the grant to Ireland for this purpose The Registrar General's return for 1911 attributes some part of the fall in the death rate (16 6 for 1900 or 5 below the rate of the preceding year) to these agencies It is also due in part to the

operation of the Old Age Pensions Act which under the original estimate in 1909, affected some ,0000 persons in Ireland. This was exceeded by 128 per cent but a large number of claims were subsequently disallowed. The number of appeals decided during Igil was 11727. The operation of the Insurance Act in Ireland cannot yet be estimated. Mr. Charles kinnear was appointed Chief Commissioner. The number of in surable persons is estimated at 1,050 000 and 674,000 persons were returned as members of approved societies when the Act came into force.

Religion—In the census of 1911 the population of Ireland is divided by religions as follows Roman Catholics 3 2,8 656, Protestant Episcopalians (Church of Ireland) 574 480 Presbyterians 439 8,6 Methodists 61 806 The number of Roman Catholics had decreased by ,0 005 of Protestant Episcopalians by 5600, of Presbyterians by 3400, and of Methodists by 200 during the decadal period since the last census. In Dublin 83 1 per cent of the population was Roman Catholic 12 9 per cent Protestant Episcopalian 14 per cent Presbyterian and 0 8 per cent Methodist. In the country of Dublin (which includes the urban districts around the city) the percentages were 71 22 8 2 5 and 16 In Belfast Roman Catholics numbered 9, 243 Protestant Episcopalians 115 1,3 Presbyterians 130 575 and Methodists 23 782 In Country Antrim the numbers were 39 ,51 42 118, 9, 198 and 3813

Owing to the special interest attaching to the Ulster question mully a Protestant one it may be noted that in the NE counties constituting. Ulster in the political sense there were 394 4 i Roman Catholics (33 i per cent) as against 794 44 of other denominations. In all Ulster the Roman Catholics numbered 690 816 (43 7 per cent) as against 890 880 of other denominations. In Munster the Roman Catholics con stituted 94 per cent in Leinster 85 2 per cent, and in Connaught 96 3 per cent.

Notable changes occurred in the composition of the clergy in the Church of Ireland Dr Alexander, the Primate of Ireland retired from the primacy in January 1911 and died shortly afterwards. In February Dr Crozier bishop of Down Connor and Dromore was elected Primate the see of Down being filled by the transference of the bishop of Ossory Dean Bernard dean of St Patrick's was appointed to the vacant bishopric. In June 1912 a canonry of St Patrick's fell vacant and was filled by the appointment of the Rev James O Hannay Rector of Westport, better known as the novelist. George A Birmingham

Justice and Law —Ireland has been in a very satisfactory condition in respect of crime In 1911 the prison population was the smallest on record Drunkenness con tinued to supply a large proportion the number of commitments under this and cognite charges being 9238 or 40 per cent of the total number committed to prison. In 1910 the figures were 10 088 During the year 10/1 male and 242 female offenders under th age of 21 years were received under sentence. A Borstal Institution for males was established at Clonmel in November 1909 under the Prevention of Crimes Act of 1908 nearly all its past inmates placed out are doing well. During the period under review Ireland has been singularly free from senous crime. In 1909 there was a recurrence of agrarian crime-shooting outrages and cattle driving-in certain counties notably Tipperary, Clare and Westmeath But since that year the number of Grand Juries congratulated by the judges of Assize on the satisfactory state of their counties has continued to rise In 1911 the number rose to 90 per cent and in 1912 it reached 95 per The Recorders of the large towns have also been able to produce testimony as to their comparative freedom from crime Almost without exception the judge of assize has vigorously protested year by year that agrarian outrage in the western countres-Kerry Clare and Galway-where it still sporadically appears is largely due to the unrestricted sale and carriage of firearms The Irish Game Protection Society and simi lar associations have also identified themselves with this protest. There have been sev eral changes in the composition of Bench and Bar In 1909 Lord Justice Fitzgibbon who had for many years been judge of the Appeal Court died The Attorney General, Mr R R Cherry, was raised to the Bench and was succeeded by Mr Redmond Barry whose place as Solicitor General was taken by Mr Charles O Connor Sir Samuel

602 IRELAND

Walker, Lord Chancellor of Ireland died towards the close of 1912, and was succeeded by the Attorney General Mr Redmond Barry Mr Charles O Connor became At torney General and Mr Ignatrus O Brien was appointed Solicitor General

Education -- So far as education is concerned, the situation is practically unchanged except for the establishment of the National University Under the system of pay ment by results, the amount of the school grant paid to managers of intermediate schools in Ireland on account of the examinations in 1911 was £46,461. In June 1912 the Inter mediate Board was requested by the Under Secretary for Ireland to draw up in co operation with the Board of National Education a scheme of scholarship whereby suitable pupils might pass from the primary to the secondary schools After conference between representatives of the board and of the teaching profession a scheme was drawn up and sent to the Treasury The board suggested the extension of the scheme so as to provide increased facilities for agricultural and technical training. The Treasury re fused to sanction the scheme However in July 1912 provision of \$10,000 was made for scholarships to enable primary school children to enter secondary schools scholarships were to be open to all National School children under 13 years of age and the examination was to be competitive regional and annual conducted by the Nation d Board's inspectors. (Provision of £40 000 was also made to improve the status of secondary teachers an improvement which consecutive teachers congresses have annual ly demanded) It was proposed that when the scholarships expired the holders should be elected to County Council scholarships The County Councils offered these only on condition that they should be held at the National University The Chief Secretary insisted that they should be tenable at any Irish University and as a result of the The National Univer deadlock the scheme remained in abevance at the end of 1912 sity of Ireland was the creation of Mr Birrell's Irish Universities Act. The Act insti tuted University College Dubhn and reconstructed the Queen's Colleges of Cork and Galway as constituent colleges Queen's University Belfast became a separate estab hishment Dublin was allotted an annual grant of £32 000 Cork £20 000 and Galway fr ooo out of the new University's share of the original endowment of the Royal University f150 000 was granted for building purposes to Dublin f14 000 to Cork and \$6000 to Galway The preparatory work of the Commission was completed in July 1911 but the authorities of the Dublin College experienced some difficulty in find ing a suitable site. Eventually a site adjacent to that of the Royal University build ings was provided by Viscount Iveagh the chancellor of Trinity College Dublin Patrick's College Maynooth has been recognized by the senate of the new univer The number of entrants to the university in 191 was 155 to University College Dublin an increase of 60 on the previous year 425 to University College Cork an in crease of 10 and 155 to University College Galway an increase of 5 An agitation in favour of making Irish compulsory for matriculation was begun by the Gaelic League and the senate finally decided to make a course in Irish compulsor; for those who did not take it at matriculation till 1013 in and after which year it is to be compulsory for matriculation Mr Dennis Coffey was appointed president of University College Dubhn The five Connaught counties have struck a rate in aid of University College Kerry Waterford Cork Tipperary and Limerick have established scholar ships to University College Cork It is estimated that when the County Council schemes are in full working order the National University of Ireland will derive an additional income of more than fr ooo from this source. The demand for the develop ment of the constituent colleges into independent universities on the plea that a federal system is wasteful and cumbrous has already made itself audible. The proposal is supported by the Cork College and its president Sir Bertram Windle It is resisted by the Galway College and its president Dr Anderson Trinity College Dublin cele brated the bi centenary of its Medical School in July 1912 The recommendations in the report of the Science Schools Committee have now been completed by the gift of Lord Iveagh two months earlier of \$10,000 to the Trinity College department of geology and mineralogy, which had been prevented by lack of funds from acquiring the appara

tus and meeting the expenses of research assistants, necessary to the carrying on of its work. There has been contrary to expectation no friction between the old and the new universities. The National University played a prominent part in the bi-centenary celebrations of Trinity College. The co-operative principle is working not only in agriculture. It is the key note of the Ireland of to-day.

INDIA1

Census of 1911—The census was taken in India on March 10 1911 and showed a total population for the Indian Empire of 315 132 537 (compared with the total for 1907 the increase is 0 771 481 or 71 0 But part of this increase is due to the inclusion of tribal areas on both the NW and NE frontiers with a population (mostly estimated not actually enumerated) of 17,1116 In the British Provinces the rate of increase is only 55% while in the Native States and Agencies it is as high as 129%. The intervening decade had been on the whole favourable to agriculture and a recovery was to be expected in the areas affected by the famines of 1807 and 1900. On the other hand the visitation of plague had been severe and continuous causing more than 6 million recorded deaths chiefly in Northern India where also an exceptional outbreak of malarial fever occurred. In the result both the Puniab and the United Provinces show an actual decrease. The highest rates of increase are in the Central Provinces Burma and Eastern Bengal and Assam

Classified according to religion some interesting results appear. As on former occasions, the rate of increase among Mahommedans (6_1°) is higher than among Hindus (5°) . So called Ammists (20°) and Buddhists (13°) both have a high rate of increase. Jains show an unexpected decrease (0°) while the reforming sect of the Arya Samaj in Northern India has grown from 92,410 to 243 514. But the most surprising results are in the case of Sikhs and Christians. The former have increased from 2 105 300 to 3 014 466 or by $_38^{\circ}$ 0 the latter from 2 923 241 to 3 8/6 196 or by $_33^{\circ}$ 0

This increase of Christian ² which of course means native converts deserves explanation in detail. The great majority are still to be found in the extreme South where in the two states of Travancore and Cochin more than one fourth of the total population are now Christians and the rate of increa e during the past decade was 30. Though the actual numbers are much less this rate of increase has been exceeded elsewhere. Taking native Christians alone and thu excluding European troops in the United Provinces the number has risen from 2,3 404 in 1891 to 68-841 in 1901 and 136-469 in 1911 while in the Punjab the number has risen from 19-561 in 1891 to 37,980 in 1901 and 163-220 in 1911. The rate of increase e during the pist decade has been 90 in Assam 45 in Burma and 33 in Bihar &c. while in the Mahommedan state of Hyderabad it has been threefold. Turning to the several denominations. Roman Catholics are still by far the most numerous and their rate of increase has been 2. Next come Syrians of various rites and then Anglicans among whom the rate of increa e has been only 8.5. Other Prote tant denominations show extraordinary figures. Baptists mainly in Madras and Burma have multiplied from 21040 to 336-596. Lutherans in Madras and Bhar from 155-455 to 18-499 Presbyterians in the Punjab and Assam from 55-931 to 181-128. Methodists in the United Provinces from 76-907 to 171-754 and Congregationalists in Madras and Travancore from 37-874 to 135-264. Salvationists now number 52-407 mostly in the Punjab Travancore Bombay and Madras.

The statistics of literacy are not strictly comparable for the test has been changed being now the ability to write a letter to a friend and read his reply. The total number of literate persons has risen during the decade from about 15½ to 18½ millions, the proportion per thousand having risen from 98 to 106 in the case of males and from 7 to 11 in the case of temales. The total number of persons literate in English has risen from 1 125 231 to 1670 387, the proportion per ten thousand having risen from 68 to 95 in the case of males and from 7 to 10 in the case of females. Excluding the exceptional case of Buddhist Burma Bombay

¹ See E B xiv 375 et seq and alhed articles.

A Here it may be mentioned that those of mixed descent formerly known as Eurasians are henceforth to be officially styled Anglo Indians

continues to stand first in respect of literacy and the United Provinces last. Among native states Travancore and Baroda are conspicuous

Finance —In India financial equilibrium varies with the monsoon upon which agri culture is mainly dependent. In 1908-9 following upon two bad seasons which culminated in famine throughout the Umted Provinces there was a deficit of no less than 32 millions entirely due to a fall in land revenue and in receipts from railways Succeeding years have been favourable though in 1911 the desired rainfall did not fall until as late as September The consequence has been a succession of surpluses amount ing to £606 641 in 1909-10 £3 936 287 in 1910-1 and £4 848 000 in 1911-2 In both the last two years however, no less than two millions of the surplus was due to an unexpect ed windfall from opium In 1911-2 the net revenue reached the unprecedented total of 56 millions compared with 49 millions two years before. During the interval the only change in taxation was a new customs duty on silver and increased duties on imported liquors, tobacco and petroleum. It should however be added that the ex cise duties on liquors and drugs have likewise been raised throughout the several As so large a portion of the recent surpluses has been derived from opium a source of revenue that will shortly disappear they have not been applied to the reduc tion of taxation but have been utilised partly in extraordinary grants for education sanitation &c and partly in reduction of debt. The cost of the Royal visit (one million) was entirely defrayed out of revenue and it is anticipated that some part at least of the expenditure on the new capital at Delhi will come from the same source

The Optum Question —The subject of opium demands special mention —By arrangement with China—the Government of India undertook to reduce the quantity exported after January 1908 by amounts annually increasing until the export should entirely clase after ten years—Under a new agreement in 1911—the total cessation was to be accelerated if China suppressed her own production of the drug—and a further limitation was placed on the export to Chinese ports such exports to be specially certified—As a result the number of chests exported was reduced from 61 900 in 1908 to 44 600 in 1911—of which only 30 600 were certified for admission to China—In the meantime of the two Government factories in the Ganges valley that at Patna has been closed while the area under poppy has been reduced from about 500 000 to 200 000 acres entirely in the United Provinces—A result not foreseen is that the restriction on export led to an increased demand and a doubling of the sale price—Thus is explained the windfall from opium which figures so conspicuously in the surpluses of the last two years—Finally it should be stated that in conformity with the international convention signed at the Hague in January 1911 the Indian Government has announced its intention of introducing legislation to discourage opium smoking—It is proposed to prohibit the practice absolutely in saloons or Lathering's numbering more than two persons to reduce the amount of the drug which a person may lawfully pos ess and to increase the sale price to the public

Agriculture—The last three or four years have been characterised by favourable mon soons and consequently by wide spread agricultural property. If prices still range high this must be attributed to the foreign demand for such staples a cotton wheat and oil eeds. A notable example of prosperity is presented by the Canal Colonies in the Punjab where wheat for export is the chief crop and horse breeding is also encouraged. The colonists have been allowed to acquire proprietary rights in their holdings and the cooperative credit movement is making rapid progress. It may be mentioned that as much as £3 000 pcr acre has here been paid for market sites along the railway, that labour at harvest time fetches. Rs. 2 (2s. 8d.) a day that sovereigns are common in circulation and that in one year Lyall

pur remitted 1147 000 by money order to other districts

The United Provinces recovered with unexampled rapidity from the famine of 1908 ow ing as much to their previous prosperity as to the efficiency of relief operation. Bengal and Bihar suffered somewhat in 1909 from a poor harvest. But the only real distress has been in Bombay. Here the monsoon of 1911 failed almost entirely in Gujarat including a large area of Native States. No difficulty was experienced in providing work and food for the destitute people and private charity was to some extent success ful in saving the cattle alive, for as often happens the drought caused a fodder famine. In 1912 the mon soon again failed in the Bombay Deccan a tract particularly hable to drought

soon again failed in the Bombay Deccan a tract particularly liable to drought. The most notable feature of recent years apart from the activity of the Agricultural Departments in the several Provinces has been the steady growth of cooperative credit societies. Some of these are urban for the benefit of artizans &c but the great majority are rural, numbering nearly 5 000 in 1911 with a membership of 236 000 and a working capital of £730 000 of which £105 000 represents deposits by the members. The movement seems to have been most successful in the United Provinces Madras and the Punjab. In

Bombay a Central Cooperative Bank has been founded by a leading Hindu merchant Sir V D Thackersey with a Government guarantee on its 4% debentures. It lends only with the approval of the official registrar at an interest which must not exceed 8% and half of

its surplus profits above 6° must ultimately be devoted to rebates on the interest payable Mines and Minerals—The mining of coal which is mainly concentrated in Bengal has recently been subject to vicissitudes—While the total output increased from an average of The difficulties of local transport by both land and sea have become so trouble some that the railways with headquarters at Bombay were compelled in 1912 to invite con tracts from Japan and Natal The production of the gold mines in Mysore remains constant about 545 000 ounces a year the Hutti mine in Hyderabad yields about 15 000 ounces but the mines in the Bombay district of Dharwar have all closed down owing to disappointing results at deep levels. The production of manganese chiefly in the Central Provinces and Madras has increased from an average of 500 000 tons during the five years ending 1908 to 800 000 tons in 1910 and India may now claim to be the largest producer of high-grade ore in the world The production of petroleum in Burma has similarly increased from an average of 146 million gallons during the five years ending 1907 to 215 million gallons in 1910 while the refining of the crude oil and the manufacture of petrol paraffin &c have be come an important industry at Rangoon. The iron industry elsewhere languishing has made a memorable start at Sachi on the hilly borders of the Central Provinces and Orissa Here the Tata Iron and Steel Company with a capital of 12 millions raised entirely in India began work early in 1912 Equipped with the most modern machinery for smelting pud dling forging &c it is intended to produce 87 000 tons of iron and steel in the year. The Government have erected a laboratory close by at Kalimati for testing the steel rails produced for use on the State railways and Japan has already give a large order for steel

Manufactures —In manufactures the most important event has been the passing of a new Factory Act which came into force on July 1 1912 The chief provisions applying to textile factories are that no person shall be employed for more than 12 hours no woman for more than 10 hours and no child for more than 6 hours in any one day that no person shall be employed before 5 30 a m or after 7 p m and that mechanical or electrical power shall not be used for more than 12 hours in the day

The cotton mills chiefly centred in the Bombay Presidency have passed through a long period of depression though the number of both spindles and looms increases year by year While the spinning of yarn has been generally unremunerative the weaving of cloth especially of the finer fabrics is steadily advancing. During the five years ending 1910-11 the number of looms has usen from 55 000 to 79 000 and the production of woven goods from 159 to 231 million pounds

Another Tata company with a capital of more than a million again raised entirely in India has begun operations at Lonauli in the Western Ghats for providing elec trical energy for the many industries of Bombay city Jute mills which are concentrated at Calcutta and mainly in English hands have enjoyed almost unbroken prosperity. In 1910 the total number of factories under inspection in all India was 2 271 employing 800 000 persons of whom 116 000 were women and 52 000 children. Mention may here be made of the recent development of banks under Indian management and with Indian capital with their headquarters at Bombay. One of these subscribed for the greater part of the Government loan of three crores (2 millions) issued in 1912.

Commerce - The foreign trade reflects the series of favourable harvests During the four years ending 1911-12 imports of merchandise have increased from 81 to 92 millions exports of merchandise from 100 to 151 millions and the net imports of treasure from 11 to 28 millions The balance of trade in favour of India thus rose from 8 to 31 millions Among imports while cotton varn shows a continuous decline other cotton manufactures (almost entirely from England) have increased from 23 to 30 millions. I arge increases are also shown in sugar (from Java) and in copper the usual material for household vessels. Among exports raw cotton continues to rank first but the second place is now held by oilseeds though raw jute and jute manufactures combined more than equal cotton export of rice depends upon the harvest in Burma as that of wheat does upon the harvest in the Punjab Within the last year barley has been sent in large quantities to England About 62 of the total imports come from the United Kingdom but only about 26% of the total exports are consigned thither A notable feature during 1911-12 has been a fall in the imports of silver accompanied by a very large rise in the imports of gold both bullion and coin Gold is no doubt hoarded and used for jewellery but sovereigns are now common in circulation in some parts while since 1910 the amount of gold held by Government in the paper currency reserve in India has increased from 9 to 20 millions

paper currency reserve in India has increased from 9 to 20 millions

Railways—Railways have fully participated in the favourable seasons which India has recently enjoyed Contrasted with a loss of 1½ millions under this head in the financial year 1908-9 gains are shown of more than ½ of a million in 1909-10 of 2 millions in 1910-11 and of more than 3 millions in 1911-12. But as all the railways do not belong to Government will be more convenient to take figures for the last calendar year. Between 1909 and 1911 the total length of line open increased from 31 484 to 32 839 miles while the total mileage under construction or sanctioned at the close of 1911 was 2 675 the total capital outlay on

open lines increased from 286 to 300 millions the total number of passengers carried increased from 329 to 410 millions the total weight of goods carried increased from 61 to 76 millions to 329 and the net earnings increased from 131 to more than 17 millions the percentage of

profit on capital rising from 4.81 to 5.71

The most important new line recently opened is that through Rajputana from Muttra to Kotah which affords communication from Northern India to Bombay on the broad gauge of the Bombay and Baroda system

The most important work in hand is the construction of the Bombay and Baroda system. The most important work in hand is the construction of a bridge across the Ganges at Sara in Bengal, which will bring the traffic from the north of the river (at present ferried over) direct to Calcutta. The most interesting project sanctioned is that of connecting the railway systems of India and Ceylon by means of a ferry service for which a bridge along Adam's Reef may possibly be substituted. Three turbine steamers were in 1912 being built on the Clyde for this ferry service. The passage is about the same distance as from Dover to Calaus through practically smooth water at all seasons.

Complaints have often been made of the inadequacy of the railways to carry the increasing goods traffic. These culminated in the spring of 1912 under a combination of exceptional circumstances the recent Durbar the coal strike in England the demand for fodder in the famine districts of Gujarat a deficiency of water in some places and the heavy bulk crops for export The provision of rolling stock has been the chief item of capital expenditure for several years past It is now recognised that the most pressing need is the adaptation of the railways to heavier and more frequent traffic by the doubling of lines strengthening of

bridges increase of sidings and improvements at terminal stations

Irrigation -According to the financial accounts the net revenue from irrigation remains pretty constant at about £600 000 a year But this gives a most inadequate conception of the important works undertaken by the Government During the four years ending 1910-1 the capital outlay increased from 34½ to 39½ millions while the total area irrigated and the net receipts showed little change and consequently the percentage of profits fell from 6.74 to 6.33 Punjab is the province where the existing canals are the most necessary and also the most remunerative and it is in the Punjab that the most important work is now under construction. This is known as the Triple Canal in the Upper Jhelum, the Upper Chenab and the Lower Bari Doab which will be completed in 1915 at a total cost of nearly 8 millions In the United Provinces a series of minor canals have been constructed for the protection against famine of Bundelkhand while a large scheme is under consideration to increase the supply of the Ganges and Jumna Canals from the overflow of the Sarda river in Oudh emportant project of throwing a barrage across the Indus at Sukkur and thus effecting perennial irrigation in Sind still awaits final sanction. These projects involve such heavy expenditure in this case nearly 6 millions that delay is justifiable. Minor works have been carried out on the Godavari river in Bombav and also in the Central Provinces but large schemes in Madras on the Kistna and the Kaveri rivers are still under consideration.

Education -No subject connected with India has attracted more attention of late than education, starting from the reform of the universities in 1904 This reform has been slow in accomplishment but the aim has now been effected by which the academ ical syndicates have gamed control over the affiliated colleges and have themselves under taken to conduct postgraduate courses and research Towards the end of 1910 a mem ber for education in the person of Sir Harold Butler was appointed to the Viceroy 5 executive council At the Delhi Durbar one of the boons announced by the King was a grant of 50 lakhs (£333 000) for education which has been devoted mainly to primary The Hon G K Gokhale, the recognised leader of Indian opinion introduced a bill in the Viceroy's Legislative Council for the gradual introduction of compulsory education, which was rejected by a large majority in March 1912. The alternative proposals of the Government were explained by Mr Montagu, Under Secretary of State in his budget speech to the House of Commons on July 30 1012 Leaving compulsion for the future, it was pointed out that free education already exists for all girls and also for a proportion of boys varying from one fifth to one third in the several Provinces What is now required is to augment the number of schools and to improve the teaching in the schools that already exist. The additional amount provided for education (higher as well as primary) in the estimates for 1912-3 was 2 of a million

During the ten years ending 1910-1 the total number of boys at school increased from 3.513 000 to 5.480 000 and the total number of gurls increased from 446 000 to 866 000 while the total expenditure from all sources increased from £2 700,000 to £4 800 000 In 1911 the proportion of pupils to the population of school going age which is taken at 15 0 of the total population, was 28 % for boys and 4 % for gurls The attendance at Secondary schools which is almost equivalent to education in English increased during the ten years by 44 and it is noteworthy that two thirds of the cost is derived from fees. The number of students at Arts colleges increased from 17 430 to 23 714. Of those who graduated B A. in 1911,

Brahmans numbered 530 non Brahman Hindus 492 Mahommedans 173 and native Christians 31 An interesting movement is that for the creation of new universities. The Government has resolved to found one at Dacca in Eastern Bengal which will probably be followed by others—at Rangoon for Burma and at Patna for the new Province of Bihar Meanwhile the Mahommedans have been collecting large subscriptions in order to raise the Aligarh college to the status of a university and the Hindus for a college at Benares

In this connexion mention may be made of the scheme organised by the Secretary of

In this connexion mention may be made of the scheme organised by the Secretary of State for the benefit of Indian students who come over to complete their education in England. The number of these is estimated at nearly 2 000 of whom 800 are in London. Prof. T. W. Arnold formerly at Aligarh and Lahore was appointed in 1900 with the title of educational adviser to superintend an office in Cromwell Road London for information guidance and guardianship. The house in Cromwell Road contains bedrooms for students on their arrival and also provides accommodation for two associations which promote social intercourse. So successful has the scheme been that in 1912 it was found necessary to make the additional appointment of a secretary at the India Office who will be responsible for making arrangements for students in universities &c outside London. Also a departmental committee was constituted to consider the means by which engineering and other technical students could obtain better facilities in England for practical experience in workshops and factories

Political History

Lurest -Within the brief period of half a dozen years the political surface of India usually so unruffled has undergone two changes as sudden and as strange as the burst and the passing away of the annual monsoon To assign their proper value to all the causes that contributed to provoke the spirit of political and social would be a hopeless task The Japanese victories over Russia the partition Bengal, racial antipathy, misdirected education inflammatory publications and preach ings each played their part The result was an unexpected outbreak of anarchical crimes such as are really alien to the Indian character and which could only be met by stern measures of repression But while these crimes naturally attracted most attention in England, those responsible for the government of the country always recognised as others can now see plainly that the deepest and most permanent feeling beneath the 'unrest' was a growing self consciousness of nationality with an inarticulate cry for greater sympathy in the administration. In 1909, when sedition was at its height, the Imperial Parliament passed an act enlarging the legislative councils by the introduction of an elected element, and also authorising the appointment of an Indian member to the executive councils of Madras, Bombay and Bengal The following year when officials and representatives of the people met in friendly debate and shared in the responsible work of legislation ushered in a period of appearsment, transfigured into effusive loyalty by the Royal visit

Nevertheless out of regard to historical truth it is necessary to summarise the chief incidents of the black period Though it was only in Bengal that sedition and outrage became endemic, under the influence of secret societies and the preaching of a sort of religious anarchism the first overt signs of trouble were manifested in the Punjab, the recruiting ground of the Indian army, and in the remote south of Madras The Punjab soon guieted down after one of the ring leaders had been deported to Burma and a real grievance in connexion with the canal colomes had been redressed. In Madras also order was restored by severe punishments on the offenders Meanwhile at Poona, in the Bombay Deccan, the Chitpavan Brahmans of the same caste as the former Peshwa of the Marathas had long been fomenting disaffection Their leader, Mr Tilak a man of great ability and a Sanskrit scholar traversed the country to promote the cult of Sivan, the founder of Maratha nationality He was responsible for breaking up the National Congress held at Surat in December 1907, when the Extremists definitely separated themselves from the Moderates After he was sentenced in July 1908 to six years' transportation for sedition, the local agitation suffered a check, but in truth it was only driven underground In January 1909 the Queen Victoria Memorial at Nag pur was desecrated by a student of the agricultural college on November 15th a bomb was thrown at Lord Minto when entering the city of Ahmadabad, and on December 23d Mr Jackson, magistrate of Nasik was assassinated The thrower of the bomb was nev

er discovered but the actual murderers of Mr Jackson were promptly tried and executed, though one of the conspirators (Savarkar), by escaping for the moment from a British steamer to the quay at Marseilles furnished occasion for a reference to the international tribunal at the Hague which decided against his extradition to France It was also in 1900 that London was startled on July 2d by the assassination of Sir W Curzon Wylhe and a Parsi doctor at the Imperial Institute The murderer a student from the Punjab, was duly hanged on July 27th It may be emphasised that most of the anarchical crimes were committed by youths of imperfect education and morbid In January 1910 a Mahommedan superintendent of police was shot in temperament a corridor of the Calcutta High Court while the final appeal in the Alipur bomb case was being heard and in the same month an attempt was detected to tamper with the fidelity of a native regiment in garrison at Calcutta Subsequently despite an isolated outrage here and there however the spirit of conciliation overcame the demon of unrest' An Indian member had been admitted to the executive council or cabinet of the Viceroy and elected members sat on all the legislative councils February 1910 the government found themselves justified in releasing the nine persons who had been deported or imprisoned without any charge two years before at a time when Bengal was honey-combed with samitis or secret societies At the end of the year a further stage of conciliation was reached when Sir W Wedderburn a retired Bombay civilian of the highest character went out to India to be president of the National Congress held at Allahabad, and to promote good will between Hindus and Mahommedans

The New Vicerov—With the arrival of the newly created Baron Hardings of Penshurst (b 1858) as Vicerov, in November 1910 it was everywhere tacitly recognised that a new chapter had opened in the political history of India though no one dared to fore tell the Royal visit and its marvellous results. Lord Hardinge had from 1906 been as Sir Charles Hardinge at the head of the Foreign Office in London and intimately associated with King Edward (see E B viii 999b) and in succeeding Lord Minto who had been personally popular with all classes he brought a varied official experience to bear on the problems of Indian government. Though 1911 was marked by one serious political crime the murder of Mr R W D. Ashe a Madras magistrate on June 19th events proved that the end of an anxious period was in sight. Nor need this verdict be upset by the deplorable outrage on Lord Hardinge himself at the end of 1912 when on December 22 a bomb was thrown at the Viceroy as he entered Delhi in state injuring him somewhat severely and killing an attendant. The occurrence of such a crime is serious enough no doubt but represents the spent force of pure anarchism and not any widespread movement.

The Royal Visit - The Royal visit to India announced in the speech from the throne on February 6, 1911, is known to have been undertaken on the King's own initiative in spite of some not unnatural warnings. Never before since Angevin times had an English sovercign left his own realm for a state progress through his dominions beyond the sea From first to last its success exceeded anticipation being marred by no untoward incident The P&O SS 'Medina' was chosen for the Royal yacht and manned with a crew from the navy She sailed on November 11th and the first Indian port at which she touched was Aden where the King and Queen landed reached on December 2d and here three days were spent the King and Queen sleeping The chief public functions were a welcome on the Apollo Bandar where on the Medina a Saracenic archway and a pavilion had been erected, a procession through the streets of the city, and a children's fête. On the night of December 5th they departed from Bom bay by the recently opened railway through Central India and Rajputana arriving at Delhi on the morning of December 7th Here ten days were crowded with ceremonial duties first a procession from the Fort through the city to the Durbar camp then the reception of ruling chiefs whose visits were returned by the Viceroy the laying of the foundation of the All India memorial to King Edward the presentation of colours to British and Indian regiments, and a review of 50,000 troops The culminating scene

was the Durbar on December 12th in an immense amphitheatre constructed for the purpose within which the King and Queen in their royal robes received the homage of the ruling chiefs and their coronation was proclaimed to the assembled people. Among the boons then announced were a grant of 50 lakhs (£333,000) for education, half a month's pay to all soldiers and subordinate officials and the admission of Indian soldiers to the Victoria Cross But what caused these to be ignored was the further announce ment altogether unexpected that Delhi would henceforth be the capital of India in substitution for Calcutta and that Bengal would be reunited under a governor in-From December 16th to 20th the King went for a hunting trip to Nepal. where the Maharaja minister welcomed him in person and many tigers and rhinoceros were shot while the Queen visited Agra and several cities of Rajputana After meeting again near Patna they arrived at Calcutta on December 30th and stayed there for nine days Apart from the exuberant lovalty of the people the most interesting incident was the historic pageant organised to represent the two festivals of the Hindu Dashara and the Mahommedan Nauroz The return journey to Bombay was broken for an hour at Nagpur and the Medina "sailed on January 10 1912 stopping at Port Sudan in the Red Sea and at Malta The intention and the result of the Royal tour could not be better expressed than in the words which the King evidently uttered from his heart on leaving Bombay

It is a matter of intense satisfaction to me to realise how all classes and creeds have joined together in the true hearted welcome which has been so universally accorded to us Is it not possible that the ame unity and concord may in the future govern the daily relations of their public and private live? The attainment of this would indeed be a happy outcome of our visit to India. To you I deliver this our loving message of farewell to the Indian Empire

What may be taken as a reply was sent by the Viceroy to the Prime Minister on the day of the King's arrival in England —

The Princes and people of India desire to take the opportunity afforded by the conclusion of the Royal visit to convey to the great English nation an expression of their cordial goodwill and fellowship. Their Imperial Majusties by their gracious demeanour their unfailing sympathy and their deep solicitude for the welfare of all classes have drawn closer the bonds that unite Figland to India. We are confident that the great and hi thrice event marks the beginning of a new crassensuring greater happiness prosperity and progress to the people of India under the aegis of the Crown

Domestic Affairs — The legislative council of the Vicerov on which an official majority is required by the regulations contains 60 additional members besides those of the executive council or cabinet. Of these 2, are elected by various representative bodies. For example, the non official members of each of the provincial legislative councils the Mahommedan community and the landholders in the larger provinces, and the chambers of commerce of Bengal and Bombay, each have at least one representative. In the result among these elected members in 1912 there were 12 Hindus 9 Mahom medans two Englishmen one Parsi and one Buddhist from Burma. Of 35 nominated members 6 were officials and the remainder included two Hindus and two Mahomme dans and a representative of the domiciled Anglo Indian community.

Undoubtedly the most conspicuous among the Indian members alike for his knowl edge of affairs his eloquence and his moderation has been Mr Gopal Krishna Gokhale CFE (b 1866) one of the two representatives of the Bombay council. He is a Chit pavan Brahman from Poona where he was for some years professor at the Fergusson College and where he recently founded a society called the Servants of India for the study of social and economical questions and for their propagation by missionary effort. He has paid several visits to England the latest in 1912, and in October 1912 he went to South Africa to examine on the spot the veved question of the exclusion of Indian immigrants and to promote a conciliatory settlement.

The first Indian member to be admitted to the Vicerov s executive council was Mr Satyendra Prasanna Sinha (b 1864) a Hindu barrister who had previously officiated as advocate general for Bengal He was appointed legal member in April 1909 and on his retirement in November 1910 he was succeeded by Syed Ali Imam, a Mahom

medan barrister from Patna It is perhaps worthy of note that both of these have sent their sons to be educated at public schools in England

The enlarged legislative councils came into being in January 1910, and as the period of membership was for three years fresh elections and fresh appointments were due at the end of 1912. Debates on bills and discussions on the budget have always been conducted without friction resolutions proposed by Indian members have afforded use ful opportunities for the pronouncement of official explanations and the privilege of asking questions has been abundantly availed of . It is significant that almost the first Act passed by the legislative council of the Viceroy (in July 1910) was one empowering the Government to prohibit indentured emigration to any country whenever it considers that sufficient reason exists. Such emigration has accordingly been prohibited to Natal. Nothing excites so much feeling among all sections of Indians as the disabilities to which they are subjected in some of the self governing British colonies.

During 1911 three important Acts were passed a Factories Act which had been long under consideration and of which the chief provisions are specified above a Patents and Designs Act, on the lines of the English measure and a Prevention of Seditious Meetings Act renewing an expiring Act of 1907 with certain amendments the most noteworthy of which permits the holding of meetings for the discussion of political subjects generally. A stringent Act for the regulation of the press passed early in 1910, still remains in force, its chief provision being the requirement of security which may be forfeited and the press confiscated on the publication of seditious matter

In 1912 swelling revenues resulted in a large surplus part of which was devoted to the pressing needs of improved sanitation. The monsoon was on the whole very favourable and trade was unusually brisk. In the Vicerov's legislative council the most important event of the year was the rejection as premature of the Hon G. K. Gokhale's bill for a considered scheme of free and compulsory education. An Act passed Parlia ment for carrying into effect the new constitution of Bengal and also the formation of legislative councils in Provinces under a chief commissioner. A Royal Commission was appointed with Lord Islington as chairman and including the English labour leader, Mr. Ramsay Macdonald to examine and report on all matters connected with the various branches of the civil service with special reference to the further employment of Indians and the present division of the services into Imperial and Provincial

Echoes of the recent troubles were aroused during the year by two legal judgments given on appeal after prolonged litigation by the Privy Council and the Calcutta High Court both of which justified executive action taken by magistrates at a time of crisis In the Mymensingh case which dates back to 1907 the district magistrate had personal ly conducted a search for arms in a house near which an outrage had been committed the day before No arms were found The occupier of the house brought an action for trespass against the magistrate and obtained a judgment for f33 as damages which judgment was confirmed by the High Court at Calcutta Ultimately after long delay this judgment was reversed by the Judicial Committee of the Privy Council in July 1912 on the ground that the magistrate was acting within his powers as a criminal court of first instance The circumstances of the Midnapur case are more complicated Here there is little doubt that a seditious conspiracy existed in 1908 when several suspected persons were arrested. One of these who had been soon discharged brought an action against the magistrate and two Indian police officers for illegal arrest. After a trial before a judge of the Calcutta High Court which lasted for nearly 200 days he was awarded £66 as damages Here it may be remarked that in India all civil actions are tried without a jury On appeal to three judges of the High Court one of whom was an Indian this judgment was unanimously reversed in August 1912 and the plaintiff was condemned to pay the costs estimated at £20 000

Foreign Affairs —Foreign affairs which for India are almost equivalent to frontier affairs, may be briefly treated — Anarchy in Southern Persia has required the despatch of a native cavalry regiment to open the roads and protect trade — In the Persian Gulf the traffic in rules and ammunition has been suppressed by combined naval and military

operations supported by restrictions imposed by the Sultan of Muscat Afghanistan has continued to maintain a not unfriendly attitude. In 1910 he agreed to the appointment of a joint commission for the settlement of boundary disputes, which resulted in an agreement for the removal of outlaws from both countries to at least fifty miles from the border Tibet has suffered from more than one revolution and the end is not vet in sight. In 1910 the Dalai Lama who had fled to China before the British occupation of Lhasa, took refuge in India from the tyranny of the Chinese and was hospitably entertained visiting the sacred sites of Buddhism. Afterwards as a result of the revolution in China the Tibetans rose against the Chinese with more or less success and invited the Dalai Lama to return. An agreement was concluded at Lhasa in August 1912 between the Tibetans and the Chinese, in the presence of the representative of Nepal in accordance with which the Chinese garrison was to be repairnated by wav of India But righting subsequently broke out afresh In these troubles the Indian Government has taken no part except by stopping a Mongolian mission that wished to proceed from Calcutta to Tibet With Bhutan on the other hand relations have become more intimate. A formal treaty was executed in March 1910 with the new ruler or Zimpon whose full style and name is 5 Sris Ugyen Wang chuk In July 1911 he was invested with the title of Maharaja and granted a salute of 15 guns and at the Delhi Durbar where he was a conspicuous figure in his Tibetan dress he was created K C S I Further east at the end of the Assam valley the wild tribe of Abors murdered Mr Williamson a political officer and most of his party in April 1911 A strong military expedition under the command of General Bower moved into the Abor country in October and succeeded in punishing the culprits. Though there was little righting the natural difficulties to be overcome were very great owing to dense jungle steep hills unfordable rivers and perpetual rain or mist. An attempt to survey the gorge by which the Brahmaputra cuts through the Himalayas—one of the few un solved problems of geographers—was not successful At the same time a survey party was sent out from Sadiya east through the Mishmi country toward Rima, where the Chinese were said to be encroaching

Obstuary —Among the native Indians who have passed away during the period the most notable name is that of Behramji Merwanji Malabari the Parsi social reformer who was born at Baroda in 1853 and died at Simla from heart failure on July 18 1912 His boyhood was straitened by poverty, and he was unable to pass beyond the matricula tion of the Bombay university His first literary effort was a collection of Gujarati verse entitled Nitivinodo (1875) This was followed by a volume of English poetry-Indian Muse in English Garb (Bombay 1876)—which was dedicated to Miss Mary Carpenter and attracted the notice of Florence Nightingale Max Muller Lord Shaftes bury and John Bright Encouraged by letters from these he now became a journalist and devoted the rest of his life to the cause of social reform In 1880 he became pro prietor and editor of the Indian Spectitor which he conducted almost unaided for 20 Since 1901 he had edited East and West He will be remembered best for the agitation he conducted for many years on behalf of Indian women touring throughout the country and thrice visiting England The result was the passing after bitter con troversy of the Age of Consent Act in 1891 by which the age for consummation of marriage in the case of a girl was raised from 10 to 12 years Later undertakings of his were to found the Seva Sadan a society for the improvement of women by women and to establish with the help of native princes and others a sanatorium for consumptives at Dharampur in Northern India He also conceived but did not live to carry out the foundation of a Morley chair for the philosophy of history at Bombay Latterly his health broke down and he lived the life of a recluse He is understood to have refused the Kaisar 1 Hind gold medal and also knighthood

A strong contrast is presented in Syed Ali Bilgrami, the most versatile Mahomme dan of his time who died at Hardoi in Oudh on May 23 1911 A half brother younger by seven years of Syed Husain the first Mahommedan member of the Secretary of State's Council, he was born at Patna in 1851 Educated first at Patna College, he

graduated at the Calcutta University with double first class honours, taking Sanskrit as his second language He then attended the Thomason Civil Engineering College at Rurki for a time but having attracted the notice of Sir Salar Jung the great minister of Hyderabad he came in his suite to England in 1876 and joined the Royal School of Mines where he passed the examination for the Associateship and was awarded the Murchison medal in geology At this time he also travelled on the continent and made himself proficient in French and German Returning to India in 1879 he served for many years in Hyderabad in the departments of public works mines and education In 1802 he went up for the law examination at Calcutta passing at the top of the list and winning the gold medal Retiring from service in 1901 he settled with his wife in England being appointed lecturer in Marathi at Cambridge and also employed in cataloguing the Delhi collection of Arabic and Persian MSS in the India Office In 1907 he was called to the bar at Lincoln's Inn and then returned to India to devote himself to work for the Muslim League and the Aligarh College Among his numerous publications are a monograph on the Book of Kalilah and Dimnah Notes on the Educational Value of Persian as compared with Sanskrit, and a translation into Urdu of Le Bon's Civilisation des Arabes

Yet a third type is represented by Venkatarama Krishnaswami Aiyar CSI a Brahman lawyer who died on December 28 1912 at Mylapore, a suburb of Madras at the age of 48 In 1909 he had been appointed a judge of the High Court and in January 1011 a member of the executive council When attending the Durbar at Delhi his Though a supporter of the National Congress and always main health broke down taining very independent views the esteem in which he was universally held was shown at a public meeting summoned by the Sheriff of Madras at which the Governor was Another memorial is present when it was resolved to erect a memorial statue of him the Sanskrit college which he himself founded at Mylapore Almost his last words are said to have been 'I want to do something yet for the country I do hope God will not take me away before I have done it

Bibliography—Among recent books on India the following are specially notable Indian Unrest by V Chirol (1910) Administrative Problems of British India by J Chailley (1910) India under Cur.on and After by L Fraser (1911) Studies in Indian Life and Sentiment by Sir B I ulbr (1910) India and the Durbar being a Reprint of the Indian Articles in the Times of May 24, 1911 The Awakening of India by J R Macdonald (1910) Education and Statesmanship in India by H R James (1911) The Renaissance in India Its Missionary Aspect by C F Andrews (1912) The Economic Transition in India by Sir T Morison (1911) Der Heutige Indien von Prof Dr Georg Wegener (Berlin 1912) The Indian Scene by J A Spender (1912) Narrative of the Visit o India of The r My stick King George V and Queen Mary and of the Coronation Durbar held at Delhi 12 Dec 1911 by the Hon J Fortescue (1912) The King and Queen in India 1011-2 by Stanley Reed (Bombay Hon J Fortescue (1912) The King and Queen in India 1911-2 by Stanley Reed (Bombav 1912) In Abor Jungles being an Account of the Abor Expedition the Mishmi Mis ion and the Miri Mission by Angus Hamilton (1912) On the Track of the Abor by Powell Millington (1912) (S COTTON)

Indian States, Provinces and Cities

Notes are appended giving recent information on the more important states prov inces, and cities, supplementary to the accounts given in the Encyclopaedia Britannical For convenience of reference they are given in alphabetical order

ADEN—The population of Aden in 1911 was 46 165 showing an increase of 5° during the decade. The trade almost entirely a transit trade does not increase partly owing to troubles in the interior but also to the development of French and Italian ports in the Red. Sea Aden was the first spot of Indian territory visited by the King and Queen on Novem ber 27 1911 when they came ashore for a few hours and received an address from Mr Cowasii Dinshaw the leading Parsi merchant

AGRA—The population of Agra city in 1911 was 185 449 showing a decrease of 1 4 ° during the decade Both the district and the division show still larger decreases. On the occasion of the royal visit to India the Queen spent three days at Agra including a trip to

Fatehpur Sikri while the King was shooting in Nepal
AHMEDABAD—The population of Ahmedabad city in 1911 was 215 835 showing an increase of 16 1 % during the decade which follows upon an increase of 25 3 6 during the previous decade
This prosperity is mainly due to its cotton mills which number 54
The population of the district increased by only 4 6. The Arts College formerly managed by

local society has recently been transferred to Government ' By the munificence of a wealthy merchant Sir Chinubhai Madhavlal a Science Institute with separate buildings for a half

merchant Sir Chinubhai Madhaviai a Science institute with separate buildings for a nail and a library are now being added

AJMER—The population of Ajmer city in 1911 was 86 222 showing an increase of 168 % during the decade. The miner province of Ajmer Merwara shows an increase of only 5 I
On the occasion of the royal visit to India the Queen spent three days at Ajmer in December 1911 while the Ling was shooting in Nepal. She visited the Mayo College Pashkar lake sacred to Hindus and the tomb of the Mahommedan saint. Muin ud-din Chisti

Allahabad —The population of Allahabad city in 1911 was 171 697 showing a decrease of 2% during the decade. The population of the district likewise decreased by 16% due to the accordance of plague. On November 11 1910 the Vicerov paid a visit to Allahabad to lay the

of 2 % during the decade The population of the district likewise decreased by 16% due to the prevalence of plague. On November 11 1910 the Viceroy paid a visit to Allahabad to lay the foundation stone of a pillar in Minto Park on which have been inscribed the two historic Proclamations of Queen Victoria and Edward VII In December of that year while the National Congress was being held under the presidency of Sir W Wedderburn the largest exhibition yet held in India was opened by the Lieutenant Governor The agricultural court which was a conspicuous success has greatly stimulated the interest of landowners in the use of labour-saving implements power plant for pumping and the manufacture of white sugar by machinery A new bridge across the Ganges to connect with the Oudh and Rohilkhand Railway was opened in October 1912 while the railway bridge across the Jumna is being widened to carry a double line Other public works in progress are a senate hall and a library for the university while a new building for the High Court has been sanctioned A trust fund has been formed for the purpose of opening out congested areas

ALWAR — The population of this native State in 1911 was 791 688 showing a decrease of 4 / during the decade The Maharaja Sir Sawai Jai Singh was created KCIE at the

Delhi Durbar

AMRITSAR—The population of Amritsar city in 1911 was 152756 showing a decrease of 6 / during the decade. The population of the district also decreased by 14 due to plague and malaria. As a result of the malaria conference held at Simla in 1909 Amritsar. has been selected for a laboratory lectures are here given to medical officers and a periodical is published

ANDAMAN ISLANDS—The population of Port Blair (the penal settlement) in 1911 was 16 324 showing an increase of 4 during the decade while in the rest of the Andamans only I 317 persons were enumerated showing an apparent decrease of 30 % In the Nicobar Islands however which are under the same jurisdiction there was an apparent increase of

no less than 35.4. o Assaw —The population of Assam (which was incorporated with Eastern Bengal in 1905 but was again constituted a separate Province under a chief commissioner in 1912) was 7 059 857 in 1911 showing an increase of 17 1 , during the decade. This high rate of increase more than three-fold that for all British India may be as ribed partly to the immigration of labourers on the tea estates but still more to recovery from the results of a severe epidemic The tea industry has been very prosperous in recent years demand having exceeded production The total number of labourers on the tea estates in 1911 was 763 239 of whom only 0 868 were under the Act specially enforcing contracts which it is proposed shortly to repeal In 1912 Sir A Farle was appointed chief commissioner of Assam and it is proposed to give the province a legislative council under the powers conferred by the Act of Parliament passed in that year

A valuable series of monographs on the more important tribes of Assam is being published by the Government

Bahawalpur — The population of this native State in 1911 was 780 641 showing an in crease of 8 3 / during the decade — The Nawab a boy of only 7 was a conspicuous figure at the Delhi Durbar riding at the head of his camel corps in the military review. In February 1911 a feeder railway of 22 miles constructed at the expense of the state was opened by the

I seutenant Governor of the Punjab

BALUCHISTAN —The population of British Baluchistan in 1911 was 414 412 showing an increase of 8 5 / during the decade —In the Baluchistan states the population of Las Bela likewise increased by 9 1 / while that of Kalat (excluding Kharan) shows an apparent decrease of 10 % due to the fact that the earlier figure was based upon an estimate not upon actual enumeration In British territory the recent period has been peaceful except for raids by Afghan outlaws from across the frontier in consequence of which it has been found necessary to re arm the levy corps with Martin Henry rifles The value of transfrontier trade though still small exhibits an increase The state of Kharan was disturbed after the death of its old chief in June 1909 and his successor was assassinated in April 1911 The ex Khan of Kalat who was dethroned in 1893 died at Pishin on May 20 1909 A severe shock of earthquake was felt throughout Kalat on October 21 1909 causing great loss of lite and property

A Gazetteer of Baluchistan has been published in 8 vols.

BANGALORE—The population of Bangalore city (including the civil and military station under British jurisdiction) was 189 485 in 1911 showing an increase of 191 / during the decade. The My sore state proposes to introduce an electric tramway service for ten miles through the city and its suburbs

BANGANAPALLE -- The population of this native State in 1911 was 39 344 showing an

increase of 21 9 % during the decade

BARODA — The population of this native State in 1911 was 2 032 798 showing an increase of 4 t % during the decade and the population of the city was 99 345 showing a decrease of 4.3%. The Maharaja Gaekwar with the Maharaji was absent during the greater part of 1910, visiting Japan the Umited States (where his second son was at college) and England They again came to London in 1911 for the Coronation Concerning his act of homage at the Delhi Durbar the description of the official historian may be quoted One chief only marred the proceedings for a moment by a laboured ungainliness of bearing which lent itself to misinterpretation. His third son at Oxford has played cricket more than once for the university eleven. Baroda maintains its claim to be the most progressive state in India. In 1911 the length of railways open was 300 miles and 100 miles more were under construc tion In addition £218 000 was spent on other public works Expert and import duties generally have been abolished and also octros in municipalities Education in primary schools is compulsory and free A bank and many factories have been established with Schools is Computedly and the A bank and many factories have been established with official encouragement. The legislative council is active in passing laws and regulations. There is also a state council presided over by the minister. See 4 Year with the Gaekuar of Baroda by E. St. C. Weeden (1912)

BASTAR—The population of this feudatory. State in 1911 was 433-310 showing an increase of no less than 41.4. during the decade due partly to recovery from famine. In February

1910 there was a serious rising of the abonginal tribes which was not suppressed without the intervention of regular troops. Two British officers have since been deputed to assist the Raja and many reforms have been introduced in the administration.

BEHAR AND ORISSA -This is the name of the new province in India which was created on April 1 1912 in accordance with the announcement of the King at the Delhi Durbar and the provisions of a subsequent Act of Parliament Including Chota Nagpur in addition to the two historic tracts after which it is named it has a total area (with native States) of about 116 000 sq m and a total population (1911) of about 384 millions among whom Hindu greatly predominate over Mahommedans. The capital has been fixed at Patna and a hill station will probably be found on the Chota Nagpur plateau. The first Lieutenant Governor is Sir Charles Bayley transferred from Eastern Bengal and Assam and the first Indian member of the assemble of the Assamble of Porthance as wealth, Indian member of the assemble of the Assamble of Porthance as wealth, Indian member of the Assamble of Porthance as wealth, Indian member of the Assamble of Porthance as wealth, Indian member of the Assamble of Porthance as wealth, Indian member of the Assamble of Porthance as wealth, Indian member of the Assamble of Porthance as wealth, Indian member of the Assamble of Porthance as wealth, Indian member of the Assamble of Porthance as wealth, Indian member of the Assamble of Porthance as wealth, Indian member of the Assamble of Porthance as wealth and the Indian member of the Indian ber of the executive council is the Maharaja of Darbhanga a wealthy landowner in Behar

BENARES —The population of Benares city in 1911 was 203 804 showing a decrease of 4.4 o during the decade while the population of the district increased at the rate of 1 7 ° o In November 1910 it was announced that the Raja of Benares Sir Prabhu Narayan Singh GCIE who already possessed the rank of His Highness and a salute of 13 guns would be recommed as a ruling chief and he was formally invested in April 1911. The new native State thus created the first in Indian history consists of what were before known as the Fam rly Domains with a total area of nearly 1 000 sq m in the two districts of Benares and Ghazipur and a rent roll of about £66 000 In addition the Raja owns private estates with He is descended from the father of Chet

a rent roll of about £46 000 subject to land revenue He is descended from Singh who rebelled against Warren Hastings and was dethroned in 1781

BENGAL —The Province of Bengal while retaining the same official title has undergone two fundamental changes of area within seven years. In 1905 the original province practically identical with that comprised in the Diwam grant of 1705 was reduced by the separa tion of Eastern Bengal from a total area of about 190 000 sq m to about 150 000 sq m while the population was reduced from over 78 millions to over 54 millions. On April I 1917 in accordance with the announcement of the King at the Delhi Durbar and under a subse quent Act of Parliament Eastern Bengal was reunited while Behar Orissa and Chota Nig pur were separated to form a new Lieutenant Governorship and the province was at the same time raised to the rank of a Presidency under a Governor with powers and privileges similar to those of the Governors of Madras and Bombay

In 1911 the population of the Province (as then existing with the inclusion of native states) was 57 206.430 showing an increase of 48 o during the decade. The population of the Province as now reconstituted is about 46 millions with Mahommedans in a slight major. ity over Hindus The first governor is Lord Carmichael, transferred from Madras and the first Indian member of the executive council was Rai Kisori Lal Goswami Bahadur appointed in November 1910 when an executive council was constituted under the Indian Councils Act of The same statute authorised the enlargement of the legislative council which now consists of 52 members including 25 elected by variously composed constituencies. In the total there were 20 Hindus and 7 Mahommedans. Calcutta remains the capital of Bengal with Darpling as the residence of the Governor during the hot season, but it has been solemnly promised that Dacca the former capital of Eastern Bengal and a centre of Islam shall always be occupied by the entire administration for a certain period of every year. In 1912 when the Province was reconstituted the Indian member appointed to the executive council

of the Governor was Dyed Shams ui Huda a Mahommedan advocate

Bharatrue — The population of this native State in 1911 was 558 785 showing a de

crease of 10 8 % during the decade — The Maharaj, who is still a minor recently spent two years in England returning in October 1910 He was a page of honour at the Durbar

INDIA 6is

BROPAL —The population of the Bhopal Agency in 1911 was 1 050 735 showing an increase of 13 4 % during the decade due to recovery after famine The population of the city was 56 204 showing an apparent decrease of no less than 27 % due to plague at the city was 56 204 showing an apparent decrease of no less than 27% due to plague at the time. The Begam of Bhopal who is a most enlightened ruler and travelled lady was a conspicuous though veiled figure at the Coronation in London and also at the Delhi Durbar where one of her sons acted as an ADC and another as a page of honour. She received the decoration of GCS is on January 1 1910 and that of CI in December 1911. See 4 Palgrimage to Mecca by the Begam of Bhopal (Trans. Calcutta. 1906), and An Account of Mv Life by the Begam of Bhopal (Trans. 1912).

BIKANER—The population of this native State in 1911 was 700.983 showing an increase of 19.9 during the decade due to recovery after famine. The Maharaja as ADC to the King was a conspicuous figure at the Coronation and also at the Delhi Durbar where one of

King was a conspicuous figure at the Coronation and also at the Delhi Durbar where one of his sons acted as a page of honour. He was created GCSI on the occasion. In June 1911 he had received the honorary degree of LLD at Cambridge. In September 1912 Memorial College in his capital named after the elder brother to whom he succeeded and by announcing the formation of a legislative council. He has recently converted an infantry regiment 500 strong into Imperial Service troops and he has offered to contribute towards the construction of a railway through his state to connect Delhi more directly with Karachi The town of Bikaner is now lighted throughout by electricity. An English officer has been lent to the state to reform the land revenue system

BOMBAY CITY -The population of Bombay city in 1911 was 979 445 showing an appar ent increase of 26 2 during the decade But when the Census of 1901 was taken plague was raging in Bombas and a special enumeration in 1906 returned a total of 959 537 also suggested that again in 1911 many persons had left the city owing to depression in the

cotton industry or through fear of plague infection

Bombay city has enjoyed almost unbroken peace and prosperity its citizens being too well to do and too sensible to be affected by the unrest that manifested itself in other parts of the Presidency The only senous trouble wa caused in December 1909 by nots of a non political character between rival sects of Mahommedans at the Muharram festival It was found necessary to call out the troops who fired on the mob and 20 lives were lost Bombay was the scene of the arrival of the King and Queen in India and also of their departure and it was there that the King delivered two of his sympathetic speeches. It has been decided to commemorate the Royal visit by erecting an archway on the historic Apollo Bandar

Two undertakings of the first magnitude are in progress at Bombay One is the work I wo undertakings of the first magnitude are in progress at Bombav. One is the work of the Improvement Trust, which has already reclaimed 90 000 sq. yards from the foreshore for buildings opened two wide roads through former slums, and erected sanitary chauls or lodging houses for 15 000 poor persons. With the aid of a special grant of £333 000 from the Government of India, it is now engaged in opening out the north of the island which is difficult of access and sparsely inhabited. The other is the work of the Port Trust, which should be completed in 1913 at a total cost of more than £5,000,000. This consists in the construction of the Alexandra Dock. 50 acres in extent, with a dry dock 10,000 ft long, and a mole where the mail steamers can be alongade, and the reclamation, of 600 at res. for export traffic. where the mail steamers can be alongside and the reclamation of 600 acres for export traffic and a new railway station Three other projects may be mentioned the provision of electrical energy from water power in the Western Ghats which has been commenced by a company with more than £1 000 000 of Indian capital under the auspices of the Tatta firm a grandiose scheme still in embryo for the reclamation of no less than 1 000 acres in Back Bay at an estimated cost of nearly \$2,000,000 to be taken in hand by the Government and the proposed electrification of all the railways in the island

See Gazetteer of Bombay City 3 vols (Bombay 1910)
BOMBAY PRESIDENCY—The total population of the Bombay Presidency in 1911 (includ ing Sind Aden and native States) was 27 084 317 showing an increase of 63 o during the decade due mainly to recovery after famine. Agricultural seasons were on the whole favourable except in Gujarat in 1911 but plague continued to be prevalent. In British territory alone (excluding Aden) the population was 19 626 477 and in native States 7 411 675

the rate of increase in each being almost equal

Bombay claims to be the province where education is most widely spread and also most efficient. Under the stimulus of encouragement from the Governor. Sir George Clarke (who retired at the end of 1912 with a peerage as Lord Sydenham) great progress has been made in recent years especially as regards the higher teaching of science. The university has revised its courses and made arrangements for post graduate study. In Bombay city three wealthy merchants have subscribed. £126,000 for the establishment of a Science College and their example has been followed at Ahmedabad (qv) Conse quently the Science College at Poona has been converted into a college for engineering. A first class agricultural college has been built at Poona. Nor has primary education been neglected. During the two years ending 1911 no less than 1 100 new schools were opened. but it is admitted that there are still 100 000 children whose parents would willingly send them to school if there were schools for them

The first Indian member to be appointed to the executive council was Mr Mahadev

Bhasker Chaubal an advocate of high standing who has since been nominated to serve on the Royal Commission to enquire into the civil service. The legislative council as reconstituted 10 July, contains a majority of non-official members. Of the total of 46 Hindus number 20, Mahommedans 7 and Parsis 3

See Rural Economy in the Bombay Deccan by G Keatinge (1912)

See Rural Economy in the Bomony December by Graning 1777.

Bundi —The population of this native state in 1911 was 218 730 showing an increase of Bundi —The population of this native state in 1911 was 218 730 showing an increase of Bundi —The decade due to recovery after familie —In December 1911 the no less than 27 7 % during the decade due to recovery after famine Queen paid a visit to Bundi while the King was shooting in Nepal There being no railway within the state she travelled by motor from Amer (100 miles) She was hospitably entertained at the capital, and the Maharao who afterwards came down to Bombay to bid

Burma—The population of the Province of Burma in 1911 was 12 115 217 showing an increase of 155% during the decade more than double the rate of increase for all India. this increase about 53 000 is due to an estimate for tribes on the frontier not formerly includ ed It is noteworthy that the number of Chinese has risen from 62 000 to 123 000 of whom

only 17 000 are females

Burma is happy in the possession of no exciting history. The wave of unrest which recently ran through India never reached its borders. Its prosperity depends almost entirely The wave of unrest which upon rice and even when the harvest has not been good this has been compensated by high prices for export. Teak ranks next in importance to rice and by the extension of working plans over the virgin forests the supply of timber is being maintained. In 1910-1 the net revenue of the forest department amounted to £440 000 Petroleum is another valuable product though the supply of oil is apparently not increasing. The ruby mines cannot be product though the supply of oil is apparently not increasing. The ruby mines cannot be considered a success but in 1910-1 lead was produced to the value of £168 ooo and rich discoveries of wolfram have recently been reported. What Burma most need is an improvement in communications for which purpose it has been proposed to levy a cess upon the rice exported from Rangoon. A line of railway is now being constructed into the Southern Shan States and a small line has also been opened in the Northern Shan States by the Burma Mines Company On the northern border which marches with Chinese territory occasional raids of Chines Kachines, and other wild tribes occur but these have never assumed a scrious form The Shan States are on the whole successfully administered by their own Sawbas or chiefs

Under the recent reform Burma has a small legislative council with a majority of non officials but the elective system has not been introduced. In a total of 15 members there

are 4 Burmans, one Mahommedan one Parsi and one Chinese
CALCUTTA—The population of the city of Calcutta proper in 1911 was 896 067 showing an increase of 57% during the decade but if the suburbs and also Howrah on the opposite side of the Hugh be added the total population would be raised to 122, 313 and the rate of increase to 104 or The increase is entirely among Hindus Mahommedans and

Christians showing an actual fall while females constitute less than one third of the total Though the climate does not enjoy a favourable reputation. Calcutta is fortunate in escaping endemic plague. In 1911 the registered death rate was only 27 2 per thousand as compared with an average of 32 per thousand for the previous five years pality has recently completed two large projects for doubling the supply of filtered water and for improving the system of drainage—It has also taken over the lighting of the city—and by laws have been passed relating to daines—stables—public buildings and markets—During the past ten years the rateable value has increased by 58 ° to £2 365 000 while the total debt is £3 222 000 In August 1911 an Act was passed by the Bengal legislative council constituting an Improvement Trust (similar to that at Bombay) to undertake chemes for clearing congested areas and making street improvements the cost to be met from an increased duty on property transfers a terminal tax on passengers and a cess on jute, with contributions from the municipality and the government _ The Port Trust has to provide for a trons from the municipality and the government The Port Trust has to provide for a trade that has doubled within the last ten years The more important works completed or in progress are—the extension of docks and sidings the acquisition and reclamation of land and the provision of a coal depot a landing stage and four ferry steamers. In 1910-1 the receipts amounted to £855 000, while the debt was £5 622 000. Under the stimulus of recent reforms the Calcutta University has advanced far towards becoming a teaching institution with no less than 49 lecturers and more than 500 students for post graduate study newest college is one founded by Marwaris for commercial education at a cost of £60 000 while a Hindu lawver has promised £93 000 for the foundation of a College of Science

The visit of the Ling and Queen to Calcutta from December 30 1911 to January 8 1912 was

even more notable for a popular demonstration of lovalty than the Delhi Durbar It cannot however be disguised that the transfer of the imperial capital to Delhi has been badly received especially by the English residents who will lose not only the attractions of a seasonal court but also the advantage of contact with the heads of the administration Indians on the other hand are glad that Bengal is reunited and that a civilian Leutenant Governor has been replaced by a Governor from England Apart from a possible fall in house rent there is no reason to suppose that the material prosperity of Calcutta will suffer

CAWNPORE —The population of Cawnpore city in 1911 was 178,557 showing an apparent decrease of no less than 12 /o but plague was raging at the time and a later enumeration

raised the number to 195 498

The population of the district likewise shows a decrease of An agricultural college has recently been opened at Cawn

pore and a trust fund formed for opening out congested areas.

CENTRAL INDIA—The total population of the Central India Agencyin 1911 was 9 356 980 showing an increase of 10 1, during the decade due to recovery after famine For the more important states see Bhopal Gualioc Indore and Revue

A Gaselier of the Central India Agency has been published in 9 vols CENTRAL PROVINCES—The total population of the Central Provinces and Berar (which form a single administration since 1905) was 16 0.3 3 to in 1911 showing an increase of 179 during the decade due to recovery after famine. In the feudatory states alone with a population of 2 117 002, the rate of increase was as high as 29 8 Native Christians have The province with its large Maratha population did not altogether escape the prevalent spirit of unrest and in January 1909 the Queen Victoria Memorial at Nagpur was dese crated by a student of the agricultural college. But on the whole prosperity has followed upon good harvests the crops for export being cotton oilseeds and wheat. As a result of the Irrigation Commission a number of small tanks have been excavated to protect precarious tracts and sanction has been given for the construction of three large canal systems from as many rivers. On January 9 1912 the King and Queen on their railway journey back from Calcutta to Bombay stopped for an hour at Nagpur to visit the fort and show themselves to the people. Under the Act of Parliament passed in 1912 it is proposed to give the Province a legislative council but this can only apply with restrictions to Berar which is not strictly British territory. The Viceroy visited Nagpur on December 17th to lay the foundation stone of the council hall

CHAMBA—The population of this native State in 1911 was 135 873 showing an increase of 6.3 during the decade. A full account of the inscriptions found in the State and also of the people and their dialects is given in the Chamba State Gazetteer (Lahore 1912). Count. The population of this native State in 1911 was 918 110 showing an increase of 13.1% during the decade. Christians number no less than 233.092 mostly Synans of different rites and Roman Catholics. The state has been exceedingly prosperous of recent accounts after the state of 13.1% and 13. years much attention having been paid to all departments of the admini tration especially forests and navigable canals. In January 1911 the Raja's salute was increased to 19 gins

as a per onal di finction and he was created G C I F at the Delhi Durbar

Coorg—The population of this minor province in 1911 was 174 976 showing a decrease
of 3 1 odering the decade due to the decline in the coffee indu try

Out of 3 533 Christians

no le s than 2 830 were Roman Catholics

CUTCH—The population of this native State in 1911 was 513 4.9 showing an increase of 52 during the decade. There are no railways in the State and the proposal to construct a direct line from Bombay to Karachi through Cutch remains in abey ance.

DACCA—The population of Dacca city in 1911 was 108 551 showing an increase of 21° during the decade while both the district and the district normal trees by more than 11° Dacca was the capital of the new province of Eastern Bengal and Assam created in 1905

and now that Bengal has been reunited in 1912 a solemn promise has been made that Dacca shall be occupied by the government for part of every year erected for the residence of officials and for the secretariat Important buildings have been The remodelling of the water works has been completed and schemes for improving the drainage are in hand. Fducation especially in English is making rapid advance. Hostels and a hall have been opened for Mahommedan students and it is announced that Dacca will shortly have a local univerity. At the Delhi Durbar, the Nawah Sir Khwaja Salimulla was created GCIE Delhi — The population of Delhi city in 1911 was 232 837 showing an increase of

II 60 during the decade due to the growth of commerce and indu tries while the population of Delhi district fell by 46 and that of Delhi division by as much as 89 owing chiefly

to plague and malaria

An acrount of the Delhi Durbar is given above Here it may be briefly said that the Royal visit which lasted from December 7 to 16 1911 was an unqualified success from the popu lar point of view. The canvas city along the historic ridge covered a total area of 25 sq m the amphitheatre erected for the crowning ceremony accommodated 100 000 spectators and 50 000 troops were present at the review. To the Indian mind the most attractive in cident was when the King and Queen showed themselves to the crowds below from a balconv in the Fort where the Mogul emperors had been wont to view spectacles

The site of the new capital is not that of the Durbar nor does it include the spot where the sine of the new capital is not that of the Durbar nor does it include the spot where the king performed the ceremony of laying a foundation stone. In accordance with the advice of an expert commission which included the charman of the I ondon County Council it will be on a high and unoccupied tract S W of the city where convenient space and healthy conditions can best be secured. Here at a distance of about 3 m from the city walls and source of the city walls. and separated from them by a wide belt of park will be built the Viceroy's palace the council chamber and other government offices, at a cost provisionally estimated at £4,000 000. The style of architecture to be adopted was still under discussion in 1912 though de igns had been invited from architects in India

INDLA 618

Meanwhile, as the Government will not return again to Calcutta temporary residences and offices were erected at Delhi at a cost of about £333 000 of which it is estimated that one-third will eventually be recovered. On October 1st an enclave surrounding the city with an area of 559 sq m and a total population of about 392 000 was by proclamation separated from the Punjab and constituted a new province under a Chief Commissioner while the laws in force in the Punjab and the jurisdiction of the Chief Court at Lahore are

preserved by an Act of the legislative council

Dholfuk—The population of this native State in 1911 was 263 188 showing a decrease
of 29 during the decade The Maharaj Rana Captain Sir Ram Singh Lokindar K C I E
died on March 29 1911 and has been succeeded by his brother Udaibhan Singh Lokindar
EASTERN BENGAL—The population of Eastern Bengal and Assam (which was created

a separate province in 1905, but ceased to east in 1912) was 34 018 527 in 1911, showing an increase of 115 % during the decade. Under the reform it received in 1910 a legislative council with a non-official majority. Of the total of 40 members. Hindus numbered 13 and

Mahommedans 8
GARHWAL—The population of the British district of Garhwal in 1911 was 480 167 show ing an increase of 117% during the decade and the population of the native state of Tehri Garhwal was 300 819 showing an increase of 119
The Raja Sir Kirti Sah K C S I is a member of the legislative council for the United Provinces For both district and State see Garhwal Ga.etteer (Allahabad 1910)

GWALIOR—The population of the Gwalior Residency in 1911 was 9 356 980 showing an increase of 10 during the decade due to recovery after famine. The population of Lashkar or Gwalior city was 46 952 showing an apparent decrease of no less than 47° for plague was present at the time of the Census. A later enumeration gave a total of 60 931. The Maharaja Sindhia was a conspicuous figure as ADC to the king at the Coronation and also at the Delin Durbar. While in England he received the honorary degrees of DCL from Oxford and LLD from Edinburgh. His personal salute has been increased to 21 guns and he has been raised to the rank of honorary major general in the British army. The Gwalior State Gazetteer consists of four volumes (Calcutta Bombay and Lucknow took) one of which contains nearly 400 photographs of places of histograph and archaeological

1908) one of which contains nearly 400 photographs of places of historical and archaeological interest while another is an atlay of 15 maps

HILL TIPPERA—The population of this native State in 1911 was 229 613 showing an increase of no less than 32 5 during the decade due to agricultural prosperity Valuable deposits of limestone kaolin and red ochre have recently been reported. The Raja Birendra Kishore Manikya who succeeded his father in 1909 married in August 1910 a cousin of the Maharajadhiraj (nominal king) of Nepal

HOWRAH—The population of Howrah city in 1911 was 179 006 showing an increase of 136 during the decade and the population of the district was 943 50° showing an increase of 109. It has been determined to reconstruct the pontoon bridge connecting Howrah

with Calcutta on the opposite side of the Hugh

Hyperabab.—The population of Hyderabad State in 1911 was 13 374 6/6 showing an increase of no less than 20 during the decade. The population of Hyderabad city unclud ing the British cantonment of Secunderabad) was 500 623 showing an increase of 11 6

The late Nizam (E B viv 32) died on August 29 1911 at the age of 45 having ucceeded when only two years old. He was always constant to the tradition of his family as the loyal ally of the British Government. One of his latest acts was to prohibit the dissemination of sections literature in his state. He was succeeded by his son I sman Ali Khan to whom the Viceroy paid a visit of congratulation in October 1911. At the Delhi Durbar he was a the Viceroy paid a visit of congratulation in October 1911. At the Delhi Durbar he was a conspicuous figure as the first ruling chief to pay homage clothed in plain black with a green turban of Mughal pattern. On the previous day he had been created GCSI. On the occasion of his birthday in July 1912 he announced a change in the administration. Salar Jung grandson of the famous munister of the same name was appointed to the office of prime minister with the Nawab Imad ul Mulk (better known as Saivid Husain Bilgram) the first Mahommedan member of the Council of India) as his special adviser. The most important recent work has been the construction of the Musi reservoir for flood protection and the water supply of the city at a cost of about £666 000. There was a serious outbreak of plague in the supply of the city at a cost of about £666 000 early part of 1912

INDORE.—The population of Indore state in 1911 was 979 360 showing an increase of 16 3' o charge the decade due to recovery after famine. The population of Indore city was 4947 showing an apparent decrease of no less than 48° for plague was present at the time of the Census. A subsequent enumeration gave a total of 68 733. The young Maharaja Holkar who had spent the greater part of two years in England and on the continent was installed with ruling powers in November 1911. He takes over a state that has been vastly improved by the administration of a council during his minority. The most important addition to Indore city has been the completion of Daily College for the sons of Central India chiefs.

JAIPUR.—The population of Jaipur State in 1911 was 2 636 647 showing a decrease of 8% during the decade The population of the city (the only one in Rajputana with more than 50 000 inhabitants) was 137 098 showing a decrease of 14 4% Jaiput city was visited

by the Queen in December 1911 while the King was shooting in Nepal She was entertained by the Maharaja An excursion was made to Amber, the former capital, now in runs JAISALMER.—The population of this native State in 1911 was 88 311 showing an increase of 20 4 o during the decade due to recovery after famine The Maharawal who was born in 1887 and succeeded in 1891 was granted ruling powers in December 1908

[HALAWAR—The population of this native State in 1911 was 96 271 showing an increase of 6.7% during the decade due to recovery after famine The Maharaj Rana paid a visit of Fingland in 1912 when he was a conspicuous figure of the London season. His predeces of 0.77 during the decade to Every are to England in 1912 when he was a conspicuous figure of the London season. His predecessor dethroned for persistent misgovernment in 1896 died at Benares in October 1912.

Rana of Jhalawar (1912)

JIND - The population of this native State in 1911 was 271 728 showing a decrease of

See Phulkian States Garetteer (Lahore 1909)

JODHPUR — The population of Jodhpur State in 1911 was 2 057 553 showing an increase of 63 / during the decade due to recovery after famine Large sums have recently been expended upon irrigation and many new chools have been opened. The Maharaja who died in March 1911 has been succeeded by his son a minor who acted as a page of pontour the Della Dieter and has given been beyond the Fordand for advention. died in March 1911 has been succeeded by his son a minor who acted as a page of honour at the Delhi Durbar and has since been brought to England for education. A regent has been found in Sir Pertab Singh (b. 1845) who had been regent to the boy's father his own nephew. Sir Pertab Singh resigned for this purpose the state of Idar in Bombay to which he had succeeded in 1902. He was a conspicuous figure as ADC to the King at the Coronation and also at the Delhi Durbar when he was created GCVO.

KALAT—The population of this native State (excluding Kharan) was 333-227 in 1911.

showing an apparent decrease of 10 o during the decade but in 1901 the figures had been based on an estimate not on actual enumeration. While Kalat proper has enjoyed an un eventful history serious troubles have occurred in the subordinate state of Kharan. The chief Sir Nauroz khan KCIE died in June 1909 and was succeeded by his son Sardar Yakub Khan who repudated the conditions imposed by the British representative on his accession and was ultimately killed by his own troops in April 1911. The succession of his accession and was ultimately killed by his own troops in April 1911. The succession of his son Habibullah khan has been recognised and measures taken for the administration of the state during his minority. The a khan of kalat, khudadad, khan, GCIE, who

had been deposed in 1893 died at Pishin in May 1909

KAPURTHALA—The population of this native State in 1911 was 268 133 showing a dease of 147 during the decade due to repeated outbreaks of plague. The Maharaja during the decade due to repeated outbreaks of plague crease of 147 is a customed to pay frequent vi its to England and the continent leaving his state under an administrative council presided over by an English official lent by the Government He was created G C S I at the Delhi Durbar

KASHMIR — The population of this native State in 1911 was 3 158 126 showing an increase of 8.7 during the decade. The population of Srinagar, the chief city, though the

Maharaja resides at Jammu within the Punjab was 126,344 showing an increase of 87. The Maharaja is a British major general and was created G C I E at the Durbar.

Apart from a serious epidemic of cholera from June to November 1910, the state has recently enjoyed a period of prosperity. The total revenue has usen from about £666,000 to £761,000 while the cash balance in 1911 amounted to £225,000. In the meantime large sums have been expended upon public works especially upon an electrical power scheme on the Jhelum river and education has been encouraged. The introduction of seri-culture has been a notable uccess the number of rearers between 1910 and 1911 having increased from _, ooo to 36 ooo and the weight of cocoons produced from 37 000 to 42 000 maunds

KHAIRPUR—The population of this native State in 1911 was 223 788 showing an increase of 123 o during the decade. The Nawab who succeeded his father in March 1909 was created GCIE at the Delhi Durbar

KOLHAPUR—The population of this native State was 833 441 in 1911 showing a decrease of 84 o during the decade due to plague. The Maharaja was created GCIE at the

Delm Durbar In 1912 his two sons were brought to England for education

KOTAH—The population of this native State in 1911 was 5.9 089 showing an increase of 17.3 during the decade due to recovery after famine. The Queen paid a visit to Kotah in December 1911 while the king was shooting in Nepal and to commemorate the occasion the Maharao who had been created G C S I at the Delhi Durbar offered a lakh of rupees to be sent for the benefit of the women of India. It has been decided that this shall form the nucleus of a fund for founding the Queen Mary College and Hospital for Women at Delhi towards which other princes and Indian noblemen have already contributed £100 000

Kuch Behar—The population of this native State in 1911 was 592 952 showing an increase of 46% during the decade. The Maharaja (E. B. xx. 937) who had come to hing land to attend the Coronation died at Bexhill on September 18 1911. As a colone in the British army his body was conveyed to the crematorium at Golder's Green with mulitary ceremony and a funeral service was read in accordance with the rites of the Brahmo Samaj. He was succeeded by his eldest son educated in England. A legislative council has been

instituted in the State and one of its first measures was a Tenancy Act. The state railway has been converted from the 2 ft 6 inch to the metre gauge

LARORE — The population of Lahore city in 1911 was 228 687 showing an increase of 12 7

during the decide due to its growing importance as a railway centre with the workshops of the North Western State Railway In the district the population has slightly decreased while in the division the decrease amounts to as much as 8 7 0 due to plague and malaria

A water supply for the city has recently been completed

Lucknow—The population of Lucknow city in 1911 was 259 798 showing a decrease of 16% during the decade the population of both the district and the division likewise de creased at about the same rate

A trust fund has been formed for the purpose of opening out congested areas in the city and improvements are being made in water supply and dramage. A medical college the only one in the province is now approaching completion and the Canning College has been reconstructed

MADRAS PRESIDENCY—The total population of the Madras Presidency (including native States) was 46 217 245 in 1911 showing an increase of 9° during the decade. In native states alone the rate of increase was as high as 14 9%. In British territory the popu

lation numbered 41 405 404
Madras usually so tranquil did not escape from the prevalent spirit of unrest from isolated disturbances, the most serious occurrence was the assassination of Mr R W D Ashe collector of Tinnevelly at a railway station on June 19 1911 The actual murderer committed suicide but several of his accomplices were convicted by a special tribunal of the High Court after a prolonged trial The monsoons and therefore the harvests have recently been favourable permitting an increase in the export of cotton and ground nuts. The co operative credit movement has taken a firm hold. As regards irrigation, a project is under consideration for constructing a reservoir in the valley of the Kaveri which (it is said) will be the largest in the world—Apart from indentured emigration to British colonies labour flows freely from Madras to Ceylon—Burma—and the Straits Settlements—The number of emigrants to the Straits rose from 49 000 in 1910 to 85 000 in 1911

The first Indian member appointed to the executive council was the Raja of Bobbili who resigned after a few months being created C C I E at the Delhi Durbar He was succeeded by V Krishnaswami Aiyar a Brahman judge of the High Court who died in December 1911 (see above) and was succeeded by P S Sivaswami Aiyar an advocate of the High Court The legislative council as reconstituted in 1909 consists of 46 members with a non official majority Of the total 19 are Hindus and 3 Mahommedans. Under revised regulations for the second election in December 1912 the number of elected members has been raised from 19 to 21 and the number of nominated members correspondingly reduced while the electorate has been increased by about 30°. The new Governor Lord Pentland took his seat in October 1012 in succession to Lord Carmichael tran ferred to Bengal. The districts in Madras are exceptionally large so that it has recently been found necessary to create three new ones by redistribution namely Guntur Chittoor and Ramnad

MADRAS CITY —The population of Madras city in 1911 was 518 660 showing an increase of 18° during the decade. As compared with Calcutta and Bombay, the notable feature is the equal number of males and females for the workers here bring their families to reside with them The registered death rate in 1910 was as high as 40 per thousand due partly to the large proportion of children. The municipality completed in 1911 a scheme for distributing the water supply and a project for drainage is in hand. The harbour has been so much improved that P & O steamers now call a the port and further improvements are being made In 1911 the debt of the Port Trust amounted to £558 000

MANDALAY - The population of Mandalay city in 1911 was 138 299 showing a decrease of 248% during the decade and the population of the district was 340 770 showing a decrease of 7% both of which decreases are due to the decay of the former capital for in the agricultural country around the number of inhabitants largely increased. A scheme for water

supply and dramage improvements is in hand

MANDI - The population of this native State in 1911 was 181 110 showing an increase of 4 I o during the decade In May 1909 popular discontent in the state culminated in a serious disturbance which necessitated the despatch of troops from Simla Order was quickly restored and an official of the Civil Service has been lent to the state to conduct a settlement of the land revenue. The Raja Bhawam Sen died in March 1912

MYSORE—The population of this State in 1911 was 5 806 in Match 1912

A by during the decade The population of Mysore city was 71 306 showing an increase of 4 7%. The most important event has been the renewal of all the leases on the Kolar Gold Fields for a further term of thirty years from March 22 1910 In 1911 the total production of gold was 547 746 ounces all sent to London for refining Another mineral product is manganese ore of which 43 000 tons were raised in 1910 Apart from an epidemic of plague the condition of the state has been prosperous. An economic conference was held for the first time in June 1911 and cooperative societies have been plaged upon a satisfactory basis. first time in June 1911 and cooperative societies have been placed upon a satisfactory basis. An interesting institution is the State Life Insurance Fund in which policies are held by more than 7 doo persons, assuring a bonus of £447 000 for a monthly premium of £1 500 The

government has proposed a bill for the tentative introduction of compulsory education The

NABHA—The population of the Maharaja was created k. C. I. L. at the Delh Durbar

NABHA—The population of this native State in 1911 was 248 887 showing a decrease of
165, during the decade due to the prevalence of plague and malaria. The Raja the hon oursed type of an old fashioned Sikh chief died on December 25 1911 at the age of 68 having been too ill to attend the Delhi Durbar He was succeeded by his son Ripridaman Singh born in 1883 who paid a visit to England in 1910 and who as a member of the Vicerov s I egislative council introduced the Anand Marriage Act (passed in 1909) to validate a certain marriage rite of the Sikhs

NICOBAR ISLANDS—The population of the Nicobar Islands in 1911 was 8818 showing an apparent increase of no less than 354 during the decade. For the first time most of the tribes were actually enumerated, while the savage Shom Pen of whom not even an estimate could be formed accidentally supplied the defect. At the very time of the Census they issued a declaration of war accompanying it with two tally sticks on which notches were cut to indicate the number of fighting men in their settlements the several settlements

being marked off by lateral notches

NW FRONTIER PROVINCE—The total population of the North West Frontier Prov ince in 1911 was 3 819 0 7 showing an apparent increase of no less than 79 7° during the decade. But these figures are misleading. They include estimates of 1 084 824 in the agencies and of 519 441 in the trans border tribal areas under political control which were omitted from the Census of 1901. In British and administered territories alone the population was 2 196 933, showing an increase of 76 / 2 039 994 were Mahommedans.

Agricultural seasons have been favourable especially for the important wheat crop.

There has however been a great increase in crime not of a political nature and not connected with border feuds and a regrettable outbreak of Mahommedans against Hindus occurred at Peshawar in March 1910. Education is very backward, but the proposal to found an Islamic college at Peshawar has been warmly taken up.

The peace on the frontier has nowhere been seriously di turbed The large agency tract to the north consisting of Dir Swat and Chitral shows steady progress and development and a high standard of discipline and behaviour is maintained by all the militia corps. Raids there have been especially by the Mahsuds but they are being conciliated partly by the ofter of work on roads and railways and partly by enlistment in the army important matter has been the appointment of a joint commission with the Afghan government which met from May to October 1910 for the settlement of outstanding disputes which came to an agreement for the removal of outlaws from both countries to a distance of fifty miles from the border Caravan traffic through the Khyber Pass has gone on without interruption and two of the Amir's motor cars ran through to Peshawar from Jalalabad

PATIALA -The population of this native State in 1911 was 1 407 659 showing a decrease of II 8 o during the decade due to the prevalence of plague and malaria The young Maharaja wa invested with full powers on November 3 1910 by the Viceroy who visited the state for the purpose. In the following year he came to England for the Coronation and on one or two occasions played cricket with success for the Indian team. At the Delin Durbar as the leading sikh thief he organied in person the Sikh religious service of loyalty that attracted much notice and he was created GCIE. The Maharam on the same occasion

presented to the Queen an address from Indian ladies with an historic jewel

PATNA -The population of Patna city in 1911 was 136 153 howing an apparent increase during the decade but plague was raging at the time of the Census in 1901 and if comparison be made with an enumeration taken later in that year there would appear a decrease of 11.4. The district and of the division both show a small decrease decrease of 114

Patna or rather the adjoining civil station of Bankipur has been chosen as the capital of the new province of Bihar and Orissa constituted on April 1 1912. In addition to the official buildings required it is proposed to provide a High Court and also probably a University both independent of Calcutta. The existing college has recently been equipped with hostels for students. The king twice passed in a steamer along the river front of the

POONA—The population of Poona city in 1911 was 158 856 showing an increase of 3.6% during the decade the population of the district was 1 071 512 showing an increase of 3.6% during the decade the population of the district was 1 071 512 showing an increase of 7.7% due to recovery after famine. The Agricultural College has recently been completed and official buildings for the secretariat & care in progress. A water supply scheme estimated to cost £116 000 has been begun. Among the most interesting modern in thutions are the Servants of India Society founded by the Hoa. G. K. Gokhale for preparing graduates by further study for careers of national usefulness, and the Seva Sadan extrabolar under the further study for careers of national usefulness and the Seva Sadan sisterhood under the direction of the widow of Justice Ranade. The memorial to King Edward VII has taken the form of a hospital for women and children

PUDUKKOTTAI—The population of this native State in 1911 was 411 886 showing an increase of 8.3 % during the decade. Owing to continued ill health the Raja has been absent in Europe for almost the whole of the last three years. PUNJAB—The total population of this Province in 1911 was 24 187 750 showing a decrease of 2.3° during the decade due to the prevalence of plague and malaria. For the native

INDIA **б2**%

States alone the rate of decrease was as high as 4.8%. In British districts the population was 19,974,936 showing a decrease of 1.7%. It is noteworthy that the number of native Christians has risen from 37,980 to 163,220 mostly Presbyterians.

The spirit of unrest which found its first overt manifestation at Rawalpind in 1907.

died away very rapidly throughout the province though there is still some friction between Hindus and Mahommedans. In this connexion it may be mentioned that the reforming Hindu sect of the Arya Samaj now number nearly 100 000 compared with only 9 000 males above fifteen who returned themselves as such in 1901 Despite heavy mortality from plague and malaria the Punjab has enjoyed a large measure of prosperity owing to the extension of irrigation and a succession of bountiful harvests. In 1910-1 the total area irri gated from government canals was 6 million acres showing an increase of more than 400 000 acres in two years The canal colonies are so prosperous that they can afford to hold up their wheat for a favourable price and at the same time to indulge in the luxury of hoarding gold years What is known as the Triple Canal Project on the Upper Jhelum Upper Chenab and Lower Bari Doab is now nearing completion at a total cost of about 46,500,000. Education is making steady progress especially education in English. The Sikhs the Mahommed ans and the Arya Samaj each support an Arts college of their own In 1910 the percentage of boys of school going age attending public institutions was 23 3 for Sikhs 17 7 for Hindus and 11 3 for Mahommedans.

In accordance with the reforms of 1900 the legislative council now consists of 24 members of whom only 5 are elected. Of the total 6 are Mahommedans, 5 Hindus or Sikhs and one a Parsi. The Land Ahenation Act of 1900 designed to protect hereditary land owning tribes from expropriation by money lenders has been extended to certain small tribes who are really agriculturists and it is believed that the old land owners are now recovering part of what formerly passed out of their hands. Tenants in the canal colonies have been encouraged to purchase hereditary rights in their holdings. An Agricultural College was opened at Lyall pur in December 1910. See *The Industrial Punjab* by A. Latifi (1911)

RAIPUTANA — The total population of the Raiputana Agency in 1911 was 10 530 432 showing an increase of 6.9 o during the decade due to recovery after famine. For the more important states some of which were visited by the Queen in December 1911 see Bikaner Bharatpur Bundi Jarpus Jodhpur Kotah and Udarpur

RAMPUR—The population of this native State in 1911 was 531 217 showing a decrease of 4 during the decade. The population of Rampur city was 74 316 showing a decrease of 56%. As A D C to the King the Nawab was a conspicuous figure at the Delhi Durbar when he was created G C VO. He has recently converted six companies of infantry into Impenal Service troops. Though a Pathan he is a Shiah and is honoured as the head of that Mahommedan sect in Northern India. Large sums have been spent on the improvement of the capital old mud houses and shops having been replaced by brick while a new brick fort full of palaces has a circumference of nearly a mile. The library of Oriental MSS has few superiors and there is a large collection of pictures by European artists. A new sugar factory and distillery yield large profits and the finances of the state are satisfactory

RANGOON—The population of Rangoon city which forms a district by itself was 293 316 in 1911 showing an increase of 195 o during the decade. In recent years the city has been almost reconstructed partly by land reclamation and partly by rebuilding. In 1911 the total debt of the municipality was £1 245 000 of which £403 000 was due to reclamation works. The incidence of direct taxation was 13° per head. A new pumping station was completed. Rangoon now almost monopolises the trade of Burma and conducts about 8 of the whole foreign trade of India In 1910 the Port Commissioners who found themselves in an embarrassed position resolved to derive their revenue in future mainly from port and river dues instead of from landing shipping and warehousing charges. Their chief task is the construction of river training works on which the welfare of the port must depend in 1911 the debt amounted to £1 £34 000. Within the last ten vears the revenue has increased from £100 000 to £225 000. A local company with European directors called the Bank of Burma failed disastrously in 1912 and a public prosecution has been ordered.

REWA - The population of the Baghelkhand Agency (almost co extensive with Rewa

state) was 1 772 574 in 1911 showing an increase of 14 1 % during the decade the eldest son of the Maharaja acted as one of the pages of honour at the Delhi Durbar Sandur.—The population of this native State in 1911 was 13,526 showing an increase of 20 80° during the decade. The Raja who is a minor is being educated in the Court of Wards College. of 20.8° during the decade The Raja who is a minor is being equeated in the Court wards College in Madras In 1909-10 the export of manganese ore from this little state by the General Sandur Mining Company reached 60 000 tons.

Sikkim —The population of this protected State in 1911 was 87 920 showing an apparent increase of 49% during the decade following after an increase of 94% in the previous decade. The Maharaja, in his quasi Tibetan dress was a conspicuous figure at the Delhi Durbar on which occasion he was created k C I E Both he and his son (educated at Oxford) take an active interest in extending education.

SIRMUR (or Nahan) -The population of this native State in 1911 was 138,520 showing

CEYLON 623

an increase of 2 1 6 during the decade ed by his son Amar Parkash The Raja died on July 4 1911 and has been succeed

TONK.—The population of this native State in 1911 was 303 081 showing an increase

of 109° during the decade due to recovery after famine
TRAVANCORE—The population of this native State in 1911 was 3 428 975, showing an increase of 162 0 during the decade which follows upon an increase of 154 0 No further evidence is necessary to prove the extraordinary prosperity of the state which is likewise indicated by the high standard of education but it is noteworthy that native Christians have increased laster than the general population and now number more than one fourth of the total. The revenue has reached £780,000 and the value of the exports £3,658,000. In August 1912 the Kodyar irrigation works were opened constructed at a cost of 70 lakhs to

Inguis about 70 000 acres the area of the reservoir will ultimately be 7 sq m

[DAIPUR (or Mewar) — The population of this native State in 1911 was 1 293 776 showing an increase of 25 6 during the decade due to recovery after famine At the Delhi Durbar the Maharana as recognised first in rank of all Rappit princes was appointed to the dignity of ruling chief in waiting on the King Emperor and was created G (I E.

UNITED PROVINCES - The total population of the United Provinces of Agra and Oudh in 1911 was 48 014 080 showing a decrease of 1 o during the decade due to the prevalence of plague and malaria. The native state of Tehri-Garhwal alone showed an increase of 12 o. In British territory the population was 47 182 044 the rate of decrease being 7,0 in Agra and 2 1 0 in Oudh. It is noteworthy that the number of native Christians has risen from

37 980 to 163 220 mostly Methodists

The province has been happy in escaping almost entirely from the unrest. This may be ascribed mainly to the efficiency of the local administration under two popular Lieutenant Governors. There is indeed some friction between Hindus and Mahommedans. and the numbers of the Arya Samaj or reforming Hindu sect. have increased in ten years from 65 000 to 131 000 The prosperous condition of the people is proved by their rapid recovery from the famine of 1907-8 Relief was so efficiently administered that deaths from stars a tion were practically unknown and the large sums then advanced for agricultural improve ments were quickly repaid. Harvests have since been generally good. Irrigation has been extended through the precamous tract of Bundelkhand and a comprehensive scheme is now under consideration to supplement the system of canals that take their water from the Ganges and the Jumna by diverting the overflow of the Sarda river in Oudh tion at Allahabad during the winter of 1910-1 was the means of popularising labour saving implements and machinery for sugar making and an agricultural college has recently been opened at Cawnpore Special attention has also been paid to technical education and the encouragement of industries It must however be admitted that the United Provinces still lag behind in the matter of primary instruction

In accordance with the reforms of 1909, the legislative council now consists of 48 members One of its most important measures has been of whom 18 are Hindus and 9 Mahommedan a Court of Wards Act for the disqualification of spendthrifts Sir J P Hewett whose term of office was marked by friendly cooperation with Indian sentiment was succeeded as Lieutenant Governor by Sir J S Meston in September 1912 It was understood that an executive council with an Indian member as in Behar and Orissa, would shortly be given to the United Provinces

CEYLON 1

The population of Ceylon in 1911 (census March 10) inclusive of military and shipping was 4 109 470 as compared with 3 578 33, in 1901 an increase of 531 137 or nearly 15 of The figures for the nine provinces of the island were as follows —

Provinces	Population	Increase	Provinces	Population	Increase
Western	1 110 393	per cent 18 84	North Western	433 058	per cent 21 86
(entral	671 806	7 76	North Central	433 958 86 269	8 94
Northern	369 654	8 65	Uya	216 655	16 42
Southern	628 491	10 89	Sabaragamuwa	408 524	26 97
Eastern	183 720	6 02			

A feature of the decade was the movement of population into the towns Colombo with its population of 211 284 increased by 32 5 and Kandy with 29 928 by 25 82 b. Newara Eliya the health resort with 7412 shows an increase of 36 43%. The only town of any importance showing a decrease of population is Trincomalie where the naval vard has been closed and the military garrison taken away. There has been a satisfactory increase of 21% and the property of the result o in the number of Europeans who are now twice as numerous as in 1871. Of the native races the low Country Sinhalese show the highest percentage 187 of increase. The Moors show 168 the Kandyans 142 the Tamils 113 and the Malays 99. There has been an increase in the number of Buddhists and Christians and a decrease in that of Hindus. In 1901 there were 8 806 females to 10 000 males and in 1911 8 878

¹ See E B v 780

Agriculture - Messrs A M & J Ferguson the authors of the Ceylon Handbook and Direc tory estimate that out of a total of 15 809 280 acres in the island there were in January 1912 about 3f milhon acres under cultivation a slight increase on the corresponding estimate made by them in July 1908 Coco nuts occupy 770 000 acres rice 620 000 acres and paims other than coco-nuts about 300 000 acres

The acreage under tea about 395 000 acres has not varied much since 1909 any increase due to newly planted fields being cancelled by the dying out of those where rubber has been interplanted. The crop for 1911 187 674 990 lbs though 6 000 000 lbs in excess of that for 1910 fell short of the record crop for 1909 by 4 000 000 lbs. The estimate by the Planters

Association of the 1912 crop is 193 000 000 lbs

In rubber planting there has been very rapid development. An area of 184,000 acres in 1909 has risen to 217 000 acres in 1912 while the shipment of 1½ million lbs in the for mer year increased to over 7 million lbs in 1911. It was estimated that in 1912 the shipments would again be more than doubled. In cocoa about 32 000 acres and cardamoms about 8 000 there has been no increase of area under cultivation. Coffee and cinchona bark once leading products have practically disappeared from the list of exports. In cinnamon no change is recorded. Immigrant labour brought over from southern India under a system of money advances, has from the first been the life blood of Ceylon planting 1910 the arrivals and departures were respectively 118 000 and 64 000 in January to June 1911 they were 40 000 and 36 000. The system has for the most part worked admirably But in the last few years an excessive strain has been thrown on it by the vast area brought under cultivation for rubber both in Ceylon and in the Federated Malay States and in the keen competition for coohes the amounts advanced have so increased as to leave small hope of recovery in full. To meet this proprietors of tea and rubber estates have formed. The Cevion Proprietors Labour Federation with the object of limiting the amount of advances and ultimately of substituting for the present system one under which all the initial expenses of the immigrant shall be paid in such manner that he shall start work in Cevlon free of debt Commerce—The last Government Blue Book in place of giving figures as previously

for the calendar year gives them for 18 months January 1 1910 to June 30 1911 as follows Imports 164 864 703 exports 173 717 722 The increase since 1900 is about 18 0

Imports 164 864 703 exports 173 717 722 The increase since 1900 is about 18 of Finance—The public revenue has risen from Rs 27 325 930 in 1900 to Rs 39 332 860 in 1909 and to Rs 65 612 640 in the 18 months January I 1910 to June 30 1911 Assuming that the figures for 1910 must have exceeded Rs 41 000 000 the increase in the present

that the figures for 1910 must have exceeded Rs 41 000 000 the increase in the present century has been fully 50%. Public expenditure has risen to correspond

The public debt on June 30 1911 was loans raised in London 45 902 700 equivalent at 1s 4d to the R to Rs 89 440 500 local loans Rs 3 064 027 the total debt Rs 92 504 527 less sinking funds Rs 12 425 330 making a net debt of Rs 80 079 197 or the equivalent of £5 338 613 equal to about 2 years revenue

Railways—The mileage open for traffic increased from 563 in 1908 to 604 in 1912 and 130 miles more are either in course of construction or have been sanctioned. Sanction has been sought for other 72 miles which should be complete within four years. The railways have from the first been a fruitful source of revenue to the government, to which they below In the 18 months from January I 1910 to June 30 1911 the recepts were Rs 13 583 160 and working expenses Rs 6 337 583 showing a profit of Rs 7 245 577 It is calculated It is calculated

that this is a return of 7_{1} , on the capital expended

Shipping—The total tonnage of vessels calling at Ceylon ports in 1910 was 9 371 097
as against 8 453 236 in 1909 Over 90 was entered at Colombo where the harbour like
the railways (though in a less degree) has become a source of government revenue. The estimated receipts for 1911-12 (July 1 to June 30) were Rs 2 609 380 and the estimated expenditure Rs 2 085 656 showing an estimated profit of Rs 523 724. As the annual charge for the public debt only slightly exceeds Rs 4 000 000 or not much more than half

the profits of the railways and harbour the financial condition is quite sound

Political and Social Progress —The Legislative Council hitherto consi ting of the gover nor ten official members and eight unofficial members has been reformed by Ordinance 13 of 1910 In the past the unofficial members were all nominated by the governor who as a rule placed the nominations in the hands of the various representative bodies of the island Three of the eight seats were held by Europeans the other five by native The reformed council consists of the governor eleven official members and ten unofficial members new official member is the government agent for the time being of the Southern Province Of the unofficials four are elected by constituencies created under the above ordinance and are styled the European urban member the European rural member the burgher member and the Educated Ceylonese member the electors being (1) Europeans resident in Colombo Calle and Kandy (2) other Europeans resident throughout the island (3) the Burgher community (4) natives who can read and write English The other six unofficial members are munity (4) natives who can read and write English nominated as before by the governor

The first electrons took place in November and December 1911 For the European seats there was no contest and as under the old system leading members of the Chamber of Commerce and Planters Association were elected. The native seats were warmly contested The reformed council held its first sitting on January 16 1912 The reduction of the num

ber of European unofficial members from three to two has been severely criticised muttee work is perhaps the most important part of the work of the council and no commettee can be counted complete without one European unofficial member on it. With only two

members available it will hardly be possible to provide a representative on every committee
Under the Excise Ordinance of 1911 introducing the Madras system into Ceylon 1140
toddy taverns have been recently opened under Government regulation
This has led to protests being lodged with the Secretary of State in London by the Native Races and Liquor Traffic United Committee and by many influential native gentlemen

Education has become more widely diffused with the increase of prosperity In 1911

there were 299 620 pupils under instruction an increase of about 63 since 1901. The government has a training college with about 100 students but there is not yet any general provi ion for higher technical education. Sir H. E. McCallum. G.C.M.G. (b. 1852) resigned the governorship of the colony on Dec. 12, 1912, owing to a breakdown in health (W MARTIN LEAKE)

BRITISH MALAYA ETC 1

Straits Settlements 2—Exclusive of the floating population in 1911 the residents in the Straits Settlements proper (excluding Christmas Island and the Coros-Leeling Islands) numbered 705 405 males being nearly 2 to 1 Singapore had 303,3-1 Penang 141 559
Province Wellesles 128 978 Malacca 1.4 081 The Dindings 7 466 Chiasse com
prised more than half the total population numbering 366 765 then came the Malays and
allied races with 235 762 Indians 81 928 and Europeans and Americans 7 276 The military at Singapore (including dependent) numbered 3 714

As regards religions the census returns gave the following statistics. Non Christian and

non Mahommedan Chinese 359 760 Mahommedans 261 154 Hindus 5- 579 Christians -7 4,4 Buddhists (non Chinese) 2 758 Jews 38, Sikhs 372
In 1910 there were 216 321 Chinese immigrants but in 1911 a fresh record was established with 269 854 made up of 226 129 men 22 738 women 16 030 boys and 4 957 girls. Mot of them proceeded to the Malay states to work in the tim mines and on rubber estates and a few went to neighbouring Dutch possessions. The number of Indian immigrants also

The large increa e in the number of immigrants from southern India of the free coolie clas is due to the requirement of the rubber planting industry. In 1911 the votem of indentured labourers ceased. In 1910 37 829 adults and 1 251 children returned to India, and in 1911 46 754 adults and 5 614 children so that the net gain to the Indian population

of the Settlements in 1911 wa 56 103

of the Settlements in 1911 wa 56 103

The number of births in the Colony in 1911 was 18 069 against 18 012 in 1910 and the number of deaths 33 0-5 against 27 484 in 1910

The birth rate was 25 38 as against 27 5 per mille and the death rate 46 45 as against 41 88 per mille.

In 1911 the police force had a total strength of 2 450 made up of 100 Europeans 3, Sikhs and 1 979 Malays Tamils and Chinese. The number of arrests during the year was 17 954 a decrease of 1 769 on 1910. There were 484 banishments against 643 in 1910. During 1900 the Education Board was appointed to assist the government in the control of money spent for educational purposes. All chool fees and other sums collected by the Department are credited to the account of the Board. The levving of an education rate which was new in 1910 has relieved the government of a large proportion of the expenditure on education. In 1911 Singapore had 33 schools with an average enrollment of 714 pupils. Penang. 102 with 10 469 pupils. Malacca 83 with 6 183 pupils. The total amount expended (\$427 225) was slightly higher than in 1910 and the net average expenditure per pupil was \$10.73 as against \$11.03 in 1910 and \$16.52 in 1909. The largest number of schools are for Malays. At the English schools the average attendance increased from 11.232 in 1910 to 11.456 in 1911. The number of girls attending school continues to increase especially among the Chinese.

especially among the Chinese

The years 1909 and 1910 witnessed a remarkable development of agricultural activity especially in Valacca and Province Wellesley. In Singapore considerable acres of waste land were put under rubber which wa planted 1150 through the pine apple fields. At the end of 1911 there were 29 150 acres of rubber on this island alone. The expansion of rubber planting has led to the neglect of fruit cultivation and other forms of agriculture but there is a slight increase in coco nut planting and several new plantations of pepper and gambier which has been inclined to disappear and a slight increase in indigo citronella grass ginger and ground nuts Sugar is going out as a product of Penang and Proxince Wellesley owing to the sale of plantations to rubber companies and spices are still cultivated only to a small extent. In Malacca rubber planting expands at the expense of tapioca. At the end of 1911 there were 80 000 acre. allenated for rubber estates. The actual acreage planted in rubber in the whole of the Settlements was 80 629 as against 60 568 in 1910

¹ For information contained in this section the Editor is indebted to the Malay States Information Agency London See E B xxv 980

There are 165 square miles of forest land about 10°, being forest reserves

The trade shows a steady growth The total imports in 1911 were valued at £46 437
339 as against £42 521 576 in 1910 and exports £39 887 145, as against £37 822 142

The values of the leading articles of import and export in round figures were as follows—
Imports Tin and tin ore £9 780 870 rice and other grains £6 679 620 cotton piece
goods £2 600 383 opium £1 735 070 fish £1 275 400 provisions £1 211 000 coal £851
670 machinery £561 400 silk piece goods £428 050 cycles motor cars and accessories
£167 770 Exports Tin £10 737 770 gums (including rubber) £4 279 200 copra £1 984
150 spieces £1 600 090 tapioca £520 920 rattans £515 085 gambier £502 600 sago
£486 735 phosphate of time £383 485 coco nut oil £265 420 preserved pines £288 750

It should be stated that the trade of the ports is chiefly a transit trade and that these
statistics refer largely to the trade of the whole of the Malay Peninsula augmented by trans
shipments from and to neighbouring countries

shipments from and to neighbouring countries

The merchant shipping entered and cleared (exclusive of native craft) in 1911 amounted to 24 086 904 tons including 14 277 754 tons British

Revenue in 1911 amounted to \$11 409 220 and expenditure to \$9 085 389

The position Revenue in 1911 amounted to \$11 409 220 and expenditure to \$9 085 389. The position of the Loan Account—an additional sum of £2 750 000 having been raised in 1910—was as follows on December 31 1911—334 % SS Inscribed Stock. £6 913 352 4% SS Debenture £1 030 100 total £7 943 452. Provision is made for repayment of this loan by a sinking fund which will come into operation in 1917. The charge on account of interest in 1911 was \$2 449 243 as against \$1 608 865 in 1910. The greater portion of this charge however is borne by the Tanjong Pager Dock Board and other bodies to whom portions of the loan funds have been allocated. The actual sums paid by the Colonial Government in 1910 and 1911 respectively were \$103 667 and \$806 961.

The revenue and expenditure of the Singapore Penang and Malacca municipalities for

1910 and 1911 were as follows —

	Revenue		Expenditure	
	1910	1911	1910	1911
Singapore	\$2 512 507	\$2 961 876	\$2 446 041	\$~ 926 626
Penang	1 103 587	1 206 244	1 116 307	1 128 605
Malacca	76 853	91 828	76 282	90 895

The debt of the three municipalities at the end of 1911 was as follows -Singapore

87 067 300 Penang \$2 630 000 Malacca, \$83 800
In 1909 the excise farms were abolished flowards the end of the year the Government Monopolies Department was formed and arrangements made for taking over not only the preparation and sale of opium but also the collection of duty on liquors and at midnight the preparation and sale of optim but also the collection of duty on liquors and at midning on December 31 the farmers handed over premises stock and utensils to the superint tendent of the Department. In addition to supplying the Colony the Department also arranged to supply the districts included in the Perak. Selangor and Negri Sembilan Coast Farms and also the State of Johore and from January 1 1911 the whole of the Federated Malay States were included in the operations of the Department. In 1911 the cash receipts for opium for consumption in the Colony were \$7.707.068 against \$6.612.918 in 1910. The collections in respect of duty on intoxicants in 1911 were—Singapore \$665.258. Penang \$505.217. Malace \$164.286.

\$505,537 Malacca \$164,386

For five years extensive works have been in progress to increase the wharfage accommo dation at Singapore and Penang and otherwise to improve the harbour at Singapore where the largest in the Far East has been constructed. The harbour works a new graving dock the largest in the Far East has been constructed. The harbour works at Singapore include a new sea wall and reclamation at Teluk Ayer and a lagoon wet dock and additional wharfage at Tanjong Pagar

A ferry now connects the railway system with the mainland at the struts of Johore and a through service of trains night and day runs between Singapore and Penang by way of Kuala Lumpur the capital of the Federated Malay States. The journey occupies 23 hours Improvements have taken place in the postal telegraph and telephone services since the new treaty brought Kelantan. Trengganu. Kedah and Perlis under British suzerainty. The mean temperature of Singapore and Penang in 1911 was 82 6° of Province Wellesley. 37° and of Malacca 82 1. The rainfall recorded in 1911 was 82 6° of Province Wellesley. 37° and of Malacca 82 1. The rainfall recorded in 1911 was 82 6° of Province Wellesley. Sa 7° and of Malacca 82 1. The rainfall recorded in 1911 was 82 6° of Province Wellesley. Sa 7° and Malacca 81 41 inches. Labuan 1—By the census of 1911 the population amounted to 6 546 (3 662 males 2 884 emales) of whom 34 were Europeans. 1799 Chinese and 4 434 belonged to the Malay race. There were 189 births and 183 deaths compared with 235 and 267 respectively in 1910 Census returns gave 116 inhabitants as Christians and 4 430 Mahommedans. The revenue in 1910 was \$82 926 44 and in 1911 \$78 990 44 the expenditure \$104.855 98 in 1910 and \$105 989 87 in 1911. Imports in 1910 were valued at \$1 437 390 and in 1911 \$1 258 884 Exports \$1 217 132 in 1910 and in 1911 \$1 074 737. The shipping entering Port Victoria was 282 742 tons (British, 152 668) in 1910 in 1911 136 884 tons (British 42 288).

¹ See E B xvi 31

A noteworthy feature in the history of the island in 1911 was the closing of the mines at Coal Point belonging to the Labuan Coalhelds Co Ltd In 1909 there was an output of 61 855 tons and of 86 689 in 1910 the export in the respective years being 57 268 and 92 223 tons Only 17 748 tons were exported as cargo and bunker coal in 1911 The shrinkage in trade was due entirely to the stoppage of mining

A fortnightly mail service is maintained by Cerman steamers between Labuan and Singa

cre The rainfall was 151 25 inches in 1910 99 82 inches in 1911

Cocos-Keeling Islands 1—The annual official visit to the Cocos Islands was made in September-October 1911 by Mr Charleton Maxwell A wireless telegraph installation had been erected on Direction Island in March Messages have been sent a distance of 2 300 miles and have been exchanged over a radius of 1 600 miles

According to the census of 1911 there was a population of 7.49 (411 males 338 females) of whom 39 were Europeans and 668 belonged to Malay race, (including 33 Bantamese con tract coolies)

At the time of Mr. Maxwell's visit the population was recorded as follows—

Home Island 640 (3 Europeans) Direction Island 64 (27 Europeans) total 704 The Furopeans on Direction Island are members of the Fastern Extension Telegraph Company staff. There were 50 Christians and 660 Mahammedans when the cen u was taken

There are no independent trades or industries. Every able bodied man and every boy over fourteen year, of age is in the direct employment of the proprietor Mr Clumes-Ro's There are 172 men and boys rated for pay according to their ability apprentices receiving 1 rupee per week and competent artisans 7 rupees

Fishing is done only as a recreation in spare time. One man i rated as a fi herman and supplies the proprietor's household with fish. Soap vinegar and salt are manufictured locally. The soap is made from coco nut oil and the ashes of the coco nut husks the vinegar from the palm wine tuwak, and the salt from sea water evaporated over a fire in iron pans. Mr. Clunies Ross proposes to start a small export trade in hark's liver oil for the manufacture of cod liver oil. Since the typhoon of 1909 a large number of coco nuts have been used as seed and the replanting of the entire area of the islands was nearly completed in October 1911. The area available for planting is 10 square miles or 6,400 acres and is planted with 1,216,000 trees. In the typhoon there were over 1,000,000 trees and only 3 per cent were left standing. No copra was exported in 1911 but export was expected to be renewed in 1913. In 1910 the export was 371 tons

The rainfall of 1911 was 70.5 inches

Christmas Island 2—In 1911 the popula ion amounted to 1,569 (1,328 males, 41 females)

The rainfall of 112 43 inches in 1909 was a re ord but was eclipsed in 1910 with 136 93. In 1909 the only export was phosphate of lime (105 481 tons) but in 1910 in addition to 137 700 tons of phosphate there were exported 1 200 lbs of cotton. Extension works are in hand to increa e the output of phosphate. As the present quarry will be exhausted in a few year the Company is building a light railway. 15 miles long to open up phosphate heds hitherto untouched on the south east end of the island. Value of imports (1911) \$229 513 exports \$3 288 208. Revenue (1910) \$85,023 54 expenditure \$14 107 25

British North Borneo 8-According to the census of 1911 the population was 208 183 (79 141 men 60 081 women 35 774 boys and 33 187 girls) compared with 104 527 in 1901 an increase of 103 656. In Sandakan the seat of government, there were 8 256 inhabitants an increase of 103 556 In Sandakan the seaf of government there were 8 256 inhabitants and in Jesselton 2 686 The total of 208 183 included 355 Europeans 167 586 natives of Borneo (of whom 87 951 were Dunsuns 25 314 Muruts and 22 387 Bajaws) 26 00. (Innese 5 510 natives of the Dutch East Indies 5 503 natives of the Sulu Archipelago and 246 Japan see Divided by religions there were 3 156 thristians 61 165 Mahommedans 24 076 Confucianists 164 Buddhists 150 Hindus 173 Sikhs and 119 299 pagans Agriculturists numbered 74 409 labourers 18 865 and fishermen 3 5.8 Steps are being taken to attract agri cultural immu, rants and arrangements have been made for the immigration of labourers Recent year have witnessed an enormous development in British North Borneo and

the Court of Directors of the Chartered Company by which its affairs are administered have every reason to be satisfied Seconded by the Colomal Office for the purpose Mr J Scott Mason (b 1873) in 1912 assumed the governorship in succession to Mr F R Ellis for a period of two years but on December 5 he was killed by a fall from his horse and Mr Aylmer Pearson formerly acting governor at once returned from England to take up the office. To aid the governor and the staff of civilians in the local administration, a legislative council was created in 1911 upon which the commercial planting Chinese and native communities have representatives Sanitary Boards have been established at San dakan Lahad Datu and other townships

The reorganization of the medical department is in progress, and a full station for Europeans is in contemplation Increased grants in aid have been made to the missionary

bodies in whose hands educational affairs are at present

There are 125 miles of railway on the north west coast connecting Jesselton with Weston in Brunei Bay and Tenom inland The gross earnings amounted to £16 936 in 1911 against £13 214 in 1910 A sum of £28 000 was spent in improving and strengthening the

hne during the year The Court has under consideration a scheme for the construction of roads to supersede the present bridle paths There is a regular weekly service of steamers between Singapore and North Borneo ports
between Hongkong and Sandakan in place of the present uncertain fortnightly service Other schemes are for the reclamation of land at Jesselton the improvement of its wharf and pier the provision of adequate water supplies for that port and for Sandakan, and the lighting of the coast. There are about 800 miles of telegraph lines. Their maintenance is lighting of the coast There are about 800 miles of telegraph lines. Their main costly and the Court has decided to erect wireless installations at various points.

costly and the Court has decided to erect wireless installations at various points. The revenue was £247 599 in 1910 and £180,646 in 1911 the expenditure £95 107 in 1910, and £96 745 in 1911 The revenue for 1910 included £60 000 derived from concessions £16 792 from land sales £13 593 from railway receipts £54 257 from customs and £39 587 from excise and licences while the expenditure included £17 180 for railway working expenses and £13 647 for constabulary In 1911 customs brought in £59 005 excise farms and licences £43 135 and railway receipts £17 040 there was no income from concessions and only £397 from land sales. The railway working expenses amounted to £20 125 and the cost of constabulary had fallen to £9 816.

Following the policy of the Straits Settlements the British North Borneo Company, has

Following the policy of the Straits Settlements the British North Borneo Company has created an Opium Monopoly Department as from January 1 1913

The total volume of trade in 1910 was valued at £981 000 and in 1911 at £1 101 000 an increase of £120 000. Out of 47 headings 39 showed increases in 1911. Estate rubber heads the list, 149 000 lbs exported being valued at £41 096 as compared with 54 000 lbs. and a value of £22 866 in 1910. Successive years should show a large increase as more estates come into bearing but as cultivated rubber is free of export duty for another 43 years this item does not affect the revenue. At the end of July 1912 out of 30 companies oper ating in the territory the majorits were engaged in rubber growing while others are engaged in coco nut and tobacco cultivation. There were upwards of 23 000 acres under rubber Ome company had a crop of 280 410 coco nuts in 1911, and the export of copra was 1 183 866 lbs against 1 034 533 lbs in 1910. The output of tobacco was 13 750 bales as compared with 13 508 bales in 1910. The export of timber amounted to 1 111 539 cubic feet against 1 218 967 cubic feet in 1910. The British Borneo and Burmah Petroleum Syndicate have acquired a large tract in the Khas peninsula where they had located an oil field Following upon this discovery they have taken up on lease 440 square miles of territory and are properting extensive areas The output of coal in 1911 amounted to 38 920 tons. The Cowie pecting extensive areas The output of coal in 1911 amounted to 38 920 tons. The Cowie Harbour Coal Company have satisfied the Court of Directors that the collientes are at present sufficiently developed to yield up to 500 tons of coal a day provided that labour is avail

ble and some expenditure incurred to put the surface coal handling arrangements in order Brune: —The census of 1911 shows 6 380 males 7 193 adult females 4 139 male and 3086 female children with a total of 21 718 Of these 20 were Europeans and 736 Chinese The only town of any size Brunci or Dar ul Salam (city of peace) has a population of 9 767 the establishment of peace and order the natives are gradually learning the advantages of cultivation and are migrating to terra firma. At Muara Damit (Brooketon) leased to Raja Brooke where there is a colliery there is a settlement of 1 447 persons. Since the appoint ment of a resident British official the common people have shown eagerness to take up land and plant coco-nuts The wild rubber tree Jelutong (Dvera costulata) is common and is worked for export Land suitable for cultivation of Para rubber (Hovea brasiliensis) is alienated by the government at an extremely low rental and several European companies have taken out grants and are proceeding with planting. At Brunei Town the Island Trading Syndicate has its cutch factory employing several hundreds of hands. The value of the cutch exported in 1911 amounted to \$262 216

Coal is worked on Berembang and at Raja Brooke's Brooketon collienes

output of coal from these collectes in 1910 was 18 418 tons and in 1911 25 607 tons

The principal imports are piece goods tobacco kerosene and sugar. The main exports
are cutch sago hides and jungle produce of various kinds. The imports at Brunei Town
amounted to goods of a declared value of \$70 000 in 1909 and of \$82 000 in 1910. The exports
from Brunei Town for the same years reached a value of \$200 and \$25 000. from Brune: Town for the same years reached a value of \$237 000 and \$246 000

That oil in payable quantities is to be found in Brunei can no longer be doubted are being sunk at Jenidong and in the Belait District with every hope of success

Reveaue (1911) \$261 865 expenditure \$247 930 There is a public debt of \$400,000 and the state has investments to its credit of a capitalised value of \$444 744

**Bederated Malay States.*—Each year witnesses a steady growth in the progress and prosperity of the Federated Malay States In 1911 though the output of tin was not greatly in excess of 1910 the enhanced value brought benefit while the rapid expansion of the plantation rubber industry is reflected in the statistics of the various departments. The degrade for belowing the plantation has been proposed to compare the plantation between the plantations have become particular the plantations between the plantations are proposed to compare the plantations have been proposed to compare the plantations between the plantations are proposed to the plantations have been proposed to compare the plantations are proposed to the plantations have been proposed to the plantations are proposed to the plantation to the plantation are proposed to the plantation and proposed to the plantation are proposed to the plantatio mands for labour in the mines and on the plantations have hampered to some extent the development of public works but much has been done to construct new roads and

waterworks to extend the railway system to improve the harbours and to carry out other public works necessitated by the expansion of commerce and the growth of industries In 1912 Benker Semang a small tract of territory 20 miles square between the states

of Kedah and Perak was formally transferred from Kedah to the latter state.

Between 1901 and 1911 the population of the Federated Malay States increased by 358 404 persons or 52 8 per cent. In the latter years of the decade the extension of rubber planting was very rapid and labour was introduced to meet the demands of the numerous new estates. Towards the end of 1907 there began a slump in the tin mining industry. The closing down of many of the lower grade mines threw numbers of Chinese out of employment and led to much emigration But the slump in the mining industry was well over before the last census was taken and the tide of immigration had set in with augmented force owing to the increased demand for Chinese labour on rubber estates. A comparison of the popula tion enumerated in the censuses of 1891 1901 and 1911 shows the remarkable increase from tion enumerated in the consuses of 1091 1901 and 1911 1901 and 1911 1901 and 1911 1901 and then to 1 036 909 in 1911 1911 Of the latter total 725 062 were males and 311 937 females The races represented were as follows—Europeans 3 284

Figure 228 610 Malays 420 day Chinese 433 244 Indians 172 465 others 4 517 The were males and 311 937 fcmales The races represented were as follows—Europeans 3 284
Eurasans 649 Malays 420 640 Chinese 433 244 Indians 172 465 others 4 517 The
religions professed were—Mahommedan 406,860 Hindu 140 068 Christian 22 902 Sikh 7 406 other non Christian religions 420 381 not given 12 164. In 1911 there were 108,471 Indian immigrants (the highest number recorded) against 83 723 in 1910. The excess of Chinese immigrants over emigrants in 1911 was 38 033 against 7 794 in 1910

The total amount spent by the Education Department in 1911 was \$330 563 increased from 456 in 1910 to 369 with an average enrolment of 22 566 pupils (19 585 boys 2 981 girls) and an average attendance of 18 384. At the English schools 3 171 boys and

909 girls were in average attendance

Throughout the year the battalion of Malay States Guides was kept up at full strength of 895 mainly Sikhs Pathans and Mahommedans. The rank and file of the Malay States Volunteer Rifles composed of Europeans numbered 578. The police force was 2 882

Revenue (1911) \$15 056 544 expenditure \$25 292 749 The largest were —customs \$11 313 173 licences and excise \$9 574 437 railway \$1 771 317 interest \$1 383 981 municipal \$1 183 760 land sales \$519 646 The largest amounts collected \$7 039 789 land

The actual Federal revenue (as distinct from the whole Federated Malay States revenue) was \$9 568 590 an increase of \$1 466 885 over that of 1910 of which railway revenue con tributed \$1 043 140 The Federal expenditure was \$15 144 696 an increase of \$1 993 771 over that of 1910 of which \$7 550 513 was spent on railway account The balance to the credit of the Federated Walay States is now \$52 537 647

Rubber is now the principal agricultural product. The number of estates increased in

Rubber is now the principal agricultural product. The number of estates increased in 1911 to 700 against 435 in 1910 the labour force to 166 0.15 from 1.2 846 and the output to 21 809 617 lbs from 1.2 563 220 lbs. For the first eleven months of 1912 the output was 31 024 086 lbs. Copra exports in 1911 reached approximately 8 000 tons the value being \$1.553 000. It was a had year for pad; the acreage under cultivation shrinking from 119 224 in 1910 to 103 278 in 1911. The output was 3 313 437 bushels. The following statistics show the agricult real acreages in 1911 exclusive of padi and horticulture—rubber for the content of the 35. 974 coco nuts 142 774 coffee 11 313 other cultivations 16 751 153 square miles were added to reserved forests bringing the total area reserved to 1 161 square miles out of a total ar a of 27 750 quare nules It was a prosperous year for mining owing to the high average ar a of 27.750 quare miles—It was a prosperous vear for mining owing to the high average price for tin—From all sources the revenue of the Mines Department was \$9.416.779 against \$7.753.143 in 1910—Of this amount \$8.818.764 was on account of the export duty on tin and tin ore against \$7.162.026 in 1910—The output of tin was 44.149 tons in 1911 and the value \$69.645.466 against \$57.116.089 in 1910—The total labour force in mines was 196.427 against 170.361 in 1910—The output of wolfram was 88 tons of a value of \$84.500 in 1911 against a value of \$47.400 in 1910—There was a falling off in gold production the output being 9.228 ounces valued at \$306.514 against 16.767 ounces in 1910 valued at \$574.868—In the states of Perak—Selangor and Negn—Sembilan—3.890 fishermen were employed in 1911 on the fisheries compared with 2.765 in 1910.

1911 on the fisheries compared with 3 765 in 1910

Again there was an increase of trade on the record for 1910 the aggregate value including bullion and specie being \$182 812 906 against \$156 107 141 in 1910. The leading exports were — coffee \$302 608 rice \$752 973 sugar \$235 343 gambier \$241 413 tapicca \$312 286 copra \$1 294 301 Pará rubber \$39 931 123 tin and tin ore \$69 756 215 (total \$116 280 927)

The number of vessels exclusive of native craft entered and cleared in 1911 was 9 667

with a tonnage of 3 870 329 compared with 9 014 and 3 504 667 in 1910

The provision of means of communication with a view to the development of the natural resources of the country has been a consistent policy of the Federal Government and in addition to the construction of new roads every year sees an improvement in roads already existing. At the end of 1911 the lengths of roads and paths were —Metalled cart roads 1 988 miles unmetalled 234 miles bridle roads and paths 1 542 miles. New roadways are under construction in all the states. The total mileage of railway open to traffic at the end of 1911 was 560 an addition of 20 miles during the year the capital account for railway and motor services being £6 383 200 or £340 074 more than in 1910

The profit in 1911 was equivalent to a dividend at the rate of 6 03 per cent The depart

ment was authorised to expend nearly £600 000 in new construction work in 1912

ment was authorised to expend nearly \$600 000 in new construction work in 1912

Perak is the most populous of the four states containing (1911) 494 057 persons (344 238 males 149 819 females) Of these I 396 were Europeans 845 Eurasians 199 034 Malay 217 206 Chinese 73 539 Indians and 2 037 others Religions were — Mahommedan 192 991 Hindu 56 988 Christian 9 734 Sikh 3 918 other non Christian 213 386 not given 3 690 Hoh in the mining district of kinta had 23 978 inhabitants Taipting (the capital) 19 556 and kampar 11 604 Ipoh and Kampar nearly doubled their population in ten years The aboriginal population is given as 12 632 against 7 982 in 1901 Births numbered 8 946 or 1/95 per mille against 10 306 in 1910 Deaths numbered 14 026 or 28 16 per mille against 13 118 deaths with a death rate of 33 03 in 1910 There were 6 498 deaths from malaria in 1911 There was an excess of 19 055. Chinese immigrants over emigrants

The strength of the police force was 1 180 in 1911 There was an excess of 1905, Chin The strength of the police force was 1 180

The strength of the police force was 1 100.

The total enrolment at 21, schools was 13 126 with an average attendance of 78 per the total enrolment. The total enrolment at 21, schools to 226 purple, the majority being Chinese. The cent English was taught at 15 schools to 2 246 pupils the majority being Chinese expenditure on education was \$149 025

The revenue in 1911 was \$19 081 190 expenditure \$13 071 195 Balance of assets at the credit of the state \$33 194 146 The revenue from land was \$860 277 land sales \$218 307 customs \$6 271 813 heenes excise etc \$4 584 938 There was an increase of \$3 106 837 under the last due mainly to the establishment of the government chandu monopoly

A record was created in the value of both imports and exports - Imports (1911) \$29,349

A record was created in the value of both imports and exports — Imports (1911) \$29,349
234 exports \$5,535,590 Of exports the principal values were —Rice \$725,724 pads
\$463,458 sugar \$233,196 tin and tin-ore \$41,105,8-2 copra \$973,811 rubber \$10,994,087
There was an increased alternation of land for rubber and coco nut cultivation over the
areas so allocated in 1910 and 1909 Of the 262,48, acres alternated for rubber 124,681 were
reported to be opened and 31,532 acres to be producing. The total crop for the year was
6 041,763 lbs as against 2,962,218 in 1910. The total acreage under padi was 78,735 and
the yield in a year of poor crops was 2,596,290 bush ls. The fruit harvest on the other
hand was the best on record. Under coco-nuts there were 73,120 acres as against 66,088
in 1910. Practically the whole delta between the Bernam and Perak rivers has been alternated
for cultivation, and in a few years this year plan, which was dense, tine le four years ago, will for cultivation, and in a few years this vast plain which was dense jungle four years ago will present an unbroken field of coco-nut palms

The total area of forest reserves is 422 sq miles an increase of 46 q m during 1911. The acting Resident (Mr Oliver Marks) comments on the difficulty of obtaining con tractors to undertake the construction of new roads, the prosperity in the planting industry having attracted both contractors and labourers Nevertheless 81 miles were added to the metalled roads (now 745 miles) and 64 miles of earth road were metalled Several bridges were constructed and waterworks for Taipeng and Kampar completed

The number of vessels entered and cleared at the ports of the state (exclusive of native

Taipeng recorded the largest rainfall 147 og in Lengtong the lowest 69 og in In Selangor the population was 294 035 in 1911 a gain of 74 2 per cent There were 220 gag males and 73 096 females Resident in the state were 1 348 Europeans 64 952 Malays 150 908 Chinese 74 067 Indians and Sakai (aboriginals) 1 739 Chri tianity was professed by 10 447 Mahommedanism by 66 639 and Hinduism by 62 940 Chine e immigrants numbered 46 598 and emigrants 24 512 There were 46 718 inhabitants (33 034 males 13 684 females) in the capital Auala Lumpur the largest town in the Federation

Births numbered 5 036 against 4.456 in 1910 the rate per mille being 16 945. Deaths numbered 11 903 against 10 797 in 1910. The death rate was 40 per mille Pasture and agriculture employed 88 388 mining 50 0.3

The police force had a total of 681 of all ranks. There were 58 schools—49 Malay J Tamil 1 Chinese vernacular school maintained by the government, and the remainder English teaching schools in receipt of a grant in aid. The average enrolment was 4 397 and the average attendance 3 837 compared with 4 092 and 3 615 respectively in 1910. Two girls schools had an average attendance of 61. The

and 3 015 respectively in 1910 1 Wo girls schools had an average attendance of 61 1 he expenditure on education was \$62 548

Total revenue (1911) \$12 330 045, expenditure \$8 715 718 The balance of assits amounts; to \$27 073 607 A Chandu Monopoly Department was created on January I 1911 Its total sales amounted to 67 067 tahils, and there was a net profit on the working of the Department of \$2 206 641 Land revenue was \$695,906 as against \$659 705 in 1910

The year was marked by an expansion in rubber coco nut and coffee production There

The year was marked by an expansion in runger coco nut and concerproduction. There were 413,499 acres alienated for agriculture comprising 145 222 acres under rubber coco nuts 33 355 acres coffee 9 575 rice 4 312 and gambier 746 acres 253 estates produced 11 438 996 lbs of rubber. Forest reserves totalled 201 265 acres. There were 71 353 acres alienated for mining mostly for tin. The recently discovered coal field at Rawang promises well. A manufacturing plant has been established at Batu Caves for high class cement. Imports (1911) \$30 196 834 exports \$47 433 952.

The principal exports were —rubber \$32,836,836,836,836,836.

Imports (1911) \$30 196 834 exports \$47 433 952 The principal exports were —rub ber \$23 852 273 tin and tin ore \$21 724 430 copra \$294 676 and wolfram \$40 503

Ocean going steamers using Port Swetterham numbered 469 against 448 in 1910 with

a tonnage of 1 673 067 against 1 503 510 in 1910 Altogether there entered 1 335 of coasting merchant vessels during the year with a tonnage of I 422 741 All but six were British

During 1911 22 miles of new roads were added to the state

During 1911 22 innes of acw toda's were added to the state
Santary Boards deal with such municipal affairs as roads and bridges lighting sewage
and registration of vehicles at Kuala Lumpur Klang and four other towns and in April
1911 an Advisory Board was appointed for Port Swettenham one of the members being
nominated by the Selangor Chamber of Commerce

In 1911 the Volunteers became a Federal force Selangor contributed two companies

totalling 209 officers and men

The rainfall in 1911 ranged from 79 37 inches at Kuala Lumpur to 111 26 at Kuala Kubu In Negri Sembilan, out of a population of 130 199 (87 651 males 42 548 females) there were 403 Europeans 69 745 Malays 40 843 Chinese and 18 248 Indians in 1911 There were 69 330 Mahommedans 15 700 Hindus and 2212 Christians On 89 estates On 89 estates 26 088 persons were employed and in mining 9 657 The birth rate was 23 5 per mille and the death rate 73 6 per mille

The police force included ,69 of all ranks

In the 65 schools 3 893 pupils were enrolled as compared with 4 253 in 1910 Of the schools 59 were for Malay boys and 3 for Malay girls there were 2 English teaching schools and I Tamil school There is a growing desire amongst the Valays for English (ducation A company of Volunteers was raised for the Federal battahon in 1911 and 108 officers

and men were enrolled

Revenue (1911) \$2 512 002 expenditure \$1 768 733 Land revenue amounted to \$295 989 against \$272 578 in 1910 and the new Chandu Monopoly Department collected \$837.644 against the \$349.969 derived from the spirit and opinin farms in 1910. The balance of assets at the credit of the tate amounts to \$1.471.644.

Rubber leads in agricultural produce with 151 estates and a planted area of 75 356 acres. The output in 1911 was 4 297 715 lbs. To rice 48 306 acres were devoted to coco nuts 19 584 and to gambier 15 049. There is a tendency to abandon rice and gambier cultivation in favour of rubber and coco nuts. The rice crop was a failure in 1911. There were 239 sq. miles of forest reserves The total acreage of mining land was 22 8,7

Imports (1911) \$4 630 404 exports \$8 419 046 These figures however are no true index to the total trade of the state as much of the merchandise produced and consumed in the state is imported via Selangor On the export side rubber was valued at \$5 039 968 gambier \$168 457 and tin and tin ore \$750 108

The number of vessels cleared at the ports (exclusive of native craft) was I 328 with a

The number of vessis cleared at the ports (exclusive of native craft) was 1 328 with a tonnage of 363 36. against 1 548 and 496 380 respectively in 1910

The rainfall in 1911 ranged from 64 35 inches at Jelebu to 96 50 at Port Dickson

In Pahang the population was 118,08 in 1911 [72 234 males and 46 474 females) Of these 137 were Europeans 87 109 Malays 24 287 Chinese and 6 of 1 Indians There were 509 Christians 77 900 Mahommedans 4 440 Hindus and 967 Sikhs Aborigines numbered 10 213 With the smallest population of the four states Pahang has the highest birth rate and the lowest death rate. It is the only state in which the birth rate exceeds the death rate. The birth rate per miles was 27 13 and the death rate 26.00. rate and the lowest death rate It is the only state in which the birth death rate The birth rate per mile was 27 13 and the death rate 26 40

The police strength is 384

The country is being opened up steadily by the extension of the road and railway sys 20 miles of new trunk railway through the eastern states were opened on the Gemas

tums 20 miles of new trunk railway through the castern states were opened on the Gemakuala Semantan ection between Triang and Semantan 34\frac{2}{3} miles of the permanent way
laid from Semantan to Kuala Tembiling and progress made with the extension into Kelan
tan Out of 173 miles of telegraph lines in course of construction 125 miles were completed

\$28 319 tapioca \$24 645 and copra \$17 185
Rainfall in 1911 ranged from 81 20 inches at Temerloh to 153 14 at Sunger Lembing
Non-Federated States 1— Johore Great progress has to be reported since the Sultan obtained the services of a General Adviser from the Governor of the Straits Settlements in his capacity of High Commissioner to the Malay States Mr. Douglas Campbell C. M. G. was lent by the Federated Malay States in 1909 and several officers were also seconded from the same service to organise and conduct government departments. Legislation was at once introduced and the outcome is increased prosperity in the finances of Johore while vast improvements are reported in administration, the opening up of roads and other means of

communication and increased cultivation. A trigonometrical survey of the country is in progress, road and railway extensions are being carried out and newly-created Town Boards in Johore Bahru Bandar Maharam and Penggaram (Batu Pahat) have been able to effect

improvements in sanitation etc

The census of 7911 showed a population of 180 412 (122 129 males 58 283 females) Of these 205 were Europeans (161 British) 71 315 Malays 63 405 Chinese 30 904 Japanese and 5 659 Indians By religion 110 939 were Mahommedans 843 Christians 847 Pagans 251 Buddhists and 4 455 Hindus. The capital Johore Bahru has 22 636 inhabitants Malarial fever was rife in 1910 and 1911 and in 1911 there was a severe outbreak of smallpox

Two government vaccinators have been appointed and are doing good work.

As yet little attention has been devoted to mining in Johore which is largely covered by jungle but in 1911 276 tons of tin were exported. Under the new Land Enactment grants of land are now made in perpetuity on conditions similar to those in force in the Fed erated Malay States Gambier pepper and tapioca are going out of cultivation. Coco nuts and areca nuts are greatly favoured by Malay and Javanese agriculturists and the export value of these crops in 1910 was \$2 150 000. The area under rubber at the end of 1911 was 75 205 acres and the export of rubber in that year amounted to 1 244 500 lbs against 613 600 lbs in 1910 The total area leased mostly by rubber companies is 281 900 acres and a large amount of land is taken up by Japanese Most exports pay a specific export duty Rubber and coco nuts however if grown on land held on a title on which annual rent is

Revenue (1911) \$3 054 901 expenditure \$3 469 571 The expenditure for 1911 includes the repayment of \$500 000 of the capital sum lent by the Federated Malay States on account of the Johore State Railway

The Public Debt is \$11 168 578 representing capital

outlay on the State Railway

The railway through the state connecting Singapore with the Federated Malav States system was completed in 1909 Along its 120 miles it provides access to the extensive areas of valuable forest lands not conveniently reached by the natural waterways. In 1910 some 295 square miles of land adjoining the railway were alienated for cultivation. The expenditure on the railway was \$388 091 in 1911 and the profit on the last quarter s working was \$6.683 A narrow gauge railway 11 miles long has been constructed to facilitate the shipment of produce from the district south of Bandar Maharam. Its extension for a fur ther 28 miles is in progress. This railway made a profit of \$12.336 m 1910 and of \$4.006 in 1911 Road construction is being pushed on and in 1910 the Sultan sanctioned the construction of a main road across the peninsula about 88 miles long from Batu Pahat on the west to Mersing on the east crossing the railway at Mengkibol

The government maintains 39 schools at two cf which (Johore Bahru and Muar with attendances of 300 and 140) English is taught. It is proposed to start an English boarding school on the lines of the school for the children of well to-do Malays at Kuala Kangsar in

Perak At the 37 vernacular schools 2 529 pupils were enrolled

Consisting solely of Malays the police force made up of 23 officers 116 non-commissioned officers and 450 constables is distributed over 42 stations. It was arranged in 1912 that an European officer should take charge. The Sultan maintains and commands a regiment of Malays comprising 220 regulars and 300 volunteers as well as a force of 65 Pathan artillerymen

In 1910 the rainfall was 106 of inches

Kelantan.—The most important event in the history of Kelantan since the British Adviser (Mr J S Mason) took over the supervision of its affairs from Mr W A Graham the Siamese Commissioner on July 15 1909 was the determination in 1912 of the agreement between the Sultan and the Duff Development Company and the resumption by the govern ment of the sovereign powers conceded to the company over nearly two thirds of the state A new working agreement has been prepared under which the government of Kelantan under takes to pay the company £300 000 and to grant to them the following rights (a) The sole right to select blocks of land for agricultural purposes amounting in the aggregate to not more than 50 000 acres (b) the sole prospecting rights for minerals over the area of the concession (c) the sole prospecting right over an area of approximately 78 sq m in the Sokor district and the right to take up mining leases and certain other rights

Great activity has characterised the administration with a view to bring about a more effective centralised government of the country. In 1909 the State Council held to meet ings and passed six important enactments in 1910 when 12 meetings were held. It enactments were passed In 1909 a beginning was made with an educational system. A government school was started at hota Bahru with 119 pupils and the enrolment had risen to 277 at the end of the year 29 of the pupils taking up the study of the English language Only four members of the royal house attended—one in the English class but in 1910 when the average attendance was 117 a son of the Sultan was amongst the students. Three new schools were opened in that year and a night school for clerks at Kota Bahru. The Kelaman Malays are keen on education the boys are industrious students and there is great eagerness to learn English The Mosque school at Kota Bahru a sort of theological in

Regular steamship communication has been established with Singapore and Bangkok On August 1 1909 postal rates were reduced from 9 cents to 3 cents between Kelantan and the Straits Settlements and the Federated Malay States and in November to 8 cents for places within the Impurial Penny Postage Umon. In spite of the reduced rates the postal revenue has steadily increased. At the end of the year, the cash on-delivery system was introduced for parcels and a money order system established with the Federated Malay States. The telephone and telegraph systems were extended and the rate for telegrams to the Strates Settlements and the Federated Malay States reduced from 13 to 11 cents per word In 1910 commission on money orders was reduced to half per cent with a substantial increase of business. A start was made with the construction of roads and at the end of 1909 there were II miles of gravelled roads and 6 of earth roads and several hundreds of miles of foot tracks and bridle path. In 1910 the road making was continued and the In 1910 the road making was continued and the most important work of the year was the beginning of a trunk road through the state

The population (1911) is 286 751 There were 109 deaths from cholera in 1910 The police force numbering 232 men with a European as Chief Police Officer was reorganised on the Federated Malay States system in 1910 As the administration of justice had fallen into an unsatisfactor, state the opportunity was taken on the resignation of the

Stamese judge in 1909 to appoint the Assistant Adviser as judge in 1909 to appoint the Assistant Adviser as judge in mediate improvement in the personnel and conduct of the Courts

Revenue (1910) \$419 327 expenditure \$403 552 Principal sources of revenue customs
\$129 560 licences \$107 508 land \$104 474 The public debt at the transference of the suzerainty was \$150 000 upon which Siam charged 6 per cent. The by the Federated Malay States interest being reduced to 4 per cent.

In 1910 only about 124 200 acres were reported to be under cultivation in a country of approximately 6 500 square miles
This comprised 95 000 acres devoted to padi 18 250 to coco nuts and 5 400 to rubber Rubber planting however is spreading and 64 500 acres were ahenated in 1910 for this purpose mostly to European companies 3 763 tons of copra were exported and 7 261 head of cattle 1 480 sheep 115 044 poultry and 684 pigs were exported to Singapore
Arrangements are being made to improve the breeds of cattle and sheep The revenue from land in 1910 amounted to \$104 474—a large increase in the collection under the Siamese regime A sago factor was installed at Kota Bahru in 1910 Many unworked mining concessions were cancelled in that year. The dredging operations for alluvial gold in the Galas. Nenggiri and Lebir river, were scarcely o successful in 1910 as in the previous year the gold won imounting to 3 698 oz against 8 507 oz in 1909. On the other hand the output of tin ore though small showed an increase

The total value of trade in 1910 was returned at \$3 003 9.5 against \$2 648 571 in 1909 Chief among the exports were—Copra \$632 040 cattle \$217 830 betel nuts \$143 048 gold \$129 465 fish \$64 904 rice and padi \$45 342 The principal imports were—Cotton piece good \$141 337 kerosene \$111 886 opium tobacco salt and woollen goods Ship

ping amounted to 206 560 tons an increase on 1909

In 1910 the rainfall was 123 4 inches Trengganu -Though the suzerainty was transferred from Siam to Great Britain on July 14 1909 it was only on April 22 1910 that the Sultan signed an agreement providing for a British agent to reside at Kuala Trengganu to fulfil the functions of a Consular official for the control of the foreign affairs by Creat Britain and for the limitation of mining and agricultural concessions to persons other than natives and subjects of Trengganu

The population (1911) 1 146 920 of Kuala Trengganu 13 991 In 1910 the Sultan issued his kuasa empowering the British agent to adjudicate as a magistrate jointly with the Hakim according to Mahommedan law and the state regulations and five suits were disposed of in that year

Several Europeans have taken up concessions for rubber planting in which industry the Sultan shares and a Japanese subject obtained a concession for coco-nut planting in 1910

No less than 1986 fishing boats were on the register at kuala Trengganu in 1910 as well as 385 sailing vessels of a burden ranging from 25 to 100 tons. These sailing ve sels were all built by native Malays for trade in the Archipelago. A bright future is predicted for Trengganu as a mining country tin wolfram and gold having been found while traces of natural oil are reported near Dungun in the north east

The following were the values of imports and exports in 1910 -Imports Rice \$209 528; totton goods \$69 731 opium \$60 909 sugar \$49,420 sarongs \$38 521 raw silk \$36 too tobacco and cigarettes \$31 930 petroleum \$21 645 Exports Tin ore, \$313 177 fish \$464.288 copra \$281 813 path \$174 295 black pepper \$152 707 Revenue is raised by means of Farms and duties on all kinds of exports Mr W D Scott's report for 1910 says. The area is estimated at 6 000 square miles

There are no main roads railways or telegraphs communication with the interior is by means of the rivers and by good native paths Regular steamship communication is maintained with Singapore and in order to obtain a good port of call a survey is to be made of Chendering lying seven miles south of Kuala Trengganu The state joined the Imperial penny postage system and the Postal Union on January 1 1911 Rainfall in 1910 (for nine months), 101 98 inches

Kedah.—The years 1909 and 1910 were devoted largely to a reorganisation of the internal affairs of this state with a view of bringing its governmental system into line with the Feder ated States of Malaya With the transfer of the suzerainty under the Anglo Stamese Treaty of 1909 Mr W G Maxwell of the Federated Malay States Civil Service as British Adviser succeeded Mr G C Hart the Adviser appointed by the Siamese government
In that year the state council held 25 meetings and passed 13 enactments or decisions by some of which forced labour was abolished and new methods introduced for raising revenue for state pur The administration is entrusted to departments and in each district there are now district officers who interest themselves in the work of the land office mines office hospital gaol public works etc. A sanitary board was brought into existence in the capital (Alor Star) and is doing good work. In 1910 the State Council held 75 meetings 16 enactments were passed. They enable the central authorities to exercise closer control of finance and a more thorough management of business Special mention should be made of the legis-

lation for the speedy abolition of debt bondage a peculiar feature of ancient Malay life A survey department has been constituted Road making bridge building and canal extension are features of the new regime and a tracing has been made of an extension of the railway from Province Wellesle into Kedah as far as Alor Star New post offices have been established throughout the country the money order system introduced and telegraph and

telephone systems extended

phone systems extended The telephones are being connected with Penans Education is making rapid progres Before 1905 there was only one school in Kedah In 1910 there were 20 Malay schools with 37 masters and 1 675 pupils enrolled a growing demand for schools and the extension of accommodation in existing schools English school at Alor Star had 97 boys on the register in 1910 and an average daily attend ance of 80 including two of the Sultan's sons. There is a girls school at Alor Star

There are 37 police stations with a total police force of 419 men of whom 2 are Europeans and 335 Malays A Courts Enactment passed in 1910 constitutes the various courts of the state and defines their powers. The Court of Appeal which had formerly consisted of the State Council without the President and Adviser but with the Assistant Adviser and two experts in Mahommedan law in their place now consists of officers specially selected to Members of the State be judges At any appeal at least five judges must be present Council are not eligible to be the judges but if any case appears to be of exceptional difficulty or importance the Court may ask the State Council to sit with it. The enactment provides for a judge of the High Court sitting with two Assessors at the hearing of any murder case or criminal case of unusual importance or difficulty. It also gives the High Court full powers of revising on its own initiative the decisions of the District Courts. The powers of the Adviser in sitting in civil and criminal cases in which British subjects are defendants are the subject of special sections of the enactment. The efficiency of the High Court has been appropriate to the High Court has been considered. much improved and the arrangements for the Chief Justice to go on circuit saves much trouble expense and delay Most of the work is done by the nine District Courts

Population (1911) 245 986 (male- 137 139 females 108 847) of these 195 411 were Malays There were 33 746 Chinese 8 135 Siamese 6 074 Indians and 136 Luropeans (128 British) A smallpox epidemic The Kedah Malays 198 720 Mahommedans in the state 5 002 Hindus and 642 Christians in 1910 caused 36 deaths and over 33 000 persons were vaccinated

believe in the efficacy of vaccination

Revenue (1910) \$1 449 116 expenditure \$1 285 342 Seventy three per cent of the revenue is derived from the opium monopoly land revenue and export and import duties

The revenue from land in 1910 was \$398 034 against \$242 873 in 1909

In 1910 693 tons of tin were exported as against 744 tons in 1909 and 12 tons of wolfram Agriculture is the mainstay of Kedah at present. An epidemic of rinderpest having swept the country in 1908-9 carrying off 9 000 head of cattle valued at \$300 000 left many villages in the north without animals enough to plough the rice fields. The State Council in 1910 came to the rescue of the cultivators lending money against the security of title deeds at 6 per cent interest (against the 24 per cent formerly charged by native money lend ers) the principal being repaid in instalments. An excellent harvest induced many of the cultivators to repay half the principal in the first year. The state veterinary surgeon reports that Koch's anti-rinderpest serum is less efficacious in Kedah than it appears to be in India. which is possibly due to the Indian cattle possessing a modified unmunity through their ancestors having had underpest or to the deterioration of the serum in the Kedah climate ancestors having had inderpest or to the deterioration of the serum in the Kedan climate During 1910 16 741 head of cattle were licenced either as imported or born in the country as against 11 125 in 1909 15 808 sales were registered as against 6 599 in 1909 Exports (1910) of rice were 614 080 gantangs of padi 13 653 936 gantangs (1 gallon = 1 gantang)

Canals have been extended for irrigation in the rice growing districts.

There has been great activity in rubber planting and out of 40 agricultural estates regis tered at the end of 1910 only one had no rubber trees. The total acreage was 94 005 of which 20 034 acress were under rubber 3 679 coco nuts and 10 005 tapioca.

The passing of a Timber and Forest Produce Passes Enactment was the first step towards referenced to the state. No forest reserves have wet here created.

protecting the forests of the state. No forest reserves have vet been created

The rainfall in 1910 ranged from 89 92 in in South Kedah to 135 38 in in North Kedah Perlis -The chief work of the British Adviser (Mr Meadows Frost) in 1909 and 1910 was to reorganise the administrative departments of this small state The population (1911) numbers 32 746 persons (16 808 males and 15 938 females) Of these 29 497 are Malays 1 b27 Chinese 1 388 Stamese and only 5 Europeans (3 British) 29,665 are Mahommedans and 8 Christians

1's Christians
The state is governed by the Council consisting of the Raja, the Adviser and three
The state is governed by the Council consisting of the Raja, the Adviser and three
The State other members. In 1910 it passed 8 enactments, one abolishing debt bondage. Touncil is the Appeal Court. The e is a police force of 65—Malays and Indians

As there we no proper register of titles for land and no rent roll Mr Frost soon after his arrival in 1900 set himself to draw up both with the result that the collection of land rent in 1910 realised \$20,580 as compared with \$14,875 in 1900. The land office has issued

a notice that no unregistered grant will be considered valid after a certain date

Revenue (1910) \$114.834 expenditure \$101.493. When the transference of suzerainty
from Siam to Great Britain occurred in 1909 there was a debt of \$474.796 which the Fed
erated Malay States took over In 1010 the debt was reduced by \$20.000

In 1910 the State Council abolished the miscellaneous import duty of 3 per cent on all imported goods not specifically mentioned and now the only duties raised are on spirits, beer wine tobacco and kerosene or other oils used for heating or lighting purpose. The miscellaneous export duty of 5 per cent on all goods not specifically mentioned (such as tin ore and guano) has also been abolt hed

Except in the Coast districts where there were excellent crops and plenty of cattle the padi ea on of 1910 was a failure. Owing to the lack of bullocks the cultivator could not Owing to the lack of bullocks the cultivator could not plough and they left off hand tillage till it was too late. Rinderpest wiped out the cattle upwards of 7 490 head uccumbing to the di case. The direct loss to the small cultivators was \$113 000 but there was a large indirect loss as well. The State Council came to the aid. of the people and loans are granted for restocking against land title In 1910 there were 150 tons of tin ore exported

Many of the limestone hills of Perlis contain caves rich in deposit of guano. A company has been formed by some Dutchmen in Penang called the Straits Guano Company to work the deposits and they have obtained a lease of seven hills. (The government retained the bart of the property of the contained the bart of the contained the con the best known hill for the use of the local cultivators) The company has made two miles of earth road which opens up good country where people are anxious to take up land. The quantity of guano exported in 1910 was 8382 tons which paid export duty at the rate of \$2 00 per ton. After a certain date the company is bound to extract not less than 500 tons per month and the export duty will be to per cent ad alorem of the market price in Penang

HONG-KONG 1

According to the census taken on May 25 1911 the civil population of the colony numbered 456 739 The non Chinese community numbered 12 0,5 while the Chinese population was thus distributed —city of Victoria (including the Peak) 19 386 villages of Hong Kong 16 106 Kowloon (including New Kowloon) 67 602, New Territories 80 6 2, population affoat 60 048 The general death rate for 1911 was 21 13 per 1000 among the Chinese community and 13 38 among the non Chinese

Public Health —The colony has outlived its former notoriety for unhealthiness influence of the young pine forests created by the Afforestation department and the training of nullahs on the slopes have tended to check malaria while the attention recently bestowed

on sanitation has also had beneficial effects

The gradual repla ement of old Chine e dwellings by new premises erected in accordance with the Public Health and Building Ordinance of 1903 is effecting an improvement in the healthiness of the native quarter—but the abnormal influx of refugees estimated at some 20 000 who arrived in Hong Kong during the revolutionary movement in south China, somewhat discounted the improvement by contributing largely to the number of cases of plague and smallpox which occurred towards the end of 1911. The number of deaths from beriberi during 1911 was only 3.0 as compared with 566 during 1910. This reduction was in some measure due to the dissemination of a circular of information among employers of cooled labour which set forth the cause of beri beri and advised the use of beans for food with rice in the absence of fresh meat or fresh fish

The records at the Observatory Kowloon showed in 1911 a highest temperature of 93 1 F in August a lowest temperature of 47 1 F in I ebruary, and a rainfall of 90 55 inches

occurring on 145 days

Industries —Of the total area of the colony which including the New Territories 18 estimated at 249 551 acres some 41 967 acres are cultivated that is practically the whole available area the remainder being steep hillsides

The government Pine Plantations occupy 6800 acres and there are about 43 000 acres of Licensed Pine Plantations

With the exception of brewing the manufacturing industries of the colony under European supervision increase in importance yearly although the Chinese revolutionary disturbances in 1911 were adverse

¹ See F B xm 657

to trade. The manufacture of lard is one of the important Chinese industries in the colony most of the lard being sent to the Philippines and during 1911 a lard and meat factory was started for the Philippine trade. Since the middle of 1910 a steam trawler has been en gaged in the fishing industry and has contributed its hauls to the local markets

Commerce - Hong Kong is a free port The total reported imports during 1911 amounted to 3 995 793 tons as against 4 292 194 tons in 1910. The exports for 1911 show an increase of 71 672 tons or 3 1 per cent. Transit cargo shows an increase of 66 109 tons or 16 per cent. Of the more important articles of import kerosene oil shows a remarkable increase. The imports of raw optum and the trade in compounds of optum have decreased considerably owing to recent legislation. The failure of the southern rice crops in 1911 caused a decrease in the rice imports and a corresponding increase in the import of Amer

nan flour which is used as a substitute for nee and rice-flour.

The demand for labour in the rubber plantations of Malaya is responsible for the continued increase in the number of Chinese emigrants to the Straits Settlements. The table which follows illustrates the extent of the Hong Kong immigrant and emigrant trade -

Year	Emigrants to Straits Settlements	Total Number of Emigrants	Total number of Immigrants (returning Emigrants)
1909	48 016 76 705	77 430 111 058	144 821 149 564
1911	100 906	135 565	1.49 894

The total of the shipping entering and clearing at ports in Hong Kong during the year 1910 was the highest reached in the history of the colony. The number of vessel engaged

in foreign trade was 40 714 of 23 160 256 tons in 1910 and 44 978 of 23 063 108 in 1911 when 24 0 per cent by number and 30 7 per cent of the tonnage was British

Finance—In 1911 the revenue was 47 497 231 and the expenditure 47 077 177 The amount of the Consolidated Loan (Inscribed Stock Loans of 1893 and 1906) at the end of animals of the Consonated Loans of 1905 at the Clown Agents for railway construction amounted to £340 000. The rateable value has doubled since 1900-01 and for 1911-12 stood at £11 161 390. The colony pays a military contribution fixed at 20 per cent of the revenue, the cost of volunteers is borne entirely by the colony

Communications — Hong Kong has unrivalled steam communication with all parts of the world and there is a weekly European Mail service — During 1910 the Hong Kong Post Office began to forward parcels to Great Britain and German via Shanghai Dalny and the Trans Siberian railway — The cash on delivery service for parcels exchanged with the United King dom was adopted on May 1 1909 — From Jan 1 1911 the Hong Kong government was reheved by the Imperial government of the charge of the postal agencies in China Extensive resumptions of land at Kowloon Point were effected during 1909 to provide a

site for the terminal station of the Kowloon Canton Railway The British section of this railway 2178 miles in length and of 4'8½ gauge was opened on October 1 1910 by Sir Henry May A two foot gauge branch from Fan Ling to Sha Tau Kok a distance of 7½ miles was commenced in May 1911 and a length of 6½ miles of this branch was opened for traffic on December 21st The Chinese section of the railway was opened and through traffic between Kowledge and Canton setablished on October 4 2011. traffic between Kowloon and Canton established on October 4 1911

Government —Sir Frederick Lugard who was appointed Governor in July 1907 left the colony in March 1912 to become Governor of Nigeria He was succeeded by Sir Francis Henry May KCMG, formerly Governor of Fiji and High Commissioner for the Western Pacific who had previously been acting Governor

In accordance with the resolutions of the International Opium Conference which met in Shanghai in February 1909 the opium ordinances have been amended and consolidated, and additional restrictions and safeguards have been imposed in respect of morphine, compounds of opium and cocaine Twenty six opium divans were closed in 1909 and all that remained both in the island of Hong-Kong and the New Territories were closed in 1010 A grant of 40000 was made to the colony by the Imperial Govern ment for the year 1010 on account of the loss of oppum revenue and a grant of £12 000 for the same purpose for the year 1911-12 In order to replace the revenue lost on opium a law was passed by the Legislative Council on September 17, 1909, imposing duties on intoxicating liquors consumed in the colony. The 34 ordinances passed in 1910 were chiefly concerned with the consolidation of the ordinances relating to the New Territories, copyright, crown suits, lepers, midwives, oaths and the volunteer reserve In 1911 the ordinances passed numbered 65, the largest number ever dealt with in one year. They related chiefly to defence the consolidation of the liquor laws the university, stamp duties, civil procedure laws for the more effectual control of clubs and societies and for the registration of Chinese partnerships with limitation of hability

A conference lasting from June till November 1909 was held in Hong Kong between the Portuguese and Chinese Commissioners for the delimitation of the boundaries of Macao. In July 1909 there was trouble in Macao with pirates on Colowan Island in which Portuguese troops and gunboats were engaged. Some of the pirates escaped and were afterwards arrested at Cheung Chow Islands in the New Territories.

Police and Crime -The strength of the police force in 1911 totalled 1080 the force is composed of 134 Europeans 300 Indians and 547 Chinese The District Watchmen Force composed of 1 4 Chinese patrols the Chinese quarters of the city of Victoria under the supervision of European police. The daily average of prisoners confined in the Victoria Gaol in 1911 was 595 as compared with 726 in 1904 the highest previous The average percentage of prisoners to population for the last ten years has been o 14 but owing to the large floating population which is constantly moving between the colony and Canton this percentage does not convey an accurate idea of the compara tive criminality of the residents of the colony The Chinese community in Hong Kong was profoundly stirred by the revolutionary movement in China and for some days in the early part of November 1911 great excitement prevailed A proclamation under the Leace Preservation Ordinance was issued November 20th, and remained in force until February 26 1912 The police succeeded in preventing any serious outbreak of lawlessness though the influx of undesirable characters from Canton and other parts of China caused many cases of disorderliness assaults and petty thieving Mili tary assistance had to be provided and special constables enlisted

Education —Education is provided at 67 government and Grant Schools comprising 20 upper grade schools (average attendance 4107) and 74 lower grade schools (average at tendance 2190). On September 7 1911 a Board of Chinese Vernacular Primary Education was constituted to promote efficient Chinese vernacular education and to collect funds to supplement the government subsidy made to the Board. The amount of the government subsidy made to the Board. The amount of the government subsidy for the year 1912 was f4100. Higher education is represented by the Technical Institute where instruction is given in scientific technical and commercial subjects. The Hong Kong University building was opened on March 12 1912. The first chairs were to be thost of medicine engineering and the arts the medium of instruction will be English. The primary object of the University is to train the character and morals of students and so far as is possible to inculcate western ideals. It will be open to all races and creeds but owing to the position of Hong Kong it is chiefly intended for the Chinese. At the end of 1911 the University endowment fund amounted to f40 098. The British government has promised a sum of f300 a vear scholarships (King Edward VII Scholars).

Social —The Victoria Recreation Club which under the style of the Victoria Regatta.

Social—The Victoria Recreation Club which under the style of the Victoria Regattaclub held its first regatta in 1849 celebrated its 60th anniversary on July 10 1909 in a new
club house which had been built on an extension of what was formerly Murray Pier—The
Club Germania commemorated its fittieth anniversary on November 27 1909. On June
2. 1911 the coronation of King George V was celebrated by a public holiday. The whole of
the colony was illuminated for three nights all the men of war in the harbour combining in
the display.

During the past three years the colony has lost several of its prominent men by death including Mr. George Murriv Bain, who came to the colony in 1864 as sub editor of the China Mail, of which paper he ultimately became proprietor he died April 21, 1909. Sir Hormusjee Mody, the donor of the Hong Kong University buildings died on June 26, 1911. On October 28, 1911. Mr. W. D. Barnes, the Colonial Secretary, who had only recently been transferred to Hongkong from the Federated Malay States met with an untimely death on the polo ground (H. Spooner)

Weihalwei 1

The population in 1911 was 14, 17, (146 840 Chinese and 293 of other nationalities)
This gives a density of about 510 per square mile. The European element numbers
213. It consists chiefly of the Royal Naval contingent on the island of Liu Kung and
of school boys most of whom have their homes in Shanghai. Of the native male population about one-lifth is engaged in occupations other than agricultural. This frac

¹ See E B xxviii 494

FIJI -638

tion micludes merchants (shopkeepers and employees) fishermen, carpenters and builders smiths boatmen and teachers—named in order of their numerical impor-As the inhabitants are mostly small holders many of them combine several occupations

Weiharwei is now a regular port of call for many China coasting steamers sailing north wards from Shanghai and there is also a regular weekly service carrying mails and passengers between Shanghai and Weihaiwei subsidised by the Government. The mails are landed and shipped at Port Edwir! where the main Post Office has been established and which is now the principal anchorage for steamers instead of as formerly on the Island of Liu Kung The shortest time in which a mail has arrived from London via Siberia is 15 days The number of steamers that called during 1911 was 615, net tonnage 519 399

Of the total area which is 285 square miles it is estimated that not more than two-fifths is atable land. The principal export crop is ground nuts (Arachis hypogaea) the export of which amounted in 1911 to 547 tons of nuts and 8510 tons of seeds. Shark fishing has been carried on by the Japanese since 1908 but only seven boats were engaged during 1911

Revenue in 1911-12 was \$74.673 expenditure \$153.591 and grant in aid £6000. The 1911 census returned 8637 males and 40 females of the Chinese population as able to the 1911 census returned 6037 males and 40 females of the Chinese population as and to read and write that is just below 6 per cent of the total population or over 11 per cent of the male population. The people of the territory have voluntarily agreed to levy a small tax on theatrical performances for the improvement of the standard of education in village schools which is very low. The government Free School during the year 1911 had an aver age attendance of 60 pupils.

There are several other schools for boys and girls under the chinese treatment of the proposed for the schools for boys and girls under the chinese treatment of the schools for boys and girls under the chinese treatment of the schools for boys are now are now that the schools for boys are now the schools for the management of Europeans

From the Chinese treaty ports and Hong Kong boys are now
sent to the Weihaiwei School for European Boys

The average attendance is about 50
and the school is now the home of the First North China Troop of Boy Scouts

The inhabitants of the territory are for the most part of an orderly nature and crime is rare. In 1911 there were 786 convictions. Gambling is responsible for a large proportion of these. The prisoners are employed on labour of a useful kind such as roadmending and treeplanting. The total strength of the police force is 3 European inspectors 3 Chinest sergeants and 52 constables an average of one policeman to 2830 of the population. The territory is remarkable for the number of suicides—31 males and 63 females in 1911. In 1909 the Provincial Assemblies were inaugurated in China. On the Weihaiwei registration of the territory are the force in the provincial Assemblies were inaugurated in China.

ister of the electors entitled to vote or to become members of the Provincial Assembly of Shantung appeared about 500 names

An ordinance was introduced in 1909 prohibiting generally the importation sale and smoking of opium or any other hypnotic except on medical grounds. A refuge was opened under the control of a medical officer for those who desired to rid themselves of the opium The number of persons licenced to smoke optum in 1911 was 42 as compared with from a chronic disease. The opium habit is becoming less prevalent and there are few voung men who indulge in it. On the other hand cases of drunkenness which till recent years were very rare among the Chinese of Weihaiwei are now becoming more numerous

The Revolution in China in 1911 caused an outbreak of disturbances on the Weihaiwei frontier which necessitated employing marines to guard the boundary. On the withdrawal of the marines a force of a hundred men of the Royal Innis killing Fusiliers was sent from Tientsin to take their place The city of Weihaiwei following the lead of the Treaty port of Chefoo declared itself in favour of the Republican party on the 14th of November

The Commissioner of Weihaiwei is Sir James Haldane Stewart Lockhart K.C.M.G. (H SPOONER)

Fill 1

The total population at the end of 1911 was 142,61 as compared with 137 588 in 1910 During 1911 4 216 Indian immigrants entered as against 3 879 during 1910

The colony continues to progress satisfactorily A large area of native land has been taken up on leasehold and the industries have increased The Sigatoka dis trict, now opened up promises to be one of the principal sugar producing districts The field work of the trigonometrical survey of Viti Levu was completed during 1911

In March 1910 the colony was visited by a hurricane which did considerable damage to buildings and plantations Banana plantations and many acres of sugar cane were entirely destroyed, the latter being affected more particularly by floods in the low lying country where cane is principally grown Damage to coco nut plantations was also

considerable, but rubber plantations were unaffected by the wind Finance—The revenue for 1911 amounted to £240 395 or £28 442 more than for 1910 ¹ See E B x 335

FIII

and £33 098 in excess of the original estimate
£65 347 which was £28 686 in excess of 1910
The principal increase in expenditure was
for Public Works Extraordinary
Frade—The bulk of the colony 8 trade continues to be conducted through Australia
and New Zealand The total trade during 1911 amounted to £2 233 285 In 1910 the
figures were £1 833 847 The total trade with the United Kingdom and British possessions which is 88 per cent of the total trade increased from £1 747 283 in 1910 to £2 138 827
in 1911 An extraordinary increase in the quantity of green fruit exported is noticeable
This is due to the fact that the banana industry was not in 1911 affected by any serious
cyclonic disturbance. The total area of land under sugar cane in December 1911 was es
timated at 43 358 acres, from which was produced 488 534 tons of sugar cane. The estimated cultivated area under banana and pine apples was 4 692 and 230 acres respectively
The area under coco nuts was estimated at 37 562 acres. The principal minor export in
1911 was trocas shell locally known as sici. It is found abundantly on the reefs surrounding the greater part of the colony and is exported for use principally in France and
Japan for the manufacture of buttons. It was placed on the list for the first time in 1910

rounding the greater part of the colony and is exported for use principally in France and Japan for the manufacture of buttons. It was placed on the list for the first time in 1910 and the export for 1911 amounted to £14.252 in value. Government—Sir Francis Henry May K.C.M.G. was appointed Governor of Fiji and High Commissioner for the We tern Pacific in 1911 to succeed Sir Everard in Thurn K.C.M.G.C.B. who retired in 1910. In 1912 Sir Ernest Bickham Sweet Escott. K.C.M.G. succeeded Sir F.H. May who was appointed to the governorship of Hongkong. Among legal enactments during 1910 and 1911 was an ordinance providing for the raising of a loan of £100.000 for the reclamation of the Suva harbour and of harbour works at Suva and of works for the general sanitation of the town. Other ordinances relate to the taxation of buildings the extension of restrictions regarding the sale of spiritous liquors and the consolidation and amendment of laws relating to lepters and the constitution of a and the consolidation and amendment of laws relating to lepers and the constitution of a Central Board of Health

Central Soard of Health

Education—During 1911 a special grant of £,00 was allowed the Suva Public School for building purposes. The school has five teachers with an average attendance of 137.2

The Lauba chool has two teachers and an average attendance during 1911 of 142.7 The The Levuka chool has two teachers and an average attendance during 1911 of 1427. The education of natives is conducted mainly by the Weslevan and Roman Catholic Missions. The former has 1002 schools with a total attendance of 16 525. The Roman Catholic Missions are conducted with a total attendance of 16 525. Mission has 124 schools and in 1911 2293 native children were on the school rolls general question of education within the Colony was the subject of a commission which sat throughout 1909 but the teps to be taken are still under consideration

Judicial—The total number of offences reported to the police was 6160 which wa 14 more than in 1910. Of these reported offences 776 were offences again t the person 372 larceny 141 offences against property (other than larceny) and the greater portion of the balance were offences again t labour laws by indentured labourers

Climate—The rainfall recorded at Suva during 1911 was 108 346 inches—In the previous year the rainfall was 10, 812 inches—The greatest rainfall in any one day throughout the year was 15 907 inches on November 12th

Shipping—The number of ves els visiting the Colony during 1911 was 151 with a tonnage

of 295 477 as against 140 with a tonnage of 262 273 in 1910

GILBERT AND ELLICE ISLANDS PROTECTORATES

The population of the e Protectorates in 1910 was about 30 000 of whom 150 were ropeans and 50 Asiatics. The natives are nearly all engaged in the copya industry but Europeans and 50 Asiatics about 700 are employed by the Pacific Phosphate Company at Ocean Island and 100 by the owners of Fanning Island An epidemic of dysentry caused a heavy death rate in 1908-09. The financial statement for 1910 showed an excess of liabilities over assets amounting to £5966. This adverse balance was caused by the purchase of the S.S. Tokelau and the erection of several residences for Government officials in 1909. The trade of the Gilberts was very much affected during the year by the prevailing drought which reduced the export of copra But little progress was made during the year the energy of the native officials being concentrated on combating famine. The export of phosphate of lime from Ocean Island amounted to 166 695 tons as against 119 425 tons in 1909

Tongan³ Islands Protectorate

The population in 1909 was 21 958 The latest report dated 1910 and issued in 1912 stated that the islands are in a satisfactory financial and commercial condition a condition stated that the islands are in a satisfactory financial and commercial condition a condition of affairs brought about by the absence of drought and hurricane for a number of years. The general revenue for 1910 amounted to £44 007 as compared with £40 456 in 1909. The expenditure for these years amounted to £42 617 and £34 739 respectively. The imports in 1910 totalled £160 543 as against £152 870 in 1909 and the exports £245 946 in 1910 as compared with £217 155 in the previous year. The trade of the Protectorate could be considerably increased if the native government exercised a more efficient administration and made provision for an adequate supply of labour. Climate and soil are greatly

in favour of agricultural development but labour is scarce and expensive Copra continues to be the principal export 12 998 tons valued at £232 866 being sent away in 1910 About To be the principal export 12 99 to as values at 252 soo being sent away in 1910. About one quarter of the total output is shipped to Europe the balance going to Australia. The Tongan Islands are now a place of call for a line of steamers running between Australia and San Francisco. The shipping returns for 1910 consequently show a considerable increase. In that year 59 vessels with a tonnage of 104 403 entered. The Government College at Nukualofa was advanced by the appointment of a technical instructor in ca. pentry and the commencement of a Technical School.

SOLOMON ISLANDS !

The natives of the Protectorate are estimated to number 150 000 In March 1911 the white and foreign population numbered 443 as against 251 in 1909. The number of in dentured labourers employed in the Protectorate at the end of March 1911 numbered 4500 dentured labourers employed in the Protectorate at the end of March 1911 numbered 4500 In 1909 the number was only 2284. The revenue for 1910-11 amounted to £14 130 and the expenditure to £9493. The loan of £2000 made from the funds in the hands of the High Commissioner for the Western Pacific for the purpose of extinguishing certain claims to land preferred by German claimants in the islands ceded by German to Great Britain in 1900 was paid off in 1909-10 and the Protectorate is now free from debt. The imports for 1910-11 were £103 147 and the exports £88 890. Almost the whole of the import and export trade is with New South Wales. The coconic plantations in the Protectorate are developing rapidly. It is estimated that the area of these plantations owned by white men amounts to about 18 000 acres. The quantity of copra exported during 1010 amounted to 4020 tons and seems likely to increase. men amounts to about 18 000 acres

In equantity of copra exported during 1910 amounted
to 4030 tons and seems likely to increase Ivory nuts rank next in importance to copra
among the agricultural products

The nut is the fruit of a species of sago palm (Calococcus
solomonensis) peculiar to the Solomon Islands

It grows naturally in swampy ground
where it is also being cultivated

The nuts are used in the manufacture of buttons and
other similar articles

Bananas of high quality are now being produced and have lately
come upon the Sydney market but this industry is only in infancy. Rubber cotton and other fibres are still in an experimental stage but give promise of development. The ship ping returns show that the number of British and other foreign going vessels entered and cleared in the Protectorate during 1910-11 numbered 82 with a total tonnage of 63 257 The total rainfall regi tered at Tulagi in 1910 was 133 40 inches (A BRUCE JACKSON)

Gibraltar

The population on April 2 1911 was 25 367 (14 145 males 11 222 females) in addition to 8 050 men on board H M ships in harbour

Revenue (1910) £80 929 (1911) £94 573 Expenditure (1910) £76 410 (1911) £73 390 The shipping entered and cleared amounted in 1911 to 11 704 165 of which 7 143 083 tons were British A scheme is in hand for the improvement of commercial facilities at Waterport In August 1911 the removal of coal hulks was considered as their presence as offering shelter to torpedo boats was held to be dangerous in war on the other hand their removal was viewed with concern by those interested in the coal traffic of the port

The naval establishment was inspected on June 6 1912 by Mr Asquith Mr Winston Churchill and Admiral HSH Prince Louis of Battenberg

Cyprus³

The census of April 2 1911 gave a total of 2,4 108 including the military popula tion of this number 56 428 were Mahommedans and 217 680 non Mahommedans There were 4658 males in excess of females

Agriculture - As the result of two bad harvests in succession the year 1910 was not a Agriculture —As the result of two bad harvests in succession the year 1910 was not a prosperous one for Cyprus There was a serious falling off in revenue and a trade depression which reacted on every industry and activity in the island. Wheat was below the average of the preceding five years barley was a poor crop. The production of cotton on the other hand was almost double that of the previous year and there was a substantial increase of olives carobs grapes pomegranates oranges lemons and silk. An exceptionally severe winter, succeeding late rains had a disastrous effect on the flocks in the Famagusta district there was a decrease of nearly 12 000 sheep and 1500 goats. The outlook for the wine industry was gloomy and the relief works were continued in the Limassol district for the henefit of the vine growers. The cross in the wine industry was suddenly relieved how ever by events in France and Italy which caused a brisk demand there for Cyprus wines.

The output of wine was good and satisfactory prices were obtained.

In the seven nursery gardens in various parts of the island more attention is now given.

to the production of fruit trees vegetables and economic plants than to the cultivation as heretofore of purely forest trees. In the experimental garden at Nicosia several thousand

1 Sec E B xxv 364.

2 See E B x1 938

3 See E B vii. 695

fruit trees were planted during the year and a number of vines were also planted to provide truit trees were planted during the year and a number of vines were also planted to provide cuttings later on The cotton experiments with the varieties previously tried again gave good results. The distillation of essential oils is an important item in the work of the Agricultural department though the market appears to be somewhat hmitted. The art of basket making is now taught and a number have been made for fruit transport. The export of potatoes to Egypt has shown considerable expansion 36,271 cwt (value £8472) being sent away in 1911 as against 14,983 cwt (value £3839) in 1910.

The agricultural depression of 1910-11 affected the sale of building timber the receipts from which amounted to £4592 as against £4762 during the previous year.

from which amounted to \$3592 as against \$3762 during the previous year. Two new forest stations have been started in the Famagusta and Aicosia districts. The expenditure on the forestry department amounts to about \$13,000 per annum exclusive of the vote for special tree planting and the revenue represents at present only about 35 per cent of the cost though the foundations are being gradually laid of a large revenue in the future. Now that the destruction of trees has been stopped and systematic planting undertaken the island

may again become one of the best timber producing areas in the Levant

Mining—The asbestos mining industry is progressing steadily under considerable difficulties as regards labour and transport. During the year 417 tons of dressed asbestos were exported. It is hoped to increase production with the aid of improved machinery. Asbestos is present in practically unlimited quantities but the fibre is for the most part very

short and the output does not in consequence possess a high market value

short and the output does not in consequence possess a nign market value of the value of imports during the year 1910 exclusive of specie was £493 475 and the value of the exports £511 841 an excess of exports over imports of £18 366 whereas in 1909 there was an excess of imports over exports amounting to £130 643 due to importations of flour and the partial failure of the cereal and carob crop. The imports from the United Kingdom represent 26 per cent of the whole the exports to the United Kingdom 27 per cent of the total number and tonnage of steam and saling vessels entered and cleared in the foreign trade was 2.268 with a tonnage of 1/12 584 being a decrease

and cleared in the foreign trade was 2 268 with a toninge of 742 584 being a decrease of 90 steamers with 48 967 tons and an increase of 180 sailing vessels and 6517 tons

Finance—The revenue collected in 1910—11 was £786 848 grant in aid £40 000 total £320 848 Expenditure £-51 521 tribute £92 799 total £344 320 The excess of expenditure over revenue was due to the fact that surplus balances of £17 670 were drawn on to meet a special Forest Estimate of £5000 and a special Public Works Estimate of £12 670

Political —Major Sir Henry Hamilton John Goold Adams G C M G was appointed High Commissioner in succession to Sir Charles A King Harman K C M G and arrived in October 1911 to take over the administration

On September 5, 1911, the Legislative Council was dissolved and elections for a new council subsequently took place

On May 27 1912 the troops had to be called out to quell a not between Greeks and Four persons were killed 80 wounded No Englishmen were hurt

In August 1912 a deputation from the Greeks of Cyprus conferred with the British Colonial Secretary and asked for administrative reforms including an increased propor tion of Greeks to Turks on the Legislative Council and also for the abolition of the tribute to Turkey of £42 000 a vear

Several measures of local utility were passed during the session of 1910 Of the most important was the law providing for the registration of trade marks

Education —In 1910-11 there were 583 primary schools with 707 teachers and 30 779 scholars an increase of 12 schools 25 teachers and 1 203 scholars over 1909 10. The aver age daily attendance excluding harvesting time is estimated at 26 910. The schools were supported at an expense of £16 859 raised locally by assessment contributions from religious funds or individuals. The schools are apportioned amongst the following religious communities. Moslem (187) Greek Christians (387) Armenian (5) Maronite (4) The aver age attendance in Moslem schools was 4059 and in Greek Christian schools 22 159

Public Health — At the end of 1910 an outbreak of smallpox occurred but this was checked

by vigorous measures of isolation and vaccination. Malarial fever was less prevalent than in former years 6074 cases being returned as compared with 7450 in 1909 and 10 476 in 1908. The hospitals of the islands show an all round increase in attendance and admission. sions and important improvements have been made. At the close of the year the inmates

of the Leper Farm numbered 99 and their lot has been considerably relieved by a substantial increase to the grant allowed them by the government.

Climate—The weather in Cyprus during 1911 was extremely varied as regards heat and cold Snow fell on the central plains and remained on the ground some days an event which had not occurred for 13 years

The average rainfall over the whole island was 23 49 (A BRUCE JACKSON) inches

MALTA é#3

Malta 1

The civil population of Malta on April 1, 1912, was estimated at 213,332 as against 215 395 on the corresponding date of 1911 The total number of births in the two years was 7211 The birth rate in 1911-12 was 33 49 as compared with 36 12 per thousand in the previous year The total number of deaths was 5286, as compared with 4612 in The death rate of the civil population in 1011-12 was 24 42 per thousand as against 21 42 in 1910-11 The general state of health in the island during the year was satisfactory except for an extensive epidemic of measles and some cases of cholera Cholera broke out in an encampment which was formed to shelter refugees from the war There were 116 cases, 85 of which proved fatal The preventive measures taken were successful in stamping out the disease

Agriculture — The total area of land under cultivation in 1911-12 was 41 866 acres while area of uncultivated land was estimated at 4707 acres. The total area under cereals Agriculture — The total area of land under cultivation in 1911—12 was 41 866 acres while the area of uncultivated land was estimated at 4707 acres. The total area under cereals was 13 444 acres. The total vield of cereals including wheat barley and mischiato (a mixture of both) was 22 457 quarters. The area under beans and other pulse was 2004 acres with a total yield of 3902 quarters. The area under beans and other pulse was 2004 acres with a total yield was 448 454 cwts. Cummin seed was planted on 1504 acres. The total yield amounted to 11 430 cwts. The total quantity of oranges lemons and mandarines gathered is estimated at 176 000 dozen. The acreage of land under cotton was 1100 acres the total yield was 187, 40 lbs. The average price obtuined was 6½ per lb. The quantity exported was 122 041 lbs. of this 22 015 lb were exported to the United Kingdom.

Finance and Trade — The revenue for 1911—12 amounted to £448 114 and the expenditures £467 783. The total expenditure on the garrison (including Militia) was £511 649. In 1910—11 the expenditure was £310 033. The total declared value of goods imported exclusive of bullion and specie and of goods imported for transhipment was £2 413 687. The total declared value of goods imported (exclusive of transhipments) was £750 42°. Shipping — The number of foreign steamers which called during 1911—12 was 997 ton nage 2 219 643. The number of foreign steamers was 1427 tonage 1 871 595.

nage 2 219 543 The number of foreign steamers was 1427 tonnage 1 871 595

Royal Commission —In 1911 a Royal Commission sat to enquire into the unsatis factory economic condition of the island and as to the best means to restore its prosperity The conditions show a financial deficit a decline in the shipping trade and an increasing population above the economic capabilities of the island Malta has suffered severely from the gradual reduction of the Imperial garrison naval and military since 1902 ---a reduction which includes two battalions and six battleships Moreover, the fleet has for the past few years been more or less frequently absent from Malta and it is estimated that this absence means a loss to the island of at least £1000 a day whole the reduction of the garrison must mean a loss to the industries of Malta of not less than £400 000 annually The financial position is now such that while the govern ment expenditure continually increases the revenue diminishes

In 1906 when the Admiralty works were completed the extra demand for labour which In 1906 when the Admiralty works were completed the extra demand for labour which had arisen a few years before ceased and there began the growth of unemployment from which Malta is now suffering and which has been aggravated by a rapid increase in population. The former prosperity depended to a large extent upon Imperial expenditure in connection with the fortifications and military works and upon the expenditure of the garrison and the fleet. In 1905–9175 men were employed in the Naval establishment as compared with 5181 in 1911, while the reduction of employment under the War department has also been considerable. The demand for Maltese lace has greatly fallen off in recent years owing to the competition of machine made lace, chiefly from Germany. It has been supply the defeated and the particle of the competition of machine made lace, chiefly from Germany. It has been supply hed gested that a government agency for the sale of genuine Maltese lace should be established

The Commission composed of Sir Francis Mowatt (chairman) Mr Russell Rea Sir Mackenzie Dalzell Chalmers and Mr D L H Baynes (secretary) emphasized in their report the fact that the difficulties both financial and economic from which Malta is at present suffering can be traced almost entirely to the growth of her population without a corresponding increase in the means of subsistence no alteration in the system of taxation or other measure serving as more than a temporary palhative Commission also refers to the density of population and the impossibility of providing adequate employment by the development of existing industries or by the introduction

¹ See E B xvu, 307

This condition is yearly intensified by the high birth rate, and thus the of new ones standard of living tends continually to fall and poverty to increase

The Commission makes the following recommendations among others —that in view of the importance of the agricultural industry to Malta this department should be de veloped and placed under an officer who would give his whole time to the work that a committee should be appointed to conduct a thorough investigation into the expenditure of the government and to report what economies can be effected that the scale and amount of expenditure on public works extraordinary should be cut down that the annual contribution of £5000 paid to the Imperial government in aid of military services should be discontinued or that alternatively the island government should be authorised to charge a fair rent for all sites or buildings required by the Army or Navy for purposes other than tortineations, that the tax on imported grain should be reduced by half the revenue thus lost being made up by increases in the duties on imported tobacco beer and sugar and the liquor license duties, and by the imposition of a general ad valorem duty on imported articles at present untaxed and that information with regard to opportunities for emigration should be made readily accessible

Legislation —Twelve ordinances were passed by the Council of Government during 1911. The most important of these relate to the management and regulation of customs the

The most important of these relate to the management and regulation of currouns are criminal laws and the manufacture of spirit and artificial wine in the island Education—There are 101 day schools and 42 night schools. The enrollment in the day schools in September 1911 was 19,282. The night schools were attended by 2666 pupils. The strength of the teaching staff during the year was 766. The total cost of the element ary schools was £28.265. An average of 175 students attended the secondary school for the average daily attendance in the secondary school for boys was 66. The daily attendance in the secondary school for boys was 66. orl The average daily attendance in the secondary school for boys was 66. The daily average number of students in the Lyceum was 484. The average number of students who attended the University was 149 as against 222 in the previous year

On January 24 1912 the islands were visited by King Ceorge V and Queen Mary who
remained from the 24th till the 7th and received an enthusiastic reception

Climate — The meteorological returns show a mean temperature for the year of 63 02 F The total rainfall was 24 230 inches October 16 and November 15 1911 Larthquakes were felt locally on September 30 (A BRUCE JACKSON)

BRITISH EAST AFRICA

British East Africa comprises (1) the East Africa Protectorate (2) the Uganda Pro tectorate (a) the Sultanate of Zanzibar The first two are administered through the Colonial Office and in status closely approximate to crown colonies The Sultanate of Zanzibar is a protected State its affairs being supervised by the Foreign Office The East Africa Protectorate by itself is popularly known as 'British East Africa' but all three protectorates come strictly under the designation

The East Africa Protectorate 1-In 1912 the white population of the East Africa Protectorate was about 4000 the Indian about 20000 The native population was estimated at 4000000. The period 1,00-19 witnessed a great development in the Highlands that part of the protectorate suited for permanent occupation by Europeans The area so available does not exceed Ireland in size Nairobi the capital had (1911) 14 000 inhabitants (800 whites 3000 Indians) It contains handsome public and The whites are private buildings A wireless telegraphy station was erected in 1912 almost wholly engaged in agriculture including dairy farming and stock raising. Sisal hemp black wattle (for tanning) and coffee are the chief products Wheat barley maize vegetables and cotton are also cultivated Besides cattle sheep and pigs there are ostrich farms During 1907-10 62 000 acres of freehold and 1 718,000 of leasehold land were taken up 1,141 000 being for grazing Large areas near the coast have been The only mineral exploited is carbonate planted for coco nuts rubber tobacco &c of soda but coal was found in 1911 near the railway at Mackinnon Road Station

Excluding government stores and specie exports rose in value from £515 000 in 1907-8 to £962 000 in 1910-11 import (chi. 19 cotton goods foodstuffs and agricultural implements) in the same period rose from £799 000 to £1 000 346 In 1911 60% of the imports came from the United Kingdom or British possessions and 10 % from Germany Of the exports

¹ See E B iv 601 et seg

40% went to the United Kingdom France Germany and the United States taking nearly 40% went to the United Kingdom France Germany and the United States taking nearly all the remainder in about equal proportions. The revenue rose from £485 000 in 1908-9 to over £700 000 in 1911-12. In the same period expenditure was approximately £700,000 each year. Up to 1912 grants in aid were made by the British treasury the amount so found in 1910-11 being £130 000. In 1912 the Protectorate became self supporting.

Traffic on the Uganda railway increased very rapidly as a result of the great agricultural development in Uganda as well as in the East Africa Protectorate. The total tonnage handled advanced from 60 000 tons in 1911-12. In 1912 nearly half a million passengers were carried double the number of three years previously. A new railway of miles long starting from the Uganda railway 282.

three years previously A new railway 93 miles long starting from the Uganda railway 282 miles from Mombasa was built in 1911-12 to the Magadi Soda Lake which lies towards the miles from Mombasa was built in 1911-12 to the Magadi Soda Lake which lies towards the German frontier. It is owned by the company exploiting the soda but worked by the government. Another railway (30 m long) was built from Nairobi NE to the Thika river opening up one of the best parts of the Highlands. The Imperial government made in 1912 a loan of 4750 000 towards railway improvements and the provision of a deep water pier at kilindim. On July 2 1912 Mr. H. A. F. Currie C. M.G. (b. 1866) who had been manager of the Uganda Railway since 1903 died. He was succeeded (in Oct.) by Mr. H. B. Taylor Superintending Engineer Indian State Railway.

The passing of ten years since the first settler (Lord Delamere the 3d baron) made the Highlands his home has proved that chimate and soil admirably suit the European constitution. The bulk of the farm work is done by the kiking a race which has distinct approved.

The bulk of the farm work is done by the kikuyu a race which has distinct aptitude for agriculture The settlers were largely recruited from the upper and middle classes of England and by the end of the decade the Highlands were furnished with churches schools

roads race courses fenced farms and substantial farm houses newspapers etc

Sir J Hayes Sadler, the governor was in July 1909 succeeded by Sir Percy Girouard He achieved the somewhat difficult task of working in harmony with the white settlers, who chafed under crown colony administration and the long delays in obtaining land In September 1911 the indignation of the whole white community was roused by the deportation of Mr Galbraith Cole (a pioneer settler and brother in law of Lord Delamere) by order of the British Colonial Secretary Mr Cole after vainly seeking protection from native stock thieves shot dead a Likuyu caught sheep stealing who attempted to escape Tried at Nairobi for murder the jury had acquitted Mr Cole with out leaving the box One result of this episode was an endeavour by the administration to afford the settlers better protection. On July 17 1912 the resignation was announced of Sir Percy Girouard who had accepted an offer to join the engineering firm of Armstrong, Whitworth & Co in England Mr H C Belfield the new governor who had served for 25 years in the Malay States reached East Africa in October 1912

Uganda - The delimitation of the western and south western frontiers of the Ugan da protectorate, where they adjoin Belgian Congo and German Fast Africa was com As a result a large tract of country north of Lake Kivu was brought under British administration while that part of the protectorate west of Lake Albert was handed over to Belgium The area of the protectorate is now given as 117 681 sq m.

At the 1911 census the population was returned at 2 843 325 including an estimate of 378 000 for natives in districts not under administrative control. The European population was 640 (including 203 government servants and 187 missionaries) Asiatics numbered 2,216 (chiefly traders and clerks) The increase in population despite the ravages of sleeping sickness2 was testimony to the prosperity of the country The Baganda (most of whom are Christians) totalled 558 000, the Banyora the next largest Mengo had 32,441 inhabitants, Entebbe, on Victoria Nyanza 9,569

The years 1000-12 witnessed an unexampled development of cotton growing the firm establishment of coffee plantations and a general expansion of trade Besides cotton and coffee there is a large trade in chillies and in hides and skins and in 1911 plantation rubber as apart from wild rubber first appeared in the export list Wheat is grown in Toro and on the foot hills of Mt Ergon The cultivation of the cotton is almost entirely in the hands of natives the purchasing and collecting being the work mainly of Indians while the ginning and exporting is done by European firms In 1912 as the result of three year investigation, pure long staple varieties of cotton—Sunflower and 'Allen's Improved—

¹ See E B xxvn 557 et seg ² By 1910 in which year the deaths from the disease were 1 546 sleeping sickness had been got under control

were substituted for the hybrids previously cultivated. The value of the cotton crop 41 000 in 1908-9 was £165 000 in 1910-11 and over £250 000 in 1911-12 The imports (merchandise only) rose in value from £288 000 in 1909-10 to £347 000 in 1910-11 and

(merchandise only) rose in value from \$\, 288\, 000\ in 1909-10\ to \$\, f347\, 000\ in 1910-11\ and exports increased from \$\, f225\, 000\ to \$\, f340\, 000\ In 1909-10\ revenue\ (including a grant in aid of \$\, f103\, 000\) was \$\, f268\, 000\ in 1910-11\ it\ was \$\, f287\, 000\ though the grant in aid\ was reduced to \$\, f96\, 000\ The expenditure\ in\ the two\ years\ was \$\, f240\, 000\ and\ \, f252\, 000\ The\ railway\ from\ Jinja\ near\ the\ Ripon\ Falls\ along\ the\ Victoria\ Nile\ was\ completed\ to\ Namasagoli\ \to 58\ m\ -in\ December\ 1911\ It\ cost\ \, f170\ 000\ This\ railway\ connects\ with\ a\ steamer\ service\ on\ Lake\ Kioga\ and\ opens\ up\ Bukedi\ where\ a\ ric\ soi\ and\ a\ well\ defined\ dry\ season\ provide\ exceptional\ opportunities\ for\ cotton\ growing\ In\ 1912\ the\ Imperial\ parliament\ voted\ \, f100\ 000\ for\ the\ provision\ of\ metalled\ roads\ suitable\ for\ motor\ traffio\ in\ this\ region\ A\ railway\ from\ Port\ Bell\ to\ Kampala\ (20\ m\)\ built\ 1912\ marked\ the\ beginning\ of\ a\ trunk\ line\ from\ the\ Victoria\ to\ the\ Albert\ N\ anza

The Baganda continue to prove themselves a most progressive type of negro 8 000 are in government service over 32 000 of their children were in Anglican schools alone in 1911 The native government is in the hands of Sir Apolo Kagwa, K C M G and two to regents The Kabaka (king) Daudi was 16 on August 8 1912

In March 1911 Mr F J Jackson C B, succeeded Capt H E S Cordeaux (who was appointed to St Helena) as governor of Uganda Jackson had played an important part in bringing Uganda under British protection and since 1880 had served continuously either in Uganda or in the East Africa Protectorate

Zanzibar 1—The Sultan of Zanzibar Ali bin Hamud abdicated November 15 1911 and on December 9th his son Khalifa bin Harub a child of six was proclaimed Sultan by the British Ali bin Hamud had been educated in Europe and he preferred the freer life and wider interests of Europe to his throne. The native administration is under the general control of the British Agent-Mr Edward A W Clarke who succeed ed Mr Basil S Cave (appointed consul general at Algiers) in 1909 Capt F R Barton C M G is First minister to the council of regency

The population of Zanzibar island at a census taken in 1910 was 114 069 that of Pemba being 8, 130 Zanzibar city had 35 262 inhabitants The Arab aristocracv large land owners-number about 20 000 there are an equal number of British Indians and about 300 Europeans The transhipment of goods to and from the mainland of East Africa and the growing of cloves are the main sources of wealth Che value of cloves exported in 1910 was £253 000 compared with £330 000 in 1900 In 1911 the crop was estimated at £300 000 Copra cultivation is increasing the export in 1910 was £ 19 000 almost double the figure for 1900 Nearly all the other exports figure also as imports they are goods in transit. Zanzibar has been to some extent replaced by Mombasa (British East Africa) and Dar es Salaam and Tanga (German East Africa) as the distributing centre for Indian and European goods This is due to the extension of direct steamship communication between India and Europe and the mainland of East Africa and to the establishment of equal rates of freights to Zanzibar and the coast town The exports from Zanzibar to the mainland of East Africa piece goods petroleum rice sugar &c received from abroad and transhipped fell in the ten years 1901-1910 from £5.4 000 to £3.48 000 In the same period the value of goods received from the main land decreased from £341 000 to £242 000 But Zanzibar retains its position as the chief city of East Africa in native estimation and it remains the headquarters of the principal Indian merchants trading with East Africa and the centre of the dhow traffic on the coast The tonnage of vessels clearing the port in 1910 was 682 000 the external trade was valued at £2 026 000 The British proportion of the trade declined from 55% in 1908 to 47° an 1910 Customs revenue in 1910 was £107 000 the total revenue £181 000 and the expenditure £192 000

See the Colonial Office reports on East Africa Protectorate and on Uganda, and the Consular reports on Zanzibar Lord Cranworth A Colony in the Making (London 1912) Ward and Miligan Handbook of British East Africa (Nairobi and London 1912) John Roscoe The Baganda (London 1911)

BRITISH SOMALILAND 1

During 1910 the British troops were withdrawn from the interior of Somaliand The arrangements made for organising the tribes in the protectorate and providing them with arms for defence against the Mullah Mahommed—the Mad Mullah—led only to inter tribal fighting and anarchy The Mullah remained in Italian territory and in October 1912 was officially reported to be suffering from an incurable disease.

The revenue for the years 1909—12 varied from £30 000 to £32 000 the expenditure £192 000 in 1909—10 (owing to military operations) had dropped in 1911—12 to £74 000 Deficits are met by grants. The trade was valued at £490 000 in 1909—10 and £484 000

10 1911-12

Gums (Arabic myrrh etc.) hides and skins ghee coffee and pearls are the chief exports The decrease of trade between Zaila and Harrar continued owing to the competition of the railway from Jubit The pearl fisheries at Zaila increased in value Berbera was placed in wireless telegraphy communication with Aden in 1911

Mr H A Byatt C M G who became commissioner of the protectorate in 1911 had

served in Somaliland since 1905

See the Colonial Office Reports and R E Drake Brockman British Somabland (London (F R CANA)

NYASALAND

The period 1910-12 was one of prosperity in Nyasaland The population in 1911 was natives 969 183 (as against 927 355 in 1907) Europeans 766 Asiatics 481. The natives proved both peaceful and contented. Witchcraft and trial by ordeal were rendered illegal in 1911 Sleeping sickness slowly extended despite every effort to arrest it. The pread of the tsetse fly involved the closing of many roads to animal transport. This difficulty is being met by the construction of metalled roads along which motor vehicles can ply but of

being met by the construction of metalled roads along which motor vehicles can ply but of the 3 156 miles of road in the Protectorate in 1911 only 23 miles—between Blantyre the chief commitrial centre and Zomba the administrative capital—were macadamised.

The external trade of the Protectorate in 1910-11 amounted to £368 000 and in 1911-12 to £446 000. To the United Kingdom in 1911-12 went produce valued at £179 000 and from it came goods valued at £194 000. The cultivation of coffee at one time Nyasaland's staple product gradually diminished since 1899-1900. In 1909-10 the export of coffee was valued at £15 500 in 1910-11 it had dropped to under £7 000. In 1911-12 it rose to £16 000 a temporary increase due to exceptionally suitable weather conditions. Cotton £59 000) was the chief export in 1910-11 having more than doubled in a year. Owing to late export of part of the crop there was a drop in 1911-12 to £58 000. Tobacco exports to late export of part of the crop there was a drop in 1911-12 to £58 000 Tobacco exports were £42 000 in 1910-11 and £53 000 in 1911-12 Rubber exports in 1911-12 were £10 000

A great obstacle to the expansion of trade was the inadequate communication with the outer world due to the persistent diminution of water in the lower Shire so that steamers ascending the /ambezi were frequently unable to reach Port Herald whence a railway runs to Blantyre. During 1912 the Imperial Government arranged to extend the railway south from Port Herald to the Zambezi the line to be continued eventually to Beira In October 1912 the Portuguese government signed a contract with a Belgian group of financiers for the building of the part of the line from Beira to the Zambezi

The revenue of the Part of the line from Beira to the Zambezi

The revenue of the Protectorate was £94,980 in 1910-11 and £97,356 in 1911-12 Ex

penditure was £112,369 in 1910-11 and £118,070 in 1911-12 Deficits are made good from
the British treasury

The institution in 1911 of a land tax of one halfpenny an acre per
annum on all lands held by non natives became a valuable source of revenue The tax
on native huts was raised in 1911 from 3s to 4s and from 6s to 8s for low and high
grades
respectively

The tax yielded in 1911-12 £50,900

Six Alfred Sharps (b. 1851), who described in 2015 reporting in Negative 1801.

respectively The tax yielded in 1911-12 £50 900

Sir Alfred Sharpe (b. 1853) who had served in official capacities in Nvasaland since 1891
and had governed the Protectorate since 1897 retired in 1910. He was succeeded by Sir W. H. Manning (b. 1863) the officer who raised the Central Africa regiment and commanded the Somahland Field Force in 1902-3 (see E. B. xxv. 382a) and who from January to No vember 1910 was Commissioner of that Protectorate.

(F. R. CANA)

MAURITIUS³

The population of Mauritius at the census of 1911 was 368 791 a decrease of 2 232 compared with 1901 Males exceeded females by 22 000 Port Louis the capital had a pop of 50,060 a decrease of 2 680 As Mauritius has an area of only 716 sq miles the density of population—514 per sq mile—18 one of the greatest in the British Empire Indian immigrants and their descendants constituted about 70% of the total population while the negro type had almost disappeared The dependencies had 6,690 inhabitants in 1911 Rodriguez the largest (area 42 sq miles) had a population of 4 829 Mauritius continues to yield practically nothing for export besides the products of the

¹ Sec E B xxv 381 2 Sec E B iv, 505 et seq (British Central Africa) 3 Sec E B xvii 913 et seq

sugar cane Moreover it produces little else for home consumption Dependent on a single industry the colony suffers when that industry i depressed Owing to the high price fetched by ugar the colony during 1910-1, attained however a sounder position than it had held for year. The value of imports in 1909 was £1 800 000 in 1910 it had increased to £2 333 000 Exports in 1909 were valued at £2 295 000 and in 1910 at £2 435 000 About 79 of the total imports came from the United Kingdom and British Possession to a single sugar to the color of the total imports came from the United Kingdom and British Possession to the color of t went nearly 99 c of the exports

The sugar trop of 1910-111 exclusive of sugar for local consumption was 214 372 tons (metric) a compared with the record 1909-10 crop of 246 560 tons the value was £2 000 000 Over 144 000 acres one third of the whole area of the island were in 1910 under sugar cultivation. There were at the same time sixty two sugar factories working. The colony is three large t customers for sugar were in 1910. British India 146 510 tons (metric) the United Kingdom 47 316 tons, and Cape Colony 19 137 tons. Great improvements have been made in the manufacture and steam ploughs have been introduced for work in the rane fields but much of the land under cultivation is rocky and hand labour has not been superseded. Aloe fibre and vanilla are the only other exports of any note. Imports of tea have increased considerably although locally grown tea has been found very satisfactory and nearly 460 000 worth of culinary oils etc. was imported in 1910 notwithstanding that the oil and climate are eminently suited to the cultivation of oil bearing plants and trees I speriments in the cultivation of cotton have been made

The revenue for the financial year 1909-10 was £720 000 considerably exceeding that of any previous year. The expenditure was £6,0 000. In 1910-11 the revenue was £742 000 and the expenditure £638 500. The net debt of the colony in 1911 was £1 296 000. Sir Cavendish Boyle (b. 1849) after erving as Governor of Mauritius for eight years retired in 1911. He was succeeded by Major John Robert Chancellor (b. 1870) an officer who had served with distinction in the Tirah Expedition (1897-98) and in other campaigns

and who had been Secretary to the Imperial Defence Committee

See A Walter 1911 Census Report (Port I outs 191) and Report of the Mauritius Royal
Commission (Cd 5186) issued in 1910 a valuable guide to the economic condition of the colony (F R CANA)

SEYCHELLES 1

The population of Seychelle at the 1911 census was 22 691 (148 per sq. m.) of whom only 2 159 were not born in the islands the increase in ten years was 3 454 or 18 per cent 85 per cent are Roman Catholics

The value of exports in 1911 fell to \$\{126\) 867 from \$f149\) 467 in 1910 and imports were \$\{ \text{foo}\) 1\ 6\ as against \$\{ \text{foo}\) 8\ 460 in the previous \$\{ \text{year}\}\$. The United Kingdom and British Poses sions took about a quarter of the to al. France with purchases to the extent of \$\{ \text{foo}\) 47\ 900 was the colony s best customer. The chief article of exports was copra valued at \$\{ \text{fo}\) 1500 guano \$\(\text{foo}\) 43\ 800) coming sectond. It is estimated that at the present rate of exploit ation the supplie, of guano will not last beyond \$\text{1920}\] Vanilla \$\(\text{foo}\) 1533\) was spill by in ation the supplie, of guano will not last beyond 1920. Vanilla (£15,533) was spill by un seasonable raintall and the crop wis one of the smallest on record since 1907, when the value of the harvest was nearly £67,000. Cinnamon bark comes fourth on the list, the trees were introduced during the French rule about 1775, but their cultivation was abandoned almost immediately and the trees proved the rule of the control of the rule of the almost immediately and the trees spread through the forest and were neglected until 1908 atmost immediately and the trees spread through the lorest and were neglected until 1908.

A ton of tortoise shell was exported to London and Paris. Experiments have been made in the rearing of young turtles from the eggs in enclosed areas. The turtles grow more quickly in continement and the weight of the shell is proportionately greater. Most of the imports came from the United Kingdom and British Possessions the total for 1911 being 474 067 as against \$\int_{16}\$ 647 from other countries. The chief import was rice which India supplied to the value of \$\int_{16}\$ 6333. Methods of agriculture have been improved and coco nut plantations in particular show the results of more scientific treatment. Many thousands of conditions have been planted out from the seeds of rubber treatment. of seedlings have been planted out from the seeds of rubber trees growing in Seychelles and in 1911 rubber appeared for the first time as an export

The revenue in 1911 was £36 333 and the expenditure £34 133
In October 1912 Mr W E Davidson (b 1859) who became Governor of Seychelles in 1904 was appointed Governor of Newfoundland and Little Col C R M O Brien (b 1859) Colonial Secretary of the Gambia (who had served with distinction throughout the Anglo Boer War 1899-1903) was made Covernor (F R CANA)

BRITISH WEST AFRICA

In West Africa the British colonies and protectorates form separate governments directly dependent upon the Colonial Office in London They are (1) the Gambia (2) Sierra Leone, (3) the Gold Coast with Ashanti and the Northern Territories (4) S and N Nigeria In every part of British West Africa the outstanding features of the period 1910-12 were practically unbroken public peace and a remarkable development of trade

1 See E B xxiv 751 et seg

and improvement of means of communication But the need of securing the natives in the unfettered enjoyment of their lands, as a condition necessary for the permanent prosperity of each of the colonies and protectorates led to the appointment (June 26 1912) of a Committee by the Colonial Secretary (Mr. L. Harcourt) to consider the laws relating to the transfer of land in British West Africa with a view to seeing how far it was feasible to extend the system adopted in N. Nigeria where the whole of the country is held in trust for the native inhabitants. Sir Kenelm Digby was appointed Chairman of the Committee whose members included Sir F. M. Hodgson an ex Governor of the Gold Coast and Mr. E. D. Morel well known for many years persistent advocacy of native rights on the Congo and elsewhere in tropical Africa.

Gambia — The census taken in 1911 showed that the population of the Island of St Mary at the mouth of the Gambia on which is built Bathurst, the capital was , 700 compared with 8,807 in 1901 — The population of the protectorate mainly Jolloff and Mandingo was 138 401 or 15 000 fewer than was estimated for 1907 — In 1911 for the third successive year the revenue (£86 454) exceeded previous records the expenditure being £71 390 — In 1910 for the first time the value of the trade reached over a million sterling the figure being £1 134 460 and in 1911 it rose to £1 499 000 imports being valued at £807 000 and exports £682 000 — The ground nut industry is the main occupa tion of the people and while it continues so lucrative the efforts of the Administration to widen the basis of prosperity meet with little success — In the five years 1907—11 the value of the crop varied from £245 000 to £437 000 (1911 tonnage 47 000)

Consisting of a narrow strip of land on either side of the lower Gambia the protectorate is hemmed in by French West Africa and the commerce (though not the shipping) is largely in the hands of French firms established at Bathurst. The trade in ground nuts is almot wholly with France and in 1911 84 8 pc of the exports (excluding special) went to France and her Colonies. The British Empire took 63 pc and Germany 56 pc France had also about 45 pc of the import trade. Great Britain coming next with about 30 pc

In September 1911 Sir George Denton (b 1851) who had administered the Gambia for nearly eleven years retired. He was succeeded by Col Sir H L Galway (b 1859)

See H F Reeve The Gambia (London 1912) an excellent monograph by a retired official Sir G Denton Twenty Three Years in Lagos and the Gambia Inl African Soc Vol xi (1912) and the Annual Reports issued by the Colonial Office

Sierra Leone 2—By a treaty with Liberia signed on the 21st of January 1911 the south-eastern district of Sierra Leone lying south of the Morro river was ceded to the Republic in exchange for the district of Kanre Lahun (see map in E B xi o4) Im mediately north of the Anglo Liberian frontier the Anglo French boundary underwent a modification (exchange of notes July 6, 1911) resulting in the transference to Sierra Leone from French Guinea of a narrow strip of territory with an area of 1 5 sq m census of 1911 gave the population of the Colony at 75 572 while that of the Protectorate The figures for the chief tribes were Mendi 44 000 was estimated at 1 327,560 Sherbro 107 000 both pagan Timini 347 000 Limba 110 000 Konnoh 61 000 the last three Moslem (more or less) The European population was 650 (as against 309 in 1901), while the Syrians (who have obtained a considerable share of the petty trade of the country) had uncreased from 4, in 1901 to 175 Freetown the capital and one of the finest ports in West Africa, had a population of 34 090 There has been a general increase both in commerce and in agriculture but the primitive and wasteful methods of farming adopted by the natives are leading to the disappearance of the dense forest lands -with unfortunate results, especially on the mountain slopes and tops where in two years virgin forest may be turned into bare rock (see "Forestry" by Mr G B Haddon Smith in the Colonial Office report on Sierra Leone for 1910) The first step towards the reservation of forest land was made in 1911

The commercial prosperity of Sierra Leone continues to be bound up with the products of the oil palm—constituting 72 p.c. of the domestic exports in 1911. Next in importance comes the Kola nut a universal article of diet among the natives of West Africa, scarcely any of the nuts reach Europe. In the five years 1907-11 the value of the exports rose from \$831 000 to \$ft\$ 300 000 that of the imports from \$f988 000 to \$f\$ 267 000. The total revenue for the same period increased from \$f\$ 359 000 to \$f\$ 37000 the corresponding figures for

¹ See E B x1 437 et seq

expenditure being £345 000 to £432 000. At the close of 1911 the colony had a funded debt of £1 255 000. Great Britain's share of the import trade in 1911 was 75 ° of the export trade 24 ° Germany ranks first (30°) in the export trade as a result of the gravitation of the palm kernel trade to Hamburg where there are large factories with the most modern machinery for extracting the oil from the kernels and making use of the waste products. The shipping statistics for 1911 showed a total tonnage of 1 246 900 68% being British com
The shipping statistics for 1911 showed a total tonnage of 1 246 900 68% being British com
The German pared with a tonnage of 993 000 in 1910 when the British percentage was 77 6 The German tonnage rose from 13 55 in 1910 to 18 67 in 1911

The expansion of trade depends largely on opening up new oil palm districts and as the

tsetse fly renders animal transport impossible attention is directed to other means of loco motion A branch line (90 m long) from the main railway begun in 1910 and completed in 1912 runs northward from Boia (S E of Freetown) and crossing the Rokell river reaches Makene the centre of one of the richest palm belts in the country The opening up of the Hinterland by feeder roads also continues A notable feature in the history of the country is the spread of Islam coupled with a general desire for education During 1911-12 a Government Model School was built at Freetown In districts where Moslem influence is strong a high degree of sobriety and of amenability to good order prevails

The visit of the Duke of Connaught to Freetown in December 1910 was an event of more than ceremonial importance. There were present from the Protectorate chiefs of many tribes which had tought hard against British dominion and the cordial manner in which they were received by the uncle of King George has been told in every corner of the country they were received by the uncle of King George has been told in every corner of the country. In April 1911 Sir Edward Marsh Merewether (b 1858) formerly Lieut Governor of Malta became Governor in succession to Sir Leslie Probyn transferred to Barbadoes. By the death of Dr E W Blyden at Freetown on February 7 1912 at the age of 80 the British Empire lost a distinguished negro scholar and official (see E B xxx 56d and xvi 541d). See the annual reports on Sierra Leone issued by the Colomal Office. J I Aldridge Sierra Leone and its Commercial Expansion. United Empire. Vol. 2. 1911. Major R. G. Berry. The Sierra Leone Cannibals. Proc. Ryl. Irish Assn. 1912.

Gold Coast 1-The census of 1911 gave the total population of the Gold Coast Ashanti and the Northern Territories as 1 503 386 equal to 18, per square mile number in the Gold Coast proper was 853 766 in Ashanti 287 814 in the Northern Territories 361 806 In all there were 1 625 Europeans The increasing prosperity of the Gold Coast is shown in the returns of trade and revenue in the absence of inter tribal disputes, in the development of agriculture and in marked improvement in sanitation

The revenue for the financial year 1911 which amounted to £1 111 000 surpassed that of all previous years and exceeded the expenditure by £197 000. The revenue in 1910 had of all previous years and exceeded the expenditure by £197 000. The revenue in 1910 had been £1 006 000 and the expenditure (including £149 380 repayment of loans) £924 862. The public debt on December 31 1911 was £2 489 000. The value of the seaborne trade increased from £5 049 000 in 1909 and £6 137 000 in 1910 to £7 576 000 in 1911. The imports for 1910 were £3 439 000 for 1911 £3 784 000 the exports for 1910 were £6 697 000 for 1911 £3 792 000 an increase of 40%. Cotton goods and spirits are the principal imports the Gold Coast in addition imports much machinery and lumber for the mines Cocoa gold rubber and palm oil and kernels are the chief exports. The cocoa industry which is entirely in native hands has had a great development. In the two years 1910—11 the export was almost doubled in quantity and more than doubled in value. The foures the export was almost doubled in quantity and more than doubled in value The figures for the three years 1909-11 were 1909 quantity 45,277 000 lbs value £755 000 1910, quantity 50 692 000 lbs value £866 000 1911 quantity 88 987 000 lbs value £1 513 000

The gold mining industry is firmly established The value of the gold mined during

the first ten months of 1912 was £1 215,000 as against £1 059 000 for the whole of 1911 which was itself an increase of £313,000 over the figures of 1910. The mines of the Ashanti Goldfields Corporation export nearly half the total yield. About 20,000 natives are employed in the mines or in dredging the river beds for alluvial gold 15% of the gold being obtained from alluvium Besides cocoa and gold rubber lumber and oil palm products are the chief Some 80 of the total trade is with the United Kingdom but Germany has a large share of the shipping the tonnage of the German ships cleared in 1911 being 438 000, British ships 773 000 and French ships 113 000—the total tonnage being 1 326 000

Sir John Pickersgill (1851-1910) who had been Governor for seven years retired in September 1010, and shortly afterwards died in England He was succeeded by Mr J J Thorburn—who had previously served in Ceylon and Lagos Mr Thorburn re tired from the Colomal service in August 1912, and Sir Hugh Clifford (b. 1866) then Colonial Secretary of Ceylon, was appointed Governor During 1911 Sir William Brandforth Griffith, Chief Justice since 1895, who had done much to codify the colony s laws retired and was succeeded by Sir P C Smyly, Chief Justice of Sierra Leone

¹ See E B xx1 203 et seq

A new and valuable direction has been given to education by the adoption of a combined system of literary and technical instruction in every Government assisted primary school. A Government framing Institution for teachers and a Technical School have been opened at Accra. The new system has the cordial co-operation of the missionary societies on whom has fallen hitherto the bulk of the burden of education.

The history of Ashanti has been one of marked development. Much of the success of the administration is attributable to the wise guidance of Mr. F. C. Fuller. Chief tommissioner since 1005. The Ashanti and allied tribes having a comparative high mentality have adapted themselves more readily than was expected to the changed conditions following the establishment of British rule and have become keen agriculturists—cultivating cocoa rubber and kola nuts. The town of Kumasi (pop. 18.853 in 1011.93 being Europeans and 23 Syrians) is a great trade centre and contains many handsome buildings some of them owned by Ashanti chiefs. Christianty is making progress—the Christian population in 1911 was 6 000—while Islam finds few converts

In the Northern Territories of the Gold Coast—an open park like country for the most part—there is a marked improvement in the condition of the people, the last tribe to dispute the authority of the British—the Zouaragu—having been subjugated in 1910. The protectorate is purely agricultural and pastoral, the chief exports which are sent mainly to Kumasi, being live stock, shea butter, and dawa, A small amount of cotton is raised. The energies of the Government have been largely directed to establishing and maintaining the legitimate authority of the chiefs, the country formerly being in an anarchical condition when each man did what was right in his own eyes.

See the Annual Reports on the Gold Coast on Ashanti and on the Northern Territories published by the Colonial Office London Major F G Guggisberg Mapping the Gold Coast and Ashanti in Trans Liverpool Geo Soc 1910 Mary Gaunt Alone n West Afr ca (Loo don 1912) J A Barbour James The Agricultural and Other Industrial Possibilities of the Gold Coast (London 1911) L P Bowler Gold Coast Palayer London 1911)

Nigeria 2—The unification of the protectorates of Southern and Northern Nigeria was decided upon early in 191? Sir Frederick Lugard (E B xvii 115) was selected as Governor of both protectorates succeeding Sir Walter Egerton in S Nigeria and Sir Hesketh Bell in N Nigeria. Sir Frederick (whose appointment was gazetted on May 17th) did not arrive in Nigeria till October 191? In both protectorates there was a marked development of trade in the period 1910—1? while the social condition of the people underwent ropid changes. The only part of S Nigeria not brought under administrative control by the middle of 1912 was a small area in the N E corner inhabit ed by Munshis a wild pagan tribe.

The population of Nigeria is approximately 18,000,000 of whom 400 are Europeans. The census of 1911 gave S. Nigeria 7.858,689 inhabitants and N. Nigeria 8.110.631 but 9.270.000 is considered a more accurate figure for the northern protectorate. The popper sq. m. is 98 in S. Nigeria and about 40 in N. Nigeria. Yoruba numbers about 2.000.000 Ibos about 3.000.000. The Yoruba—readiest of all West African tribes to adapt themselves to Western civilisation—inhabit the Western Province of S. Nigeria through which the railway from Lagos to the Niger passes. Their chief towns are Ibadan (pop 75.000 in 1911). Ogbomosho (80,000). Abeokuta (51,253). Oshogbo (59.821). In contrast to the Western Province, where Yoruba is practically the only language, the census of 1911 revealed in the Central and Eastern provinces of S. Nigeria 57 different languages with 8.2 distinct tribes. In N. Nigeria two to three hundred different languages are spoken. Hausa being the widest spread. The only towns of more than 30.000 inhabitants in N. Nigeria are Kano (39,368 in 1911) and Horin (36.343).

In S Nigeria the energies of the administration were chiefly concentrated on samitation, the cleaning of the network of waterways which form the Niger delta, the building of reads, and the putting down of inter tribal disputes. At Lagos, the capital (pop 73,766 in 1971), great harbour works were begun to enable steamers dra vii g 24 ft to lie alongside the quay. Large areas of swamp land have been reclaimed at Lagos and 1 See E B ii 724 et seq. See E B xix, 677 et seq. Forcados (pop 3 180) the port for steamers ascending the Niger Throughout Yoruba land increased attention has been paid to education—several technical schools being established—and there is springing up a group of intelligent thinking men, born and educated in Southern Nigeria, who are imbued with love of their country and are de voting themselves to its service. In the Hausa States and Bornu in N. Nigeria—as among the Yoruba in S. Nigeria—the administration rules through the native governments. The establishment in 1011 of a Beil el Mal (State Treasury) in all the Hausa Emirates was an important step towards securing purity in the public services. From the Beil el Mal the native judges and other functionaries receive fixed salanes. At the same time the Emirs were given civil lists in lieu of depending upon what share they could get from the imposts levied on the people. The Land and Native Rights Ordinance. 1011 established the system of native land tenure on an inalienable basis.

nance rorr establi hed the system of native land tenure on an inalienable basis Nigeria with 80 000 sq m of dense forest still depends mainly upon its swivan products but since 1910 its mineral resources have leapt into importance. The mineral survey of 5 Nigeria revealed the existence of lignate at Asaba 15 m W of the Niger and of enormous deposits of coal at Udi some 50 m E of the Niger at Ontsha. A survey for a railway to connect the Udi coalfield with Onitsha was made in 1912. In N Nigeria the exploitation of the fin fields in the province of Bauchi attained large proportions. Mining which began in a small way in 1902 attracted little attention till 1909. Since then over £3 000 000 capital has been invested in the field which is alluvial and covers some 2 500 sq m. Exports of tin our rose from £38 000 in 1909 to £72 000 in 1910 and £181 000 in 1911. In that year I 470 to its of tin were exported from Jan 1st to July 31. 1912 the export was 1 489 tons tyalue not stated). In October 1912, the Colonial Office announced that pending a systematic survey of the tin mining area no mining leases or prospecting licences would be granted to new applicants. Rich reels of galena carrying a considerable silver return have been found in the province of Muri, along the middle Benue.

found in the province of Muri along the middle Benue

The completion of the railway from Paro to Kano in March 1911 proved a potent factor not alone in the development of trade but in its influence on native life and thought. In the first year of working the receipts on the Baro-Kano railway came to about £70 000. The railway is 3 ft 6 in gauge and 356 miles long. In 1911 also the railway from Lagos was extended till it joined the Northern Nigeria line at Minna (250 miles from Lagos), the Niger being bridged at Jebba. A2 ft 6 in gauge railway was built in 1911 from Zaria on the main line castward to Rahammi at the foot of the Bauchi Plateau and 40 m. W. of Naragura the headquarters of the tin field. It is 90 m. long and cost £2 000 a mile. Like the other Nigeria and 1911 from 2011 from

rian railways it is State owned and State worked

During 1909-11 the volume of trade passing through S. Nigeria rose from £8 600 000 to £10 588 000 excluding the goods in transit to Porto Novo in Dahomey. In 1910 £346 000 and in 1911 £7.6 000 of the total was credited to N. Nigeria as the value of imports and exports by commercial hirms. I alm kernels valued in 1911 at £2 574 000 and palm oil (£1 696 000) were the chilf exports. Rubber and cocoa were next in importance. The export of cocoa in 1911 (9.858 000 lbs.) showed an increase of 50 over 1910 its value was £164 000. Cotton dispite fluctuations in the crops gave promise of expansion. Cotton cultivation for export also prograssed in Northern Nigeria. Up to 1912 the price fetched by introduction for local manufacture exceeded one pumy per lb. the highest price offered by the British Cotton Growing Association. From N. Nigeria the chief exports during 1910-12 were palm kernels shea nuts rubber gum and tim. The bulk of the trade of Nigeria, as also the shipping is in British hands though increasing competition is being met with from German and French firms.

In 1911 the revenue of S Nigeria was £1 956 000 the highest on record Of this £975 000 was derived from duties on imported spirits and £307 000 (£1,0 000 net profit) was railway revenue Expenditure was £1 717 000 On March 31 191. the public debt of S Nigeria was £6 471 000 A loan of £5 000 000 wa floated in 1911 calls to the end of the year being £5 223 000 In N Nigeria in the financial year 1910-11 the total local revene was £275 000 compared with £178 000 in 1908-9 In 1911-12 it was £545 000 (including a sum of £100 000 on account of native local administration, the corresponding sum not being shown in the 1910-11 statement) The expenditure in 1910 was £565 000 compared with £540 000 in 1908-9 In 1911-12 it was £827 000 In N Nigeria the importation of trade spirits is forbidden and the chief source of revenue is the land tax—in reality a prorata property tax—which increased from £124 000 in 1908-9 to £217 000 in 1911-12 (The land revenue is really double the figures given one-half the amount collected being retained by the native government for local needs) Deficits on the N Nigeria revenue were met by grants in aid from the Imperial government and as to £70,000 from the S Nigeria treas

¹ In some districts the presence of prospectors was resented Mr Campbell a mining engineer was murdered in June 1912 at Ninkada Nassarawa province by Mada pagans against whom a small force was sent the Mada sustaining about 180 casualties

The revenue of the Best-el Mal amounted to over £200 000 in the first year of its ution. In N. Nigeria in the Moslem regions (i.e. the Hausa States and Bornu) and

institution In N Nigeria in the Moslem regions (i.e. the Hausa States and Bornu) are government schools where purely secular education including crafts and agriculture is given. Hausa is taught in Roman characters. As among the Yoruba and the Bem of S Nigeria the chiefs in N Nigeria are keenly interested in the schools.

St. Helena¹

The population in 1911 was 3 520 (1 658 males 1 862 females) Revenue (1910) £9 306 (including a grant in aid of £2 500 from the Imperial Exchequer) (1911) £8 622 Expenditure (1910) £9 596 (1911) £9 129 The Government flax fibre mills have been working only intermittently having been opened in 1907 they were closed in 1910 the supply of leaf being exhausted and they have remained so since except during a few weeks. There is a lace school but it does not support itself. Jamestown was visited by 51 ships in 1910 and 64 in 1911. On October 24, 1910 H.R.H. the Duke of Connaught visited the island no member of the Royal Family having done so since the Duke of Edinburgh in 1860. Capt H.E.S. Cordeaux C.B. C.M.G. became governor in 1911 in succession to Lt. Col. Sir H.L. Callway, K.C.M.G. transferred to Gambia. L Galway K.C.M.G. transferred to Gambia

Falkland Islands

According to the census of 1911 the population including South Georgia was 3 275 The large increase since 1901 (pop 2 043) is due to the development of the whaling in The population in 1911 was thus distributed —East Falklands and adjacent islands 1 608 West Falklands (including New Island) 664 South Georgia (including a shipping population of 563) 1 003—in 1901 it was uninhabited

The average number of births during 1908-1912 was 52 and of deaths 18. The average density of population was — Falkland Islands (6 500 sq miles) 34. South Georgia (1000 sq miles) 1 003. The total number of males and females was 2 370 and 905 respectively or an average of only 382 females to every 100 males. The small population of females is due to the large number of men engaged in the whaling industry. In the statistics relating to religious beliefs 1 821 persons are returned as belonging to the Church of England 769 as Lutherans and 63 as Baptists. Of the total population 2 107 were returned as British subjects. It of these being naturalised. Of the total population 80 were naturally of Switch in the contraction of the statistics of the total population 2 107 were naturally of Switch in the statistics. subjects 13 of these being naturalised Of the 1 093 foreigners 980 were natives of Sweden and Norway the majority of these being engaged in the whaling industry With the exception of small government reserves the whole of the land of the colony is

in the hands of sheep farmers. Closer settlement is thus rendered impossible and in spite of the high wages paid for labour there is no opening for new settlers. About the colony is composed of peat but nothing has yet been done to develop it About one fifth of

The rainfall registered at Port Stanley during 1911 amounted to 37 06 inches as com

pared with 27 68 inches in 1910

Industries - Sheep farming and whaling continue to be the principal industrics number of sheep in the colony during 1911 was 706 170 which is 18 566 less than in 1910 The number of sheep slaughtered in 1911 was 76 315 as against 69 704 in the previous year. This increase is partly due to the establishment of two mutton-canning factoric capable of dealing respectively with 600 and 300 sheep daily. They began work in 1910 employing

100 men and producing 25 000 tins of preserved meat
Whaling round the Falkland Islands was not so successful in 1911 as in former years whating found the Faikiand Islands was not so successful in 1911 as in former years one company producing only a total of 7 400 barrels of oil and 50 tons of whalebone. In the dependencies however the whaling industry has developed rapidly and appears to be availing sheep-farming as the mainstay of the colony. In South Georgia eight companies are now established and employ 1000 men in their factories ashore and affoat. During the 1910-11 whaling season oil and guano were produced worth £534 715. The South Orkneys and the Sandwich Islands were each visited by one company and ten companies held in cences for the South Sheriands and Graham's Land. The total catch from these dependences. was 156 770 barrels of oil and 400 tons of whalebone together worth over £468 500
The total value of the products during 1911 was £1 026 415 The export of whale oil
in 1911 was 12-174 tons valued at £270 762 more than double the export in 1910
Trade is expanding steadily The exports during 1911 amounted to £471 156 as co in

1 See E B xxiv 7 See E B x 151 pared with £308 930 in 1910. The imports were valued at £93 913 as against £94 294. The principal exports are whale oil and wool. Over 4½ million in of wool valued at £150 134 were sent away in 1911 a slight decrease on 1910. The other articles of export are tallow, sheep skins, hides seal skins, whale oil, whale one whale plates and tinned meat

19 566 The total general expenditure amounted to £36 146 exceeding that of 1910 by 1910 The average excess of ordinary revenue over expenditure during 1908-12 was £2 910 At the end of 1911 the assets of the colony were £167 727 and the habilities £76 546

Communications - The Pacific Steam Navigation Company's steamers call at Stanley on their voyage out to Callao and on their return voyage a fortnight later thus making a monthly communication by letter with England and fortnightly by cable via Monte Video and Chile The hitherto isolated state of the colony will shortly be terminated by the erection of a wireless telegraph station the tender of the Marconi Wireless Telegraph Company having been accepted for a 5 kilowatt installation capable of communicating at night with Buenos Aires or Monte Video

The number of sailing vessels that entered inwards in 1911 was 14 with a tonnage of 12 940 an increase of 6 159 in tonnage but no increase in the number as compared with 1910. The number of steamers entering was 64 with a tonnage of 141 929 an increase of

6 in number but a decrease of 7 192 in tonnage

Social Progress —Among legal enactments of the year 1911 were new regulations con cerming whaling sealing and the importation of animals an ordinance dealing with the sale of liquor in the Falkland Islands and South Georgia the imposition of an export duty of 3d a barrel on whale oil and a publication of a new edition of the laws of the colony

The volunteer force on December 31 1911 had two officers and 117 non commissioned officers and men The Bov Scouts held their first meeting on July 23 1911

The results of the educational year in the government school are attsfactory is a further advance in the numbers on the roll and a considerable improvement in the av There erage attendances The number of children educated during 1911 was 435

The new hospital to be erected from a fund subscribed by the colonists as a memorial to King Edward VII was begun towards the end of 1911 it will have accommodation for 12 patients. A new town hall to take the place of the Stanley Assembly Room recently destroyed by fire is also in the course of erection

In 1911 there were only 60 convictions for various offences as against 81 in 1910

The reports of the medical officers indicate a general improvement in the public health of the colony (A Bruce Jackson)

THE BRITISH WEST INDIES

The history of the British West Indies is still that of the several colonies no practica ble scheme for federating the islands British Guiana and British Honduras having been forthcoming During 1910-12 steady progress has, however been made in the direction of securing greater uniformity in all matters concerning these colonies The question of closer trade with Canada has helped to bring the various units together

The preference of 377 per cent given by the Dominion on British sugar had continued to attract West Indian produce to the Canadian market, the value of the preference was, however, reduced by the privilege given to the best refiners of Canada for three years from 1909 of importing at the British preferential rates two tons of sugar for every ton of Canadian beet refined and by the further privilege extended to the Canadian refiners generally in the same year of importing foreign sugar to the amount of 20 per cent of their requirements on the terms of the British preference in view of an alleged combina tion of the West Indian producers to ruse prices In August 1909 a Commission con sisting of Lord Balfour of Burleigh the Hon William Stevens Fielding the Hon Wil ham Paterson Sir John Poynder Dickson Poynder MP (now Lord Ishington) and Sir Daniel Morris with Mr H R Cowell as Secretary, was appointed to enquire into the question of trade relations between Canada and the West Indian colonies terms of reference included improvement of transportation and telegraphic communica The Commissioners visited Canada in September 1909 and the West Indian colo nies in January 1010 Evidence was also taken in London In their Report they warmly advocated the establishment of reciprocal trade arrangements between Canada and the West Indies and the improvement of steamship and telegraphic communica With regard to steamship communication, they advocated the establishment of a service between the West Indies and the Mother Country via Canada but this did not commend itself to the West Indian colonies and the scheme was dropped in favour of direct steamship communication. In April 1919 a conference of delegates from British Guiana and the West Indian islands (the Bahamas Jamaica and Grenada excepted) met at Ottawa and an agreement was arrived at on the basis of the grant of mutual preferential terms on the principal articles of import into the West Indies from Canada and vice versa. During 1912 the agreement was approved by the Legislatures of all the West Indian colonies concerned and by the Imperial government. A resolution approving of it was passed by the Dominion House of Commons in November 1912.

Since 1905 when the transatlantic mail contract was abandoned the Royal Mail Steam Packet Company had carried the transatlantic mails on a poundage basis. In 1910 the Company gave notice to terminate the arrangement and in November the direct service ceased, causing much inconvenience and loss to trade On November 18th an intercolonial conference was held in Barbados and the West India Committee strong ly urged upon the Imperial Government the need for a mail subsidy The government at last agreed to offer a subsidy of £40 000 and a contract was entered into with the Royal Mail Company for a transatlantic service to run until 1917 or concurrently with the intercolonial service (conducted for a subsidy of £25,000 payable half by the Imperial Government and half by the colonies served) for a subsidy of £63 000 to which Trinidad contributes £16 300 Barbados £4000 and British Guiana £2700 Under the new serv ice which was inaugurated in 1911 Trinidad succeeded Barbados as headquarters and port of transhipment for the intercolonial steamers. In 1911 the direct service carried on since 1901 by the Imperial Direct West India Mail Service between Avonmouth and Jamaica under contract with the Imperial and Jamaica Governments ceased the subsidy of f.40 000 not being renewed In the same year the Imperial Government discon tinued the subsidy of f_{13} 500 to the mail service between Canada and the West Indies which is now conducted by the Dominion alone

THE LEEWARD ISLANDS 1

The census of 1011 disclosed the population of the islands constituting this colony to be as follows Antigua 32 265 Barbuda 7,5 St Kitts 26 283 Vevis 12 045 Anguilla 4075 Dominica 33 863 Montserrat 1° 196 Redonda 120 Virgin Islands 556° During the financial year 1910-11 there were 4640 births and 3456 deaths Of births 1762 were legitimate and 2 887 or 62 per cent illegitimate The death rate of the Colony is conspicuously low Montserrat enjoying the minimum with 13 15 per 1000 Next in order come Anguilla (14 64) the Virgin Islands (15) Barbuda (18) Nevis (23 62) Dominica (23 99) Antigua (27 38) and St Kitts (29 37)

Sugar is the chief industry, and the principal source of revenue in Antigua and St Kitts Antigua during 1910-11 exported 13 488 tons (6397 tons of 96 grev crystals and 7091 tons inuscovado). The central factory at Cunthorpe's (Antigua) manufactured 5400 tons of crystals and Bendal's I actory 1015 tons. Extensions at Gunthorpe's during the year increased its manufacturing capacity to about 8000 tons of grey crystals in a crop. Consequently more estates have abandoned the muscovado process and now sell canes to the factory. The quantity of peasants canes purchased in Antigua was 7718 tons as against 4579 in 1909, the price paid averaging 12s 1d per ton in 1910 as against 9s 6d a ton in the previous year. In St Kitts a central factory has been established with a maximum output of 10 000 tons of crystals. Further extensions of the central factory system the success of which has been so pronounced are also contemplated. In the cotton industry during 1910-11 prices fell somewhat from the high figures prevailing during the previous year and trade depression in England early in 1911 also affected the sale. From the cultivators standpoint however yields gave no cause for disappointment. The area planted was extended and there was comparative freedom from insect pests a freedom not enjoyed by sugar planters who were handicapped to a certain extent on this account. In the Presidency of Antigua where 560 acres—an increase of 215—were cultivated the average return amounted to 173 lb of lint per acre. In St Kitts 1600 acres—an increase of 600—were planted the average yield being 200 lb of lint per acre. A like yield was obtained in Nevis (the highest since the island turned its attention to cotton) where 1400 acres were cultivated—an increase of 500 acres. A similar return is-reported in the case of Montgerrat which possesses the largest area tinder cotton—2000 acres. In the Virgin Islands there is no estates cultivation the cotton being purchased from grewers and ginned and exported by the Government.

¹ See E B xvi, 371 and albed articles

Ever increasing prosperity attends the cultivation of the lime (citrus acida var medica) the principal industry of Dominica showed an increase of 85 000 barrels as compared with 1909-10. The export of citrate of lime amounted to 5194 cwt valued at £16 880-an increase of 1747 cwt lime amounted to 5194 cwt valued at £16 880—an increase of 1747 cwt A second citrate works was established and the operations of an existing works extended In Montserrat the total export of limes was valued at 19000 In a minor degree Antigua Nevis and the Virgin Islands devote attention to this industry

Dominica also exported cacao to the extent of 11 012 cwt valued at £23 769. Cacao also engages a certain measure of attention in some of the other islands Dominica has also embarked on rubber cultivation a considerable area having been planted with Heven brasil-

venses It is estimated that 40 000 plants are already in various stages of growth

The cultivation of coconuts attracts attention in Antigua and Nevis and in the latter island and in Dominica vanilla is receiving notice

island and in Dominica vanilla is receiving notice. The only manufactures of importance are connected with sugar in Antigua and St Kitts Nevis and the cultivation of lime in Dominica. In St Kitts rum is distilled. The total imports were valued at (1909) £471 016 (1910) £541 713 and exports (1909) £420 800 (1910) £537 832. The separate figures for imports in 1910 were—Antigua £170 033. St Kitts—Nevis £192 541 Dominica £140 925 Montserrat £29 718 Virgin Islands £8496. For exports—Antigua £196 184. St Kitts—Nevis £195 506 Dominica £109 529. Montserrat £30 003. Virgin Islands £6610. The imports came chiefly from—the United Kingdom £729 193 in 1910 (an increase of £45 667). British Colonies £102 738 (+£21 130) and the United States £191 148 (+£1041). The exports went chiefly to—the United Kingdom £188 984. (+£41 666). British Colonies £271 020 (+£68 934) and United States £4,5 462 (+£5175).

The total revenue was (1909–10) £149 670. (1910–11) £164 375. and expenditure (1909–10).

United States \$43,402 (+±5.175)

The total revenue was (1909-10) £149 670 (1910-11) £164 375 and expenditure (1909-10) £149 906) (1910-11) £159 263

The revenue was raised by the respective Presidencies in 1910-11 in the following proportions—Antigua £52 326

St. Kitts-Nevis £52 748

Dominica £41 473 Montserrat £12 262 Virgin Islands £5566

The surplus of assets over habilities on March 31 1911 amounted to £54 845

There are 24 573 children on the registers of the Government and grant aided schools of the Colony, the average daily attendance herms 12 082. There are 7 secondary schools in

the Colony the average daily attendance being 12 082. There are 7 secondary schools in receipt of grants from local funds. The Colony also assists a Morayian Training College for females in Antigua, and furnishes an allowance for the training of local male students at the Mico College Jamana From Imperial funds grants are made towards Autigua and St Kitts Grammar Schools and Dominica Agricultural School The Presidencies maintain Antigua an industrial chool to which boys are sent from each Presidency

The total number of persons committed to prison during 1910 was 1144 3140 offences were reported to the police 13 458 persons were brought before the magistrates and the summary convictions numbered 6802 Convictions in the Superior Court totalled 39 Sir Henry Hesketh Bell K.C.W.G. was appointed Governor of the Leeward Islands in 1912. The Administrators were St. Kitts-Nevis Hon T. L. Roxburgh C.M.G. Dominica Hon L. Douglas Young C.M.G. Montserrat Lt. Colonel L. B. Davidson-Houston C.M.G. (Commissioner) and the Virgin Islands Hon T. L. H. Jarvis

British Guiana 1

During 1909-12 the Government continued to obtain information with regard to the extent and value of the vast forest resources of British Guiana and an officer of the Department of Lands and Mines with special qualifications for the work was appointed to make a systematic and detailed examination of the Forest Lands In 1010-11 the Commissioners appointed to enquire into the question of the sea and river defences of the colony presented their report Their recommendations which included the execution and maintenance in future of the sea defences by the Public Works Department and the division of the colony into sea defence districts, were approved by the Combined Court which decided that the cost should be met by the estates villages and other properties within each district, and by the Government in the proportion of # for the estates, villages and other properties and 4 from General Revenue

The census of April 1911 showed a population of 295,713, exclusive of the aboriginal Indians in the unfrequented portions of the Colony During 1910 there were 8332 births registered (27 5 per 1000) a slight decrease on the previous year Of the births so registered 60 i per cent were illegitimate. The deaths registered were 10 424 (or 105, more than in the previous year), giving a death rate of 34 4 per thousand Mor

tality among children continues high 234 per thousand

1 See E B xn 676 et seg

The acreage devoted to the principal products of the Colony stood as follows at the end of 1910 -- sugar came 69,736 rice 31,680 cacao 2200 coffee 2546 rubber 1700 coconuts 9466. Sugar and its by products constitute 72 per cent of the export of locally grown produce and 64 of of the total exports. The export for 1910-11 declined by 7579 tons and the prices realised were below those of the previous year. The cultivation in certain districts suffered to such an extent from the ravages of insect pests that it was decided to obtain the services of an economic biologist. The experimental cultivation of canes was continued dur ing the year by the Board of Agriculture and on the plantations the area planted with vari eties of cane other than Bourbon increased from 39 850 to 45 484 acres Excellent rice is grown—largely by East Indians who settle in the colony after the expiration of their indentures on the sugar plantations. The export which is absorbed mainly by the British West Indies has risen from a few thousand pounds to a quantity running into seven figures There is an enormous area available for rice cultivation and although the output for 1910-11 was below that of the previous year the industry is firmly established. The export of cacao fell considerably during 1910-11 but this is explained principally by an increased local consumption of sweets Rubber as a local industry is still in its infancy Cultivation is being prosecuted vigorously and the Government carries on experimental work. The export of coconuts has increased considerably. Cattle rearing is an important branch of local industry and a low estimate gives the number of cattle as 71 500

In 1910-11 the output of rum was upwards of 2 515 000 gallons a falling off of half a milhon gallons as compared with 1909 to This decline is attributed to the downward tendency

in the price in the United Kingdom

The output of gold for 1910-11 was 54 989 ozs —a decrease compared with the previous ir of 9841 ozs. The search for diamonds was actively prosecuted although the out year of 9841 ozs put (3035 oz) was below that of 1909-10

Perhaps the most striking success has attended the balata industry the amount collected in 1910-11—1 340 924 lb—being the highest on record Four new companies were floated and commenced work and new areas are being prospected. The forest resources of the Colony are practically limitless and of those resources timber

is of the first importance. During 1910-11 256 845 cubic feet were exported showing an increase of 58 648 cubic feet on the previous year. Woodcutting licences to the number

of 218 were issued covering an approximate area of 70 000 acres.

The total imports were valued (1909-10) at £1 774 457 and (1910-11) £1 749 766 the exports (1909-10) £1 985,337 and (1910-11) £1 820 198 Of the imports in 1910-11 the United Kingdom sent 47 64 per cent the United States 24.41 per cent and Canada 8 23 per cent. Of the exports the United Kingdom took 40 per cent. Canada 31 60 per cent and the Linted States 14.00 per cent.

United States 14 20 per cent

The revenue was (1909-10) £540 269, and (1910-11) £563 100 the expenditure (1909-10) £546 711 and (1910-11) £542 757 The excess of assets over habilities on March 31 1911 was £48 116 The public debt of the colony was then £887 115 Of this amount £817 115 represents sums borrowed for public purposes the balance £70 000 having been raised for immigration purposes £280 186 stood at the credit of the sinking fund account

During the financial year 1910-11 the sum of £28 294 was distributed in grants in aid among 224 schools with an average daily attendance of 21 555 the number on the rolls being 34 562 Secondary education is provided for in the case of girls mainly by private enterprise. For boys the Government maintains Queens College. There are also two or three private schools There is a system of scholarships under which pupils from primary schools can pass to the secondary schools these scholarships didler which pulis from plantary schools can pass to the secondary schools these scholarships being open both to boys and girls. In a country pre-eminently agricultural like British Guiana instruction in the principles of agriculture is of the first importance and this fact is fully recognised by the Government. Model gardens and gardens attached to schools are found throughout the The establishment of an Agricultural School has also been determined upon the school founded for the reception and training of vagrant boys and youthful male offenders the large majority are educated in agriculture the institution being worked as a farm school and possessing 80 acres of land under cultivation

During 1910-11 8795 offences were reported to the police There were committed to prison 4562 persons and there were three cases of capital punishment

In 1911 the Combined Court voted an increased salary for a Governor of tried administrative ability and Sir Walter Egerton KCMG received the appointment in 1912

WINDWARD ISLANDS 1

Grenada.—This island is the headquarters of the Government of the Windward Islands, the governor in 1912 being Sir James Hayes-Sadler, K. C. M. G. The popula tion on December 31 1910, estimated on the basis of natural increase, was 75 254 The census of 1911 however disclosed a total of 66 750 The discrepancy is attributed to emigration The birth rate in 1911 was 30.02 per thousand, and the death rate 1966

¹ See E B x11 578

Cocca nutmegs and cotton represent the principal products and in past years have practically absorbed the attention of the agricultural population. A healthy tendency practically absorbed the attention of the agricultural population. A healthy tendency practically absorbed the attention of the agricultural population. The record however is now being manifested to open up other sources of development. The record cocoa crop of the island—73 863 bags—was reaped in the year ending September 30 1910. In the following year it was 67 144 bags. Land settlement schemes have been initiated in the dependency of Carnacou where a lime industry has been established and also in Grenada itself where rubber cultivation is extending. Practically the only manufacture is rum of which 63 356 gallons were made in 1911 a soap factory is also in operation. The total imports for 1910 were valued at £279 368 and for 1911 at £309 227 and the exports at £1910 £291 760 [including cocoa £259 365] and (1911) £264 640 (cocoa £223 104). The revenue was (1909—10) £71 224 (1910—11) £81 415, (1911—12) £98 645 the Expenditure (1909—10) £73 282 (1910—11) £75 561 and (1911—12) £81 012. The Colony s assets stood on March 31 1912 at £56 419. The public debt was £123 670 and the accumulated surking fund for its redemption between 1917 and 1942 amounted to £30 270. The Govern

suching fund for its redemption between 1917 and 1942 amounted to £30 270. The Government owns and maintains 9 of the 49 custing schools the remainder being grant in aid schools (22 Roman Catholic 11 Anglican 5 Wesleyan and 2 Church of Scotland). The number of scholars on the roll was 10 905 and the average attendance 5377.

St Lucia — The census of April 1911 showed a population of 48 637 as compared with 49 883 in 1901. The birth rate for 1910 was 30 I per thousand and the death rate 16 6. In 1910 the Government made its first comprehensive attempt to combat the malaria problem.

by means of the free distribution of quinine

The principal products are sugar and cocoa which represent 92 per cent of the domestic exports Lime cultivation is steadily increasing while honey and cotton are also produced though cotton does not appear to find favour with the planters The Botanic station and special agricultural services involved an expenditure during 1910 of £638 and £507 was special agricultural services involved an expenditure during 1910 of £638 and £507 was spent on the maintenance of the Agricultural School Plants to a total number of 54,9-9 were distributed by the Agricultural Department Local sulphur deposits are worked but the quantity obtained in 1910 was so small that none was exported. The position of the rum industry is indicated by the following returns distilled 49,256 gallons consumed 42,456 gallons exported 4692 gallons. In 1909 the experiment was tried of shipping rum to Canada. In 1910 however this was found unprofitable owing to the low prices obtainable Consequently less rum has since been manufactured. The outlook in regard to the trade of the port of Castries is encouraging. This remark applies especially to the extending coal trade. The total value of all imports was (1909) £266 228 (1910) £277 208 and of exports (1909) £250 674 and (1910) £238 955. The revenue was (1909-10) £65 739 and (1910-11) £65 666 and the expenditure (1909-10) £64 446 and (1910-11) £67 288. The Colon's surplus on March 31 1911 stood at £25 014 in addition to the Public Buildings Insurance Fund (£3895). The Public Debt amounted to £146 929. There were 5.5 elementary schools in 1910 having 7259 scholars on the roll with an average attendance of 4625. The Administrator in 1912 was the Hon Edward J. Cameron. C.M. G. St. Vincent.—The census of April 1011 showed a population of A1877. The births

St Vincent —The census of April 1911 showed a population of 41 877 n 1910-11 totalled 1661 (831 males, 830 females), 38 21 per cent being illegitimate Deaths totalled 835 (1993 per thousand) infant mortality standing at 24 or per cent

During recent years St. Vincent has taken up the cultivation of cotton with enthusi The extent of the acreage and the quantity of the export in 1910 were the largest since the revival of the industry in the island. Sea Island cotton was planted over 3 587 acres and 561 5 6 lb of lint were produced the average yield of lint per acre being 156 lb The total cotton production was 521 956 lb, valued at £38 409

The success attending this cultivation has set up a serious rivalry with arrowroot which has held pride of place in the exports for many years, but so long as cotton retains its average value of 18d per b of lint it must constitute the staple crop of the Colon, Arrowroot can be grown on any land where cotton is cultivable, whereas the production of cotton is confined to the coast lands Meanwhile arrowroot continues to receive increased attention Towards the end of 1910 a Growers' and Exporters' Association began work, and it is notable that the price has advanced from 1 d to 3 d per lb soil and chmate of the Colony appear to be better suited to arrowroot production than those of any other West Indian island Sugar is produced chiefly in the Carib country the only noticeable feature being an increase in the export of the crystallised, and a de crease in that of muscovado Land settlement continues satisfactory

The ginning of cotton is the principal industry the Central Ginnery established by the Government in 1903-04 having proved a profitable—and indeed indispensable—factor in the success of cotton culture. The working of the establishment in 1910 yielded a profit

of 480 The sale to the ginnery of seed cotton is compulsory in the case of lots of less than 100 b weight. Any amounts up to 4000 b may also be sold by anyone to the ginnery. This cotton is bought on a profit-sharing basis. The law providing for this method of sale and purchase has proved highly popular among small cultivators. In addition to the Government establishment there are three private ginneries. The price of lint during the year was good reaching 26d per lb in the case of some special bales. The average price however was 17d to 20d for Sea Island cotton. Marie Calante selling at from 6d to 10d per lb.

The whale oit industry would appear to be in a decadent state, there being a great fall.

The whale oil industry would appear to be in a decadent state there being a great fall in the value of the export. Fiforts are being made to establish a sponge industry in the Grenadines. Turting is carried on but here again the exports disclose a conspicuous decrease. The total value of the imports was (1909) \$48 810 (1910) \$69 7737 and of exports (1909) \$68 698 and (1910) \$101 180. The revenue was (1909–1910) \$28 440 (1910–1911) \$30 125 and the expenditure (1909–1910) \$31 350 (1910–1911) \$30 343. The excess of assets over liabilities amounted on March 31 1911 to \$6524. There is no public debt the last loan instalment having been repead in May 1910. The Colony is responsible for the unpaid balance of the Hurricane loan to planters from the Imperial Treasury which on March 31 1911 stood at \$10 450 but against that amount there is a sinking fund of \$2335. This loan is being steadily redeemed.

There are 28 primary schools, and 4552 scholars on the rolls with an average attendance of 2200. There is also a secondary school, and satisfactory results are obtained from the Agricultural School. Special effort is made to teach the cultivation of cotton.

The Administrator in 1912 was the Hon C Gideon Murray

BRITISH HONDURAS 1

The development of British Honduras proceeds slowly begun in 1902 was nearing completion in 1912. It runs 20 miles inland and opens up an extensive area suitable for banana cultivation. In 1911 a Town Board was constituted for the City of Belize. The population according to the census of 1911 was 40 809 (20 526 males 20 283 females). The birth rate in 1911 was 42 393 and the death rate 24 8 malarial fever being the principal cause of mortality. Tuberculosis has seriously increased, and preventive measures are being adopted with some success.

The total imports for 1911 were valued at \$2 886 677 (-\$67 460 on 1910) and the exports at \$2 685 849 (-\$341 469) the bulk of the trade being with the United States The revenue in 1910-11 was \$459 295, and the expenditure \$542 810 The loan debt on December 31 1910 amounted to £168 815 Provi ion for the repayment of loans has been made by the investment of sinking funds which total \$02 173 There were 46 primary schools in 1911 with 4725 pupils The cost of primary education was \$34 259 Of this sum the Government contributed \$20 103

The Governor in 1912 was Sir E J F Swayne K C M G

BARBADOS 2

In 1912 the House of Assembly voted £900 to defray the cost of a complete survey of the island, with a view more particularly to the investigation of the extent and position of the petroleum deposits. The existence of petroleum has been proved, but the industry has not yet been placed on a commercial footing. The survey was entrusted to Mr. E. H. Cunningham Craig. In 1912 the Legislature passed a Bill granting to the Anglo Mexican Petroleum Products Co. Ltd. the exclusive right of supplying imported fuel oil to calling steamers for a period of twenty five years.

With an area of 166 square miles, Barbados is for its size the most densely populated British possession. The census of April 1911 showed a population of 171,417 (69,912 males and 101,505 females) The population and prosperity of the island are affected by two factors—the emigration of labourers to the Panama Canal Zone and the influx of visitors from abroad The Panama Canal has been constructed mainly by West Indian labourers of whom no fewer than 20,000 were natives of Barbados in 1909. It is claimed that any disturbance of the local labour supply has been more than compensated for by the remittances sent home by Barbadians from the Panama Canal Zone and by the money brought back to the island by returning emigrants. In 1909 £80 000 was remitted, in the following year nearly £83 000. Tourists also help to circulate money In 1910 5491 first and second class, and 12,441 steerage and deck passengers reached the

The tourist business is assuming considerable dimensions with a view to stimulating it a Barbados Improvement Association was started in 1911.

The birth rate in 1910 was 37 2 per thousand and the death rate 25 5 per thousand the births 58 8 per cent were illegitimate. Infantile mortality stands at 268 per thousand.

Sugar has always been the chief product of Barbados. The crop for 1910 amounted to

35 906 hogsheads of muscovado 3993 hogsheads of vacuum pan crystals and 77 722 punch eons of molasses or 22 104 hogsheads of sugar and 8686 puncheons of molasses more than that of the previous year Barbados was one of the first West Indian Colonies to participate in the revival of the cotion indu try in the West Indies and remarkable results were obtained within a comparatively brief period. In 1910 however the acreage reaped declined from 5768 to 4121 the decrease being due to the low price and poor yields obtained in 1908. The remunerative prices obtained during 1909 and 1910 resulted in an increase of the acreage from 4121 to 4741 Bananas are cultivated to some extent and during 1910 13 137 bunches were exported 226 169 gallons of rum were manufactured in 1910 as compared with 207

230 gallons in 1909 Sea Island cotton is ginned locally.

The imports and exports in 1909 and 1910 were valued as follows — (1909) exports. The imports and exports in 1909 and 1910 were valued as follows — (1909) exports £88 086 imports £110 543 (1910) exports £1 0.58 890 imports £1345 194 United Kingdom imports £480 823 in 1909 rose to £592 641 in 1910 United States £355 809 in 1909 to £399 649 Canadian £131 910 in 1909 to £151 985 Canadian in 1910 occupied only third place in the list of importing countries but her advance is steady. The principal commodities purchased from Canada in 1910 were flour (£31 144) and white pine (£31,409) other articles all of which show an increase include oats from all staves and shooks beef cordage fruit and vegetables grain and shingles. Fish butter sulphate of ammonia and hay are also obtained from Canada. Of the total exports in 1910 £783 125 represented broodice of the colony and £305 705 the produce of other countries. Exports to the United Kingdom £70 487 in 1909 rose to £117 223 in 1910 those to Canada, £348 707 in 1909 to £484 108 those to the United States £37 219 in 1909 to £77 650. Exports of sugar £396 004) showed an increase of £243 092 as compared with 1909 Canada alone taking £268 455 as against £107 221 in 1909 £268 455 as against £107 -22 in 1909

The revenue in 1909-10 was \$195 803 and in 1910-11 \$213 298 the expenditure in 1909-10 was \$199 625 and in 1910-11 \$211 949 Public debt stood at close of the year at \$422 900 and the sinking fund at \$85 940

The primary schools number 166 (Anglican 132 Wesleyan 18 and Moravian 16) scholars

on the rolls numbering 27 658 and the average attendance being 16 529. The government grant towards these schools amounts to \$11 264. The colony s total expenditure on educa The government trion in 1910 was £19 209 First and second grade schools in receipt of annual legislature grants number 9 (7 boxs and 2 girls) the largest grant (£1000) being made to Harrison College (boys) The number of pupils on the rolls of these schools totals 035 The colony makes provision for scholarships tenable by students enrolled at Codrington College and for a further scholarship tenable at a European or Canadian University. At the close of 1910 there were 4 ragged schools, having 28s scholars, multiple and the close of 1910 there were 4 ragged schools.

During 1910 there were 9888 summary convictions and 40 convictions in Supreme Courts. The percentage of convictions to population is 5.79. The daily average number of prisoners in Glendairy prison was 210 for 1910, the number of persons committed to penal impri onment 1785. There were 134 boys in the Industrial school on December 31, 1910. The proceeds of its agricultural work amounted to £1937 and the expenditure to £2483. The Governor in 1912 was Sir Leslie Probyn. K.C.M.G.

JAMAICA 1

The census of April 1911 showed a population of \$31 383 (females 433 944 males Compared with the previous census of 1891 this return reveals an increase of 191,892 or 30 per cent compared with an increase of 26 3 per cent between 1871 and 1891 Every parish except Port Royal contributed to this increase, notably St. Mary 70 per cent and Portland 53 7 per cent Labour requirements on the Panama Canal in Cuba and in Costa Rica have affected the emigration and immigration returns 13 100 labourers set out from the Colony during the year ending March 31, 1912 and 8 984 arrived at Kingston * The marriages celebrated during the financial year 1911-12 numbered 360,-a rate of 42 per thousand as compared with 40 in 1910-11 Both these rates show a remarkable decline when compared with 190,-08 when owing to the emotional effects of the earthquake at Kingston in January 1907 the rate rose to 74 As a result in 1908-og the return of illegitimate births declined to 60 50 per thousand The total births registered in 1911-12 numbered 32 750 representing a rate of 39 o per thousand the rate for illegitimate births being 64 I per cent The death rate stood

See E B xv 132 et seq

at 22 I per thousand, the total number of deaths registered being 18 631 Of these 8 871 were due to infantile mortality, 38 9 per cent of the children born in Kingston

and 35 5 per cent of those born in St. Andrew dying before the age of 5

The total acreage under cultivation returned in 1911-12 was 2 171 709 distributed as follows—tilled lands 280 286 guinea grass 143 592 commons 517 830 wood and ruinate 1 230 001 This return shows an increase over the average for the four preceding years of 24 552 acres or 8 per cent in tilled lands an increase of 3 902 acres or 3 per cent in guinea grass of 28 589 or 6 per cent in commons and of 2488 acres in wood and ruinate

grass of 28 589 or 6 per cent in commons and of 2488 acres in wood and ruinate

Tilled lands classified under the agricultural products give the following returns—
sugar cane 34 766 coffee 24 473 coconits 16 691 bananas 82 435 ground provisions 74 723

mixed cultivation 30 167 cocoa 13 355 minor products 3676 These returns diclose an
increase over the average for the four preceding years of 4450 acres in cane of 3440 acres in
coconits of 14 862 in bananas of 3163 in cocoa Ground provisions including mixed culti
vation show a decrease of 146 acres coffee 668 acres and minor products 603 acres

During 1910-11 the Sugar Experiment Station was operated the Imperial Grant enabling
the station to be equipped with laboratories and an experimental distillery and to provide
for experimental plants on estates The operating expenses of the station were also provided
for a period of 7 years A central sugar factory at Rose Hall in St James recently com
pleted will deal with the produce of nine sugar estates. The work of agricultural instruction received considerable impetus as the result of the appointment of four additional in
structors. The rubber industry engaged attention during 1911 Cashiloa of which three structors The rubber industry engaged attention during 1911 Castilloa of which three distinct species have been established giving the most promising results

distinct species have been established giving the most promising results.

The total value of the imports and exports for 1909-10 and 1910-11 was —(1909) imports £2 561 674 exports £2 628 307 (1910) imports £2 614 943 exports £2 568 222 and (1911) imports £2 865 553 exports £2 948 067

The principal articles of import were textiles (£638 331 in 1911) hardware (£304 128) wheaten flour (£255 207) dried and salted fish (£150 746) and lumber (£106 893)

The principal articles of export were bananas (£1 456 581 in 1911) sugar (£247 413) logwood & logwood extract (£265 138) coffee (£154 131) and rum (£85 916)

In 1910-11 the imports from the United States were for the first time slightly in excess of those from the United Kingdom. In the following year however imports to the value of £1201 232 of £51 per cent came from the United Kingdom and £1200 345 of £4.8 per cent

of those from the United Kingdom. In the following year however imports to the value of 1 201 923 or 45 1 per cent came from the United Kingdom and £1 200 345 or 41 8 per cent from the United States and £249 546 or 8 5 per cent from Canada. Of the exports the United States took 61 9 per cent in 1911 as against 54 1 in 1910 the United Kingdom 14 7 per cent as against 20 6 and Canada 8 6 per cent as against 8 4. The revenue was (1909–10) £992 976 (1910–11) £990 399 and (1911–12) £1 161 014 and the expenditure (1909–10) £1 033 794 (1910–11) £987 304 and (1911–12) £1 155 208. The Government closed the financial year 1911–12 with a surplus of £190 191 having also £100 000 invested as an insurance fund to provide for the repair of damage to Government property by hurricane fire or earthquake. The Public Debt of the island most of which is represented by productive investments amounted to £3 871 305 on March 31 1912 The sinking funds amounted to £759 865 leaving a net hability of £3 111 440

In 1911 there were 698 schools on the annual grant list average number of scholars

98 576 average attendance 61 669 percentage 62 55 total payments to elementary schools and teachers £60 503 On January 1 1911 the regulations for compulsory education in and teachers £60 503 On January t 1911 the regulative Kingston district Falmouth and Lucea came into effect The work of school inspection was facilitated in 1911-12 by the addition of an Assistant Director and of three Inspectors A reduction from 100 to 70 of the number of schools in each inspectors district improves

Serious crime finds no place in the social life of Jamaica No execution of capital punish ment took place in 1911-12 Committals to prison totalled 5676 a decrease of 101 as compared with 1910-11 but an increase of 716 as compared with 1909-10 Reconvictions

during the year amounted to 1442 Persons bound over as probationers numbered 103
Work is proceeding on an extension of the Jamaica Government Railway from May Pen to Chapelton to be constructed at an estimated cost of £90 000 it will open up the fertile valley of the Rio Minho and render 17 000 acres available for cultivation.

The western end of the island was visited by a destructive storm of hurricane violence in

November 1912

The Governor in 1912 was Sir Sydney Olivser KCMG but at the end of the year he resigned on being appointed secretary of the Board of Agriculture in England

TRINIDAD 1

The estimated population on March 31 1911, was 368,014 Arrivals in the Colony during the year numbered 22 845, and the departures 16,719, giving a net increase to the population by immigration of 6126. Included in these figures were 3286 East 1 See E B xxvii. 284

Indians brought to the Colony under radenture, and 622 who returned to India after the expiration of their indenture The birth rate was 31 8 per thousand, and the death rate 20 5. The health conditions show steady improvement During 1911 there were

only two fatal cases of yellow fever, and twelve cases of plague

Cocoa and sugar represent the chief products of Trinidad Coconuts also engage widespread attention, and this remark holds good with regard to rubber,-large areas being planted under Castilloa, Funtumia and Hevea brasiliensis During 1910-11 7376 to of rubber valued at £1395 were sent out of the Colony Fruit principally bananas is cultivated but the progress of this industry was arrested during 1910-11 by the uncertainty (now remedied) as to the continuance of a regular steamship service providing cold Minor industries are greatly encouraged in Trinidad by means of the dis tribution of plants and seeds from the Botanic Stations at reasonable rates

The establishment and progress of the oil industry represents one of the most striking developments within recent years of industrial activity in the tropics. The most important borings are located in the South western portion of the island in the vicinity of the celebrated Pitch Lake, which for many years has provided immense quantities of asphalt exported largely to Great Britain and the United States -a principal source of the Colony's economic wealth The use of oil fuel in the British Navy promises to enhance the importance of Trinidad as a British possession During the financial year 1910-11 considerable advance was made in the industry drilling being commenced on private lands at five centres An aggregate depth of 15 347 feet was drilled the number of wells in progress being 22 Thirteen have yielded fair results prospecting commenced a total depth of 32 972 feet has been drilled the number of The area affected by approved licences comprises 78 37 acres wells being 44

In addition to the oil and asphalt industries maniak mining is carried on and limestone quarries are worked. The manufacture of sugar and rum and molasses is an important characteristic of the colony's industry apart from the quantity exported about 8 000 tons of sugar (valued at £135 000) and 335 045 gallons of rum (valued at £29 000) were manu factured for local consump ion in 1910-11 Also five million coconuts were used locally in the manufacture of 85 000 gallons of oil valued at £16 000 nearly all of which was con

sumed in the colony

Imports were valued at (1909) £3 288 826 (1910) £3 343 011 exports (1909) £3 218 092 (1910) £3 467 588 The increase in imports in 1910 as compared with 1909 is made up of £30 743 under ray materials (principally coal and lumber) and 37 19 under manufactured articles (chiefly machinery for the oil fields) less a decrease of £6 577 under live stock food, etc. The growth of the coaling business of Port of Spain the capital is a triking feature of the Colons a tride. In 1910, 80 067 tons were imported (as compared with 23 235 tons in 1906 of the colons at the the Colon's tride In 1910 80 667 tons were imported (as compared with 23 235 tons in 1906-07) 44 205 tons being upplied to vessels (as against 6 70, tons in 1906-07). The value of machinery imported in 1910 was £1-2 788 as compared with £52 676 in the previous year. The raw material chiefly imported i coal patent fuel manure and lumber. The chief importing coun ries were—the United Kingdom £936 427. United States £860 903 venezuela £233 086. Canada £134 609. The principal exports were—cocoa £1 230 097 sugar rum and molasses £743 969. coconuts and copra £85 359. fruit £19 952 a phalt £179 146. The chief countries taking the exports were—United States £919 047. United Kingdom £599 240. France £403,211. Canada £354 484.

The revenue in 1909-10 was £853 565 and in 1910-11 £948 383, the expenditure (1909-10) £863 253. (1910-11) £927 033. The revenue for 1910-11 was the largest ever collected in the colony the chief increases being under customs (£67 340) and licences (£24, 770). As regards expenditure the recurrent expenses amounted in 1910-11 to £843 050 as compared with £708 262 in the previou year whilst the extraordinary (public works roads

compared with £798 262 in the previou year whilst the extraordinary (public works roads

compared with \$798\; 262\; in the previou year whilst the extraordinary (public works roads and bridges) amounted to \$83\; 984\; as against \$£64\; 991\; in 1909\; -10\] The surplus balance was \$104\; 925\; on March 31\; 1911\; assets totalling \$£696\; 630\; and habilities (exclusive of funded debt) to \$£591\; 705\] The funded debt stood on the same date at \$£1051\; 093\] and the sinking funds at \$£174\; 426\; a loan of \$£450\; 900\; has also been authorised by Ordinance.

The ek-mentary schools exclusive of private schools numbered \$£63\; on March 31\; 1911\; Government schools totalling \$53\; and as isted schools \$210\] The assisted schools are as follows—Roman Catholic \$79\; Anglican \$51\; Presbyterian Canadian Mission \$60\] Wesleyan 12\; Moravian \$12\] Children on the rolls totalled \$47\; 661\] the average daily attendance standing at \$27\; 083\] The expenditure on elementary education from public funds amounted to \$£51\; 111\] Practical agriculture and nature study are taught in nearly all primary boy or mixed schools. Secondary education for boys is provided from public funds at Queen \$\$Poyal College (Port of Spain)\] and two affiliated schools \$\frac{1}{2}\] the specific of \$\frac{1}{2}\] and two affiliated schools \$\frac{1}{2}\] College (Port of \$\frac{1}{2}\] and two affiliated schools \$\frac{1}{2}\] Poyal College (Port of Spain) and two affiliated schools St. Marv's College (Port of Spain)

and Naparima College (San Fernando) St Joseph Convent School for Girls is now affiliated to Queen's Royal College A Board of Industrial Training carries on small night classes for

apprentices artisans also attending

Offences reported to the police during 1910-11 numbered 20 928 the total number of persons arre ted or brought before the magistrates being 23 787 Summary convictions animbered 13 857 Convictions in the supreme court totalled 185 The death penalty was imposed in 4 cases of prison administration during the year was \$12 365 Prisoners earnings were \$7.749 During 1911 the first sod of the Tabaquite Poole Railway excession which will open up to 500 acres of fertile land, was turned and usely an appropriate to supreme to supreme to supreme to supreme to supreme the band was turned and usely an appropriate to supreme the band was turned and usely an appropriate to supreme to

10 500 acres of fertile land, was turned and work on an extension to Siparia which will

serve an area of 14 100 is in progress

The Governor in 1912 was Sir George Le Hunte, K C M G

The Bahamas 1

In 1910 the Legislature passed a resolution authorising the Governor to ascertain on what terms the Canadian Dominion could incorporate the Bahamas but the resolution was purely tentative The Bahamas did not participate in the reciprocal Trade Con ference at Ottawa in 1912 During 1910-12 the tourist business continued to ncrease, and the Legislature voted fr ooo for advertising the Islands in 1909-10

The census of April 1911 gave a population of 55 872 a net increase of 2137 since 1901. The islands showing an increase were Andros (1 252) Abaco (1 146) and New Providence (1 0.0). On the other hand Eleuthera showed a decrease of 2 203. During 1901-11 about 6 000 labourers (accompanied in some cases by their families) emigrated to Florida. Mexico and Yucatan. The births during 1911 numbered 34.1 per thousand and the deaths 21.7 per thousand. Nearly every industry has recently shown a decline. The export of timed pineapples has fallen off owing to poor stock. Hawaiian competition and the effect of the American tariff. Sizal (hite cultivation is the most important industry, some 20 000 acres. American tariff Sisal fibre cultivation is the most important industry some 20 000 acres

being planted but the price is low and the rapid extension of the industry in other countries has had its effect on the Bahamas. The sisal is all shipped to the United States. The exports of grape fruit, which amounted to 365,000 in 1909 fell in 1911 to 309,194. The output of oranges, which in 1907 amounted to a million and a half valued at £3,000. refell in 1911 to 15,400 valued at \$20. The feeling with regard to agricultural prospects is reflected by the decision of the Legislature to abolish the Board of Agriculture after an existence of six years and the expenditure of £5,000 of public money. The one industry which has shown signs of progress has been sponge fishing. The safes of sponges during 1011

The trade figures are—(1909) exports £171 442 imports £311 0740 as against £87 657. The trade figures are—(1909) exports £171 442 imports £343 489 (1910) exports £19, 803 imports £3, 9014 (1911) exports £209 251 imports £311 095. Out of a total of £31 095 imports to the value of £203 550 came from the United States and imports to the value of £82 360 from the United Kingdom in 1911. It should be ex plained however that in the absence of direct communication with the United Kingdom many goods from the mother country being transhipped in America are classified a American The United States is also the best customer of the Bahamas having taken produce to the value of \$698 975 out of a total of \$174.895 the United Kingdom ranking next with \$29 349. Here again it must be remembered that as New York is the port of transhipment many goods destined for Canada and the United Kingdom are classified as going to the United States.

The financial figures are (1909-10) revenue £77 578 expenditure £92 858 (1910-11) revenue £84 391 expenditure £85 315 (1911-12) revenue £85 592 expenditure £82 675. The excess of assets over liabilities on March 31 1912 stood at £15 482. The public

debt stands at £51 568 the annual charge for interest and sinking fund being £6 580. The existing debt will be wholly liquidated by 1926 unless anything unforeseen arises.

The number of primary schools (exclusive of private and denominational schools) is 64.

(46 board schools and 18 grant-in aid schools). Pupils number as follows—Board Schools. Schools 222 Wesleyan 167 total 10.621

The annual vote to the Board of Education amounts to £6.000. There is no State

secondary education but five private organisations provide instruction for 153 pupils

The number of persons committed to Nassau Prison in 1910 was 189 as against 214 in
The police force—largely recruited from Barbados—numbers 81 men

1909 The police force—largely recruited from Darpados—named S. Mr. G. Hadden Smith was appointed to succeed Sir William Grey Wilson K.C.M.G. as governor in 1912

Bermuda 2

The population of Bermuda at the Census of 1911 was 18994. The revenue for 1911 was £79 248, and the expenditure £90 101 No official report on the colony has been issued since 1907 but in 1910 the exports totalled £106 508 and the imports £517 074.

¹ Sec E B in 207 et seq

4rea —In 1911 the fifth decennial census was taken. The area is given as 3 720 665 sq m of land and water 15 900 sq m less than in 1901, the reduction being partly due to the Alaska award and partly to the new map measurements

The areas of the separate provinces in sq m are — Alberta 255 285 British Columbia 355 855 Manitoba 73 731 New Brunswick 27 985 Nova Scotia 21 427 Ontario 260 862 Prince Edward Island 2 184 Quebec 351 873 The population per square mile was 1 93 in 1911 as against 1 44 in 1901 the corresponding figures for the provinces being as follows (1901 in parentheses)—Alberta 1 44 (28) British Columbia 1 09 (50) Manitoba 6 18 (3 46) New Brunswick 12 61 (11 83) Nova Scotia 22 98 (21 45) Ontario 9 67 (8 37) Prince Edward Island 42 91 (47 27) Quebec 5 69 (4 69) Saskatchewan 1 95 (36) in Yukon and the North West Territories there have been decreases

Population —The population of Canada according to the census of 1911 was 7 204-838 an increase of 1 833 523 since 1901 or 34 13 per cent. The following were the populations of provinces and territories with the increase or decrease per cent since 1901 in parentheses. Alberta 374 663 (+413 08) British Columbia 392 480 (+x19 68) Mani toba 455 614 (+78 5) New Brunswick 351 889 (+6 27) Nova Scotia 492 338 (+715) Ontario 2 523 274 (+15 58) Prince Edward Island 93 7 8 (-9 3) Quebec 2002 712 (+21 46) Saskatchewan 49 432 (+439 48) Yukon 8 512 (-68 73) North West Territories 17 196 (-15 19)

The rural population in 1911 was 3 924 394 and the urban population 3 280 444 the increase since 1901 being 17 16 per cent for the former and 62 25 per cent for the latter. In Alberta the increase of rural population in the ten vers was 180 3.7 and of urban 121 314. In British Columbia the increase of rural population was 100 318 and of urban 113 505 and in Maintoba the rural increase was 70 517 and the urban 129 89. New Brunswick lost 1 493 rural and gained 22 262 urban while Nova Scotia lost 23 981 rural and gained 56 745 urban. Ontario lost 52 144 rural and gained 39, 511 urban. Prince Edward Island gained 15 urban but lost 9 546 rural. Quebec shows gains of both rural and urban population being 39 951 for the former and 313 863 for the latter. Saskatchewan also show gains in both classes being 287 13b for the former and 11, 815 for the latter. In Yukon the rural loss was 13 430 and the urban loss 5 277. In the North We t Territories whose population is wholly rural the loss was 2 933.

The cities with populations exceeding 24 000 in 1911 were Montreal, 470 480, Toronto 376 538 Winnipeg 143 518 Vancouver 100 401 Ottawa 87 062 Hamilton 81 969 Quebec 78 190 Halifax 46 610 London 46 300 Calgary, 43 704, St John, 4 511 Victoria 51 660 Regina 30 213 Edmonton 4 900

The total Indian population of the Dominion on March 31 1912 was 104 956, and in addition there were 4 600 Eskimos within the confines of Canada making a total native population of 109 556 a slight increase on the previous year. Of the Indians 43 382 were in Ontario Quebec and the Maritime Provinces 36 79, in the three Prairie Provinces and the northern territories and 4 781 in British Columbia.

Immigration —The total immigration to Canada during the fiscal year 1911–12 was as follows —From the United Kingdom 138 1 1, US A 133 710 other countries 8 406 For 1910–11 the total was 311,084 (British 123 01, US A 121 451) and for 1009–10 208 794 (British 59 790 US A. 45 206) —The British immigrants in 1911–12 included 96 806 English and Welsh 32 988 Scotch 8 327 Irish

Boundaries—Important measures extending the boundaries of the provinces of Quebec Manitoba and Ontario were passed by the Canadian parliament during the session 1911–12. The boundary of Quebec was extended to include the whole of the mainland north of her old boundary excepting such territory over which Newfoundland has lawful jurisdiction the additional territory being approximately 355 000 square miles. The eastern boundary of Manitoba was extended northerly to the 60th degree of latitude and the eastern boundary north easterly to the point where the eighty ninth meridian of west longitude intersects the southern shore of Hudson's Bay, an addition of about 178 100 square miles. Additional territory to the north wa, also given to Ontario amounting to approximately 146 500 square miles. This arrangement gave to Manitoba possession of the two ports on the Hudson's Bay—Fort Churchill and Port Nelson

¹ See E B v 142 et seg

It was, however, provided by Order in Council that access to the Bay should be provided for the Temiskaming and Northern Ontario Railway, a line belonging to the Ontario government. For this purpose Ontario is to be given a strip of land five miles wide, running from the new Boundary of Manitoba to the Nelson River, and terminating in a half mile strip along the east shore of that river. Should the Dominion government decide to extend the Hudson's Bay Railway to Fort Churchill Ontario is to receive an additional strip 200 feet wide from the Nelson River to the nearest point on that railway, and to have running powers over that line to Hudson's Bay. On April 21, 1912 it was officially announced that the new district of Ontario is to be known as 'Patricia'.

Agriculture — The details of area yield and value of the principal crops for 1911 were as follows Wheat 10 373 958 acres, 215 851,300 bushels value \$138 567,000 oats, 9 219 920 acres 348,187 600 bushels value \$126,814 000, barley, 1 404 352 acres 40 641 000 bushels, value \$23 904 000, hay 7 903 242 acres 12 604 000 tons value \$146 596 000 The total estimated wheat production of Canada for 1912 was 05 685 300 bushels oats 381 502,000 bushels and barley 43 895 300 bushels, the quality of these three crops being above the average of the two preceding years

At the close of the fiscal year 1911-12 fifteen government experimental farms and stations were in operation throughout the Dominion in addition to sub stations. While much of the work done has been a continuation of years past, some of the features are practically new, especially in connection with the encouragement of mixed farming

Conservation -In February 1908, an international conference on the conservation of the natural resources of the North American continent was held at Washington when the United States Canada Newfoundland and Mexico were represented by delegates A declaration of principles was adopted respecting the use development and conserva tion of land water forests minerals and game and the conference advised the estab lishment in each country of a permanent commission for the conservation of natural resources The question having come before the Canadian parliament a Commission of Conservation was created by statute This body consists of thirty two members including the Dominion Ministers of the Interior of Agriculture and of Mines respective ly and the member of each of the nine provincial governments who is charged with the administration of the natural resources of the province together with twenty other mem bers appointed by the Governor in Council Of these twenty appointed members at least one from each province must be a member of the faculty of a university (if any) within the province. It is the duty of the commission to take into consideration all questions which may be brought to its notice relating to the conservation and better utilisation of the natural resources of the country to make inventories collect and disseminate information and frame recommendations. The first annual meeting of the Commission was held in Ottawa in January 1910 Seven committees of the Commission were formed for lands water and water powers minerals forests public health fisheries game and fur bearing animals and press and co-operating organisations. A staff has been appointed and constituted as a department of the government at Ottawa and in addition to the work of the Committees numerous important subjects have been investigated and reported upon One instance of a recommendation acted upon is that of setting aside the eastern slope of the Rocky Mountains as a forest reserve This has been embodied in an Act of Parliament, and some 14 600 square miles will be reserved An exhaustive work containing the various regulations in force through and protected out Canada bearing upon lands, fisheries and minerals has been compiled and published under the auspices of the Commission, and a report has been issued dealing adequately for the first time with the extensive water powers of the country Other reports bear on agriculture insanitary housing etc

Fisheries—An amendment to the Fisheries Act, RS 1906 c 45 provides for the licensing in British Columbia of salmon canneries, and manufacturers of oil from sea lions, hair seals, sharks or dog fish, and alterations are made in the method of calculating the license fees to be paid by lobster canners

Commerce — The value of the total exports, imports and goods entered for consump

tion in Canada, with the duty collected thereon for 1910, 1911, and 1912 are shown be The figures in each case are for the fiscal year ended March 31st

	Total	Total	for	Duty
1910	Exports \$301 358 529	Imports \$391 852 692		\$61,024 239
1911	297 196 365	472 247 540	461 951 318	73 312 367
1912	315 317 250	559,320 544	547 482 190	87 576 036

The aggregate trade with the United Kingdom the United States, Germany, France and the West Indies for the same period is also given

	United				
	Kingdom	United States	Germany	France.	West Indies
1010	\$244 984,407	\$336 652 587	\$10 436 421	\$12 750 192	\$13,284,809
1911	246 901 573	404 331 540	12 710 357	14 345 865	15,603 170
1912	268 760 435	476 889 112	14 904 919	13 868 369	15 391 818

Manufactures —Although the complete details showing the results of the census of 1911 are not yet available some useful prehminary figures have been made public by the census and statistics office at Ottaw . Every factory in operation during the whole or part of the census year which had given employment during any part of the year to five or more persons was required to make a report. Some places such as brick or tile works butter and cheese factories electric light and power plants fish curing plants flour and gristing mills lime kilns saw and shingle mills may however be operated to yield large products with less than five hands With these exceptions, factories em ploying five hands and over in 1910 made an average product of \$60 6,1 as compared with \$45 483 in 1905 and \$ 6 21, in 1890 being an increase per factory of 25 per cent in the ten years 1890 to 1900 and 84 per cent in the ten years 1900 to 1910 Or com pared by the production per head of the whole population it was \$,6 in 1890 \$89 in 1900 and \$161 in 1910 The total value of products of this class of factories grew from \$481 05, 375 in 1900 to \$718 352 603 in 1905, and \$1 165 9,5 639 in 1910 In the five years 1000 to 1005 the growth was 47 per cent and in the next five years it was 61 per For the same class of factories the earnings of salaries and wages were in 1010 \$241 008 416 being an increase of 112 per cent in the decade. The average of wages and salaries in 1910 was \$46, in wages alone \$418

Classified by provinces the values in dollars of manufactured products were as follows Classified by provinces the values in dollars of manufactured products were as follows Alberta (1900) I 313 375 (1910) 18 788 826 British Columbia (1900) 19 447 778 (1910) 65 204 235 Manitoba (1900) 12 927 439 (1910) 53 673 609 New Brunswick (1900) 20 972 470 (1910) 35 422 302 Nova Scotia (1900) 23 592 513 (1910) 52 706 184 Ontario (1900) 241 533 486 (1910) 579 810 225 Prince Edward Island (1900) 2 326 708 (1910) 3 136 470 Quebic (1900) 158 287 994 (1910) 350,901 656 Saskatchewan (1900) 651 667 (1910) 6 332 132 It will be seen that Ontario and Quebec more than doubled their values showing increases respectively of \$338 276 739 and \$192 613 662 but the four western provinces have shown rates of increase considerably higher ranging from 1 323 78 per cent for Alberta to 871 68 per cent for Saskathewan

berta to 871 68 per cent for Saskatchewan

The principal manufacturing centres with the values in dollars of products in 1910 are— The principal manufacturing centres with the values in dollars of products in 1910 are — Montreal 166 296 972 (71 099 750 in 1900) Toronto 154 306 948 (58 415 498 in 1900) Hamilton 55 125 946 (17 122 346 in 1900) Winnipeg and St Boniface 39 400 608 (8 616 248 in 1900) Ottawa 20 924 331 (7 638 688 in 1900) Maisonneuve 20 813 774 (6 008 780 in 1900) Quebec 17 149 385 (12 779 546 in 1900) London 16 273 999 (8 122 185 in 1900) Brantford 15 866 229 (5 564 695 in 1900) Vancouver 15 070 105 (4 990 152 in 1900) Halifax 12 140 409 (6 927 552 in 1900) Windsor and Walkerville 12 113 279 (3 278 126 in 1900) Berlin and Waterloo 12 076 783 (4 359 690 in 1900) Peterborough 10 633 119 (3 789 164 in 1900) St John 10 081 667 (6 712 769 in 1900) Sydney 9 395 077 (631 396 in 1900) Sault Ste Marie and Steelton 7 842 384 (738 472 in 1900) Calgary 7 751 011 (599 444 in 1900) Guelph 7 39°,336 (3 689,183 in 1900) Hull 7 259 301 (3 182 050 in 1900) Lachine 6 295 716 (2 909 847 in 1900) St. Catherines 6 024 217 (2 070 543 in 1900) Galt 5 252 600 2 225 343 in 1900) Stratford 5 133 840 (1 935 176 in 1900) Catham 5 023 560 (2 714 977 in 1900) Edmonton 4 493 304 (243 778 in 1900) Victoria 4 244 034 (2 617 573 in 1900) Capital increased from \$331 635 499 in 1890 to \$446 916 487 in 1900 and to \$1 47 583 609 in 1910 salaries and wages in the same years from \$79 234 311 to \$113 283 602 and to \$241 008 416 and products from \$368 696 723 to \$481 053 375 and to \$1 165 975 639 The averages of the values of twelve out of fifteen groups of products were greater at the end of the first decade than in 1890 and at the end of the second they were greater for all groups,

the lowest showing an increase of 81 per cent. At the end of twenty years the increase in the values of all products wa 216 54 per cent as compared with an average of 30 47 per cent in the first decade and of 142 13 per cent in the second

In 1910 there were three hundred kinds of manufactures as compared with 264 ten years range of the cost of raw materials in 1900 was \$266 527 858 which when deducted from the value of products gave \$214 \$25 517 or 80 26 per cent as the value added by manufactures compared with \$601 509 018 as the value of raw materials and \$564 466 621 or 93 76 per cent as the value added by manufactures in 1910

Railways — The total railway mileage for the year ended June 30 1911 was 25,400, an increase of 669 miles over 1910 Sewenty per cent of this increase was in the western prov inces On the same date there were about 1600 additional miles of railway in actual operation which were officially regarded as being still under construction. The mileage under construction was—graded or being graded 6.223 track laid or being laid 3.833 In addition to these figures some 2 500 miles of additional line were located surveyed or being surveyed

to these figures some 2 500 miles of additional line were located surveyed or being surveyed.

New construction on the Canadian Pacific Railway, system between June 30 1910 and June 30 1912 amounted to 1 753 miles. On the Grand Trunk Pacific Railway, the Prairie Section (main line Winnipeg to Wolf Creek 916 miles) was completed at the beginning of 1910 of the Mountain Section (main line Wolf Creek to Prince Rupert 837 miles) 100 miles from Prince Rupert eastward to Copper River completed at the beginning of 1910 the remaining 257 miles being under contract from Copper River castward to Bulkley Summit 175 miles were to be completed in the spring of 1913 from Wolf Creek westward 185 miles is completed and a further distance westward to Second Crossing of Fraser River (120 miles) was also completed at the end of 1912.

was also completed at the end of 1912

From 1909 to the end of 1912 849 miles of branch lines (of which 747 were graded) were constructed as follows—Regina Boundary Branch 155 miles Regina Moose Jaw Branch 40 miles Moose Jaw North West Branch 48 miles Weyburn Branch 15 miles Prince Albert Branch 111 miles Battleford Branch 48 miles Cut Knite Branch 50 miles Harte Brandon Branch 25 miles Biggar Calgary Branch 105 miles Calgary Branch 202 miles Alberta Coal Branch 50 miles

During the year 1912 over 586 miles of newly constructed tracks were added to the Canadian Northern system the average mileage operated being 3 888 miles. (reat progress has been made in the construction of the transcontinental line of the Canadian Northern bystem which was expected to be completed by the end of 1913 the line through British Columbia to connect the western lines of the railway with tidewater at the Pacific coast has advanced rapidly. In addition to the advantage of easy gradients the location of the line enters without competition into a large territory the physical characteristics of which are expected to attract a desirable class of settlers. The line will also give access to a hitherto unknown section of the (anadian Alps.

During the year \$61 650 300 was added to the stock is ue of railways operating in Canada and \$56 741 214 to funded debt These additions brought the aggregate capital hability up to \$1 528 689 201 The aggregate earnings from all sources for the year were \$188 733

493 an increase of 87 per cent over 1910

Ports —Much attention has been and is being devoted to the provision of adequate dock accommodation and other shipping tacilities. The harbour at Montreal has been vasily improved and a new floating dry dock was launched by the Governor General on November 18 1912 thus providing complete modern equipment for the repair and examination of large vessels. At Victoria British Columbia a contract has been let to an English firm for the construction of a breakwater as a first instalment of an important scheme of harbour improve ment and at Courtenay Bay St John New Brunswick another English firm of contractors were in 1912 undertaking dock and breakwater works on a large scale so as to enable the port to meet the demands that would be made upon it through the great railway extensions

Postal Development - During 1911-12 a very considerable expansion was witnessed The number of post offices increased by 437, and there was an increase of 670 miles in the extent of the system over which mails were carried by railway. The number of miles over which mails were carried by railway and water routes and ordinary land routes was greater by 3 422 080 miles than it was for the year before. The increase in the number of letters and postcards sent during the year was over fifty two millions and a quarter or more than ten per cent greater than the year before. An Order in Council was passed during the year ingressing to \$150 the amount the Poet Office Savings Ranks are authorised to accept in increasing to \$1500 the amount the Post Office Savings Banks are authorised to accept in any one year and increasing the maximum limit of an account to \$5000 exclusive of interest Formerly the maximum amount that could be accepted from a depositor in one year was \$1000, and the maximum limit of an account was fixed at \$3000 The increase in value of postage stamps sold was \$1 068 607 or about 10% per cent

Finance.—The federal revenue increased from \$71 186 072 in 1905 to \$136 108 217 in 1912 and the expenditure from \$78 804 138 to \$137 142 082. A large amount of this expenditure is chargeable to capital and represents outlays in respect of railways canals and public works bounties, etc. The total debt in 1912 was \$508,338 591, the total assets

\$168,419,131 and the net debt \$339,919 400

The Governor General - The Earl and Countess Grev embarked at Quebec for Eng land on October 13 1911 when His Excellency relinquished the office of Governor General Appointed on September 26th and assuming office on December 10 1904 Lord Grey's tenure of office was in 1000 extended beyond the usual term of five years, and again for another year after the death of King Edward in 1910 He had thus held office longer than any of his eight predecessors since Confederation In January 1911 it was notified that the Duke of Connaught would be appointed to succeed Lord Grey and on March 21st he was formally gazetted as Governor General and Commander in Chief for a period of two years. On October 12 1911 the Duke and Duchess were wel comed at Quebec, where the new Governor General was formally sworn in

Imperial Conference 1911 -At the Imperial Conference in London in May and June 1911 the Canadian representatives were Sir Wilfrid Laurier 1 Prime Minister, Sir F W Borden 2 Mmister of Militia & Defence and Mr L P Brodeur (b 1862), Minister of

Marine & Fisheries

Among the resolutions adopted of particular interest to Canada was Resolution I proposed by the Imperial government which provided that (a) the Dominions shall be afforded an opportunity of consultation when instructions are being framed for British delegates at future meetings of the Hague Conference and that Conventions affecting the Dominions provisionally assented to at that Conference shall be circulated among the Dominion govern ments for their consideration before any such convention is signed (b) that a similar procedure where time and opportunity and the subject matter permit shall as far as possible be used when preparing instructions for the negotiation of other international agreements affecting the Dominions Moreover in connection with the most favoured nation clause in certain Treaties still in force between Creat Brittin and other countries Resolution XIX was adopted on the motion of Sir Wilfrid I aurier as follows. That His Majesty's Govern ment be requested to open Negotiations with the several foreign governments having Treaties which apply to the Overseas Dominions with a view to securing liberty for any of those Dominions which may so desire to withdraw from the operation of the treaty without impairing the treaty in respect of the rest of the Empire Steps were subsequently taken by

Dominions which may so desire to withdraw from the operation of the treaty without impairing the treaty in respect of the rest of the Empire. Steps were subsequently taken by the Imperial government towards the opening of negotiations with the countries concerned. Resolution XX also adopted on the motion of Sir Wilfird Laurier suggested the appointment of a Royal Commission to investigate and report upon the natural resources of the Empire and the development of mutual trading relations. Effect was given later in the year to this suggestion and Mr. George E. Foster the Minister of Trade & Commerce in Mr. Borden. cabinet was appointed on the Dominions Royal Commission.

Parliamentary Politics — The political history of Canada in 1910-13 centres round the two great questions of Reciprocity with the United States and Canadian naval policy in relation to the Empire. On July 18, 1911 parliament reassembled after the Coronation adjournment and on July of the government of Sir Wilfrid Laurier who had been Premier since 1806 decided to recommend the dissolution of parliament and to submit their preposals for commercial reciprocity with the United States (see below) to the judgment of the Canadian people at a general election which was fixed for Septem While the chief question before the electors was the Reciprocity Agreement, the question of Canala's Naval Policy (see below) received much attention especially in the province of Quebec. The result was a complete defeat for the government and the Reciprocity party. What had been a Liberal majority of 40 was converted into a Conservative Liberal and Anti Reciprocity majority of 40 Mr Fielding and Mr Paterson who were responsible for the negotiations with the United States were both defeated together with Sir F Borden and four other ministers. On October 6th Sir Wilfrid Laurier and his administration resigned office Sir Wilfrid Laurier re tained his seat, however, and decided to remain at the head of his party now in Op-

Mr R L Borden 8 leader of the Conservative party, being called upon to form an Administration accomplished this task on October 10, 1911 and the new ministry was

¹ B 1841 see E B xv1 286-7 B 1847 see E B iv 245 Robert Laird Borden (see E B iv -45) was born in Nova Scotia in 1854 Becoming a leading lawyer in his province he entered the Dominion parliament in 1896 and in 1901 became leader of the Conservative Opposition

constituted as follows R L Borden Premier and President of the Privy Council George Eulas Foster 1 Trade and Commerce, Robert Rogers (b. 1864) Interior F D Monk (b 1856) Public Works, Francis Cochrane (b 1852) Railways and Canals, William T White 2 Finance, Louis P Pelletier (b 1857) Postmaster General, John D Hazen (b 1860) Marine and Fisheries and Naval Service, Charles J Doherty (b 1853), Justice Samuel Hughes (b 1853) Militia and Defence, William J Roche (b 1859), Secretary of State Thomas W Crothers (b 1850) Labour Wiltrid B Nantel (b 1857) Inland Revenue and Mines John D Reid (b 1859) Customs Martin Burrell (b 1858) Agriculture George H Perley (b 1857) Albert E Kemp (b 1858), and James A Lougheed (b 1854) members without portfolios On October 22 1912 Mr Monk resigned on the question of Mr Borden's naval policy (see below) and his portfolio was taken over by Mr Rogers Mr W J Roche becoming Minister of the Interior in his The office of Secretary of State was filled by Mr Louis Coderre (b. 1865) the member for the Hochelaga division of Montreal On October 23 1911 the Hon. Auguste Landry was appointed Speaker of the Senate and on November 15th Dr T S Sproule was elected Speaker of the House of Commons

The twelfth parhament of the Dominion of Canada was opened on November 15 1911 by the Governor General in person The address in reply to the speech from the throne was voted on November 29 and on December 7th parliament adjourned over the Christmas recess until January 10 1912 On resuming the main business was financial estimates including supplementaries being submitted for \$169 389 716 divided as to \$117 981 831 to Consolidated Fund Account and \$51,40, 885 to Capital Account On April 1 1912 parliament was prorogued

When the new session opened on November 21, 1912 it was known that the an nouncement of Mr Borden's naval programme would be the business of outstanding importance The Governor General in the speech from the throne stated that his advisers having consulted with the Imperial government it had been concluded that it would be the duty of Canada at this juncture to afford aid for the purpose of strengthen ing the effective naval forces of the Empire and on December 5th (see below) the Premier announced an Emergency Contribution Bill leaving the permanent Naval Policy for future consideration

The Reciprocity Question -Sir W Laurier's government had begun their official negotiations for Reciprocity with the United States in January 1911 as the result of private discussions in the previous year. The terms of the proposed Agreement were announced in the Canadian parliament by Mr W S Fielding the Finance Minister in Sir W Laurier's cabinet on January 26 1911 It aimed at more free interchange of products by removing duties on certain articles and reducing them in others

Among those which were to enter free in each country if of the growth product or manufactures of the other were live animals poultry wheat and other grain vegetables fruit dairy products honey cotton seed oil and certain oil seeds grass garden field and other seed fish except those preserved in oil certain fish oils timber (not sawn) brass (not polished) rolled iron or steel sheets 14 gauge or thinner galvanised coated with zinc or the crucible cast steel galvanised iron steel or wire typewriting and typesetting machines barbed fencing wire coke (round) wire rods wood pulp and cream separators. Among the articles to be admitted into Canada from the Umited States and into the United States rne arrices to be admitted into Lanada from the United States and into the United States from Canada at identical rates were the following—Fresh meats I½ cts. per lb bacon and hams not in time or jars I½ cts. per lb meats dried and preserved I½ cts per lb canned meats and poultry 20 per cent lards etc, I½ cts per lb barley malt per 100 lbs 45 cts cereal foods 12½ cts per 100 lbs biscuits wafers cakes 25 per cent confectioners 32½ per cent farm wagons 22½ per cent farming implements of various kinds 15 per cent portable engines with boilers and traction engines for farm purposes 20 per cent roofing slates 55 cts per 300 ft. cutlery plated or not 22½ per cent clocks watches etc. 22½ per cent automobiles. 100 ft. cutlery plated or not 271 per cent, clocks watches etc 271 per cent automobiles 30 per cent. Arrangements were made for special rates of duty on a moderate scale to cover a large number of other commodities

1 See E B x 732 Born in New Brunswick in 1847 In 1885 he was Minister of Marine and Fisheries, and in 1888-96 Minister of Finance

* Born at Bronts Ostario in 1866 He became a successful financier in Toronto occupy

ing until recently the position of Vice President of the National Trust Company

The case presented for the adoption of this agreement was that reciprocal trade relations had been the policy of all parties in Canada for generations, that many efforts had been made to secure a treaty without success, and that Sir John Macdonald's National Policy Tariff (18,9) contained a standing offer of reciprocity with the United States covering a large portion of the products included in the present agreement. The United States having approached Canada with fair offers, it was claimed that they should be fairly met and that in making the arrangement the government were realising the desires which the Canadian people had expressed for half a century and also that in promoting friendly relations with the neighbouring republic the best possible service to the empire was being done. As Canada was seeking markets every where for her surplus products subsidising steamship lines, and sending out commercial agents, it would be abourd to refuse to avail herself of increased facilities in the markets at her doors

A denial was given to the expressed fear that the imports from Great Britain would be seriously affected. It was pointed out that the greater part of the agreement dealt with natural products which did not come from Great Britain and that the range of manufactures affected was small. It was further denied that there was any foundation for the assumption that the tariff rates agreed upon discriminated in favour of the United States and against Great Britain. The promoters of the agreement promised that in every case Great Britain would have the same rate or a lower one and held that Canada's right to deal with the British preference as she pleased remained untouched

The opposition to the agreement took the ground that the arrangement had been entered into hastily without its effects being fully appreciated and that the question should be referred to the people Attention was drawn to the success which had attended the efforts to build up a nation and bind the country together from east to west and it was contended that as the arrangements proposed would primarily affect the question of transportation by promoting a tendency to make trade move north and south the immense efforts which had been made would be sacrificed and the markets which had been secured in Great Britain abandoned The action of the United States in approaching Canada with a desire to make such an agreement after declining on so many occasions to consider the question when asked to do so by Canada was looked upon with suspicion and it was suggested that the balance of advantage would remain with the United States the speeches of some of her most prominent public men being freely quoted in support of this view —notably one by Mr Champ Clark in Congress and another by President Taft himself It was held that the unpelling cause was the desire of the United States to have access to the abundant natural resources of Canada her own reserves of wood coal and other minerals and much of her farm land having shown signs of exhaustion It was thought the better plan was to conserve Canadian A further objection to the proposals was that while they re ources for Canadian use would change the whole current of Canadian industries and be likely to dislocate the national development the new markets proposed would be so entirely unstable and insecure that after having had the benefit of them for a few years they might be withdrawn causing a reversion to the position of 25 years ago, and necessitating the re building of home industries and re-making their reputation in markets which in the mean time had been entirely occupied by old competitors Great importance was attached to the restriction on legislation which it was alleged this agreement would cause as no trade aggrieved under it could obtain redress without the arrangement as a whole being It was also urged that under it concessions in the tariff would have to be made in accordance with existing treaties, to countries from which no equivalent advantages could be obtained and it was declared that if this Reciprocity policy was pursued the ties of empire would eventually be cut for it would lead to complete commercial union and in the end the political domination of the United States, to which Canada would simply be an annexe

The debates in connection with the matter lasted for almost the remainder of the session but on February 22 1911, on the motion of Mr F D Monk, the House adopted unanimously the following as an amendment to the motion for going into Committee

of Ways and Means 'But before resuming the discussion of the terms of the agreement concluded between the government of Canada and the President of the United States, and with a view to dispel the feeling of unrest created in Canada by comments made in both countries as to the political consequence of the agreement, the House washes to affirm emphatically its determination to preserve intact the bonds which unite Canada to the British Empire and the full liberty of Canada to control her fiscal policy and internal autonomy"

A Bill to give effect to this Reciprocity Agreement on the part of the United States was introduced in the American Congress on January 20th and in due course passed the Senate on July 22nd it being emacted that its provisions should become operative as soon as the necessary counterpart legislation had been passed by the Canadian parliament Discussion continued in the Canadian House of Commons but no progress was made towards the adoption of the proposals, and on July 20 1911 the government decided to recommend the dissolution of parliament and to submit the matter to the judgment of the people at a general election. The defeat of the government followed the result being greatly influenced by the strong opposition to Reciprocity which was shown by such well-known Liberals as Mr. Clifford Sifton (b. 1861) formerly Minister of the Interior in the Laurier cabinet.) Mr. Lloyd Harris and Mr. Wm. German and by the steps taken by a body of prominent Liberals of Toronto assisted by Sir Edmund Walker President of the Canadian Bank of Commerce.

Sir W Laurier's Naval Policy - An outcome of the Imperial Conference of 1909 had been the determination of the Canadian government to establish a naval service, and on January 12 1910 a Bill for this purpose was introduced into the House of Commons and became law on May 4 1010 It provided for the creation of a Naval Department and transferred to it from the Department of Marine and Fisheries the wireless telegraph fisheries protection hydrographic and tidal survey branches. It empowered the gov ernment to appoint a Naval Board to advise the minister and to organise and maintain permanent reserve and volunteer forces and to place at the disposal of His Majesty for general service in the Royal Navy ships or men of the Canadian naval service Provision was also made for a naval college During the debate on the Bill. Sir Wilfrid Laurier announced that it was the intention of the government to construct in Canada if possible four cruisers of the improved Bristol class and six destroyers of the improved 'River At conferences with the British Admiralty it was agreed class that the naval stations for Canada should be two-one on the Atlantic to include the waters north of 30° N lat and west of the meridian of 40° W and one on the Pacific to include the waters north of 30° N lat and east of the meridian of 180 Halifax Dock yard was taken over from the Imperial authorities on January 1 1906 and the dock and at Esquimalt on November o 1910 On August 28, 1911 it was announced that the King had approved of the naval forces of Canada receiving the style of The Royal Canadian Navy" and of the ships of war of that navy being designated as His Manesty's Canadian Ships" On December 16th the following regulations were published with regard to the flag and pennants to be flown by the Royal Canadian navv ships and vessels of the Royal Canadian Navy shall fly at the stern the white ensign as the symbol of the authority of the Crown, and at the jack-staff the distinctive flag of the Dommion of Canada, such distinctive flag being the blue ensign with the Arms of the Dominion inset in the fly The white pennant will be flown at the masthead

In pursuance of Sir Wilfrid Laurier's naval policy, H M's cruisers 'Niobe" and "Rainbow' were purchased and taken over in the autumn of 1910. On July 20 1911 however H M C S. "Niobe" sustained damage by grounding on the coast off Cape Sable her repairs were undertaken at Halifax and took infteen months to complete The building of the proposed new cruisers and destroyers had however not been commenced at the time of the resignation of Sir Wilfrid Laurier's government

Mr Borden's Nuval Policy — The naval policy of Sir Wilfind Laurier's government was that of a Canadian built and Canadian-controlled navy but this was criticised by the Opposition as involving a large expenditure a distincted Impenal navy and the construc-

tion of obsolete types of ships. Upon Mr. Borden's acceptance of office, the naval question became one of renewed interest. Mr. Borden stated that in his view the question of permanent co-operation between the Dominion and the rest of the Empire ought to be tully debated and that the Canadian people should be given an opportunity of pronouncing upon it pains would be taken to ascertain in the meantime what were the real conditions confronting the Empire. In pursuance of this object. Mr. Borden, with several of his colleagues, visited London in July 1912 and were cordially welcomed by Mr. Asquith's government, who enabled them at meetings of the Imperial Defence Committee and otherwise to obtain all the information available as to the problems of British foreign policy, and the naval situation as it presented itself to the British Admiral ty. The proposals which the Canadian government founded on the understanding thus arrived at were left however to be made public first in the Dominion Parlament after it met in November.

Mr Borden's speech on December 5 1912 must always be historic in the relationship between Canada and the Mother country. It was notable for announcing two steps forward in a common Imperial policy. In the first place his Bill to Authorize Meas ures for Increasing the effective Naval Forces of the Empire proposed to contribute £, 000 000 (\$500000) for the construction and equipment of three first class battle ship to be under the control of the British Admiralty as part of the Royal Navy subject to arrangements for their being at the disposal of the Canadian government if ever a separate Canadian Navy were established. And in the second place by the agree ment of the Imperial government to include a Canadian Minister as one of the permanent members of the Committee of Imperial Defence the principle was recognised that if the Dominions took their share in Imperial defence they must also have a share in determining Imperial policy.

The proposal for an 'emergency contribution" of three battleships to the British Navy was founded on a memorandum (published in England on Dec 5th as a Parlia mentary paper) drawn up by the Admiralty for the information of the Canadian government as to the existing international situation from a naval point of view and Mr Borden read this out in the course of his speech. It is given in full elsewhere in the Year Book (see Part I sect 1. The World's Navies.) and need not here be repeated. But the view taken by the Canadian government can best be shown by quoting the salient passages of Mr. Borden's speech.

As regards the vital need of naval security for the very existence of the Oversea Dominions as part of the British Empire and the grave danger to that security indicated by the relative decline in the power of the British navy owing to the growth of other navies Mr Borden said

This Empire is not a great military power and it has based its security in the past as in the present almost entirely on the strength of its Navy. A crushing defeat upon the high seas would render the British Island or any Dominion subject to invasion by any great military. Power loss of such a decisive battle by Great Britain would practically destroy the United Kingdom shatter the British Empire to its foundations and change profoundly the destiny of its component parts. There is therefore grave cause for concern when once the naval supremacy of the Empire seems on the point of being successfully challenged.

The great outstanding fact which arrests our attention in considering the existing conditions of naval power is this. Twelve years ago the British Navy and the British Flag were predominant in every ocean of the world and along the shores of every continent. To day they are predominant nowhere except in the North Sea. The paramount duty of ensuring safety in home waters has been fulfilled by withdrawing or reducing squadrons in every part of the world and by concentrating nearly all the effective naval forces in close proximity to the British Islands. In 1902 there were 55 British warships on the Mediterranean station to-day there are 19. There were 14 on the North American and West Indies station to day there is one. There were three on the south-east coast of South America to day there is one. There were 10 on the Cape of Good Hope station to-day there are three. There were 12 on the Australian station to day there are eight. There were tindies station to day there are eight. There were ten on the East Indies station to day there are nine. To sum up in 1902 there were 160 ships on foreign and Colomal stations against 76 to-day. Do not imagine that this

result has been brought about by any reduction in expenditure for the case is practically the reverse. Great Britain's total naval expenditure in 1902 was less than \$152 000 000 (£30 000 000). For the present fiscal year it exceeds \$220 000 000 (£44 000 000). Why then has the naval force of the Empire been so enormously reduced while at the same time, the expenditure has increased nearly 50 per cent? For the simple reason that the increasing strength of other navies and especially of the German Navy has compelled Great Britain not only to increase her fleet, but to concentrate it in the vicinity of the British Islands.

It is neither necessary nor desirable to debate or discuss the probability or imminence

It is neither necessary nor desirable to debate or discuss the probability or imminence of war. The real test of our action is the existence or non-existence of absolute security. It should never be forgotten that without war without ting a shot or striking a blow our naval supremacy may disappear and with it the sole guarantee of the Empire's con

tinued existence

The fact that trade routes vital to the Empire's continued existence are inadequately defended and protected by reason of the necessary concentration in home waters is exceed ingly impressive and even startling. Even during the present year the battleships of the British Mediterranean Fleet based on Malta have been withdrawn and based on Gibraltar in order that they might become more easily available for necessary aid in home waters. The Atlantic Fleet based on Gibraltar has been withdrawn to the vicinity of the British Islands for the same reason. Under such conditions the British Flag is not predominant in the Mediterranean and with every available exertion of the whole Empire it may be impos sible to regain the necessary position of strength in that great highway before 1915 or 1916 Austria Hungary with only 140 miles of sea coast and absolutely no colonial possessions is building in the Mediterranean a formidable fleet of Dreadnoughts which will attain its full strength in about three years and which will be supported by strong battleships of the pre Dreadnought type and by cruisers torpedo craft and other necessary auxiliaries fleet of Italy in the same theatre will be even more powerful and more formidable. The withdrawal of the British Flag and the British Navy from so many parts of the world for the purpose of concentration in home waters has been necessary but unfortunate. Our Navy was once dominant everywhere and the White Ensign was the token of naval suprem acy in all seas. Is it not time that the former conditions should in some measure be restored? Upon our own coasts both Atlantic and Pacific powerful squadrons were maintained 12 years ago To-day the flag is not shown on either seaboard. I am assured that the aid which we propose will enable such special arrangements to be consummated that without courting disaster at home an effective fleet of battleships and cruisers can be established in the Pacific and a powerful squadron can periodically visit our Atlantic seaboard and assert once more the naval strength of the Empire along these coasts. I do not forget however that it is the general naval supremacy of the Empire which primarily safeguards the Oversea Dominions New Zealand's battleship is ranged in line with the other British battleships in the North Sea because there New Zealand's interests may best be guarded by protecting the very heart of the Empire

As regards the three Canadian battleships now to be added to the navy, Mr Borden pointed out that under the Admiralty the Empire now had what he had convinced him self was the most thorough and effective naval organisation in the world of which it was the best Canadian policy to make use. The hazardous and costly experiment of building up a separate naval organisation for Canada was quite unnecessary and in any case could only provide a poor and weak substitute. In the present emergency the Canadian ships were best employed as part of the Empire navy under the Admiralty of the mother-country.

Those ships will be at the disposal of His Majesty the King for the common defence of the Empire They will be maintained and controlled as part of the Royal Navy, and we have the assurance that if at any time in the future it be the will of the Canadian people to establish a Canadian unit of the British Navy these vessels can be called by the Canadian government to form part of the Navy in which ease of course they will be maintained by Canada and not by Great Britain. In that event there will necessarily be reasonable notice and indeed Canada would not desire or suggest the sudden withdrawal of so powerful a contingent from any important theatre in which the naval forces of the Empire might be exposed to severe and sudden attack. In the meantime I am assired that special arrange ments will be made to give Canadians an opportunity of serving as officers in these ships

The ships will be built under Admiralty supervision in the United Kingdom for the reason that at present there are no adequate facilities for constructing them in Canada The plant required for the construction of Dreadnought battleships is enormous and it would be suppossible at present to have shipbuilding in this country on such a scale—In any case only half could be built in Canada because the machinery for armour and guns would secessarily be constructed or manufactured in the United Kingdom. The additional cost of construction in Canada would be about 12 million dollars for three and it would be impossible to estimate the delay—No one is more eager than myself for the development

of the shipbuilding industries in Canada but we cannot upon any business or economic con siderations begin with the construction of Dreadnoughts and especially we could not do so when these ships are urgently required within two or three years at the outside for rendering aid upon which may depend the Empire's future existence. According to my conception the effective development of the shipbuilding industries in Canada must commence with small beginnings and in a businesslike way. I have discussed the subject with the Admiralty and they thoroughly realise that it is not to the Empire's advantage that all shipbuilding facilities should be concentrated in the United Kingdom. I am assured therefore that the Admiralty are prepared in the early future to give orders for the construction in Canada of small cruisers oil tank vessels and auxiliary craft of various kinds. The plant required is relatively small as compared with that which is necessary for Dreadnought battleships and such an undertaking will have a much more secure and permanent basis from the business standpoint. For the purpose of stimulating so important and necessary an industry we have expressed our willingness to bear a portion of the increased cost for a time at least I see no reason why all the vessels required in future for our government service should not be built in Canada even at some additional cost. In connection with the development of shipbuilding I would not be surprised to see the establishment of a high class of engineer ing works which will produce articles now imported and not at present manufactured in Canada. Therefore although the sum which we propose to devote for necessary naval aid at this critical juncture is to be expended in Great Britain, yet we believe that this step will result under the conditions which I have described in the very marked development of more than one industry in Canada and that even from a purely economic and material standpoint the step has much to commend it

The Canadian expenditure now proposed was in Mr Borden's view a moderate one regarded not as the beginning of a system of periodical contributions but as an emer gency aid at a moment of crisis

If we should neglect the duty which I conceive we owe to ourselves and if irreparable disaster should ensue what will be our future destiny? Obviously as an independent nation or as an important part of the great neighbouring Republic. What then would be our responsibilities and what would be the burden upon us for a protection on the high seas much less powerful and less effective than that which we enjoy to day? Take the case of one nation whose territory resources population and wealth may fairly be compared with those in Canada. The naval estimates of Argentina for the four years from 1909 to 1912 inclusive amounted to \$35,000,000 (£7,000,000). No information is available as to the exact proportion of the last mentioned sum which has been appropriated for naval purposes but it is understood that the far greater portion is for naval construction. It is safe there fore to estimate that during the past four years Argentina has expended for naval purposes not less than from \$65,000,000 to \$70,000,000 (£13,000,000). The Federal and State expenditure of the United States comprises a total outlay for armaments of between \$250,000,000 and \$300,000,000 and \$300,000,000 and \$300,000,000 and \$300,000,000 and \$300,000,000 and be same period.

to \$25,000 000 or between \$80 000 000 and \$100 000 000 during the same period

It is apparent therefore that the aid which we propose to bring at this juncture is of a
moderate and reasonable character For 45 years as a Confederation we have enjoyed
the protection of the British Navy without the cost of a dollar So far as official
estimates are available the expenditure of Great Britain on naval and military defence for
the provinces which now constitute Canada during the mneteenth century was not less than
\$400 000 000 (£80 000 000) Even since the inception of our Confederation and since
Canada attained the status of a great Dominion the amount so expended by Great Britain
for the naval and military defence of Canada vastly exceeds the sum which we are now
asking parliament to appropriate From 1870 to 1890 the proportionate cost of the North
Atlantic Squadrons which guarded our coasts was from \$125 000 000 to \$150 000 000 (£25
000 000 to £30,000 000) From 1853 to 1903 Great Britain's expenditure on military defence
in Canada runs closely to \$100 000 000

As regards the voice which it had been arranged that Canada should have on the Committee of Imperial Defence, Mr Borden said

With increasing power and influence there has necessarily come by sure and gradual steps a certain development in our relations with the United Kingdom and the other Domin ions. In this constitutional development we are necessarily confronted with the problem of combining co-operation with autonomy. It seems most essential that there should be such co-operation in defence and in trade as will give to the whole Empire an effective organisation in these matters of vital concern. On the other hand each Dominion must preserve in all important respects the autonomous government which it now possesses. The responsibility for the Empire's defence upon the high seas in which is to be found

The responsibility for the Empire's defence upon the high seas in which is to be found the only effective guarantee of its existence and which hitherto has been assumed by the United Kingdom has necessarily carried with it the responsibility for and the control of

foreign policy When Great Britain no longer assumes sole responsibility for defence upon the high seas she can no longer undertake to assume sole responsibility for and sole control of foreign policy which is closely vitally and constantly associated with that defence in which the Dominions participate The great Dominions sharing in the defence of the Empire upon the high seas must necessarily be entitled to share also in the responsibility for and in the control of foreign policy. Not only His Majesty's Min isters but also the leaders of the opposite political party in Great Britain have explicitly

accepted this principle

Thave alluded to the difficulty of finding an acceptable basis upon which the great Domin ions co-operating with the mother country in defence can receive and assert an adequate voice in the control and moulding of foreign policy. We were brought closely in touch with both subjects when we met the British Ministers in the Committee of Imperial Defence. That committee is peculiarly constituted but in my judgment is very effective. It consists of the Prime Minister of Great Britain and such persons as he may summon to attend it Practically all the members of the cabinet from time to time attend its deliberations and usually the more important members of the cabinet are present. In addition naval and military experts and the technical officers of the various departments concerned are in attendance. A very large portion of the work of the committee is carried on by subcommittees which often are composed in part of persons who are not members of the general committee itself and who are selected for their special knowledge of the subjects to be considered and reported upon. The amount of work which thus has been performed during the past five or six years in particular is astonishing and I have no doubt that it has contributed largely to the safety of the whole Empire in time of peril

The committee is not technically or constitutionally responsible to the House of Commons and thus it is not supposed to concern itself with policy. As so many important members of the cabinet are summoned to attend the committee its conclusions are usually accepted by the cabinet and thus command the support of the majority of the House of Commons While the committee does not control policy in any way and could not be undertaken to do so as it is not responsible to parliament it is necessarily and constantly obliged to consider foreign policy and foreign relations for the obvious reason that defence and especially navai

defence is inseparably connected with such considerations

I am assured by his Majesty's Government that pending a final solution of the question of voice and influence they would welcome the presence in London of a Canadian Minister during the whole or a portion of each year. Such minister would be regularly summoned to all meetings of the Committee of Imperial Defence and be regarded as one of its permanent members. No important step in foreign policy would be undertaken without consultation with such representative of Canada. This means a very marked advance both from our standpoint and from that of the United Kingdom. It would give us the opportunity of consultation and therefore influence which hitherto we have not possessed.

In opposition to the Government proposals Sir Wilfrid Laurier on December 12th moved an amendment which while not negativing the first clause of the Government resolution providing for a vote for increasing the effective Naval forces of the Empire would have substituted for the remaining clauses a resolution declaring it necessary that Canada without further delay should enter actively upon a permanent policy of naval defence and that any measure of aid to Imperial naval defence which did not embody a permanent policy of participation by ships owned manned and maintained by Canada was not an adequate expression of the aspirations of the Canadian people Borden said Sir Wilfrid had asserted that before she enacted a permanent policy Canada must have a voice in all questions affecting war or peace But that was a large contract and the question before them was that of emergency and immediate defence If Canada was represented in the councils of war and peace the other That question might take years to solve Dominions and dependencies must be also It must be discussed by itself, and in the meantime Canada should continue in her preparations for defence Sir Wilfrid Laurier condemned the Government's policy of direct contribution as un Canadian and un British and as unsuited to the real needs of the Empire

Other Legislation 1910-12—Among important acts passed during the session 1910-11 were the Opium and Drug Act which prohibits the importation manufacture sale or possession for other than scientific or medicinal purposes of opium cocaine morphine and encaine, or any salts or compounds thereof a new Seed Control Act and an Act confirming and sanctioning the treaty signed at Washington on January 11, 1909 relating to the bound ary waters and to the questions arising along the boundary between Canada and the United States. In the session 1911-12 an act was passed amending the Dry Docks Subsidies Act of 1910 and providing that any dry dock shall not be deemed for the purpose of subsidy

to be a dry dock of the first class unless there can be received and repaired therein the largest ships or vessels of the British navy existing at the time at which the contract is entered into Another Act of this session provided for the constitution of a new Department under the First Minister to deal with all official communications in connection with the external affairs of Canada the administration of all matters relating to the foreign consular service in Canada etc A measure of great importance dealing generally with grain inspection was also passed it provides for the appointment of Grain Commissioners the establishment of inspection divisions and the appointment of a Grain Standards Board for the purpose of establishing commercial grades and defines the various established grades for the extension of the boundaries of Manitoba Ontario and Quebec were also passed

Under the Canadian Medical Act chapter 137 Revised Statutes 1906 and the amending Act chapter 16 1911 provision was made for the formation of a Dominion Medical Council as soon as the Legislatures of the various provinces of Canada had enacted legislation accept ing the provisions of the Acts The object of the legislation is to provide for one central council consisting of representatives of the different provinces for the purpose of (a) the establishment of a qualification in medicine such that the holders thereof shall be acceptable and empowered to practise in all the provinces of Canada (b) the establishment of a register for Canada of medical practitioners and the publication and revision from time to time of such register (c) the determination and fixing of the qualification and conditions necessary for registration the examinations to be undergone with respect to professional subjects only and generally the requisites for registration (d) the establishment and maintenance of a board of examiners for examination and granting of certificates of qualification (e) the enactment with the consent and at the instance of the medical councils of the various proving inces of Canada of such provincial legislation as is necessary to supplement the provisions of this Act and to effect the foregoing purposes. The Secretary of State summoned a meeting on November 17 1912 for the purpose of organising the Council and a number of appointments were subsequently made

The Ne Temere Decree -On January 23 1912 the House of Commons decided to refer to the Supreme Court of Canada and later to the Judicial Committee of the Imperial Privy Council the question whether the Dominion parliament may con titutionally pass a marriage law applicable in all respects in every province in Canada. On July 29, 1912 the Lord Chancellar delivered judyment which speaking generally upheld the decision of the Supreme

Court of Canada It was ruled that the Dominion parliament is not entitled under the British North America Act to pass a uniform federal law legalising all marriages performed by authorised clergymen. The matter is in the jurisdiction of the provinces Anglo American Peace Celebrations—On June 4 1912 at a representative meeting at Ottawa a Committee was appointed to act for Canada in preparing a programme of the celebration of the 100 years of peace between the branches of the English speaking people
Fur Seal Convention — The International Fur Seal Conference which was held at Washing

ton from May 11 to July 7 1911 resulted in a Convention being signed by which Great Britain the United States Rus ia and Japan undertook that pelagic sealing should cease for a period of 15 years from December 15 1911 and thereafter until terminated by one year s notice. Canada was represented by the under secretary for external affairs. Mr. Joseph Pope, who in 1912 was created a K.C.M.G. Provision was made for an apportionment of the annual proceeds from the seals killed on land the share pavable to Canada being 15 per

cent of the gross takings of the United States and Russia and 10 per cent of those of Japan

Provincial Governments —On June 14, 1911 a general election was held in Nova Scotia
the result being the return of the government which had been Liberal since 1884. The
elections for the British Columbia Legislature took place on March 28, 1912, the result being the return of the government 40 Conservatives and 2 Socialists being elected. The Hon Richard McBride K.C. (b. 1870) the Premier of British Columbia since 1903, was created a K.C.M.G. in 1912. The election in Ontario was held on December 11 1911 when a K C M G in 1912 The election in Outano was need on December 11 1911 When Sir James Whitne, s government was returned by a majority of 60. In January 1912 the Prince Edward Island elections resulted in the return of 27 Conservatives and 3 Liberals. The Premier is Hon J A Mathieson, K C who had formed a government in December 1911. The general election in New Brunswick took place on June 20. 1912 resulting in the return of 44 Conservatives 2 Independents, and 2 Liberals. On May 15. 1912 the elections were held for the Quebec Legislature and resulted in the return of Sir Lomer Gouin accountment with a shortly reduced majority. On July 11, 1912 the graph december 1915. government with a shahity reduced majority On July 11 1912 the general election took place for the province of Saskatchewan The chief issue was the Reciprocity agreement as in the Dominion elections and the overwhelming majority by which Mr Scott's government The appointment of members of provincial governments to the new federal cabinet in

1911 necessitated some rearrangements in the provincial cabinets.

In Manitoba the vacancy caused by the Hon Robert Rogers joining the Dominion cabinet was filled by the inclusion of Mr George Lawrence as Minister of Agriculture In 1912 the Hon Rodmond Palen Robhn (b. 1833) Premier since 1900 was created KCMG and the returning Chief Justice Joseph Dubuic (b. 1840) was knighted In Ontario, Mr W. H. Hearst K.C. M.P. became Minister of Lands, Forests and Mines.

in succession to the Hon Frank Cochrane the new Federal Minister of Railways and Canals In 1912 the heutenant governor Col John Morison Gibson was created a K C M G

In New Brunswick owing to the appointment of the Hon J D Hazen Premier and Attorney General to be Federal Minister of Marine and Fisheries the Hon J K Flemming Provincial Secretary was called upon to form a government Mr Flemming took the office of Surveyor General and the Hon W C H Grimmer was appointed Attorney General Hon H F McLeod Provincial Secretary Hon John Morrissy Commissioner of Public Works Hon D V Landry Agricultural Commissioner and the Hon Robert Maxwell and Hon John A Murray without portfolios

New Lieutenant Governors —On August 1 1911 Mr D C Cameron was sworn in as Lieutenant Governor of Manitoba in succession to Sir D H MacMillan retired A native of Vankleek Ontario he was elected to the Ontario Legislature in 1902

Sir Francis Xavier Langelier Acting Chief Justice of the Supreme Court of Quebec was appointed Lieutenant Governor of the Province of Quebec in succession to Sir C A Pellettic deceased. Born in 1828, he has held several officer in Oueboo Minuteries and sat in the deceased Born in 1838 he has held several offices in Quebec Ministries and sat in the Dominion House of Commons from 1884 to 1898

In New Brunswick the term of office of the Hon I J Tweedie expired on March 1, 1912 and he was succeeded as I reutenant Governor by Senator Josiah Wood who was born at

Sackville New Brunswick in 1843

Indiciary—In succession to Sir Louis Jette resigned the Puisne Judge of the Court of King & Bench the Hon. Horace Archambault became Chief Justice of Quebec in 1912 Born at L Assumption Quebec in 1857 he was educated at Laval University In 1888 he was called to the Legislative Council Quebec and from 1897 to 1905 was Attorney General of

the Province Appointed a Q C in 1889 he was raised to the bench in 1908
On the death of Sir Charles Moss Chief Justice of Ontario in 1912 he was succeeded by Sir Wm Meredith who was born at London Ontario in 1840 and was educated at Toronto University He was member for I ondon in the Ontario Legislature from 1872 to 1896

The Hon F W G Haultain formerly Premier of the North West Territories was gazet ted on November 2 1912 as Chief Justice of Saskatchewan He was born in 1857 at Wool with England going to Outario in 1860 He was called to the Bar of Ontario in 1882 and

wich England going to Ontario in 1800. He was called to the Bar of Ontario in 1882 and to the Bar of the North West Territories in 1884, being appointed a k. C. in 1902. The Hon Francis L. Haszard k. C. Prime Minister of Prince Edward Island was appointed Judge of the Canadian Supreme Court on May 4, 1911 being succeeded in the Premiership by the Hon H. J. Palmer. The new Judge of the Supreme Court was born in Prince Fdward Island in 1849 and was admitted to the Bar in 1872. From 1893 to 1900 he was Supremdary Magistrate and Recorder of Charlottetown. Elected a member of the Provincial Lordstature Assembly in 1904, he became Prime Minister of the Prevince of the

Provincial Legislative Assembly in 1904, he became Prime Minister of the Province in 1908

Provincial Legislative Assembly in 1904, he became Prime Minister of the Province in 1908

In April 1912 four new Judgeships were authorised by parliament and were filled a follows—Mr Alexander Haggart ex M P for Winnipeg to the Manitoba Court of Appeal Mr W L Walsh K C of Calgary to the Supreme Court of Alberta Mr Hector Chauvin K C of Hull as Judge of the new judicial district of Labelle and Mr Haughton Lennox M P for South Sinicoe to one of the extra judgeships of the High Commission of Ontario As Chief Justice of the Superior Court of Quebec Mr Justice Davidson has succeeded Sir Melbourne Tait The new Chief Justice was born in Huntingdon Quebec in 1841 he was educated at McGill University and was made a Q C being raised to the bench in 1887 where he has been a Puisne Judge of the Superior Court

Personalia—On October 22 1912 Major G W Stephens resigned the position of Chair man of the Montreal Harbour Commission—On March 1 1912 Dr J G Rutherford resigned his position as Veterinary Inspector General and I ive Stock Commissioner He was appointed Chief Veterinary Inspector in 1902 Veterinary Director in 1904 and Live Stock Commissioner in 1906—On March 31 1911 Dr William Saunders C M G retired after nearly 25 years service as Director of Experimental Farms in Canada during which tunc he showed a keen and enlightened sympathy with all that tended to assist in the development he showed a keen and enlightened sympathy with all that tended to assist in the development of the agricultural resources of the Domission Born in Devonshire England in 1836 he went to Canada in 1848. He is succeeded by Mr J H Grisdale

went to Canada in 1848 He is succeeded by Mr J H Grisdale

Obstuary.—The Canadian obstuary for 1911 included the following —Thomas Mayne
Daly (b 1852) police magistrate at Winnipeg d June 24th. He was formerly a member of
parliament and was Minister of the Interior from 1892 to 1896—Desire Greouard the
judge and man of letters d at Ottawa on March 22nd He was born at St Timothée Quebec
on July 7 1836 and was educated at Montreal College afterwards studying law He stood
for the Canadian House of Commons for several constituencies from 1872 to 1878 and was
finally elected for Jacques Carrier in that year He held the seat until 1895 when he became
a judge of the Supreme Coart At the time of his death he was Senior Judge He published
a work on the Civil Laws of Marriage one on the law of insolvency and one on bills of
exchange, also Lake St Louis Old and New and Chevalier de la Salle He was an editor of
La Revuel Gritique.—Sir Charles Alphonse Pantaléon Pelletier K C M G the judge
and statesman d at Quebec on May 1st He was born at Rivière Ouelle on January 22
1837 and educated at Lavai University He was tailed to the Bar in 1860 and became Q C

in 1879 In 1892 he was Batonnier of the Quebec Bar He commanded a battalion of volunteers during the Fenian rising of 1866 He sat in the Dominion House of Commons from 1869 to 1877 when he was called to the Senate From 1896 to 1901 he was Speaker of the Senate In 1902 he was appointed a Judge of the Supreme Court of Canada and in 1908 Lieut Governor of the province of Quebec—Sir Henri Elterar Taschereat the judge of at Ottawa on April 19th He was born at St Mary's Beauce Co Quebec on October 7 1836 and educated at Quebec Seminary He was called to the Quebec Bar in 1857 became QC in 1867 Judge of the Supremor Court Quebec in 1871 Judge of the Supremor Court of Canada in 1878 and Chief Justice in 1902 He was knighted in 1902 and hade a Privy Councillor in 1906 when he resigned his Chief Justiceship From 1861 to 1867 he had represented Beauce Co in the Canadian Legislative Assembly He published Criminal Law of Canada and Code Civil Procedure of Province of Quebec—Sir John Carling K CM G the agricultural administrator b at London Ontario 1878 d November 6 1911 Prior to Confederation he had held the positions of Receiver General 1862 and Minister of Works and Agriculture in the Dominion Ministry of Sir John A Macdonald and to him is due the credit of establishing a number of Experimental Farms throughout the country

The following are the more memorable among those who died in 1912 —Adam Carr Bell formerly Senator b 1847 d at Picton Nova Scotia on October 31st He entered the Nova Scotia legislature in 1878 In 1896 he was elected to the Dominion parliament but was defeated in 1904—EDWARD BLAKE (b 1833) formerly prominent as a Canadian statesman whose later career in the Imperial Parliament was of less account d at Toronto on Mar h whose later career in the imperial randoment was of less accounted at rotomic on war in st (for biography see E B iv 354)—Sir Richard Cartwright (see E B v 435) the states man (b 1835) d at kingston Ontano on September 23rd—Sir Edward Clouston Bart the financier general manager and vice president of the Bank of Montreal b 1849 d November 23rd—He had been connected with the bank for nearly 50 years.—George Ralph RICHARDSON COCKBURN the educationalist and politician d in London on January 24th was born in Edinburgh on February 15, 1832 and educated at the Royal High School and University there afterwards going to France and Germany. He went to Upper Canada in 1858 and from 1861 was Principal of the Upper Canada College for over twenty years besides being Senator of Toronto University From 1887 to 1896 he sat in the Dominion House of Commons as Conservative Member for Central Toronto He was chief Canadian Commissioner at the Chicago World's Fair 1893—CHARLES M HAYS (b 1896 at Rock Island Ill USA) president of the Grand Trunk Railway lost in the Titanic in April Formerly general manager of the Wabash Railway he was appointed to be manager of the Grand Trunk in 1896 and subsequently president. He was also president of the Grand Trunk Pacific —George Holmes missionary bishop in the North west d in London on February 3rd He was born in England on November 23 1858 and educated at 5t John's College Winnipeg He was afterwards trained at the Church Missionary College Islington College Winnipeg He was afterwards trained at the Church Missionary, College Islington whence he returned to Canada in 1885 In 1887 he was ordained and worked as a missionary in the North West Territory till 1905 In 1901–05 he was Archdeacon of Athabasca in 1905–09 Bishop of Moosonee and from 1909 till hi death Bishop of Athabasca —Sir James Macpherson Lemoine the lawyer and author d at Quebec on February 5th He was born at Quebec on January 24 1825 and educated there He was called to the Bar in 1850 but devoted himself chiefly to the writing of hi torical and ornithological works. In 1894 he was elected President of the Royal Society of Canada His publications included L. Ornithologic du Canada (1861) Les Pecheries du Canada (1862) Maple Leases (6 vols 1863–94) Quebec Past and Present (1876) Annals of the Port of Queber (1901) etc.—James Pitt Mabee the judge d at Toronto on May 7th He was born at Port Rowan Ontario on November 5 1859 and educated at Toronto Univer ity He was called to the Bar in 1882 made Queens Counsel in 1893 and Judge of the Ontario High Court in 1905 He resigned his position as Judge in 1908 to become Chief Commissioner of the Board of Railway Commissioners for Canada —James Macdonald the Dominion parliament and was Minister of Justice in Sir John Alexander Macdonald's cabinet in 1878 Latterly he had been Chief Iustice of his province Born in 1828 he entered the Dominion parliament and was Minister of Justice in Sir John Alexander Macdonald's cabinet in 1878. Latterly he had been Chief Justice of his province—Sir Charles Moss the judge d at Toronto on October 12th. He was born at Cobourg Ontario on March 8. 1840 and educated at the Ontario Law School. He was called to the Bar in 1869 became K.C. in 1881 and Judge in 1897. In 1902 he became Chief Justice of the Province of Ontario. He was knighted in 1907. From 1900 to 1906 he was Vice Chancellor of Toronto University. He published together with Mr. R. Sullivan a handbook of Commercial Law for Upper Canada.—James Oborne a well known railway official. d at Van couver on April 30th. He was born at Montreal on September 19. 1862 and was educated at the Montreal Public School. At thirteen years of age he began railway work and rose to be general superintendent of the British Columbia division of the Canadian Pacific Railway. be general superintendent of the British Columbia division of the Canadian Pacific Railway
—William Ogilvie first governor of Yukon b at Ottawa 1846 d November 13th For
merly a Dominion Lands Surveyor and astronomer in the service of the Canadian Depart ment of the Interior he carried out important surveys in the Mackenzie and Yukon regions and also in connection with the Alaska boundary. As representative of the Dominion government in the Yukon during the exciting period of the Klondike gold rush. Mr. Ogi vie

performed excellent service for which he was justly esteemed —William Ross the Senator b 1825 d at Halifax on March 17th He became a member of the Legislative Assembly of Nova Scotia in 1859 and of the Dominion House of Commons in 1867. In 1874 he left parliament and became collector of customs at Halifax. In 1889 he was returned again to the Dominion parliament and in 1906 was appointed to the Senate. He was Minister of Militia in the Mackenzie government in 1873.—Frederick William Thompson manufacturer b 1862 d May 7th. At the age of fifteen he entered the Exchange Bank of Montreal When twenty-one he joined the Ogilvie Milling Cobecoming general manager of their North Western business in 1899 and general manager of the whole business in 1900. In 1902 he re-organised it as the Ogilvie Flour Mills Coltd. He had considerable political influence and worked hard against the reciprocity agreement with the United States.

(W. L. Griffith)

NEWFOUNDLAND ²

Population — The provisional returns of the census of 1911 show a total population of 242 966 persons (124 485 males and 118 481 females) of whom 2,0027 are domiciled in Newfoundland and 3 939 in Labrador This constitutes an advance of 9 95% over the figures for 1901 The population of St John's City has increased from 29 504 in 1901 to 32 292 in 1911 The religious classification includes Roman Catholics 81 914, Church of England 78,140, Methodists 68 127 and Salvation Army 10 127

Economic Conditions —The marked progress of Newfoundland during the last few years is in the main to be attributed to three factors vi. improved means of communication the development of mineral resources and the foundation of an important pulp and paper making industry. The immediate results of these undertakings have been to give employment to large numbers of people hitherto dependent solely upon the great fishing industries as a means of livelihood and to turn the attention of capitalists and administrators to the possibilities of the land as opposed to the sca

Recent international and imperial events have brought Newfoundland much before public notice. Sir Edward Morris (b. 1859). Prime Minister since 1009 accompanied by special delegates attended the Imperial Conference of 1911. The Colonial Government took a prominent part in the Festival of Empire held in London during the same year, the extensive collection of Newfoundland products there exhibited has been transferred to the Newfoundland Court at the Imperial Institute. The award of the Hague Tribunal in 1910 has been brought to a satisfactory conclusion by the Anglo American Fisheries Treaty (191) which settles outstanding difficulties between the Colony and the United States. The question of reciprocity between Newfoundland and the United States has been the subject of official discussion.

Fisheries — The fisheries must for long remain the primary interest of Newfoundland and measures have recently been taken to place the industries upon a thoroughly table basis Important work has been done by the newly-established Board of Trade in the official inspection grading and branding of products. The Covernment has had under consideration the offers of the Booth Fisheries Company (USA) to undertake operations in New foundland the proposal being to apply modern methods of cold storage to the cod catch and thus render available the extensive markets for fresh fish in the central and western states of America and elsewhere. Similar methods are proposed in connection with the lobster fishery. The award (1910) of the Hague Tribunal has been found to work satisfactorly and with the gratifying result of an increase of trade in fishery products with America. An agreement has recently been arrived at between the Governments of New foundland the United States and Canada which settles among other difficulties the delimitation of bays on the Newfoundland coast. The total value of the fishery exports in 1911 was £1 807 226 cod £1 344 689 cod oil £61 833 cod liver oil £12 041 herrings £79 971 lobsters £74 069 salmon £14 535 other fish £45 523 seal shins (undressed) £56 562 seal oil £79 155 whale oil £29 790 whale fertiliser £6 124 whale bone £2 9,4

Forest Resources—Exploitation of the forest wealth of the colony is developing rapidly in the pulp and lumber industries. It is stated that natural regeneration is sufficient to

Forest Resources—Exploitation of the forest wealth of the colony is developing rapidly in the pulp and lumber industries. It is stated that natural regeneration is sufficient to assure a permanent supply of raw material but steps are being taken by the Government with regard to reafforestation. Advance has been made in the lumber industry chiefly owing to the operations of American companies. Profitable markets have been developed in South and North America the exports in 1910-11 being valued at £75.683. The forest resources of Labrador remain practically untouched. In its extensive forests and abundant and readily available water power. Newfoundland possesses remarkable facilities for the establishment of a pulp and paper making industry, and important advances have already

been made. The Anglo Newfoundland Development Company in which Lord Northcliffe is so largely interested commenced operations in 1909 and now controls over 3,000 square miles of forest land yielding a fine quality of pulpwood. The mills erected at Grand Falls on the Exploits River are the second largest of their kind in the world and possess the most modern equipment. The whole of the power required is obtained from the Falls. At Bishop Falls also on the Exploits River and eleven miles distant from Grand Falls Messrs. Afbert Reed & Co. of London have established a similar plant of only slightly smaller dimensions. Schemes are being framed for the erection of further mills by American and other companies in the Fortune Bay Gander River and Grand Lake districts. The export of pulp and paper during 1910–11 was valued at £51 582 and £193,898 respectively. The whole of the trade was with the United Kingdom.

Agriculture —The Government is prosecuting an active agricultural policy with a view to meeting the demand for farm produce which will arise from the industrial development of the country. The programme provides for the supply at Government expense of improved stock, seeds and implements and considerable inducements are offered to agriculturists. Attention is also being given to agricultural education. Farm colonies are to be established by the Salvation Army. Mixed farming offers the best inducements while the prospects for cattle sheep and poultry are considered good. Special encouragement is being given to sheep farming with a view to the establishment of a local woollen manufacturing industry. The average annual output of farm produce is valued at over £800,000 the principal crops being cabbages turnips hav and oats. Development of the fruit (berry) industry is anticipated. A successful Agricultural Show was held in St. John's in 1910.

Mineral Resources —During the last twenty years the annual value of minerals exported has averaged nearly £257 000 the chief ores being those of copper and iron. The Govern ment has recently concluded agreements with certain companies in respect of the development of coal iron and petroleum resources and has offered financial rewards to successful prospectors. The principal copper mine is that at Tilt Cove in Notre Dame Bay but promising discoveries of ore have recently been made at points in White Bay, and on the north-east coast. The iron mines at Bell I land Conception Bay, have been successfully worked by two companies and it is estimated that 40 000 000 tons of haematite ores are in sight with an unknown quantity in the extension of the beds seawards. Haematite has been found at River Exploits and at various points on Notre Dame Bay. Rich bessemer ores occur at White Bay, and extensive deposits of magnetic ore have been located along the west coast. Operation with iron pyrites have been commenced at Pilley's Island in Notre Dame Bay. Developments are expected with regard to the west crast chromite deposits the silver lead ores near Placentia and the slate beds at Bay of Islands Smith Sound and elsewhere. Operations at Parson's Pond oil field have advanced sufficiently to permit of a regular supply of oil to the gas works of St. John's for illuminating purposes. Favourable agreements have been concluded with certain English companies for the exploitation of the coal resources of the Island. During the last tew years the valuable seams near Grand Lake have received considerable attention from the Reid Company.

Communications — Progress has been made with the construction of the branch railways sanctioned by the Government in 1910—Steamship communication has been improved and the telegraph—telephone and wireless services augmented

Finance — The trade and revenue returns (the highest ever recorded) for the year ending June 30 1911 were revenue f_{7-5} 020 expenditure f689 587 imports f2 751 137 and exports f2 461 681 During 1910—11 the British Empire (chiefly Canada and the United Kingdom) supplied 60 8 $^{\circ}_{0}$ of the imports and received 99 7 $^{\circ}_{0}$ of the exports

Administration —Sir Ralph Champnev Williams K C M G was to retire from the Governorship in February 1913 and to be succeeded by Mr Walter Edward Davidson C M G Governor of the Seychelles

The principal measures recently dealt with by the Legislature have reference to rail way extension and steamship services mining development agriculture and the fishing industry while others are concerned with education the extension of telegraph tele phone and wireless facilities road development, woollen manufactures, the provision of sanatoria for consumptives and old age pensions

The death occurred at Ottawa on October; 1011 of Sir James Spearman Winter formerly Premier (1807-1900) Born in Newfoundland in 1845 he became a barrister and in 1874 entered the Newfoundland legislature being its speaker in 1877-,8 and subsequently holding other offices. In 1910 he was one of the British Counsel in the Fisheries Arbitration.

AUSTRALIA:

Including as it does the adjacent island of Tasmania the area of the Australian Commonwealth is now computed at 2,974,581 square miles, 1,149 320 of which are within the tropical zone (about five thirteenths of the total) Since the Commonwealth was proclaimed in 1901 there have been three changes affecting the political boundaries of Australia In 1905 Papua (the British portion of the island of New Guinea) was taken over from the British Government and constituted a Territory of the Commonwealth In 1909 the Commonwealth took over an area in the south of New South Wales which was constituted a Federal Territory and on which will be built the Federal Capital In 1910 the Northern Territory was taken over from South Australia and constituted a Federal Territory

Papua -Soon after taking control of Papua the Australian Government appointed Colonel Murray as Lieutenant Governor with Mr Staniforth Smith as a special officer to encourage industrial development. The suitableness of Papua for various forms of tropical agriculture is undoubted but there is a labour difficulty in the way of progress. The Papuan like most South Sea Islanders has an aversion to steady work. In Fig. a British Colony in the South Pacific a position similar to that existing in Papua has been met by the importing of industrious cooles from India to develop the sugar plantations The Austrilian Government however is determined to keep Papua for the Papuans It was proposed in 1908 that the Papuan should be forced to do a certain amount of work either for himself for private planters or for the Government the argument being advanced that since Nature was so bountiful as to keep him in reasonable comfort without work he would never be driven to labour by necessity and must therefore be brought under some other form of compul sion. The Australian Government vetoed the proposal. The officials responsible for the government of Papua state now that they have hopes that the natives will be tempted into the paths of industry by desire for the white man's cloth steel etc ordinances have been framed to regulate the conditions of native labour and during 1911 nearly 8 000 natives were engaged under contract in some form of labour But the labour position does not hold

out much hope of the growth of a great sugar growing or cotton growing industry

The white population of Papua is about 1 000 and the native population about 500 000

There are about 15 000 acres under cultivation mostly planted with coco nut trees

Rubber cotton sisal coffee are also grown and mining and pearl shelling are considerable industries. The system of land tenure is by leasehold—freeholds are not granted—the conditions of

leasing are not onerous

The Federal Territory and Federal Capital Site — The Constitution having provided that the capital of the Commonwealth should be within the State of New South Wales at least one hundred mules from Sydney the New South Wales Government in 1909 surrendered to the Commonwealth Government some 900 square miles of territory around Yas. Can berra and also an area of two square miles on the shores of Jervis Bay for the construction of a Federal port and with these areas went the right to construct a railway from this port

to the Federal territory

In 1910 the Federal Government took possession of the Territory

It established there
in 1911 a military college and instituted a competition among the architects of the world for the best plans for building a new Federal city Unfortunately because of a disagree ment many British architects of the first standing did not take part in the competition. The design which found most favour was the work of a Chicago (USA) architect. Mr Walter Burley Griffin At the proposed Federal capital will be housed the Governor General the Parliament and as far as possible all the Federal government departments. The preliminary work of construction is in hand

The Northern Territory—With an area of 523 620 square miles (more than one sixth of the continent) having some very fertile land and with a better river system than most other parts of Australia the Northern Territory is almost empty and undeveloped. The total population (other than aborigines) was 2 846 in 1010 of which the largest element was Chinese the total white population being 1 182. The backwardness of the Territory as compared with the rest of Australia is due chiefly to political causes. When the Australian colonies first set up separate households it was convenient to none of them to include the Territory and it was left in the hands of the Imperial Government In 1863 South Austra lia took over the responsibility for the Territory having formed a plan to connect it with Adelaide by a north to-south trans-continental railway. With such a railway it would have been brought within the ambit of South Austrahan development. Without that railway it was actually more remote from communication with South Australia than with any other of the States The railway was begun It reached Pine Creek from Port Darwin at the north end and Oodnadatta from Adelaide at the south end then hope of its completion was abandoned As soon as the Commonwealth came into existence it sought a

¹ See E B 11 941 et seq

transfer of the Northern Territory from South Australia But14 was not until January I 1911 that the final stage of the negotiations was reached and the Territory assumed by the Commonwealth The terms of transfer were that all the past deficits incurred by South Australia in the administration of the Territory should be taken over by the Commonwealth and that the trans continental railway should be completed from Port Darwin in the north to Port Augusta (near Adelaide) in the south The Commonwealth purchased the existing state railway from Port Augusta to Oodnadatta

state railway from Port Augusta to Oodnadatta

In 1912 the Commonwealth Government appointed an administrator for the Northern Territory and took preliminary steps for its development and colomisation. A scientific inquiry as to the possibilities of a white population flourishing in this tropical part of the continent is proceeding and so far, the evidence on that point is reassuring. There is very little malaria in the Northern Territory and other specific tropical diseases are absent. The land is generally considered to be suitable for cattle grazing (there are great herds of wild buffalo) and tropical farming on the coast for sheep farming and dairy farming on the tablelands. There are said to be possibilities of mineral wealth but mining results in the past have been usually disappointing. In its policy of development the Australian Government does not propose to allow any further complete alienation of Crown lands. (There have passed into private hands already 473 990 acres.) In future all titles will be leasehold but the leases will be in perpetuity with reappraisement every 14 years in the case of town lands every 21 years in the case of agricultural and pastoral lands. Political difficulties stand in the way of pushing on boldly with the north to-south trans continental railway which is the chief need of the Territory. Some favour a direct route some a route deviating so as to cross Western Queensland and New South Wales.

THE COMMONWEALTH

The Federal Act of July 1900 (see E B ii 966) united in an indissoluble Australian Commonwealth six self governing colonies organised as British settle ments between 1770 and 1859 which retain their individuality and for certain pur poses their independence. The federating States, New South Wales (E B xix 5.7 et seq.) Victoria (E B xxviii 37 et seq.) Queensland (E B xxvii 732 et seq.), South Australia (E B xxvii 438 et seq.) Western Australia (E B xxviii 539 et seq.) and Tasmania (E B xxviii 438 et seq.), were left with certain self governing powers and preserved their own political institutions. Separate notes are added later as to certain details in the internal affairs of the individual states but in the following account Australia will be considered substantially as a whole in its aspect of a single national unit

Population -Public opinion in Australia has at different times condemned as unsatisfactory the rate of growth of the population both by natural increase and by immigration The feeling that the natural increase of the population was not suffi cient led in New South Wales to the appointment of the Birth Rate Royal Commission An outgrowth of that Commission was a Federal Royal Commission on Secret Drugs and Cures which reported in 1907 and devoted much attention to the matter of artificial limitation of families It was established fairly clearly by the first of these Commissions that there was no natural cause predisposing to sterility in Austraha but that the desire for comfort conduced to a fairly general artificial limitation of families As a consequence of this Commission some public opinion against the ten dency to race suicide was aroused, and certain administrative measures were adopted by the Customs and Police Departments which sought to lessen the facilities for artificial limitation of families. It is a coincidence, if not a case of cause and effect. that since 1903 the natural increase of population in the Commonwealth has steadily improved Possibly a healthier public opinion following on the report of the Birth Rate Commission was in part responsible Other possible contributory causes were a great increase in material prosperity following upon Federation and an influx of im migrants from lands where artificial limitation of families was not so much practiced The natural increase per 1,000 of mean population in 1906-10 was 15.93 which was higher than that of any European countries except the Netherlands and Bulgaria and compared with 11 58 for England and Wales A natural increase which is almost the highest in the world must be accounted fairly satisfactory - even though the ' crude birth rate' (number of births per 1,000 of mean population) is rather low (26 7 as

compared with 48 1 in Russia, 25 6 in England and Wales and 19 6 in France) But with a somewhat low birth rate (for a new country) Australia has a very low death rate the lowest in the world except for New Zealand The Australian death rate of 10 4 compares with 14 5 for England and Wales, 30 0 for Russia and 19 3 for France

In regard to immigration Australian public opinion has undergone a marked change within the last few years a change due in the main to a fuller appreciation of the danger of leaving the lonely outpost of the Empire in the South Pacific so bare of There was for many years a desire on the part of the exceedingly prosperous working people of Australia to keep out immigrants as much as possible lest a rush of population should cause a reduction in the wage rate or a hardening of the conditions of life. That desire survives in some quarters and is still a force to be reckoned with in a country where the Labour voters have the controlling power in But it is being recognised by Labour leaders as well as by others that a great access of population is necessary to the safety of the country and need not affect the general prosperity of a continent which has a population of under 5000000, and which has room at a low estimate for 100 000 000 people. In the beginning of Aus tralian colonisation state aided immigration brought a great influx of people to Aus tralia who otherwise would never have been able to afford the expenses of the long journey from Europe Since 1906 the policy of state aided immigration has been re established in Australia by several of the States

The effects of a better natural increase and a better increase from immigration are shown in the following figures since 1991

Year	Natural increase.	Migration	Total gain
1901-1905	284 431	dec 16 793	267 638
1906-1910	334 828	inc 57 278	386 106

On April 3, 1911 the decennial census was taken in Australia and the population ascertained to be 4 455 005, showing a rate of increase for the Federal decennium of 18 05° 0 as against a rate of increase of 18 88 for the previous decennium. But whilst the annual rate of increase from 1901–1906 was only 1 39° 0 the annual rate of increase 1906–1911 was 2 03. The year 1911 showed a total increase of 143 624 to which natural increase contributed 74 324 and immigration 69 300 exceeding in one year by over 50% the total immigration gains of the previous ten years

It is clear that Australia has turned the corner in regard to immigration. For 1912 it was officially computed that the total immigration would be 100 000 persons from the United Kingdom alone, as emigration from the Commonwealth has almost ceased, this will represent a clear gain. The difficulty experienced in 1912 was not in persuading people in Great Britain that there were better chances of prosperity in Australia nor in overcoming any Australian objection to new comers but in securing accommodation on ships to take British emigrants to Australia

Social Conditions — The Australian people are almost wholly British in character a full 96% of the total are of British origin 2 ocome from foreign European countries and 2 of from foreign non European countries. The standard of average education is high and illiteracy almost unknown. The wage rate is generally high and has shown lately a marked tendency to increase. Thus the average wage of females in the clothing trade (taking the lowest paid class of labour) in Victoria was 100 for week in 1897, but in 1910 the average wage was 210 dper week. From a West Australian Labour return endorsed by the Trade Union officials the following current average rates of wages in that state are taken bakers £3 per week blacksmiths for to 120 dd and bricklavers 120 to 140 a day carpenters 100 dd to 120 a day domestic servants 80 to 250 per week engine drivers £2 80 to £3 7 6 per week navvies 80 to 80 dper day, shoemakers £2 140 to £3 a week waitresses from 120 dt 250 per week. These figures are fairly representative of Australia. The cost of living in Australia is affected favourably on the one hand by the low price of the standard was brighted with a wage tate.

The cost of living in Australia is affected favourably on the one hand by the low price of food items which are local products unfavourably on the other hand by the high wage rate ruling in the building trade and the local manufacturing industries. On the whole it compares well with the cost in most civilised countries. In 1911 the statistician to the Componwealth Government Mr G H Knibbs instituted an inquiry into the cost of living from which some valuable facts were gleaned. Taking four sets of family budgets (a) of families with £200 a year and over divided into families of four members and under four

members (b) of families with less than £200 a year divided similarly he found that the members (b) of tamilies with less than \$200 a year divided similarly he found that the average percentage of income spent on housing was 13 70 on food 29 30 on clothing 12 72 on fuel and light 3.46 on other items (including amusements thrift etc.) 40 82% This last figure gives the best indication of a general prosperity 1 e of a substantial margin out of wages and salaries for non essential outgoings. The percentage of income expenditure on food in working class families in Australia is 36% as compared with 57% in the United Kingdom and a general average of over 50 in all other countries for which statistics are available. The indication this gives is of a good margin between wages and cost of substantial properties of the strengthened by the fact—which cannot be supported by official statistics. sistence and it is strengthened by the fact—which cannot be supported by official statistics but is apparent to every observant traveller in Australia—that the working classes indulge in more varied plentiful and luxurious food than the same classes in Great Britain. Thus of a total of 4s 1od epent in food the Australian apportions 6d to bread 1s 1d to meat 71d to vegetables and fruit 61d to milk 71d to butter cheese etc 31d to sugar 21d to tea coffee etc and is to other food

coffee etc and is to other food

The Australian birth rate was 27 21 in 1011

The percentage of illegitimate births to total births was 5 84 in 1910

There has been a very slight decrease in this rate during the last decennium

The Australian population is predominantly masculine the proportion being 108 males to even 100 females

The marriage rate (number of marriages per 1 000 of mean population) was 8 79 in 1911

The rate has improved steadily since 1908 (The rate for England and Wales calculated in the same way is 7 30)

The most favoured age for marriages are between 18 and 30

The average age of bridgeroms is in the professional classes 31 26 years the mercantile classes 29 74

the industrial classes 28 76 and the agricultural classes 30 93

The average age of brides in 1910 was 25 77

The celebration of a marriage is more easily effected in Australia than in England

The facilities for divorce differ in the various states divorces being granted more readily in New South Wales and differ in the various states divorces being granted more readily in New South Wales and Victoria than in the other states. The total of Australian divorces in 1910 was 451 of Victoria than in the other states The total of Australian div which 254 were granted in New South Wales and 141 in Victoria

A di quieting feature of Australian social life is the preponderance of the urban over the rural population. In South Australia nearly one half of the total population of the State (380 000 square miles in extent) is concentrated in the city of Adelaide. In Victoria 44 in New South Wales 38 / of the total population is in one city and in the whole Common wealth 38 of the population is contained within six cities. The charm of the cities is great the conditions in the back country are often hard. By cheap railway rates for great the conditions in the back country are often hard. By cheap railway rates for the farmer, goods by pushing such of the conveniences of civilisation as are under state control as far forward as possible and by other means the states and the Commonwealth strive to counterbalance the call of the cities. But all effort seems to be in vain. The proportion of the urban to the total population is growing. In 1906 Melbourne had 35 of the population of New South Wales in 1911 it had 38 /s. in 1906 Melbourne had 42 of the population of Victoria in 1911 44 /s. and in the whole Commonwealth six cities held 35 49 of the population in 1906 and 38 of the population in 1911. At the last census 4 274 414 of 4 455 005 people were returned as Christians (Church of England 1 710 443 Roman Catholic 921 425 Presbyterian 558 336 Methodist 547 806 being the chief denominations). Of Hebrews Pagans Mahommedans etc. there were 36 785, and some 25 000 were returned as agnostics atheists or freethinkers. There is no etablished church.

c tablished church

Public Health —Though part of Australia is within the tropics there is practically no tropical disease and there is an absence also of small pox hydrophobia and other diseases which are known in some parts of Europe The death rate from all causes in 1911 was 1066 including the death rate for the tropical Northern Territory 1958) It is the lowest death rate in the world except one I ately there has been a betterment in regard to the infantile death rate which the hot summers ruling over the greater part of the Common wealth make the chief cause of public health anxiety. In 1901 it stood at 103 61 per thou sand in 1910 at 74 81 per thousand. It is noticeable that an abnormally hot summer forces up the infantik death rate but this rate has been brought down to as low as 71 56 per thousand in 1909 To lessen infantile mortality and at the same time to encourage the birth rate there are two remarkable p oposals (both likely to be carried through) before the Australian public to day. One is that of the Commonwealth government to pay a bonus of £5 to the mother of every infant born in the Commonwealth whether legitimate or illegitimate. The other is that of the New South Wales State government to provide a free and compulsory medical service in childbirth. Apart from infantile mortality, the chief fees to human life in Australia are tubergulosis, cancer diseases of the heart and yielence. foes to human life in Australia are tuberculosis cancer diseases of the heart and violence The deaths from malaria (tropical) numbered forty in 1910

Education — The Australian system of elementary education is free compulsory unde nominational and usually secular Secondary education is not free but a generous system of bursaries makes education to the stage of a University degree available to the poorest in most states. There is also a good system of agricultural and technical colleges. Slight differences as regards religious teaching exist in the various States In Queensland un denominational teaching of the Bible is allowed, and clergymen may give religious teaching within school hours to children of their respective denominations. In New South Wales and Western Australia general religious teaching is part of the course. In other states the system is more rigorously secular. In no state is denominational religion taught in the state schools but private denominational schools exist being maintained especially by the Roman Catholic Church The compulsory age for school attendance is in the largest States from six years to fourteen years in no State less than six years

Production and Industry—Australia down to the end of 1912 had enjoyed seven fairly do years The early stage of the Federation was marked by a severe drought which

good years The early stage of the Federation was marked by a severe drought which checked for a time the development of prosperity. But since 1905 the growth of prosperity in the Commonwealth has been very great. A valuation of the total production of the Commonwealth shows in 1907 a value of £114 585 000 (average per head £30 2 6) in 1909 £174 503 000 (per head £40 16 6) and in 1910 £187 734 000 (per head £42 19 2). In 1906 the total value of the pastoral products of the Commonwealth was £45 389 000 in 1909 £30 660 000 in 1908 £47 259 000 in 1909 £50 640 000 in 1910 £56 993 000. These returns from the chief Australian industry afford a safe index to the growth of prosperity in others. The area under crop in 1905-06 was 9 433 455 acres. It amounted in 1906-07 to 9 552 800 acres in 1907-08 to 9 358 902 acres in 1908-09 to 9 891 243 acres in 1909-10 to 10 972 299 acres and in 1911-12 to 12 105 125 acres. The production of wheat increased from 68 520 772 bushels in 1905-06 to 95 111 983 bushels in 1910-11 of a value of £16 458 187. The figures for 1911-12 are not so good the estimated yield being 71 664 971 bushels the falling off was due to a somewhat unfavourable season. The growth of sugar cane in spite of the great change made in its conditions by cutting off the supply of coloured labour has held its own. In all other crops—fruit vines oats hops potatoes—there was either progress or stability. Some promising undications were gleaned of luture success in the cultivation of coffee tobacco. Cotton oil plants and fibres. In dairy farming there was great tion of coffee tobacco cotton oil plants and fibres. In dairy farming there was great progress The export of butter in 1906 was 75 802 856 lbs. in 1910 it was 87 928 151 lbs and the value of dairy farm exports increased from £3 352 803 in 1906 to £4 127 074 in 1910 The total yield from agriculture including dairy poultry and bee farming was £38 960 000 in 1906 and £57 139 000 in 1910 In mineral production Australia kept a high place in spite of the dwindling gold returns from Victoria and West Australia. The mineral production of the Commonwealth reached to its highest point (£28 301 346) in 1907 In 1908 it was £24 580 303 in 1909 (the year of a disastrous coal strike) £23 074 935 in 1910 it was £23 215 191 The chief items in this total were gold £11 553 840 coal £3 684 041 copper £2 389 412 silver lead bullion and ore (shipped abroad to be refined) £1 934 735 tin £950 768 and zinc £1 289 781 The great mineral resource of the future in Australia tin 1950 768 and zinc 11 289 781 The great mineral resource of the future in Australia will doubtless be coal A conservative estimate of the amount of coal available for easy working in the state of New South Wales alone is over a thousand million tons oil shale exists also in Australia and the Commonwealth Government is now offering bounties to the extent of £20 000 a year to encourage the local production of kerosene and paraffin wax Up to 1910 the value of the products of oil shale in New South Wales had reached £2 251 081 and the actual years production was worth £33 896 mania have also deposits of oil shales Queensland and Tas

There has been a steady progress in manufactures in Australia since the Federation In 1907 the total of wages and salaries paid in factories was £18 323 977 with an average wage of £77 32 In 1910 the total of wages paid was £23 874 959 with an average wage of £87 11 The total value of the output of factories in 1909 was £107 409 733 in 1910 £120 770 674 The value added in process of manufacture was £42 216 495 in 1909 and £48 048 032 in 1910 The factory industries are not so far of a highly organised type Great iron industries are yet to be created though the presence in many parts of Australia of deposits of iron ore and the cheapness of coal have invited their establishment for many vears In 1909 the Australian Government offered bounties to a total of £150 000 for pig iron puddled bar iron and steel made from Australian ore and further bounties to the extent of £30 000 for galvanised iron wire netting and iron pipes So far however no very great results have followed During 1912 there were reports that great iron smelting works were about to be established in New South Wales by a company which had been before

chiefly interested in silver mining

Forests and fisheries bring an amount of nearly £5 000 000 to the Australian purse. But in neither case is there creditable progress The timber resources are usually prodigally wasted and until very recently there was no attempt at reforestation. The fisheries are not exploited in any systematic fashion there being little or no deep-sea fishing or fish curing. In both these matters however better things are promised in the future. Bounties were available during 1912 to the extent of £10 000 for Australian preserved fish and there are 13 fish-curing establishments. In 1900 the Federal Government launched the Endeav our "a vessel specially built to investigate and chart deep-sea fishing grounds. The En 'a vessel specially built to investigate and chart deep-sea fishing grounds deavour has since been engaged in the collection of information regarding the migra tion feeding grounds etc of fish in the waters off the Australian coast and it is hoped that the ultimate result will be the foundation of a great fishing industry

Trude and Commerce -Since Federation the overseas trade of the Commonwealth has increased rapidly. In 1901 the total was valued at £92 130 000 in 1911 at £146 456 000

The records since 1906 have been

Year	Imports	Exports	Total	Value per inhabitant
1006	44 745 000	69 738 000	114 483 000	€28 g to
1007	51 809 000	72 824 000	124 633 000	30 4 5
1908	49 799 000	64 311 000	114 110 000	27 4 T
1909	51 172 000	65 319 000	116 491 000	27 5 0
1910	60 014 000	74 491 000	134 505 000	30 15 6
1911	66 973 000	79 483 000	146 436 000	32 12 5

The unfavourable figures for 1908 were due in a large measure to the financial crisis in the United States causing a lower range of world prices for wool and metals. The total

the United States causing a lower range of world prices for wool and metals. The total public indebtedness of Australia is £267 127 283—most of it borrowed abroad—on which an average rate of interest of £3 1.4 4° per annum is paid. The payment of this interest affects the export figures. The import figures on the other hand are swollen by the continuance of public borrowing from abroad which averaged for the nine years to 1911 about £6 000 000 a year. Probably in a normal year one item nearly balances the other. The bulk of Australia's trade is with Great Britain and with British possessions. Of the imports in 1910 totalling £60 014 351. £36 646 441 were from the United Kingdom £7 865 649 from British possessions and £15 502 261 (not much more than one quarter) from foreign countries. Of the exports in 1910 totalling £74 491 150. £37 698 312 were to the United Kingdom £8 323 486 to British possessions and £28 469 352 (more than one third) to foreign countries. British imports to Australia have preferential tariff treatment A profitable future is promised for Australian trade in supplying Asiatic countries with A profitable future is promised for Australian trade in supplying Asiatic countries with food products minerals and raw materials for textiles. Steps are being taken to foster this

trade and it has grown in value from \$2.298 000 in 1904 to \$5, 121 000 in 1910

Communications—There were at the end of 1911 a total of 18 012 miles of railways open for traffic in Australia showing an increase of nearly 1 000 miles over the previous year Practically all the railways are owned by the state governments There are four different gauges in use broad standard narrow and very narrow. The Commonwealth has constitutional power with the states consent to take over the railway systems and unify the gauges but the power is not likely to be exercised for some time. At present Queen land and New South Wales are foremost in railway development. The Commonwealth Govern ment has acquired from South Australia the railway line from Port Augusta to Oodnadatta and has taken over with the Northern Territory the short railway from Port Darwin to Pine Creek It is intended to connect Pine Creek with Oodnadatta thus making a north to south trans continental railway. Other proposed Commonwealth lines will connect the new Federal Capital with the Sydney to Melbourne main line and with the Federal port of Jervis Bay. In a more advanced stage is the line which will complete railway communication between east and west. This trans-continental line from Port Augusta in South Australia to Kalgoorlie in West Australia will stretch over 1 100 miles and the estimated co t is £3 989 000. The work is being carried out by the Government without the interven

tion of contractors and was put in hand in September 1912

The capital cost of the Government railways in Australia had reached to £152 855 000 in 1911

They are the chief asset standing against the public indebtedness of various states The net revenue of these railways provides 4 44% for interest and sinking fund on the capital invested. After payment of all working expenses and interest there was calculated to be a

profit of £1 424 000 in 1911 available for debt redemption
Several great shipping companies have arisen in Australia to carry on the coastal trade
the trans oceanic trade is mostly in the hands of British companies, though Australian Cerman French Italian Norwegian and American lines have some share The policy of the Australian Government is to seek to secure as much as possible of the coastal trade for Australian vessels and to banish coloured labour from all ships trading to Australia shipping legislation can only be carried out with the assent of the Imperial Government these ideals cannot be fully realised but the Commonwealth enforces white labour con ditions to some extent by refusing postal subsidies to vessels employing coloured crews A new Navigation Bill drafted after several consultations with the Imperial Government passed through its final stages in the Commonwealth Parliament in 1912. In this measure there are elaborate provisions for the safety of ships and the comfort of crews The coastal trade is confined to Australian ships and to foreign ships licensed to engage in that trade licenses are subject to the payment whilst on the Australian coast of Australian wage rates to seamen and a further condition is that the ship receives no bonus or subsidy except from the Australian Government

The proportion of British to foreign shipping entering and clearing Commonwealth ports is roughly 77 4 to 22 5

Finance (Public)—The prosperity of Australia during the last quinquentium is reflected in the public revenues. The Commonwealth collects the revenue from Customs Excise Land Tax Posts Telegraphs and Telephones. Coinage (including Bank note issue) and fees from various small services such as the Patents Office. It has to meet from this revenue that the rest of seven the services (see her except and the services). the cost of naval and military defence of its services (such as postal and telegraph) and of

its administration and to pay a fixed annual subsidy to the state governments of 25s per head of the population resident in each state. In addition it has to meet the cost of the trans-continental railway from west to east already in process of construction of the proposed trans-continental railway from north to south and also of the administration of the Northern Territory taken over from South Australia

The early years of Federation were hampered by the want of revenue owing to the operation of the Braddon clause of the Constitution But it was possible to make great changes in the financial position when Mr Fisher took office in 1910 The lapsing of the Braddon clause gave him a larger share of the Customs and Excise receipts The Land Taxes he imposed brought in a revenue of £1 370 344 in the financial year 1910-11. The Australian Notes Act which he passed made the Commonwealth Government the 1951ing authority for bank notes up to the value of £7 000 000 against which a gold reserve of one fourth that amount was to be kept. The issue might go above £7 000 000 but for any sum above that limit a gold reserve equal to the full issue had to be kept. A subsequent Act abolished this qualification, and left the amount of the issue unlimited provided that a gold reserve of 25% of the total was maintained Serious objection was taken to this amend ment in financial quarters and Mr Fisher undertook not to put the amending Act in force until after the General Election of 1913 At the same time as the Australian Government note issue was authorised a tax of 10% per annum was imposed on the amount of all notes issued by private banks and any note issues by state governments were prohibited. Also a Commonwealth Bank having all the ordinary functions of a bank with a Savings Bank Department superimposed was established and opened its doors in 1912. In 1912 the Commonwealth note issue had reached to £10 048 472 against which a gold reserve of £4 841 536 was held

The growth of Commonwealth revenue since 1906 is shown below in thousands of pounds which disregards small items except in the computation of the grand totals -

	1906-7 £000	1908-9 £000	1910-11 £000	1911-12 £000	1912-13 Estimate £000
Customs and Excise Post and Telegraph	9 631 3 128	10 8.14 3.409	12 980 3 906	14 710 3 916	14 511 4 202
Land Tax			1 370	1 366	1 300
Total	12,816	14,350	18 806	20 546	20 422

The expenditure has also grown Excluding the subsidy paid to the states the Au tralian Government spent £4 987 317 in 1906-07 £7 499 516 in 1909-10 and £13 158 529 in 1910-11 (the chief increase that year being in respect of the construction of the Australian Navy) £14,297 572 in 1911-12 and (estimated) £16 604 791 in 1912-13 of which however £2 261 541 did not come out of current revenue Expenditure grows in all departments as new respon subilities call for outgoings The deficit on Northern Territory administration for example was £166 856 in 1911 (a half year only) On the other hand the subsidy to the states which in 1906-07 was £7 845 574 and in 1909-10 £8 492 436 under the Braddon clause dropped in 1911-12 to £5 821,423 under the new system of a definite subsidy of 25s per capita.

The debts of the various states can best be refurred to here because the Commonwealth.

Government sought in 1910 and was granted by Act of Parliament and Referendum the right to amend the Constitution so as to take over all the State debts and make them into one Federal debt. The total of the State debts outstanding in 1911 was £271 750 944 and they have largely increased during 1912. The total is represented in the main by such solid assets as railways. The transfer of these debts to the Commonwealth would involve presumably the transfer of the assets which stand against them and would also necessitate some arrangement for Federal control of future borrowing The Prime Minister announced in September 1912 that he was devoting earnest attention to the matter

in September 1912 that he was devoting earnest attention to the matter Finance (Private)—There are twenty one private banks trading in Australia Their paid up capital totals £20 181 758 and their reserved profits total £10 330 457 Their total deposits in 1911 were £143 446 910 and the total of the advances made by them £108 578 774 Their total liabilities were £148 835,219 and their total assets £159 565 443 The last dividends of the four greatest banks were 10°, 10°, 14°, and 12°, respectively The Savings Banks figures show a prosperous and thrifty working population. In 1911 there were 1 600 112 individual depositors in the Savings Banks of Australia a proportion of 362 to every thousand of the population. The total of deposits was £59 393 682 giving an average deposit of £37 2s 4d per depositor or of £13 8s 5d per head of the whole population. The life assurance figures impress the same lesson. There were nearly a million life assurance policies in force in Australia for 1910 More than half of these were mellion life assurance policies in force in Australia for 1916 More than half of these were for small amounts, but the total sum assured exclusive of bonus additions was about £110,000 000 Further the Friendly Societies have a total membership of 400 000 and a yearly revenue of £1,538,532

Government and Politics—Under the Federal Constitution the Commonwealth is governed by a Governor General appointed by the British Crown and acting on the advice of a Cabinet which is responsible to an Australian Parliament of two Houses. The Senate represents the states and is composed of six members from each state elected for six years by the adults of the state voting en masse every three years to return three Senators—the House of Representatives is about double the Senate in numbers (15) represents the people numerically and is elected every three years by the adults of Australia voting in single member electorates which are approximately equal in population—The number from each state varies with the growth of population—The Australian Parliament can only act within the powers set forth in the Constitution. The High Court is the final interpreter of that Constitution and may veto any legislation either of the states or of the Commonwealth which is ultra vives.

It was not until the election of the fourth Parliament in 1910 that the political system of the Commonwealth of Australia began to have an aspect of permanency and it is necessary to refer back to 1901 to understand fully the position

At the outset there had been some promise that the early years

of the Umon would have been marked by a truce among all political

First

1901-03

Parliament

of 1012

parties during which the machinery of the new Government would be This promise had been illustrated in the choice of the first Ministry established firmly The first Governor General of the Commonwealth (the late Marquis of Linlithgow) in a situation which offered him the guidance of no precedent had followed a sound constitutional course by sending for the Premier of the senior of the Federating states Sir Wm Lyne But public opinion did not endorse the choice Sir William Lyne (born in Tasmania in 1844) was a type of the politician who had served well in He had been the first champion of a I rotective tariff in New the days of the states South Wales had risen to be her Premier, and had marked his term of office by a programme of social reform which had endeared him to the powerful Labour Party But he had not been enthusiastic for Federation rather otherwise Public opinion de manded that the first government of the Union should be formed by its champion Sir Edmund (then Mr) Barton (born in New South Wales in 1849) Mr Barton had never been at home in state politics though he had early devoted himself to a Parlia mentary career entering the New South Wales Assembly as member for the University of Sydney in 1879 His enthusiasm waited for the cause of the Federation of Australia After the death of Sir Henry Parkes he assumed the leadership of the Federal move ment having for his chief heutenants Mr Alfred Deakin in Victoria Sir Samuel

Griffith in Queensland Mr B R Wise in New South Wales and the late Mr Kingston in South Australia The Convention which framed the Federal Constitution had recognised Mr Barton's services by electing him as its leader. Now there was such an unmistakable demand that he should be Federal Prime Minister that Sir William Lyne was unable to form a Government and advised that Mr Barton should be sent for 'The latter called to his side all the Premiers of all the Federating states with one exception they responded, and this Ministry of 'all the talents appealed to the

people for support on a non party platform

But this fair promise at the outset was not fulfilled. Party warfare broke out at the first elections with great violence. Sir George (them Mr.) Reid led one opposition party. He had been the chief opponent of Federation. Born in Scotland in 1845, he went to Australia as a boy with his father a Presby terian clergy man entered the Civil Service ventured on a political career somewhat late in life and entered the New South Wales Parhament as a champion of Free Trade which was just then being attacked in its last Australian stronghold. Federation was to him anathema for he saw that it would be fatal to Free Trade in New South Wales. But he finally recognised that the movement for Union was too strong and as Premier of New South Wales he had convened the Federal Convention of 1809 which framed the Commonwealth Constitution. Now that Federation was achieved he went to the polls in a Free Trade attack upon the Barton administration.

Another attack came from another quarter. In the various states there were labour parties of varying strength very influential in New South Wales Queensland and South Australia, weaker elsewhere These combined in a Federal organisation and as a third independent party went to the polls under the leadership of one of the remarkable men of Australian public life Mr J C Watson Born of poor Scottish parents in 1867 whilst on the voyage to Australia Mr Watson was in boyhood deprived of nearly all the advantages of education, but taught himself enough to become a printer Sagacious tactful resolute he came to the front in the Australian Labour movement and was elected first leader of the Federal Labour party of the Labour party under his leadership at the polls was extraordinary Parliament of the Commonwealth was divided as between the Government followers and Mr Reid's Opposition party almost equally but with the Labour party (16 strong in the Representatives 8 strong in the Senate) holding the balance of power

This made a position of grave difficulty for the Government The common sense and moderation of Mr Watson saved the situation to some extent He gave a general support to the Government and assisted them in their most pressing tasks. Never theless the first Parliament was hampered by party fighting, the opposition seeking to win the Labour party over to their side and the Government being forced to post pone a good deal to modify a good deal in order to keep in office. Sir Edmund Barton was deeply disappointed He had looked to a first patriotic Parliament completing without any ' scuffling on the steps of the temple '-to use his own phrase the measures necessary for the stability of the Federation He experienced a first Parhament in which party rancour had been extraordinarily rife. He retired to accept a Federal judgeship and Mr Deakin took his place (September 1903)

Mr Alfred Deakin (born in Victoria in 1856) had cherished an enthusiasm for Federation not inferior to that of Sir Edmund Barton But he had resolutely put away from him the idea of competing for the Federal leadership recognising that it was best in the hands of a citizen of New South Wales the chief citadel of anti Fed eralism He now took over the government at a time of great difficulty Mr Watson had led his Labour forces with moderation and with a sense of patriotism as distinguished from 'partyism' Nevertheless the Labour member and even more exigently the Labour voter had to be placated with some 'Labour legislation One of these Labour measures the Industrial Arbitration Bill had almost wrecked the Barton Government The opposition fostered a point of division between the Government and its Labour allies, and on this point there arose a crisis, which was interrupted by the General Election of 1903

Mr Deakin met the Second Parhament of the Commonwealth in 1904 with his own following reduced the following of the Labour party increased (23 in the Repre

sentatives 14 in the Senate) and with party feeling embittered by the Second recriminations incidental to a contest at the hustings. Business was Parliament. impossible, though Mr Deakin proved to be an able and tactful leader 1983-87 In April 1904 Mr Deakin went out of office and was succeeded by Mr In August of the same year Mr Deakin gave his support temporarily to Mr George Reid and a Reid McLean coalition administration supplanted Mr Wat son's This lasted through a long recess and a few days of Parhamentary life and in July 1905 Mr Deakin came back to office with the support of Mr Watson Mr Watson was even at that time determined on resignation. But he was strongly convinced that a measure of tariff reform was necessary, and determined to remain in Parliament until it was effected The first Federal tariff had had to make concessions to Free Trade sentiment The second tariff was completely protectionist and intro duced a new principle into Australian politics by granting a "preference" to British imports At the third General Election in 1907 the Labour party again improved its position, mostly at the expense of its allies

Mr Watson kept the leadership of the Labour party, and kept that party solidly behind Mr Deakin, until the tariff was settled Then he retired and Mr Andrew

fisher took his place Born in Scotland in 1862, Mr Fisher was brought up as a coal-He went to Queensland in 1885 entered the state Parhament and later the miner Federal Parhament He had been included in Mr Watson's Cabinet Third Now assuming the leadership he very quickly gave Mr Deakin notice to Parliament out and in 1908 formed his own administration. It lasted however little 1907 10 more than six months Mr Deakin then formed a coalition with the remnants of the Free Trade opposition no longer now led by Mr George Reid but by Mr Joseph Cook his lieutenant, and the Deakin Cook administration came into office one of its first acts was to send Sir George Reid to London as High Commissioner for the Commonwealth Mr Cook like Mr Fisher had been a miner He entered New South Wales Parliament as a Labour member drifted away from his party and entered the Federal Parliament as a Free Trader, was the chief supporter of Mr Reid in an Anti socialist party and now joined with Mr Deakin to oust the Labour party from office one ground of attack being their lack of proper sympathy with the cause of Imperial defence

This was at the time of the European crisis over Austria's annexation of Bosnia Herzegovina when public interest throughout the British Empire was being stirred over the question of maintaining British supremacy at sea and strengthening the hands of the Imperial Government in view of increasing international complications. New Zealand had promptly offered to provide a "Dreadnought' for the British navy. It was objected that Mr. Fisher had not done likewise. He claimed that his Imperial patriotism was not wanting but that in his judgment more useful action could be taken by hurrying on with the creation of an Australian navy. This navy he stated in a despatch to the British Government would be organised and controlled by Australia in times of peace but on the outbreak of war would pass automatically to the control of the British Admiralty. Mr. Fisher's direct following though he was helped by Sir William Lyne, who now left Mr. Deakin's party could not maintain him in office and in June 1909 the Deakin-Cook administration came into power Amid briter party wrangles the third Australian Parliament closed its life expring by effluxion of time in January 1910.

The General Election of 1910 resulted in a sensational victory for the Labour party under Vr Fisher. The party captured a working majority in both the Senate and the House of Representatives. The position of parties was Dealin Cook followers—Representatives 31 Senators 13 Labour party—Representatives 42 Senators 23 In the House of Representatives there were two independents. On April 9 1010 Mr Fisher formed his second administration under circumstances unique in Australian Federal history. In the Senate and the House of Representatives the opposition was powerless the more completely so because the Labour party majority was bound solemnly to party fidelity. No opposition criticism on any issue could hope to detach a single I abour member from his allegiance to the Government which in regard to all its measures consulted a caucus of its supporters beforehand as to both principles and details

The decision which gave Australia's de times completely into the hands of the Labour party (and that not the Labour party of Mr Watson but of Mr Fisher—much mere of a party 'man) was influenced very largely by negative considerations. The people disliked deeply the coalition of Mr Deakin with Mr Cook who had before seemed to represent absolutely irreconcilable ideas in politics—and a vote for the Labour party was in many cases a vote of no confidence in the coalition rather than actually an endorsement of Labour policy—An indication of this fact was given a little later, when the Labour Government (May 1911) submitted to a direct poll of the people amendments of the Federal Constitution, without which it could not carry out its Labour policy—These amendments sought—(a) to give the Commonwealth Parliament full power to legislate with respect to trade and commerce instead of the limited power it had under the Constitution (the limitation stood in the way of Federal legislation dealing with the conditions of labour), (b) to give the Commonwealth

Parliament full power over all trading corporations (c) to give the Commonwealth Parliament specific power to deal with the wages and conditions of labour and labour disputes (d) to give the Commonwealth Parliament power to deal with all combinations and monopolies. A further proposed amendment of the Constitution gave the Commonwealth Parliament power to declare that any business was a "monopoly," and following such declaration to acquire it paying on just terms for any property used in connection with it. By a majority of about a quarter of a million votes in a total poll of about I 155,000 votes the people declared against these amendments of the Constitution. Thus a Labour Government was left in office without power to carry out its Labour policy. It was announced that these amendments would be submitted again at the General Election of 1913.

Thwarted by the safeguards of the Constitution and the refusal of the people to allow amendments removing those safeguards in an effort to move further towards the ideal of a socialistic state the Fisher Government was yet able to carry out much advanced legislation Its first task however had been to clear itself very completely of any suspicion of a lack of earnestness regarding the defence of Australia and the In 1909 whilst Mr Deakin was Prime Minister, an Act of Parliament had been passed enforcing military training on all able bodied male citizens. This enact ment of universal service had not been opposed by the Labour party criticism was that the system proposed to be enforced was not thorough enough and the Government of the day promised that an expert from Great Britain should be asked to report on the system Field Marshal Viscount Kitchener accepted an invitation to visit Australia and his report was before the Parliament of 1910 with a Labour Government in power That Government not only accepted all his recommendations but in some cases crossed his ts and dotted his is There was established a system of universal training for military defence which Lord Kitchener guarantees as adequate and which the Fisher Government has enforced against various protests with a resolute courage In the matter of naval defence the Fisher Government was equally firm in dissociating itself from any faltering policy

Mr Fisher in carrying on and extending the defence policy of his predecessors gave the opposition no reason for hostility. But his Land Tax was hotly contested During his brief administration Mr J C. Watson had foreshadowed a Land Tax, the purpose of which was to be economic rather than fiscal that is to say it was to be designed chiefly to make the holding up of big estates against closer settlement un profitable and the collection of revenue was to be but an incidental matter. Mr Fisher's Land Tax kept this "bursting up' of big estates in the foreground but owned to a material interest in securing additional revenue to finance the great defence schemes which had been entered upon. Estates of under £5000 in unimproved value were exempted if their proprietors were resident in Australia (absentee landlords had no exemption) upon estates of over £5000 in unimproved value the tax was at the rate of one penny in the £ rising rapidly with the value of estates until at £75000 unimproved value the rate was 6d in the £, beyond which it did not go. In case of absentees the rate is higher culminating in a tax of 7d per £ of unimproved value

Another highly important financial measure carried through by the Fisher Government was a re arrangement of the financial basis between the Commonwealth and the states. The original financial basis of the Commonwealth Government was absurd, but it had been forced upon the makers of the Federation by circumstances. It was found during the various sessions of the Convention which sat to frame a Constitution that Federal enthusiasm was apt to evaporate, and to be replaced by a hard bargaining spirit as soon as the allocation of revenues came to be discussed. There were six states to be united two of them (New South Wales and Victoria) rich and powerful two others (Tasmania and West Australia) poor in revenue and in population, two others (Queensland and South Australia) occupying middle places. As soon as the issue came up as to how the Commonwealth revenues were to be collected and distributed, the representatives of the large states began to fear that the small states

would "live upon them" the small states began to fear that their revenues would be destroyed in the interests of the big states. Tasmania and West Australia won a large proportion of their income from the Customs taxation of goods from the other states and that source would disappear with inter state Free Trade. The difficulty was finally solved by a clause called the "Braddon clause" (or in party polemics the Braddon Blot.) after its author the late Sir Edward Braddon, Premier of Tasmania.

The Braddon clause provided that the Commonwealth Government, after collect ing the Customs and Excise duties should pay back at least 3 of them to the revenues of the various states The idea was ingenious The Commonwealth Government in order to get 5s for itself would have to collect 15s for the states and thus the smaller states could rely on no starveling policy of Customs and Excise taxation every body said that the clause was absurd without being able to suggest an alternative It was put in the Constitution with a provise that it should last but ten years the first three Parliaments several efforts were made to secure by agreement with the states a less crippling arrangement. But party strife prevented resolute action on the part of any Federal treasurer On their part the states were firm to maintain a system which in some cases they thought to be the only safeguard against bankruptcy while in other cases they recognised it to be a source of most abounding revenues which they had the pleasure of spending but not the odium of collecting Cook administration on the eve of going to the country in 1909 made an arrangement with the state Premiers to amend the constitution so that in place of the provisions of the Braddon clause the Commonwealth should pay to the states 255 per head of population per annum out of the Customs and Excise collections ment was sanctioned by Parliament To come into force however it required the endorsement of the people at a referendum. That endorsement was refused position then when Mr Fisher took office for the second time was that the Braddon clause of the Federal Constitution was on the point of expiry and that the whole of the Customs and Fxcise revenues would then be at the unfettered disposal of the He could have destroyed the financial independence of the states Commonwealth He took a moderate course and by an Act of Parliament of 1910 the states are allowed subsidies of 25s per head of population per annum out of the Customs and Excise revenue for ten years At the end of that time the Federal Parliament can make any other disposition that it thinks fit since there is now no Constitutional provision on the subject

Mr Fisher with two of his colleagues attended the Imperial Conference of 1911 He was apparently impressed by the degree of confidence with which the British Government consulted the representatives of the overseas dominions. A first indication of the intention of Australia to take an active part in the foreign policy of the Empire was furnished in August 1912 by a protest against the United States policy in regard to the Panama Canal

Australia at the end of 1012 was on the eve of her fifth General Election. The Labour party intended to ask for a renewal of confidence and for such amendments of the Constitution as would enable them to carry further their socialistic policy. The Opposition under Mr Cook.—Mr Deakin announcing in December his withdrawal from the leadership.—raised a warning against this policy and condemned the administration of the Government as tinged with favouritism and inefficiency. The Opposition party was not as well organised as the Government party and it showed some signs of internal dissension. Many of its friends feared that it would succeed only in weakening and not in defeating the Labour Government. It was impossible for it under any circumstances to secure a majority in the Senate, even if it won all the 18 seats to be contested for all the 18 Senators who were not retiring at the election of 1913 were Labour members. A by election in 1912 at Werriwa (N.S.W.) at which the Labour party held the seat by a greatly decreased majority seemed to foreshadow this result.

The Governor General of the Commonwealth in 1912 was Lord Denman The following were the names of the Cabinet still in office at the end of the year_

Prime Minister and Treasurer
Attorney General
Minister for External Affairs
Minister for Home Affairs
Postmaster General
Minister for Defence
Minister for Trade and Customs
Vice President of Executive Council
Honorary Ministers

Honorary Ministers

Home Affairs
I Thomas
K O Malley

The Constitution and the High Court — The Federal Constitution in safeguarding the Federal power from trespass by the states and the power of the states from trespass by the Federation, necessarily set up a system of conservative check. But the full extent of that check was only understood when a High Court began to interpret the statutes in the light of the Constitution. Already a considerable amount of the legislation of the Australian Parliament has been declared ultra vires by the High Court. Some of the decisions affected political issues so deeply that it was sought to amend the Constitution so as to facilitate "Labour legislation but this effort failed. The power to amend the Constitution is in itself subject to many safeguards. A proposed amendment must first have the approval of an absolute majority of both Houses of Parliament. It is then submitted to a poll of the people and to pass it must secure (a) a majority of the total votes cast (b) a majority of the votes cast in a majority of the states. If the three largest states voted 'Yes' and the three smallest states voted "No' though the total Australian vote was "yes," the proposed amendment would still fail

In 1906 the Australian Parliament had passed an "Excise Act" which was intended to enforce what was called "the New Protection —A high protective Customs Duty had been placed on agricultural machinery and at the same time an Excise Duty on the same machinery manufactured locally with the provision that the Excise Duty should be remitted if the manufacturers paid "fair wages" On June 26 1908 the High Court declared this Act invalid on the ground that it was not what it purported to be—a taxing Act but rather an Act to regulate wages within a state a thing which the Federal power was not competent to undertake under the Constitution

The first two Australian Parliaments devoted much time to discussing a Federal Industrial Arbitration Act, which included in its control state railway servants. This inclusion was nullified by a High Court decision that it was an unconstitutional interference by the Federal power with the affairs of the states. In the Trade Marks Act the Australian Parliament gave Trade Unions the right to register what is known in the United States as the "Union label" a mark showing that certain goods were manufactured by Trade Union labour only. The Australian High Court (August 1908) set this part of the statute aside on the ground that such a "Union label" was not a genuine trade mark and the proposal to register it as a trade mark was really a subterfuge to assume control of labour conditions which were outside the province of the Commonwealth

Not only Federal legislation but state legislation has been vetoed. An Arbitration Act in New South Wales had sought to give the widest powers of regulating in dustrial disputes. In a sense of five appeals the High Court gave such a strict interpretation to the provisions of that Act that it was more than half destroyed. (The High Court is the only Court of Appeal in cases affecting the Constitution, and is with the Privy Council an alternative Court of Appeal in all other cases.)

In 1913 an effort was to be made to secure from the people a reversal of their verdict in 1911, when they refused to give endorsement to amendments of the Federal Constitution which would legalise for the future the Federal and Labour legislation which the High Court had vetoed Meanwhile the Australian Constitution as interpreted by the High Court is a barrier against any great development of socialistic enterprise on the part of the Commonwealth Government

Since the beginning of the Federation there have been two alterations of the Constitution sanctioned one unimportant, was designed to improve the electoral machinery the other gave the Commonwealth power to take over all the states debts. Three proposed alterations have been rejected one which proposed to make constitutional provision for a subsidy to the states one which proposed to give the Commonwealth Parliament control of labour legislation and one which proposed to give the Commonwealth Parliament power to take over monopolies and conduct them under state control

The Australian High Court was originally constituted (1903) of three Judges Sir Samuel Griffith (chief) Sir Edmund Barton and Mr. R. E. O. Connor. In 1906 two other Judges were added Mr. Henry Bournes Higgins and Mr. Isaac Isaacs. In 1912 it was proposed to strengthen further the Court to seven Judges. Sir Samuel Griffith (born in Queensland in 1845) had a distinguished career as a politician in his native state. He took an early interest in the Federal movement was President of the Federal Council (which preceded Federation) from 1888 to 1893 and was chiefly responsible for the framing of the first Federal Constitution on which the more popular Constitution subsequently adopted was modelled. Sir Edmund Barton's services to Federation have been al early roled. Wr. Richard E. O. Corro (born in New South Wales in 1851) was also one of the first advocates of Federation he died on November 18 1912. It was a curious circums stance that all three members of the first High Court were graduates of Sydney University Mr. Higgins (born in Ireland) was leader of the Equity Bar in Victoria and accepted office as Attorney General in Mir. J. C. Watson's first Labour Ministry (1904). Mr. Isaacs (born in Victoria in 1855) had a distinguished carter in state politics and was Attorney General in Mr. Deakin's second administration.

Industrial Disputes -In spite of much advanced "Labour legislation the in dustrial situation in Australia has not been altogether peaceful recently on the Victorian State Railways in 1903 was followed in 1908 by a strike on the Sydney State Tramways Both of these strikes against state employment failed South Wales in 1908 altered its Indu trial Arbitration system and this alteration being resented by the Trade Unions various small strikes followed. The next year (1909) more serious strikes broke out on the Broken Hill (NSW) silver mining and the Newcastle (NSW) coal mining fields Stern measures were taken by the New South Wales Government to repress these strikes and the leaders in the strike move ment were arrested and some of them punished with imprisonment. In 1910 there were strikes of tramway employees at Perth (W A) and of transport workers at Ade laide (SA) In 1912 the tramway employees of Brisbane came out on strike because of a slight grievance against their employers (a private company) The leaders fomented a sympathetic strike on 'Syndicalist' lines calling out the workers in every industry with the avowed object of preventing all business. Serious riots accompanied the strike The state Government acted however with decision and the strike disorders were crushed and the Syndicalist movement deteated. This strike had not the general sympathy of Labour leaders in Australia Shortly after the Queensland Premier Mr Denham, went to the country to ask for sanction for a policy of dealing sternly with labour disorder The General Election gave him a substantial majority, and he passed legislation (1912) making strikes illegal without due notice and without a secret ballot of the Trade Union affected

The Labour Government of the Commonwealth has amended the Federal In dustrial Arbitration Act (introduced by the Deakin Government and passed by the Reid McLean Government)

It originally forbade the employment of Trade Union funds for political purposes

That restriction has been removed

The Tariff —The first Australian Tariff Act of 1901 was introduced by the late Mr Charles Kingston then Minister for Customs in a form very like that of the later Tariff Act of 1908. In 1901 Free Trade opposition and Labour party criticism cut down Mr kingston's proposals materially and his Tariff did not satisfy the Protectionists. But party divisions prevented reform for seven years. During 1906 however several small Tariff Acts were passed the chief of which provided for a measure of Preferential Trade with South Africa. The 1908 Tealff Act raised the tariff generally and provided for a preferential rate on certain goods imported from Great Britain.

In 1910 the system of Customs book keeping between the states was abolished in consequence of the substitution for the Braddon clause of a fixed subsidy from the Commonwealth to the states. Since then there have been no material changes in the Tariff and the Customs Minister. Mr. Tudor has expressed the view recently that the Government would not be willing to raise the Tariff further unless there were a certainty that labour conditions would be thereby bettered a certainty which could not be provided by the Commonwealth legislature under the present constitutional limitations

The preferential tariff treatment of British imports does not show any very marked effect on the trade figures as yet. The proportion of imports from the United Kingdom has remained fairly steady. It was 51.52 $_{\rm B}$ in 1908. 51.50 in 1909. 51.21 in 1910. Previous to 1908 the proportion of British imports was dwinding. British goods admitted at a preferential rate in 1910 paid. £2.485.497 in duty. Whereas if they had come under the general tariff they would have paid. £3.457.671 in duty. The rebate was thus £972.174. In regard to £6.425.260 of British imports the Commonwealth admitted them free foreign goods of the same classes and value would have paid an average tariff duty of 5.18° $_{\odot}$.

Defence —When the Commonwealth Government took over the defence of Australia from the states in 1901 there existed for land defence in the various states very small forces of regular troops used as instructional cadres and as garrisons for the forts small forces of militial enlisted under a voluntary system and paid for about 16 days of drill and camp training a year, further small forces of volunteers not paid at all and giving usually but scanty time to training. The total of these forces was 25 b/3 of whom a proportion could be counted as efficient. Naval defence apart from the existence of various small craft was entrusted to the British Navy and a yearly subsidy (up to £126 000) was paid to the British Admiralty on condition that a fleet of a certain strength was maintained in Australian waters and certain facilities given to Australians wishing to enter the naval service

At first the Federation did little to disturb these arrangements The fleet subsidy was continued and extended The military forces were taken over as they were But the Defence Act of 1903 gave an indication of a new spirit. It made provision for the enlistment of all able bodied males for defence service in case of war. An amendment proposed by Mr W M Hughes one of the leading members of the Labour party that this universal obligation to military service should be accompanied by a universal obligation to training for service was rejected. But it was inevitable that in time the one should follow the other Mr Hughes (born in Wales in 1864) a very advanced Socialist at the outset of his political life constituted himself the Parhamentary cham pion of compulsory training for service, and - assisted outside the House by the National Defence League of which Colonel Gerald Campbell a volunteer officer of distinction was the moving spirit — eventually secured the acceptance of the principle A series of Acts in 1000 1010 and 1011 gave Australia a military system under which with few exceptions the whole manhood of the country will be trained to the use of Under this system at the age of twelve a boy must begin training (chiefly physical culture) as a jumor cadet Training as a senior cadet begins at 14 and lasts until 18 it comprises drills equivalent to 16 full days a year. At the age of 18 the obligation to undergo adult training begins and lasts until the age of 25 through seven This adult training consists of the equivalent of 16 full days drilling a year of which not less than eight shall be in a camp of continuous training. In the case of the artillery and the engineers the training extends to 25 days a year of which not less than 17 must be in camp There are certain exceptions including one making provision for those who have conscientious scruples against bearing arms, these how ever are trained for the hospital and ambulance services. The thinness of the population in some districts forces another class of exemption the residents of far out back' cannot be economically mobilised for training and for the present are left out of the scheme A Staff College in the Federal Territory is provided for the training of officers and its organisation is on severely practical lines. Cadets are accepted after The whole cost of their college training is borne by the Army Estimates and parents are forbidden to supplement the messing allowance by private pocket

money Even railway fares to and from the College when cadets go on holiday leave are paid by the Government, as are also all costs of uniform and equipment 4 severe but not unwholesome discipline is exacted, the drinking of alcoholic liquors and eigarette smoking are both forbidden in the College

It was not to be expected that a compulsory military system should be carried through altogether without protest. It had some opponents influenced by religious objections or by those pacific ideals which would seek to abolish the possibility of war by abolishing all organisation for national defence. But the first stage and the second stage of the scheme dealing with the cadets have now (1912) been successfully surmounted, and the training has been put in hand of the first draft of 20 000 of adult citizen soldiers. An official statement published in September 1912 showed that 81% of those affected had complied with the provisions of the Act, and that there were in New South Wales only 643 offenders "in the other states a considerably less number," who were so recalcitrant that it was necessary to prosecute them. In October 1912 the Defence Minister stated that the Opposition to the Act was no greater than to the Compulsory Education Act. Penalties of fines and imprisonment are provided for disobedience.

The numbers under training when the system is in full operation are estimated at 100 000 senior cadets and 120 000 citizen soldiers. But as after training the citizen soldier will pass into a reserve the potential military resources of the Commonwealth in the future are only to be calculated by the total number of males of military age "minus those who had been exempted from training. On the basis of the present population there would be 366 000 males between the ages of 18 and 26, 330 000 between 26 and 35 and a further 614 000 between 35 and 60. Exemptions, at a broad guess might be 3%. The organisation of the establishment proposes at present 28 regiments of Light Horse 56 batteries of Field Artillery, and 92 battalions of Infantry and a due proportion of Engineers and Army Services Corps

In regard to naval defence there was strong criticism of the subsidy policy at the very outset of the Federation But that policy was warmly supported by the British Admiralty and the Imperial Defence Committee and the impression was given that the only alternative to an Australian cash subsidy towards the British Navy was no co operation at all in the naval defence of the Empire Indeed the early advocates of an Australian Navy were met in their own country with charges of disloyalty to the mother country But Australian public opinion steadily hardened on the subject The British Admiralty was ultimately converted in part at least. On December 19, 190, Mr Deakin as Prime Minister of Australia outlined a scheme by which Australia would devote the amount of the naval subsidy then £200 000 a year to the building of an Australian fleet under the control of the Commonwealth Government but trained to co operate with the British Navy He proposed in short that in naval defence Australia should set up an independent but loval system corresponding to the one she had adopted in military defence Mr. Deakin announced that the British Admiralty did not altogether endorse his views especially in regard to the control of the Austrahan Navy in time of war which was kept with the Commonwealth Government unless it chose to pass that control over to the British Admiralty

No great advance was made in regard to naval defence until the general anxiety as to the European situation in 1000 made the subject of Imperial Defence of the first importance. Australia was represented at an Imperial Defence Conference in 1000 which showed a remarkable change of opinion on the subject of "local navies" on the part of the British Admiralty. They brought down to the Conference, as a substitute for an Australian subsidy to the British Navy a proposal for the building of an independent Australian fleet unit with the help of a British Treasury subsidy of £250 000. The Australian Government adopted the scheme in its entirety, except that it refused to accept the subsidy and decided to put the whole cost on the Australian taxpayer. Under this scheme Australia was to provide a fleet unit with a 'Dread rought' cruiser as its chief vessel. There was no provision for the automatic transfer

of the first to British control in the outbreak of war that point having been allowed to drop out of sight. It is argued in Australia that a special provision of the sort is not needed as full co-operation may be safely assumed

In March 1911 at the request of the Australian Government, and at the close of a visit to Australia Admiral Sir Reginald Henderson reported on the naval needs of the His report was accepted and it represents the present aim of Aus trakan Naval Defence, though according to a statement made by one member of the Australian Ministry (Mr Roberts) the acceptance of Admiral Henderson's proposals was subject to ratification by the electors in 1913 But there seems to have been no division of opinion in the Cabinet as to its acceptance We have called in a doctor we must take his prescription," was the statement made by one member of the Cabinet discussing the expenditure that Admiral Henderson demanded His proposed Australian navy would consist in 22 years of 52 vessels manned by 15 000 men est annual vote would be £4 794 000, and the ultimate cost would be £88 500 000 The strength of the fleet would be 23 ships in 1918, 42 ships in 1923, 48 ships in 1928, and 52 ships in 1933

At present the Australian building programme is confined to the fleet unit de cided upon in 1900 a battle cruiser of the Indomitable class three unarmoured crusers of the Bristol" class six destroyers of an improved River' class and three submarines of C' class and the necessary auxiliaries. In 1912 there were Yarra Warrego" (destroyers) and in in actual commission the Parramatta the water the Australia ' (a battle cruiser completed in 1912) and Melbourne and 'Sydney (cruisers one of which was due for completion in 1912) Construction of the fleet is proceeding simultaneously in Great Britain and in Australia The ber sonnel for the fleet will be largely drawn from the British Navy at the outset But Australian officers and crews will be recruited and trained as quickly as possible A site has been chosen for a naval college for the training of officers at Jervis Bav (N S W) and a temporary college established at Geelong (Vic) New Zealand is co-operating with Australia in the maintenance of the college for training naval officers provisions of the Act compelling universal training for service affect the naval manning for young citizens may elect to train as naval cadets. The official report on the train ing of the first batch of naval cadets issued September 1912 was satisfactory

The cost of this great naval and military preparation is shown in the growth of the Austrahan Defence votes In 1905-6 the Commonwealth devoted £970 345 to defence in 1906-7 £1 035 795 in 1907-8 £1 334 744 in 1908-9 £1 050 590 in 1909 10 £1 534 881 in 1910-11 £3 008 705 The estimates for 1911-12 provide for an expenditure of £4 775 136 Administration of both the military and naval systems is by Boards

The Australian obituary for 1011 included the following names -

SIR RICHARD CHAFFEY BAKER President of the First Senate of the Commonwealth d at Adelaide Australia on the 18th March He was born in North Adelaide in 1842 educated at Eton and Trinity College Cambridge and called to the Bar in 1864 He was president of the Legislative Council of South Australia from 1893 to 1901 and special envoy to London from the Australian Governments for the mail contract negotiations in 1885

SIR JENKIN COLES speaker of the South Australian Assembly since 1890 b 1842 d at Adelands on the 7th of December

SIR GEORGE HENRY JENKINS Clerk of Parliaments in Victoria since 1891 d at Colombo Ceylon on the 17th July He was born in 1843 at Abergavenry in Monmouthshire and becoming connected with the government department of Victoria made a special study of parliamentary procedure and became an authority in Australia on Constitutional questions He was Clerk of the Legislative Assembly of Victoria from 1882 till 1891 and was knighted

in 1904
Cardinal Patrick Francis Moran third Archbishop of Sydney New South Wales and the first Australian Cardinal (see E B xix 543c) d at Sydney on the 16th August He was born in County Carlow Ireland, on the 16th September 1830 and cducated at the Irish College at Rome where he became Vice President and Protessor of Hebrew In 1873
Irish College at Rome where he became Vice President and Protessor of Hebrew In 1884 to Sydney as Roman Catholic he was consecrated Bishop of Ossory and thence went in 1884 to Sydney as Roman Catholic primate of Australia The cathedral of St Mary Sydney was built under his direction William Lloyd Murdoch the cricketer d suddenly during a cricket match at Mel bourne, on the 18th February. Born in 1855 at Sandhurst, Victoria, he went to England as

captain of the Australian eleven in 1880 and in the historic test match of that year made Explain of the Australian eleven in 1800 and in the historic test match of that year made 153 not out (see E B vii, 444b). He was captain of the Australian eleven in 1882 and 1884 From 1893 to 1899 he lived in England and played for Sussex and returning to Australia he played for New South Wales

In 1912 the following well known Australians died -

GEORGE JOHN BONNOR the cricketer d at Sydney on the 28th June Born in 1855 in Victoria he first went to England as a cricketer in 1880 attracting special attention by his

Victoria he first went to England as a cricketer in 1880 attracting special attention by his unusual height and strength. He played for Australia again in England in 1882 1884 1886 and 1888 (see E B vii 444b)

James Francis Corrett Roman Catholic Bishop of Sale Victoria d in Melbourne on the 19th May. He was born at Limerick in 1840 and educated in France. After a few years spent in Ireland as a priest he went to Melbourne as secretary to Archbishop Goold He acted as Assistant Secretary to the Primary Australian Synod of his church in 1885 and 110 1887 was consecrated first Bishop of Sale
Sir Matthew Henry Davies Speaker of the Legislative Assembly of Victoria from 1887

to 1892 b 1850 d November 26th

JOHN HUGHES member of the Legislative Council of New South Wales was born at Syd ney in 1857 and died 18th December He was Vice President of the Executive Council m 1898-99 and again from 1904 to 1910 In 1899 he was for a few months Minister of Justice

1898-99 and again from 1904 to 1910. In 1899 he was for a tew months Minister of Justice Martin Howy Irving a prominent educationist d at Albury in Surrey England on the 2-rd July. The son of Edward Irving (see E. B. xiv 8-34b) the founder of the Catholic Apostolic Church he was born in 1831. After leaving Balliol College. Oxford he was for a year a master at the City of London School but went to Australa and was appointed to the Chair of Classics and English at Melbourne University. In 1876 he became head master of the Hawthorn Grammar School and in 1884 commissioner of the new constituted Public. Service Board He was also for some years chairman of the Melbourne board of the Austral

ian Mutual Provident Society and a promoter of the volunteer movement

SAMUEL EDWARD MARSDEN former Bishop of New South Wales d at Clifton England
on the 15th October He was born at Sydney NSW in 1832 and educated privately and at Trinity College Cambridge. He was ordained in 1855 and in 1861 was appointed diocesan inspector of schools for Worcester. In 1869 he was consecrated Bishop of New South Wales and held the see till 1885. After his retirement he returned to England and became assistant bishop in the diocese of Gloucester and Bristol.

RICHARD O CONNOR Judge of the High Court d at Sydney on the 18th of November Born at Sydney in 1851 he gradually made a position at the N S W Bar and entered the state legislature and he was an enthusiastic supporter of the movement for Federation. When this was accomplished in 1901 he hecame vice president of the Council and leader of the Federal Senate and in 1903 he was made a judge of the new High Court. From 1905 to 1908 he was president of the new Court of Conciliation and Arbitration

SIR WILLIAM OWEN formerly Judge of the Supreme Court of New South Wales b 1834

d November 22

NEW SOUTH WALES

The area of New South Wales is now computed at 309,472 square miles. The state has progressed rapidly since Federation. The population in 1900 was 1 364 590 and in 1911 1646 734. During the same period the area under cultivation grew from 2445 564 to 4611 672 acres. In 1908 NSW re-established a system of state aided immigration its net gain from immigration was however only 438 in 1911. But since then the increase Its net gain from immigration was nowever only 438 in 1911. But since then the increase has been greater. The city of Sydney has shown a remarkable growth since Federation and in 1912 a Million Club was formed to foster the growth of the city to 1 000 000 inhabitants. The estimated population in 1911 was 629 500.

At the General Election of 1910 the Labour party carried the day and Mr J S T McGowen formed a ministry which still held office at the end of 1912. Parties are very

evenly divided and the years 1911 and 1912 were marked by perpetual political fighting and very little legislative work. By securing from a member of the Opposition acceptance of the office of Speaker the Government was able to make its position more secure (his vote of course was lost to the Opposition) and this incident led to many remarkable scenes of disorder and violence in the House. An incident of the political situation has been a growth of unfriendly feeling between the state Government and the Federal Government. The state Government in 1012 decided that the Government House building could no longer be reserved for the use of the Federal Governor General. In consequence the Governor General and the Federal Gove eral will not live in Sydney in future during the Parliamentary recess

Lord Chelmsford appointed in 1909 was still Governor in 1912, but Sir Gerald Strickland

was nominated in October to succeed him in 1913

VICTORIA

Since Federation the population has increased from 1 197 206 to 1 337 678 State aided immigration was re-established in 1908 and a vigorous policy of closer settlement has been adopted Victoria is now the most forward of all the states in encouraging immigrants.

Alone of all the Australian states Victoria has never yet been governed by the Labour my At the end of 1912 the Premier was Mr W A Watt. His ministry is the successor party At the end of 1912 the Premier was Mr W A Watt. His ministry is the su of Mr W H Irvine's (1902) which was very strongly opposed to the Labour party or Mr W H I riving 5 (1902) which was very strongly opposed to the Labour party. After Mr Irvine Mr Bent then Mr Murray then (1912) Mr Watt led this Government. As temporary seat of the Commonwealth Government. Milbourne the capital of Victoria has been also the political capital of Australia and the housing of the chief of the Federal departments there has given some impetus to the city's growth. Since the inauguration of the Federation it has been improved greatly in appearance by a scheme of tree decoration applied to the river banks and the chief streets

The Governor in 1912 was Sir John Michael Fleetwood Fuller

SOUTH AUSTRALIA

South Australia has now an area of 380 070 square miles and a population of 408 558 having been relieved of the care of the Northern Territory The state is facing the develop ment of its dry belt where wheat growing has been found to be possible with a very low average rainfall. In 1901 the area under wheat was 1 743 452 in 1910-11 2 104 719 acres in 1911-12 (estimated) 2 190 782 acres with an average yield of 9 29 bushels to the area Continental railway to Perth (W.A.)

In politics South Australia has always been very progressive in spirit. It was the first state to entranchise women and most of the social reform legislation of Australia original states to entranchise women and most of the social reform. It was the first mated here The Labour party has often formed the Government But since a strike of

transport workers in 1910 there has been a reaction against that party in the state

At the end of 1912 the Governor was Admiral Sir Day Hort Bosanquet and the Premier

the Hon A H Peake

QUEENSLAND

The population of Queensland is now 505 813 the state has progressed greatly since Federation the population having increased in the last decade by 21 62°. The state is committed to a vigorous policy of railway development and immigration. Alone among the Australian states it develops its railways from several maritime centres instead of from the one capital city The sugar industry is a great source of Queensland wealth and some anxiety was formerly felt as to whether the white labour policy of the Commonwealth would not ruin this industry. That anxiety no longer exists in 1910-11 there were 108 535 acres under sugar in Queensland in 1910-11 141 779 acres and the estimates for 1911-12 were extremely favourable. The sugar produced in 1910 was 1 840 447 tons. Agricultural farm applications in 1901 were 661 in 1910 1 733 showing the rapid progress of land settle ment. Under all forms of settlement there were applications for 364 766 acres in 1901 and for 1 951 170 acres in 1910. The figures in each case represent new settlement.

Politically the state was for long one of the strongholds of the Labour party which shared the Government under a coalition system. Since 1907 (when woman suffrage was adopted) there has been a drift in the other direction. The Philip ministry (1907-8) was The Kidston ministry (1908) was as regards its head strongly hostile to the Labour party nostile to the Labour party

The Rioston ministry (1900) was as regarded as a continuous and troubled political
situation developed. The Denham ministry (1911) was quite opposed to the Labour party.

It had to face in 1912 a fierce. Syndicalist labour strike and following the defeat of the
strike appealed to the country for a renewal of confidence. The General Flection resulted. on the decisive defeat of the Labour party An Industrial Peace Bill was thin brought forward to limit the right to strike and was passed by the Legi lative Assembly in September 1912. At the end of that year the Governor was Sir William MacGregor and the Premier the Hon Digby Frank Denham

WEST AUSTRALIA

The population (282 114) shows an increase since Federation of 53 The state has kept for many years a system of state aided immigration and in 1910 the number of inch

migrants was 6 655

The backwardness in development of this the largest of the states is now being met by a vigorous land settlement policy and the pushing on of the trans continental railway to connect the state by land with the eastern states. The wheat growing industry hals 1910-11 581 862 acres and the estimated area for 1911-12 is 559 195 acres. The gol yield is decreasing. In 1911 it was 1 370 868 oz

West Australia with its large population has a strong Labour party which was in power at the end of 1912 with the Hon. F. Scaddan as Premier. The Governor in 1912 was Si

Gerald Strickland whose successor in 1913 was designated in November in Sir H Barron,

Tasmania

With a very mild chimate in which drought is unknown Tasmania (pop 191 211) is destined to be tise garden orchard and small-culture farm of the mainland. But it has not

vet shared in the tide of the Commonwealth's prosperity and during the last decade increased though its natural increase was almost the highest in the its population by only 10 80

Commonwealth It lost more by emigration than it gained by immigration In 1912 the Governor was Major (eneral Sir Harry Barron (transferred 1913 to West Australia) and the Premier Sir Elliott Lews Mr W G Ellison Macartney deputy master of the Royal Mint was nominated on Dec 11 to succeed Sir H Barron as governor (Frank Fox)

NEW ZEALAND 1

Population: - The population according to the quinquennial census of April 2 1911 was (exclusive of Maoris) 1 008 468 of whom 531 910 were males and 476 558 females This shows an increase of 110 800 in five years—the largest in any quinquennial period The density to sq m is 9 690 number of persons to an in in New Zealand's history habited dwelling 4 68 The populations of the principal cities (including suburbs) were Auckland 1026,6, Wellington (the political capital) 70729 Christchurch 80193 Dunedin 64 237 Excluding suburbs the city populations were Wellington 64 372 Christchurch 53 116 Dunedin 41 529 Auckland 40 536 The number of Maoris (in cluding half castes living as Maoris) was 54 0 5 Of the total population 996 418 were British subjects (born and naturalised) and only 1 050 were of foreign nationality The birth places of the British subjects were as follows New Zealand 702 779, United Kingdom 28 684 Australia 50 693 other British possessions 4 5,0

Births and Deaths -The birth rate in 1886 was 35 40 per 1 000 of population but it declined steadily from year to year until in 1809 it was 25.1.—the lowest percentage reached in the history of New Zealand. The rate increased yearly until 1907 when 27.30 was recorded. In 1911 the rate fell to 25.07. The number of children to a marriage for the twenty year period 1892–1911 shows a decline from 4.54 to 3.07. Of every 1.000 children born in 1911 41 were born out of wedly it as against 45 in 1910.

The death rate per 1 000 of population has been as high as 10 95 (in 1907) but fell to 9 39 in 1911 which is slightly below the New Zealand average of the previous ten years slightly below that of Australia and much below that of all European countries. The principal causes of death in 1911 were cancer 7 97 per 10 000 of mean population phthisis

5 58 pneumonia 5 14 gastritis and enteritis 3 69
Although the birth rate in New Zealand is low as compared with that of some European countries the death rate (particularly among infants) is the lowest recorded by any country in the world. As a result, the natural increase of population—by excess of births over deaths—is exceptionally high. The natural increase per 1 000 of mean population for the decennial period ended 1911 was 17 00 as compared with 11 71 for England and Wales during the same period

Migration - The migration returns show considerable fluctuations. For instance the net increase by migration in the years 1907-11 was - (1907) 5 730 (1908) 14 261 (1909) net increase by migration in the years 1907–11 was — (1907) 5 730 (1908) 14 261 (1909) 4719 (1910) 3 408 (1911) 4 200 In the same period the natural increase remained consistently steady (1907) 15 028 (1908) 16 897 (1909) 17 565 (1910) 16 345 (1911) 16 820 During the same years arrivals from the United kingdom were (1907) 7 449 (1908) 11 184 (1910) 9 50, (1911) 11 379 Departures for the United kingdom were (1907) 2 446 (1908) 2 635 (1909) 2 6,6 (1910) 2 509 (1911) 2 755 Religion—The New Zealand census includes the religions of the people An analysis of the 1911 return gives the following percentages—Church of England and Protestants not otherwise defined 41 14 Presbyterian 23 52 Roman Catholics and Catholics undefined 13 97 Methodist 9 43 Baptist 1 99 Hebrew 0 21 The number who objected to state their religions presented 25 per cent

their religion represented 3.5, per cent

Agriculture—The census for 1911 showed the total area of land under occupation to be Agriculture—In the census for 1911 showed the total area of land under occupation to be 40 238 126 acres of which 16 265 890 acres were under cultivation. The principal crops were wheat 8 290 221 bushels oats 10 118 917 bu hels barley 927 112 bushels potatoes 141 510 tons. Of the total production of wheat 7 000 bushels were required for home consumption and seed in 1911. There is no regular export of wheat. Butter and cheese were exported in 1911 to the value of £1 216 137—an increase of about 200 per cent in ten years. Frozen meat exports doubled in value in ten years. The exports in 1911 were

valued at £4 173 014

Trade—The value of imports has been—(1909) £15 674 719 (from United Kingdom £9 287 786) (1910) £17 051 583 (from United Kingdom £10 498 771) (1911) £19 584 789 (from United Kingdom £11 787 300) Exports—(1909) £19 661 996 (to United Kingdom £16 193 188) (1910) £22 180 209 (to United Kingdom £18 663 118) (1911) £19 528 490 (to United Kingdom £15 134 743) The total trade per head of population was—(1909)

¹ See L B xix 624 et seq

a Moderate Liberal from an English point of view He surrounded himself with colleagues who collectively made up the strongest cabinet New Zealand had possessed for a generation. More than half the members of the cabinet were university graduates—a distinction unique in the history of New Zealand Ministries. The Ministry which had a good working majority was constituted as follows. W. F. Massey Prime Minister Minister of Lands. Agriculture and Labour. J. Allen, Minister of Finance Defence and Education. W. H. Herries, Minister of Railways and Native Affairs. W. Fraser, Minister of Public Works and Mines, A. L. Herdman. Attorney General and Minister of Justice. F. M. B. Fisher. Minister of Customs and Marine. F. H. D. Bell. Minister of Internal Affairs and Leader of the Legislative Council. R. H. Rhodes. Postmaster General and Minister of Public Health, Dr. Pomare, Member of the Executive Council representing the Native Race.

The Massey government announced their determination to bring about closer settle ment of the land and to make this the most important plank in their policy. They proposed to lessen the graduated tax on estates of $£5 \cos$ unimproved value and to provide that the graduation should be regular and increasing with every £1 increase in un improved value. The new law was to provide that the 25 per cent additional tax now imposed on estates of £40 \cos , or more in unimproved value should apply to estates of more than £30 \cos

One of the first executive acts of the Massey Ministry was the appointment of Mr Thomas Mackenzie to the position of High Commissioner in London in succession to Mr C Wray Palliser who on Mr Mackenzie's appointment resumed his office of secretary to the High Commissioner's Department which he had held during Mr W Pember Reeves and Sir William Hall Jones tenures of office as High Commissioners

Obstuary—SIR JOHN LOGAN CAMPBELL known as The Father of New Zealand died at Auckland on the 21st of June 1912. He was born in Edinburgh on the 8th of November 1817 and educated at Edinburgh University. After taking a medical degree he entered the service of the East India Company but in 1839 he left it and emigrated to Sydney. A year later he went to New Zealand and there founded at Auckland the firm of Brown & Campbell In 1856 he joined the Stafford government as a member of the Executive Council. From 1861 to 1871 he was in England but he returned to New Zealand and there held many important posts including the chairmanship of the Board of Education in Auckland and of the Board of the Bank of New Zealand. He was the author of Poenamo a book on early life in Auckland. He was knighted in 1902.

life in Auckland He was knighted in 1902
SIR WILLIAM STEWARD ex Speaker of New Zealand House of Representatives died at Wellington NZ on the 1st of November 1912 He was born at Reading Berks on the 20th of January 1841 and went to New Zealand in 1862 where for 30 years he was a journalist and newspaper proprietor He was elected to the House of Representatives in 1870 and was its oldest member From 1893 to 1901 he was Speaker of the House and in 1901 he was kinghted He published Carmina Varia (1867) and The Vision of lorangi and Other Poems (1906)

SOUTH AFRICA 1

The area of British South Africa, according to 1911 official figures is 1,204 358 sq m. In the same year the census returns gave the total population as 8 106 224 of whom 1 305 531 were Europeans or whites. Administratively British South Africa consists of (1) The Union of South Africa a self governing dominion comprising the Cape. Natal Transvail and Orange Free State provinces. (2) The Territory of Rhodesia administered by the chartered company of British South Africa. (3) The Native Protectorates—Basutoland Bechuanaland and Swaziland administered as crown colonies. South Africa, however forms one Customs Union and the interests of Rhodesia and the Native Protectorates are so intimately connected with those of the Union that it is best to treat the whole area as a unit. This plan has been adopted below but certain particulars regarding Rhodesia and the Protectorates are given in separate sections.

1 stal Statistics—Table I compiled from the 1911 census return gives details of the area and population. Compared with the census of 1904 the increase in the white population was 172 390. Of this increase 123 285 was in the Transval alone, the in

crease in the white population in the other provinces of the Union being slight. In Rhodesia the white population had nearly doubled in the seven years. The increase in the native and coloured population was 88,5666. With respect to the coloured population two important factors must be remembered. (1) The Cape province total of native and coloured includes 1,91000 persons with a marked strain of white blood, officially classed as mixed the total mixed population being 4,5000 (2) The Natal province total of native and coloured includes 13,000 Indians. There were also 10048 Indians in the Transvaal the total Asiatic population being 1,52000.

The increase in the total population in the Union between 1904 and 1911 was 1512% in the white population 1444% in the native population 16% in the Asiatic and other coloured races 984%. Among the whites there were 8618 females to 100 males in 1911 compared with 7585% in 1904. For all races there were 9411 females to 100 males in 1911 compared with 9297 in 1904. Increase by immigration is slight. In 1911 55 000 passengers landed at S. African ports and 46 000 embarked

The population of the chief towns at the 1911 census was Cape Province—Cape Town, with suburbs 161 579 (b5 442 whites), Port Elizabeth and suburbs 37 o63 (20 007 whites) East London 24 600 (14 809 whites) Kimberley (including Beaconsheld the municipalities were amalgamated in 1912), 44 413 (1, 507 whites) Graham s Town 13 830 (7 323 whites) King William's Town 9 028 (5 510 whites) Natal Province—Durban and suburbs 89 998 (34,880 whites) Pietermaritzburg 30 555 (14 737 whites) Ladysmith 5 595 (2 87 whites) Transiaal Province—Pretoria and suburbs 57 674 (35 94? whites) Johannesburg 237 104 (119 953 whites) Germiston 54 3 5 (15 519 whites) Boksburg 43 628 (11 529 whites) Benoni, 32 560 (8 639 whites) Roodepoort Maraisburg 32 518 (1657 whites)—these four last named are all towns on the Rand as is also Krugersdorp 35 144 (13 132 whites) Orange Free State Province—Bloemfontein 26 925 (14 720 whites) Jagersfontein 9 019 (2 067 whites) Harrismith, 6,799 (3 447 whites) Rhodesia—Bulawayo, whites 5 199, Salisbury, whites 3,479

Commerce and Agriculture—While gold and diamonds are still the chief sources of wealth there was during 1910-12 a marked development in other mining industries (coal copper tin, &c) and in agriculture—The value of external trade for the whole of British South Africa (excluding specie and government stores) is shown as follows—

- 1910 1911 1912

- (1st nine months only)

Exports £54 509 000 £57 734 000 £46 512 000

Imports \$35 123 000 36 423 000 27 460 000

Compared with 1907 the export figures for 1911 showed an increase of over £10 000 000 or 21% the imports for the same period increased £10 500 000 or over 40% Of the imports in 1911 it was officially estimated that £6 351 000 or 17% were taken by native or coloured consumers a significant indication of their economic importance to the country. In 1911 the United Kingdom supplied 58% of the imports those of the British empire as a whole being 64% Germany and the United States came next as importers. By reason of the preference tariff granted them British goods benefited in 1911 in the Union alone by £538 000 Australian goods by £46 000 and Canadian goods by £16 000 Nearly all the exports [02/in 1911] go to the United Kingdom. The following were in 1911 the chief exports gold £37 608 000 diamonds £8 282 000 wool £3 900 000 ostrich feathers £2 253 000 angora and mohair £917 000 hides and skins £1 216 000 coal £1 079 000 copper £615 000. These figures do not however represent fully the agricultural development. The export of maize bark (for tanning) and of fruit has greatly developed while much of the increased production in 1911 was consumed locally. The imports of agricultural machinery £148 000 in 1910 rose to £196 000 in 1911. But the development of industries besides gold and diamond mining is best shown by the value of other goods exported valued at £9 500 000 in 1908 they were worth £13 300 000 in 1910 and £13 700 000 in 1911

at f.9 500 000 in 1908 they were worth f.13 300 000 in 1910 and f.13 700 000 in 1911

The gold output from the Transvaal mines for 1911 was f.35 041 000 for the first ten months of 1912 it was f.32 242 633

The issued capital at the end of 1911 was f.02 325 000 and f.8 066 000 represented dividends. The diamond output was from the Cape Province (including f.346 000 from river diggings) f.5 506 000 an increase of f.298 000 over 1910 the Transvaal diamond output in 1911 (mostly from the Premier mine) was f.1 628 000

In May 1911 alluvial diamonds were discovered at Moosfontein on the Transvaal side of the Vaal in the Bloemhof district and 17 m N W of the river bank in a great gravel covered area Alluvial diamonds had never previously been found so far from the river. A mining town of 10 000 inhabitants (half whites) has spring up and there is every likelihood of the diggings having a nite on several years. By the middle of 1912 diamonds worth over f.300 000 had been found. Of more importance was the proof afforded in 1912 that there were nich copper fields

in the Messina district northern Transvaal

Finance—The following are the figures for the revenue and expenditure of the Union (Rhodesia and the protectorates being dealt with separately below)—The financial year ends March 31 and as the Union was established on May 31 to10 the first financial year contained ten months only—It should also be pointed out that the account of the Railways and Harbours Board is not shown in the budget statements only the contribution from the board to the consolidated fund—Revenue (1910–11) £13 598 000 (1911–12) £16 538 000 (1912–13 est.) £16 288 000 Expenditure (1910–11) £13 598 000 (1911–12) £16 638 000 (1912–13 est.) £17 129 000 The actual revenue for April—September 1912 was £8.473 000 the expenditure for the same period £7 629 000 The public debt on March 31 1911 was £114 236 000 the yearly interest £3 876 000 The Union government to the end of 1912 and contracted in permanent loan, the indebtedness being that incurred previously to Union

\$\frac{1}{14} 230 000\$ the yearly interest \$\frac{1}{3} 876 000\$ The Union government to the end of 1912 had contracted no permanent loan the indebtedness being that incurred previously to Union

The following figures for 1911–12 show the main sources of revenue. Customs \$\frac{1}{4}\$ 508 000

mines (part proprietory profits part 10 \$\frac{1}{6}\$ tax on profits imposed 1911) \$\frac{1}{2}\$ 305 000 licences stamp duties transfers &c. \$\frac{1}{2}\$ 1653 000 taxes on natives \$\frac{1}{2}\$ 181 000 contribution from

Railways and Harbours fund \$\frac{1}{2}\$ 159 000. In 1910–11 the Board's contribution had been \$\frac{1}{2}\$ 500 000 and is intended to cease altogether profits from railways and harbours being allocated to developing industries by reduction in rates and fares and in improving means of communication. Expenditure is practically wholly on the civil service. In 1911–12 the sum of \$\frac{1}{4}\$ 18 000 was spent on defence. The provincial finance had been reached by the close of 1912.) Up to March 1912 the sum of \$\frac{1}{4}\$ 589 000 was spent by the Railways and Harbours Board on capital and betterment account of this \$\frac{1}{2}\$ 400 000 was allocated to building new railways. Reductions in railway rates to the end of 1912 represented a loss in revenue of \$\frac{1}{2}\$ 335 000. In 1911 the Railways Board showed a revenue of \$\frac{1}{2}\$ 163,000 and expenditure \$\frac{1}{2}\$ 205 000 the Harbours Board are evenue of \$\frac{1}{2}\$ 2000. The state owned harbours are Cape Town Port Elizabeth. East London Durban and Mossel Bay

Communications—The contract for carrying ocean mails by the Union Castle boats arrangle by Sartembers 2012. Meanthurs the components of the had been nurshased by the

Communications—The contract for carrying ocean mails by the Union Castle boats expired in September 1912 Meantime the company's fleet had been purchased by the Elder Dempster Shipping Company which on September 9 1912 concluded a new agreement (to last ten years) with the government framed to meet the requirements of an act passed in April 1911 by the Union Parliament forbidding the entry into any contract with any person or company which granted rebates to shippers. This act was aimed at the shipping ring

¹ South Africa supplies the world's markets with about 85% of their requirements of ostrich feathers

which controlled freight rates to and from South Africa
The contract with Elder Dempster (who in October placed orders for two new liners for the S African service each of over 15 000 tons) left the time for the mail boat service unaltered namely 16 days 15 hours between Southampton and Cape Town Over 80% of the shipping is British The net tonnage of vessels entering and clearing Umon ports rose from 11 494 000 in 1910 to over 12 550 000 in 1911 Another 2 000 000 tonnage represents the trade of Lourenço Marques and Beira with British South Africa

Wireless telegraphic stations have been established at Cape Town and Durban inland telegraphic service was in 1911 connected with German S W Africa

In October 1912 the total mileage of the railways open was in the Union 8,400 (of this mileage 7 646 was state owned) belonging to the Rhodesian Railway Systems 2 357 There was in 1912

There was in 1912

There was in 1912 (it is part of the trunk line north from Cape Town) and the Delia landay through communication from Cape Town to Katanga (Belgian Congo) a distance of 2 316 miles all save 167 miles being in British territory. With the following exceptions the rail wave built since 1010 were mainly short lines to serve rural districts. The railway from ways built since 1910 were mainly short lines to serve rural districts. The railway from Ermelo to Piet Relief (70 m) opened in July 1911 was in 1912 being extended to Vryheid (69 m) to give a direct route from Durban to the Eastern Transvaal. In October 1912 the Johannesburg Zeerust line was completed to Mafeking thus reducing the railway distance from the Rand to Bulawayo by 240 miles and making Durban the Union port nearest to Rhodesia. In the northern Transvaal, the Pretoria Pietersburg line was continued to Bandolier Kop (70 m) and after lying derelict many years, the old Selati railway was con

Public Buildings and Monuments — During 1910-12 over £1 300 000 was spent on public buildings. The most notable are the Union government offices at Pretoria expected to be completed in 1914 The new General Post Office at Pretoria (opened Oct 1911) is a handsome and commodious Renaissance building. The museum government library and University College at Pretoria have also been completed. The Houses of Parliament at Cape Town have been enlarged as have also the Law Courts in that city. New Law Courts have been built at Johannesburg and Durban. A University College has been built at Pietermaritzburg. Over £500 000 was spent on harbour improvements notably at Durban where a permanent

quay wall was built at the harbour entrance while the harbour at Congella was opened up

A memorial to Cicil Rhodes has been placed in the Groot Schuur estate on the slopes of
Table Mountain It is a granite temple in the Doric style approached by a flight of steps on
either side of which are four hons sculptured by J M Swan At the foot of the steps is G
F Watts s statue of Physical Energy (of which the east is in Kensington Gardens London)

Progress has been made with the new Anglican cathedral in Cape Town In it was placed in 1912 a magnificently illuminated MS vellum volume bearing the names of the

British slain in the war of 1899-1902

In November 1912 it was announced that Mr Max Michaelas formerly a partner of 46 pictures by old Dutch masters including paintings by Rembrandt Frans Hal Jan Steen and Vandvek These he presented to the Union government to form the nucleus of a national gallery Sir Hugh Lane had previously formed a collection of modern masters at the Johannesburg Municipal Gallery of which he was the first honorary director. The Michaelas collection is to be housed at Cape Town

Rhodesia -In July 1911 NE and NW Rhodesia were amalgamated under the title of Northern Rhodesia a change indicative of the recognition that NE Rhodesia would follow the fortunes of South Africa rather than those of Nyasaland of April 1911 showed that the white population of Rhodesia had nearly doubled since 1904 but was still very sparse—2, ooo persons to 438 000 sq m. In the 18 months following the taking of the census there were fully 2 000 new European settlers Over 90% of the white inhabitants are natural born British subjects—a higher percentage than in any other part of South Africa The administration remained in the hands of the British South African Company whose charter does not expire till 1914 sians were divided in their views of the future form of government between three policies (1) a renewal of the charter (2) entry into the Union of South Africa (3) a modified form of crown colony government The party advocating the third alternative was most vocal It was represented by the Southern Rhodesian League which formulated its views in November 1912 In December 1912 the Chartered Company announced that the elected members of the Southern Rhodesia Legislative Council would be increased from seven to twelve, and the nominated members from five to eight

The revenue figures in Southern Rhodesia are (1910-11) £784 000 (1911-12) £864 000,

(1912-13 est) £853 000 and the expenditure (1910-11) £684 000 (1911-12) £838 000

(1912-13 est.) 1894 000

The imports of ordinary merchandise (i.e. excluding railway material government. The exports The imports of ordinary merchandise. (If e excluding raiway material government stores and specie) were valued at £2 222 600 in 1910 and £2 569 000 in 1911. The exports (excluding goods in transit) were £3 018 000 in 1910 and £3 098 000 in 1911. For the first eight months of 1912 the figures were imports £1 745 000 exports £2 081 000. In 1910 British imports were 69% of the whole in 1911 they were 68. One fifth of the imports came from the Union of S. Africa. Germany and the United States each had about 5% of the import trade. Northern Rhodesia in 1911—apart from transit trade—sent exports worth £150 000 into Belgian Congo. This was consequent on the opening of railway communication with hatains. Gold is the chief export. The output in 1910 was valued at munication with katanga Gold is the chief export. The output in 1910 was valued at £2 568 000 in 1911 at £2 647 000 for Jan Oct 1912 at £2 2000. The export of chrome ore in 1910 was £100 000 in 1911 £118 000. The output of coal from the Wankie mines was 180 000 tons in 1910 and 212 000 tons in 1911

Rhode ia is, however pre-eminently a stock raising and igricultural country and most of the new settlers are farmers Maize is largely grown for export but the chief export other than minerals was tobacco valued at £31 000 in 1910 and £31 000 in 1911. Scarcity of native labour led to the establishment in October 1911 of an official Native Labour Recruiting Bureau which secured uniformity of recruiting conditions for all classes of employers and better conditions for the natives. A uniform tax of one shilling per native was imposed on all employers by an ordinance passed in December 1911. This tax the farmers refused to better conditions for the natives. A uniform tax of one shilling per native was imposed on all employers by an ordinance passed in December 1911. This tax the farmers refused to pay and to save the situation the ordinance was revoked by the Secretary of State for the Colonies. June 1912 at the request of the Chartered Company. The Legislative Council in lieu of the tax granted a subsidy to the Labour Bureau.

Complaints of the high cost of living and of excessive railway rates were rife during the last half of 1912 and led to vigourous protests against the increased duties on foodstuffs and statement approach by the Universe makes and industries. Suggestions to make

clothing proposed by the Union commission on trade and industries Suggestions to make Outch an official language in Rhodesia were strongly resented. Owing to large gifts from Cecil Rhodes and Alfred Beit there are as good facilities in the country for elementary and secondary education of Europeans as in England High schools for girls and for boys have

been opened at Bulawayo and Salisbury

The Nati e Protectorates - The Bechuanaland Protectorate Basutoland and Swazi land remain under the control of the Imperial Covernment represented by the High Commissioner for South Africa and are administered by Resident Commissioners They form in whole or in greater part native reserves The history of all three protec torates in 1910-1 was one of peaceful development the fear of the Basuto and Bechuana that they would be immediately handed over to the Union having been allayed

Basutoland in 1912 changed its financial year to end at March, it (instead of June 50) to bring it in line with the rest of Briti h South Africa. Its prosperity is shown by the fact that for the mine months which constituted the financial year 1911-12 the revenue was £138 000 compared with £145,000 for the full twelve months on the preceding financial year Expenditure in 1910-11 was £134,000 in 1911-12 £111,000. At the time of the census of 1911 over 21,000 male Basutos were absent from the territory 11,800 being engaged on the Rand mines. Agriculture and stock raising are the occupations of those who stay at home Strenuous efforts were made by the administrator to improve agricultural methods and in 1912 there was a marked increase in the quality and quantity of wool and mohair produced 1912 there was a marked increase in the quality and quantity of wool and mohair produced Education is fairly general 17 400 scholar the majority girls were in attendance at the mission schools of the Paris Evangelical Society and other bodies. In 1911 the hut tax was abolished and a tax of £1 per annum on adult males substituted or if a native has more than one wife he pays £1 p a for each wife up to a maximum of £3 a year for himself and his wives. This tax yielded £02 000 in 1912. This Busutoland national council met at the capital Maseru in March 1912. This council consists of 90 members (all natives) and the paramount chief (Letise) 94 members are nominated by the Basuto themselves 5 by the government. This council is an advisory body and keenly critical. The Resident Commissioner (appointed 1901). Mr. H. C. Sloley was made a K.C. M.G. in 1911.

Bechuanaland is a much poorer country, than Basutoland and the Bechuana a much less virile race than the Basuto. They suffered in 1911 and again in 1912 from prolonged drought Financially Bechuanaland approached an equilibrium in 1911-12 when the revenue was

Financially Bechuanaland approached an equilibrium in 1911-12 when the revenue was £59 000 and the expenditure £65 000 the deficit made good by the Imperial Government being the smallest on record. This was due to the fact that the staple product of the protectorate—cattle (which between 1904 and 1911 increased from 139 000 to 323 000)—had for the first time access to a good market Johannesburg and kimberlev restrictions previously enforced owing to fear of cattle disease being removed. A sum of 470 000 was realised by the natives through the sale of surplus cattle. Bathoen paramount thef of the Bangwaketsi ded in July 1910 and Sebele paramount thef of the Bakwina died in January 1911. Mont siva chief of the Baralong died in April 1911. All these chiefs were noted men in the early struggles between the Boers and British for the possession of Bechuanaland. Sebele being son of the chief Sechele the friend of David I ivingstone Khama survives and rules his tribe

-the Bamangwato-with undisputed authority

Swaziland is steadily recovering from the state of chaos into which it had fallen (see E B xxv1 186) The white inhabitants are engaged in agriculture and in gold and tin mining In 1911 12 the gold output was £02 000 that of tin £32 000. The staple agricultural products maize. During 1911-12 there was a considerable det elopment in fruit growing especially citrus fruits. The Swazis raise maize and other crops and own large stocks of cattle. From 7 000 to 10 000 Swazis obtain work on the Rand mines. The partition of rights between the European concessionaires and the Swazis was completed in 1911. Altogether £182 000 was expended on the settlement of this question. In 1911-12 the total revenue was £57 000 the expenditure £6. 000. In 1911 a National bund was established to be used for purposes beneficial to the Swazis. To this tund every adult male Swazi pays a direct tax of 23 a year. Naba Tsibeni the queen regent continued to act as chief of the Swazis. Sobhuza her grandson and nominally paramount chief was in 1912 about fourteen years old.

Political History —The most sahent feature in the history of South Africa since the establishment of the Union has been the endeavour made to develop the material resources of the country especially it agricultural and general trade. The results achieved have been indicated in preceding sections of this article.

The parliament of South Africa legislating for the whole Union the provincial councils took a purely secondary position. Racial questions as between the British and Boer sections of the community tended to occupy a less conspicuous position though the indiscreet actions and utterances of Ceneral Hertzog, the minister of Ju tice and an ardent champion of Boer nationality, caused much embarrassment to his colleagues and disquiet among the people.

Ceneral Botha 1 the Prime Minister in the first session of the Union Parliament (opened November 1910) had the support not only of his own party the Nationalist or "South African party (predominantly Boer) but that of the four I abour members from the Rand and of several of the Natal member elected as Independents. The opposition known as the Unionist party (and mainly British) was led by Dr. Jameson (see E B x 141) who was created a baronet in January 1911. Owing to ill health Sir Starr Jameson resigned the leadership in April 1912 and was succeeded by Sir Thomas Smirtt an ex Cape minister and like Jameson a medical man. In October 1912 Sir Starr Jameson retired from parliament altogether resigning his scat for Albany (Graham 5 Town)

General Botha made one important change in the cabinet during the first session, Sir F R Moor ex Premier of Natal being succeeded on February 2d as minister of Commerce and Industries by Col George Leuchars also a Natal representative first session was devoted mainly to putting the Union machinery into working order The most controversial issue considered arose out of the Education Acts of the former Orange River Colony (see E B xx 160) which enforced bi lingualism Elementary education was by the act establishing the Union left in the control of the provincial The Union parliament could therefore only advise A select committee on which both parties were equally represented considered the subject and on the 17th of April 1911 presented a majority report recommending that up to standard IV instruc tion in schools be given in and through the 'home language with the optional use on the demand of parents of the other language and that above standard IV freedom of choice be left to the parents also that teachers should be free to qualify in either lan On April 4th the Union parliament approved this compromise though General Hertzog (formerly minister of education in the Orange River Colony) was not in full The success of an action for slander brought against Hertzog (August 1911) by Mr Wm Fraser an ex in pector of schools—whom that minister had dismissed in May 1909—caused considerable scandal which was intensified by the success of another slander action (November 1911) against Hertzog the plaintiff in the second case being Dr Ward president of the OFS medical council The situation was rendered piquant by the fact that Herizog was minister of Justice Herizog's resignation was

¹ Ceneral Botha was on August 16 1912 appointed an honorary general in the British army

The session of 1911-12 revealed acute differences in the cabinet and in the ministerial Mr J \ Merriman ex Cape Premier the most accomplished parliamentarian and ablest hnancier in the House of Assembly was a very candid friend of the ministry as when in June 1912 he denounced their financial proposals as predatory and extrava The ministry itself was divided on personal and provincial and also progressive and retrogressive lines Chief among Botha's colleagues were Mr H C Hull and Mr Jacobus Wilhelmus Sauer Mr Hull (b 1860) after being in the Cape civil service had practised at the bar served in the war of 1899-1902 and was afterwards treasurer of the Transvaal and he entered the Union cabinet as minister of finance Mr Sauer (b. 1850) had been 30 years a member of the Cape House of Assembly and had frequently held On the establishment of the Union he became Minister of Railways and Har bours and Chairman of the Railways and Harbours Board created by the Union Act the largest revenue producing department of state. Mr. Sauer became head of one section of the cabinet, General Botha or rather Mr. Hull head of another July 1911 cabinet dissensions occurred but there was no open breach until May 18 1912 when Mr Hull resigned The ministerial differences were aired in two set de bates in the House of Assembly Mr Hull alleged that railway expenditure was not previously sanctioned by the Treasury and that there had been a tendency to regard railway administration as something for which the government had no collective respon-General Botha (May 2 d) admitted that the cabinet had not been sufficiently considered in railway matters

As a result of this episode within the ministry itself General Botha's authority The reconstruction of the cabinet was postponed until after the close of the parliamentary session on June 24th After two days negotiations Mr Saucr and his friends threatening to resign if their demands were not granted a compromise was reached. Mr Henry Burton K.C. another ex Cape Colony minister took over the Railways and Harbours General Smuts (Transvaal) was transferred from the Ministry of the Interior to that of Finance, Mr Sauer became Minister of Agriculture (an office (eneral Botha had held in conjunction with the premiership) Mr Fischer (Orange Free State) became minister of the Interior while retaining his portfolio as minister of Lands while General Hertzog in addition to his duties as Minister of Justice undertook those concerning Native Affairs which Mr Burton had previously administered The cabinet—whose other members were (of Leuchars Mr I S Malan (Cape) and Sir David de Villiers Graaff (Cape)—was thus reduced to mine members 4 of them being representatives from the Cape 2 from the Transvaal 2 from the Orange I ree State and one from Natal

The question of defence came prominently before the country in connection with the Imperial conference held in London in 1911 which General Botha attended as represent ing the Union It was decided that South Africa should provide for its own internal defence and a Defence Act was passed in the Union parliament in June 1912 creating a citizen force at a cost of about \$500 000 a year this is in addition to a permanent force of five regiments The act provided for the military training of 50% of the young men between 18 and 21, the other 50% being compelled to join rifle clubs and similar associa tions. The 50% for training are obtained in the first place by voluntary enlistment but if sufficient numbers are not forthcoming by this method then by ballot bers of the Citizen Force with the colours are paid Provision was made for artillery, cavalry infantry engineer and transport units uniformity with the units of the other over sea Dominions being aimed at General C F Beyers one of the Transvaal commandants in the Anglo Boer War was appointed Commandant General while the Council of Defence created by the act consisted of General Schalk Burger (Transvaal) Col Crewe (Cape) General de Wet (Orange Free State) and Col Sir Duncan Mackenzie (Natal)

Objections to the act came chiefly from the back veld Boers who entertained strong dislike to compulsory service. The force being established the reduction of the strength of the British Imperial forces in South Africa from 11 500 to about 7,000

was announced in November 1912 The Union government had also under considera t on proposals for a naval defence policy. General Botha educating his followers on this matter in several speeches made during 1012

A notable event in the history of the country was the inauguration of the Rhodes memorial at Groot Schuur on July 5, 1912 by Larl Grev a former director of the Char tered Company and ex governor general of Canada. The ceremony was attended by Lord de Villiers. Chief Justice of South Africa. Mr. Merriman and Mr. Burton minister of Railways. General Botha was absent but he subsequently wrote a foreword to the pamphlet containing Earl Grev's speech in which he (Botha) paid a warm tribute to Rhodes lofty conceptions and achievements.

Lord Gladstone who filled the duil offices of Governor General of the Union and High Commi sioner of South Africa was subjected to much criticism over his action with regard to natives charged with assaults on white women but he met his critics fairly and won their respect. In February 1911 he was made an LL D of Cape Town University. In May of that year he visited Basutoland in September he went to Rhodesia (where he received Lewanika the paramount chief of the Barotse) extending his journey into Katanga (Belgian Congo). In the summer of 1912 Lord Gladstone paid a long visit to England returning to South Africa in October.

The promotion of trade and agriculture occupied much attention especially as the country suffered from prelonged drought the severest experienced since 1862. Begin ning in October 1911 it affected chiefly Natul the Transval and Transkei where thousands of natives were reduced to the verge of starvation. The severe losses sus tained turned attention to the need of more scientific farming and to large irrigation works upon which the government expended £500000 in 191. In October 1912 a government Land and Agricultural Bank began operations in the Union and a similar in titution was e tablished by the Chartered Company in Rhodesia. Creat relief was expenienced in Natal and in the Rand by the break up of the drought in November

1912 Meantime the export of cereals from South Africa had fallen off considerably while a new and formidable compet to for the European maize market was being found

Farly in 1 it a commission of which Sir T M Cullinan was chairman appointed to enquire into the conditions of trade and industries reported in favour of increased duties on wheat flour sugar tea clothing and turniture declaring that it was only necessary that a policy of protection should be adopted but that there should be continuity of pelicy ' Two influential members presented minority reports in favour Rhodesian feeling wa in favour of a lower tariff and with of the open door reference to the increased duties proposed by the Union commission the Bulawayo Chamber of Commerce declared (August 1911) that it was to the interest of Rhodesia to withdraw from the Customs Union rather than bear greater fiscal burdens other Rhodesian Chambers of Commerce passed similar resolutions on November 19 1012 Sir Thomas Smartt deciared that a plank in the Unionist party's platform was a tariff primarily for revenue purposes combined with a policy for the encouragement of industries for the general benent and the extension of the existing imperial preterence

In December 1012 a political crisis involving the reconstruction of the ministry occurred. It was precipitated by the by election in the Albany division to fill the vacancy caused by Sir Starr Jameson's resignation. (The election on Dec. to resulted in the return of the Unionist candicate Mr. Van der Riet by a large majority over the Ministerialist. Mr. E.pin.) General Hertzog had already (Oct. 1012) created anew a feeling of political antagonism by describing in a speech at Nylstroom Sir Thomas Smartt and other Opposition leaders as undestrable political foreign adventurers," and during the Albany election he made a speech—at Rustenburg on December 8—pointedly against the Imperial policy advocated by Ceneral Botha declaring that

¹ George V after his accession resigned his position as Chancellor of the Cape University being succeeded in 1912 by the Duke of Connaught

Imperialism appealed to him (Hertzog) only when it was useful to South Africa He had a short time previously also pronounced in favour of the Dutch and British remaining two nationalities flowing each in a separate channel On December 13, Col Leuchars Minister of Public Works, resigned as a protest against General Hert Anti Imperial and Anti British sentiments ' As Hertzog was not prepared to resign General Botha tendered his resignation on December 15 and was at once asked by the Governor General to form a new ministry. This was accomplished on December 20 Mr Fischer a minister who had usually acted with General Hertzog deciding after much hesitation to join the new ministry. The cabinet was reconstituted as follows -General Botha Premier and Minister of Agriculture Vir Sauer Minister of Justice and Native Affairs General Smuts Minister of Finance and Defence Mr Fischer Minister of the Interior and of Lands Mr Malan Minister of Mines and Education Mr Burton Minister of Railways and Harbours Sir Thomas Watt Min ister of Posts Telegraphs and Public Works, Sir D de Villiers Graaff minister without portfolio The only new member was Sir T Watt who as a Natal member of the House of Assembly replaced Col Leuchars General Botha described the new minis try as aiming first at building up a new country on non racial lines

OBITUARY - The deaths of some prominent South Africans may here be noted -

Sir Thomas Ekins Fuller formerly agent agent after Cape Colony died at Tunbridge Wells on the 5th of September 1910. Born at West Drayton Middle ex in 1851, he was for some time a Baptist minister leaving England to edit the Cape Argus in 1864. He was subsequently general manager of the Union Steamship Company. Chairman of the Cape Town Harbour Board a director of the De Beers Mining Company and member of the House of Assembly (see E B v 248) In 1902 he was appointed agent general for Cape Colony in London and knighted in 1904

Tommy Fuller was one of the most esteemed and respected men in South African circles

PILT ARNOLDUS CRONJE the Boer general (see E B vii 501c) died at Klerksdorp Transvaal on the 4th of February 1911 aged 75 Since the war ended he had sunk into comparative obscurity

Sir JACOBUS ALBERTUS DE WET Member of the Legislative Council of Cape Colony died at his home in Cape Colony on the 26th of March 1911 aged 71 He came of an old South African family He was appointed British Agent at Pretoria in 1890 during the critical period (see F B xxvii 200 et seq) which ended with the closing of the Vaal River Drifts and his name was familiar in connection with the proceedings after the Jameson raid ın 1896

Sir HENRY GEORGE ELLIOT born in 1826 died at Cape Town 29th of November 1912 He entered the Royal Marines in 1847 and served through the Crimcan War. In 1877 he became chief magistrate of Tembuland and for 26 year, he took a great share in the govern ment and development of Kaffrana (see E B xv 630a)

Sir Thomas Charles Scanled the Cape Colony politician died at Cape Town on the 15th of May 1912 aged 77. He was admitted Attorney of the Supreme Court of Cape Colony in 1866 sat in the House of Assembly from 1870-96 and was Prime Minister of the Colony from 1881-84 (see E B v 248b and 242c). In 1894 he was appointed Legal Adviser to the British South Africa Company, and held the position of Acting Administrator of Rho desia at intervals from 1898-1907. He was knighted in 1884.

ARTHUR JESSF SHEPSTONE the Natal politician died at Pietermaritzburg on the 30th of September 1912 aged 59. He was born in 1852 the son of Sir Theophilus Shepstone (see E. B. xxiv 840) and was educated in Natal. He was a digger at the Kimberley Diamond Fields in 1871 and served as a trooper in the Natal Carbineers during the Langahibalch rebellion in 1873. In 1876 he was appointed Labour Agent for the Natal railways. In 1887 he became a resident magistrate and served in various districts. In 1909 he became Sec retary for Native Affairs in Natal

African Charters. chapters (F R CANA)

SECTION II THE UNITED STATES OF AMERICA THE UNITED STATES:

POPULATION -In 1910 the population of the United States and possessions (the latter estimated) was 101 100 000 the actual enumeration (including Alaska Hawaii and Porto Rico) was 93 402,151, and the inhabitants of 'continental United States (including Alaska) 91 9/2 266 the figure used as a basis of comparison here this total three fifths (60 6° o) was contained in the three tenths of the country's area in the 'Northern states 2 2 e New England (one fourteenth of the total population) the Middle Atlantic group (more than one fifth) the East North Central group (nearly one fifth) and the West North Central (more than one eighth) In this group the proportion of population was twice the proportion of area. In the Southern states the proportion of population (nearly one third) was about the same as the proportion of area, not quite three tenths, in the South Atlantic group it was two fifteenths (13 3 %) in the East South Central one eleventh (9 1 %), and in the West South Central nearly a tenth (96°0) of the total The Western states with nearly two fifths (396%) of the area had less than two twenty fifths (7 4 0) of the population—relative population being to relative area as one to five, in the Mountain states there was about 2 900 and in the Pacific states about 46% of the total population. Roughly three tenths of the area and seven tenths of the population was east of the Mississippi river and seven tenths of the area and three tenths of the population west of it

Of the separate states eleven had each more than two and a half million inhabitants and together they contained a larger population than the other 37 states (and the District of Columbia) in order these were. New York Pennsylvania Illinois Ohio Texas Massachu etts. Missouri Michigan Indiana (corgia and New Jersey. Only two of these states are west of the Mississippi—Texas, the largest state of the Union in area and Missouri an important manufacturing state. The only one in the 'Old South' is Georgia the great producer of coal and iron in the South

The relative increase for the entire country in the decade was 21%—a little more than in 1890-1900 but less than in any other decade even 1860-100 when the rate was 2 6% (or a little more) The actual increase in 1900-10 was 15 977 691, a much greater one than ever before and equal to the entire population about 1835

The decade s growth was largest in the West 66,00 as compared with 198% for the South and 1770 for the North In the groups the greatest increase was 7350 (only 28 in 1800–1900) in the three Pacific states, and least in the East South Central group (Kentucky Tennessee Alabama and Mississippi, 1140 (in 1800–1900 1740) In the most populous group the three Middle Atlantic states the rate was 25% Three states Washington Oklahoma (both comparatively new states) and Idaho doubled in population and Nevada came near doubling the growth in the last two states was partly due to changes in mining Iowa alone decreased (05%) in the decade The lowest rates of increase were in rural New England (Vermont 360, New Hampshire 460) where economic conditions resemble those in the East South Central group

In 1910 the Middle Atlantic states ranked first and the East North Central states second changing positions since 1900. In the same way the West South Central fifth, and the East South Central, sixth in 1910, exchanged rankings in the decade ¹ See E B xxvii 612 et seq.

² The classification of states is as follows Northern including New England Group (Maine New Hampshire Vermont Massachusetts Rhode Island and Connecticut) Middle Atlantic (New York New Jersey and Pennsylvania) East North Central (Ohio Indiana Illinois Michigan and Wisconsin) West North Central (Minnesota Iowa Missouri North Dakota South Dakota Nebraska and Kansas) Southern including the South Atlantic Group (Delaware Maryland District of Columbia Virginia West Virginia North Carolina South Carolina Georgia and Florida) East South Central (Kentucky Tennessee Alabama and Mississippi) West South Central (Arkansas Louisiana Oklahoma Texas) and Western including the Mountain Group (Montana Idaho Wyoming Colorado New Mexico Arizona Utah and Nevada) and Pacific Group (Washington Oregon and California)

The other groups did not change in rank South Atlantic third West North Central fourth, New England, seventh, Pacific, eighth and Mountain, ninth

The average density of population in 1910 was 30 9 persons to the square mile—nearly are that (10 6) in 1860. The variations in different parts of the country are great from thrice that (10 6) in 1860 3 1 persons to the square mile in the Mountain Group (07 in Nevada)—a much smaller density in 1910 than that (4.5) for the original thirteen states in 1790—to 193 2 in the Middle Atlantic states (337 7 in [New Jersey) 418 8 in Massachusetts and 506 5 in Rhode Island The greatest density is in the District of Columbia (i.e. Washington) 5.517 8

The centre of population in 1910 was in Bloomington Indiana (39. 10. 12. N. lat. 86°

3. 20 W long) or rather over 39 miles north of where it was in 1900 in 1790 it was 23 m E of Baltimore only 6 18 further north but about 557 m to the east. The median point of area of Continental United States is 657 m further west and about 50 m to the north

in Smith county northern Kansas.

The number of males to 100 females was 106 in 1910 (104 4 in 1900 increase due to immi gration) and the variation in different parts of the country was marked 99 3 in New England but 127 9 in the Mountain states and 129 5 in the Pacific states More illuminating is the ratio of males to 100 females in different nativities and colours of the population 98 9 among negroes 199 5 among native whites of foreign parentage 104 among native whites of native parentage 129 2 among foreign whites and 185 among all others-mostly Asiatics and temporary immigrants. These ratios differ little from those in 1900. In the West the ratios in each state were much higher than this average. Five states comparatively the older communities—Massachusetts. Rhode Island. Maryland, and North and South Carolina. and the District of Columbia had in 1910 more females than males. New Hampshire New York New Jersey Virginia and Georgia -also of the earlier settled territory-were in

New York New Jersey Virginia and Georgia—also of the earlier settled territory—were in this group in 1900 but not in 1910. In 1910 the males of voting age numbered 26 999 151 or 294 % of the total population (in 1900 21 134 299 or 27 8%). In the decade 1900-10 the rate of increase of the white population was 22 3 and that of the negro population 11 3 / the former a little more and the latter a great deal less than the rate (21 /) for the entire population. So that the white population increased relatively from 87 9% to 88 9 % of the total population and the negroes decreased from 11 6 to 10 7 (8 833 994 in 1900). In 1910 the Indian population was 265 683 (237 190 in 1909), the Chuese 70.04 (80 862 in 1909), and the Larariese 71 722 pearly, three the in 1900) the Chinese 70 944 (89 863 in 1900) and the Japanese 71 722 nearly thrice the number (24 326) in 1900. The percentage of whites was highest in New England (98 9 in New Hampshire 99 8%) and lowest in the South Atlantic group (66 2) where however it was higher than in 1900 (64.2) and for any one state lowest in Mississippi (43.7 in 1900 it was higher than in 1900 (64 2) and for any one state lowest in Mississippi (43 7 in 1900 41 3°). The relative decrease in the negro population is not due merely to the more rapid increase of population in the North for there was such a decrease throughout the South Atlantic states where they were 35 7° in 1900 and only 33 7 in 1910 and in Mis issippi (58 5 and 56 2) and Alabama (45 2 and 42 5). In the South Atlantic states the highest percentage of negroes was in South Carolina 58 4 in 1900 and 55 2 in 1910. In the New England and Middle Atlantic groups manufacturing States fed by constant immigration the whites of foreign birth and of foreign parentage made up more than one half the total (59). New England 53 9° Middle Atlantic). The Facific states with their strong appeal to the immigrant come next with 45 7′ (48 5 in California). The New England and Middle Atlantic states rank highest in both foreign parentage and foreign birth ie in the immigration of the last and present generations. The East and West North Central states (28) and 27 6% of foreign parentage) rank next highest in the immigration of the last (28 and 276 % of foreign parentage) rank next highest in the immigration of the last generation and the Patific states (206° of foreign born whites) next in more recent immigration. In the South the foreign element is small 6 (36 foreign parentage and 24 foreign born) in the South Atlantic states (only 11 in South Carolina) 36 % (26 and 1) in East South Central (only 16 in Mississippi and 24% in Alabama) and 109° (69 and 4) in West South Central (3 4 in Arkansas)

Immigration —Immigration is more and more from southern and eastern Europe tria Hungary Italy and Russia supplied one sixteenth of the immigrants in 1871-80 one tria riungary icary and Russia supplied one sixteenin of the infiningrants in 1671-60 one sixth in the next decade one-half in the next and nearly two thirds in 1901-10. In 1910 the percentage to the total population of foreign birth from Russia and Finland was 12 8 (63 in 1900) from Au tria Hungary 124 (62 in 1900) and from Italy 101 (47 in 1900). In 1900 there were 8 513 Greeks in 1910 101 100. Although there were large percentages in 1910 of foreign born whites from Cermany (187) from Ireland (101) from the Scandina vian countries (94) from Great Britain (92) and from Canada and Newfoundland (9) this much less important than the fact that these percentages were smaller than in 1000, when is much less important than the fact that these percentages were smaller than in 1900 when they were 27 5 158 104 114 and 115 respectively. In mill work Slavs and Armenians are employed where a generation ago there were Irish and French Canadians and in small shops especially in the East Creeks are rapidly displacing the Italians who were themselves new comers in the sale of fruit and in the ownership of boot blacking and small

barber shops fifteen years ago

¹This proportion is not typically American, but is nearer the ratio in Europe

Urban Growth —In 1910 the urban population (in 2 405 incorporated places each of 2 500 inhabitants or more) was 42 623 583 about six thirteenths of the total population and in this territory the increase in the preceding decade was 348 in rural territory 11 2 / and in the whole country 21°. The increase in urban population (nearly 12 000 000) made up about seven tenths of the total increase in the decade. More than two thirds of this urban population in 1910 was in the three groups (New England 12 8 /o Middle Atlantic 32 2° and Fast North Central 22 6) which were comparatively early estiled and are presequient. and East North Central 22 6) which were comparatively early settled and are pre-eminent ly manufacturing. In New England (where the census includes townships or towns among urban territory) the urban population was five sixths of the total it was more than nine tenths of the whole in Rhode Island (96 7 °) and Massachusetts (92 8) and was less than half only in Vermont (48 6) In the Middle Atlantic states seven tenths (71) of the than half only in Vermont (48 6) In the Middle Atlantic states seven tenths (71) of the total population was urban in New York 78 8 ° in New Jersey 75 2 and in Pennsylvania 60 4 ° In the East North Central the urban population made up more than half (52 7) of the total the ratios were highest in Illinois (61 7) and Ohio (55 9°) Other states in which the urban population was greater than the rural were—California (61 8 , urban) Washington (53) Maryland (50 8°) and Colorado (50 7). The percentage in the Pacific Group where city growth has been very rapid was 56 8 in 1910 but only 46 4 in 1900 and 36 2 in 1880 the urban population from 1900 to 1910 more than doubled and the percent age of increa e in Washington was 166—in Oregon 115° and in California 81 4°/
Nearly one minth of the country 5 urban population was in New York City (4 766 883) and about one fifth (8 501 174) in New York City Chicago (2 185 283) and Philadelphia (1 549 008) ¹ taken together—In 1910 there was 5 (in 1900 3) cities between 500 000 and 1 000 0000 II (in 1900 9) between 250 000 and 30 000 and 31 (in 1900 25) between 100 000 and 250 000—The 50 cities each with more than 100 000 inhabitants included 14 which had less than 100 000 in 1900 (when Spokane had only 36 848) their total in 1910 was 20 302

had less than 100 000 in 1900 (when Spokane had only 36 848) their total in 1910 was 20 302

1.8 -nearly one half the urban population Illiteracy —In spite of the great increase in 1900–10 of population especially in large cities the growth of immigration and especially of immigration from southern and eastern Europe and from Asia the numl er of illiterates (10 years old and over) decreased from 6 180 069 to and from Asia the number of inherates (10 verts old and over) decleased from 0 too 605 to 516 693. The percentage of illiterates was 10 7 in 1900 and 7 7 in 1910. In the latter year the rate was highest in the South 174 in the Last S with Central 16 in the South Atlantic and 13 2 in the West South Central But these percentages showed immense progress over 1900 (when the corresponding figures were 24 9 23 9 and 20 5). In each of the gress over 1900 (when the corresponding figures were 24 9 23 9 and 20 5). In each of the other groups of states the rate was lower than the average for the entire country—ranging from 6 8 (9 6 in 1900) in the Mountain status to 3 (42 in 1900) in the Lacinc and 2 9 (41 in 1900) in the We t North Central groups. In New York and Connecticut the actual number of illiterates increased in the decade and the percentage remained 5 5 in New York as it was in 1900 and increased in Connecticut from 59 to 6 this was due to large immigration of a non Teuton class The pre cace of a large proportion and in a few states of a majority of negroes in the South makes the rate of illiteracy high there but the improvement in the decade is more marked in the negro than in the white population—the actual decrease during the decade in the number of all illiterates in the country was 663 376 of negro illiterates 625 107 The highest rates for the entire population over 10 years in 1910 were 29 in Louisiana (38 5 in 1900) and 25 7 in South Carolina (35 9 in 1900). In the former tate the rate for whites was 142 (184 in 1900) and for negroes 484 (61 I in 1900) and in South Carolina the rate for whites was 10 3 (13 5 in 1900) and for negroes 38 7 (52 8 in 1900) the South the number of white illiterates increased only in Texas and Louisiana the number of negro illiterates increased only in Oklahoma

AGRICULTURE 2-In 1910 the number of farms was 6 361 502 being 10 9 more than in 48° more than in 1900 the number of farms was 0 301 502 being 109 more than in 1900 but the area in farms 878 798 325 acres (46 2 of the land area of the country) was only 48° more than in 1900 Considerably more than half of this area (478 451 750 acres) was improved and it is a true index of the progress of agriculture that this improved area was 154 greater than ten years before. The average farm acreage decreased from 146 2 to 138 1 acres and both this fact and the increase in the average value of farm land per acre from 146 240 140 for the increase in the average value of farm land per acre from 146 240 140 for the increase in the average value of farm land per acre from 146 240 140 for the increase in the average value of farms. \$15 57 to \$32 40 (108 1 —due in part no doubt to the increased cost of living and general rise in prices) and in the average value of farm property per farm from \$3 563 to \$6 444 (80 9 o increase—for a farm 55 o smaller) show gradually intensified farming. The rapid increase in all prices can explain only a part of the increase 100 5 o in the total value of farm property \$40 991 449 090 of this total the items were land \$28 475 674 169 (118 i o increase)

A more exact idea of this centralisation of the urban population in these cities may be ramore exact idea of this centralisation of the drivan population in these cities may be gained by taking the population of the three metropolitan districts that is of the territory within 10 miles of the charter boundaries of each. The total for these three cities and their immediately adjacent districts was 10 913 831. New York (including Newark and Jersey City) 6 474 568. Chicago 2 466 921 and Philadelphia 1 972 342. On the same basis the population of the Boston district was 1 520 470 of the Pittsburg district 1 042 855 and of St. Louis and its immediate vicinity. 828 733. Twenty five such metropolitan districts each containing a city with more than 200 000 contained 22 088 331 inhabitants. ² See E B 1 414 et seq

buildings, \$6 325 451 528 (77 8%) implements and machinery \$1 265 149 783 (68 7°0) and domestic animals poultry and bees \$4 925 173 610 (60 1°0)

In 1910 east of the Mississippi were 41 7% of all farm land and 45 6 / of improved farm land in 1900 43 8 and 51 1%. The land in farms was divided in 1910 between North South and West in proportion of 47 1 40 3 and 12 6 /0 the corresponding figures for 1900 being 45 6 43 2 and 11 2 0. Of the improved area 60 6 was in the North 31 5 /0 in the South and 7 9 in the West in 1910 the percentages in 1900 were 63 30 4 and 66

Acreage of Farms —Of the total increase in farm acreage in the decade more than three-fourths was in the West North Central states, where the percentage of increase was 15 7 /

fourths was in the West North Central states where the percentage of increase was 15 7 /6-An even larger percentage but a much smaller total increase was in the Mountain group (28 3%) There was scarcely any increase in the East South Central group (0 3/) and actual decreases in the West South Central (4 2%) in New England (4 1) and in the Middle Atlantic group (3.7%) Only in the two groups last named were there decreases in the improved acreage 10.8% in New England and 4.8% in the Middle Atlantic group In each state of these two groups there was a falling off both in total area and in improved area state of these two groups there was a falling off both in total area and in improved area in Vermont there was 23 2 % less improved farm land in 1910 than in 1900. The greatest decreases in farm land for the separate states were Arizona 35.6 (but 37.6 increase in improved area). Utah 17.5 increase in improved area. Texas 10.6 (but 39.8 / increase in improved acreage). West Virginia 5.9 % (but a slight increase 0.4 in improved acreage). The greatest increases in area of all farms were in New Mexico. 119.7 in improved land). North Dakota 82.9 (and 112.1 increase improved land). Washington 37.8 in improved land). Colorado 42.8 / (and 89.2 % in improved land). Washington 37.8 increase in improved land). South Dakota 36.4 (and 40.2 in improved). Nebraska 29.1 / (and 32.3 / improved). South Dakota 35.5 increase in improved). The great increase in improved land is shown by the fact that in 1900 it was improved) The great increase in improved land is shown by the fact that in 1900 it was 49.4% but in 1910 54.4% of all farm land and by the fact that although the percentage of the total farm land improved decreased slightly in the decade in New England (from 39.6 to 36.8) total farm land improved decreased slightly in the decade in New England (from 39 6 to 36 8) and in the Middle Atlantic states (from 68 6 to 67 9) this decrease was in two distinctly non agricultural (but manufacturing) groups. In every other group there was increase East North Central from 74 5 ° to 75 4 / (in 1910 56 6 of all land was improved farm land). West North Central from 67 5° to 70 6 % (in 1910 50 3 ° of all land was improved). South Atlantic from 44 2 to 46 7° East South Central from 49 5 to 53 9° of 38 2° of all land improved). West South Central 22 5° to 34 4° Mountain 18 1 to 26 7° (only 29 / of all land) and Pacific from 39 6 % to 42 9. In 1910 59 5°, of all farm land and 39 8 % of all land was improved east of the Mississippi and 50 8 / of farm land and 19 2°% of the entire land area west of the Mississippi. In the North 70 1 of farm land and 49 3 of all land was improved in the South 42 5% and 26 8 and in the West 34 2 and 5°. The average farm is larger in the newer than in the older part of the country, in the

The average farm is larger in the newer than in the older part of the country in the West 296 9A. (386 I in 1900) in the North 143 A (133 2 in 1900) and in the South 114 4A (138 2 in 1900) but the figures for the South are somewhat misleading as the census classifies as separate farms the several tenant holdings of a large plantation East of the Mississippi the average acres of land per farm was 93 (99 8 in 1900) and west 211 3 (229 in 1900)

Farm Values -In 1910 67 / of the value of all farm property was in the North (33° in the West North Central and 24 7 in the East North Central group) 21 9 in the South (9 4 West South Central 7 2 South Altantic 5 3 East South Central) and 11 1 o in the West (6 8 Pacific and 4 3 Mountain) East of the Mississippi was 46 5° of the whole value west 535 But east the value of land was only 431 / and the value of live stock only west 53.5 But east the value of land was only 43.1 ' and the value of live stock only 43.8 ' the value of buildings 62.8 ' and the value of implements 52.2°, of the total of each of these items the first two being less and the second two more than the percentage of the value of all property in the West. The percentage of increase in the value of all farm property was 69.1 east and 139.3 west of the Mississippi or by the three fold division 90.1' in the North 110.1 in the South and 164.7 ' in the West. The average value of all farm property per acre was \$46.64 in 1910 and \$24.37 in 1900 for the entire country in the North it was \$66.46 (76 % more than in 1900) in the South \$25.31 (114.7 % increase) and in the West. \$40.93 (123.9 % increase)

The average value of farm property per farm east of the Mississippi increased in the decade from \$3 067 to \$4 849 and west of the Mississippi from \$4 448 to \$9 030 In 1910 the average in the North was \$9 507 in the South \$2 897 and in the West \$12 155 (Pacific group \$14 643 California \$18 308 Nevada \$22 462) But comparisons are misleading because the average acreage differs so much in the different parts of the country and the number of live stock is so much greater in the West (and to a less degree in the North) than in the South The average value of buildings per farm it is to be noted was higher in the North (\$1 564) than in the West (\$1 009) and much higher than in the South (\$461) but in land machinery and live stock the rank of the three regions was first the West second the North and third the South

Production 1-The crops of 1911 #ere unusually small and those of 1912 remarkably large

¹ Statistics for 1911 are from the 1 ear Book of the US department of agriculture those for 1912 are preliminary estimates made by that department

In May and June 1911 the country east of the Rocky Mountains suffered severely from a rainfall The Weather Bureau reported that in a half century there had not been such a continuous high temperature as in these two months

The rainfall was 27 8% less than usual ontinuous night emperature as in these two months. The rainfain was 2/0 /0 loss than usual in New England 216% less in the West South Central states. 212% below normal in the Pacific Northwest 254% in the Dakotas Nebraska and Kansas 197% in Minnesota Iowa and Missouri. 124% in the Middle Atlantic group and 103% in the East South Central states. The result was that the total value of the crops of 1911 estimated at \$5,504,000.000. was only \$44 000 000 greater than in 1910 in spite of higher farm prices for all crops—except cotton cotton seed and flaxseed The total value of all farm products in 1911 was \$8 417 000 000 being \$277 000 000 less than in 1910 The loss of \$321 000 000 (\$-77 000 000 net loss plus \$44 000 000 increase in value of crops) was in animal products—e.gs wool butter and coults being less and only detay core more valueble than in 1910 the products and only detay core more valueble than in 1910 the second only detay core more valueble than in 1910 the second only detay core more valueble than in 1910 the second only detay core more valueble than in 1910 the second only detay core more valueble than in 1910 the second only detay core more valueble than in 1910 the second only detay core more valueble than in 1910 the second only t poultry being less and only dairy cows more valuable than in 1910 in 1911 the value of animal products was \$2 913 000 000 (\$5 234 000 000 in 1910)

In 1912 there was no such damage from inclement weather The value of animals slaugh tered was less than in the preceding year (or in 1909 but more than in any other year since 1900) but the crop value was much greater and the total value of farm products was \$9 532 000 000 Taking 100 as the value of farm products in 1899 the United State department of agriculture estimates the products of 1905 at 133 of 1911 at 178 4 (being less than in 1909 or the preceding year) and of 1911 at 202 I

In 1911 nearly all crops were less than the average for the preceding five years but in

1912 nearly every crop was greater than ever before Wheat and tobacco had twice been

greater and cotton and rice once

Indian Corn — The crop of Indian corn in 1911 was estimated to be 2 531 500 000 bushels with a farm price per bushel higher than in any year except 1883 in the records of the United States department of agriculture and the total value was greater than in the previous year was twice the value of the cotton crop and was hardly exceeded by the value of cotton

wheat and oats combined In 1912 the crop was 25.2 greater than in 1911

Cotton — The cotton crop of 1911 about 15 00 000 bale (only 11 610 000 in 1910)

grown on 36 045 000 acres (only 32 403 000 in 1910) was probably the large t ever grown in the country but its value though above the average for the five preceding years was less than that of 1910 lint being nearly 5 cents a pound cheaper and cotton seed being corre spondingly lower in price. In 1912 the crop was smaller than in 1911 or in 1904 and was

exceeded in value by the crop of 1910

Hay —Third in value in 1911 was the hay crop 47 444 000 tons. The average crop for the five year preceding was one third greater and the crop since 1888 was each year larger. The crop was so small that there was an increase in farm value of \$2.50 a ton and the total value \$694 570 000 wa exceeded only in 1910 and 1907 and was a little more than the hye vears average In 1912 the hay crop was greater in value than the cotton crop or the great hay yield of 1910 being \$861 000 000—nearly as much as wheat tobacco and potatoes together Wheat—The 1911 wheat crop about 621 340 000 bushels was less than the five year

average in the preceding decade the crop of 1904 only was smaller. The value of the wheat crop about \$543,000,000 also was far below the average it exceeded the value of the crop of 1906 when the average price a bushel was nearly one third less In 1912 about 730,267,000 bu (\$555 280 000 farm price) was grown (less than in 1901 or 1906) the spring crop be ng much better than the winter yield and the total being one binth more than the average for the preceding five year

Oats -In oats as in hav the crop was so small in 1911 that the price was unusually high and the total farm value above the five year average. It was 922 000 000 bu valued at \$414 000 000 (about \$408 000 000 in 1909 and in 1910) But in 1912 the crop was 46 /6 greater than the previous maximum crop of 1909 51 5 more than the five year average. The large crop 1 418 337 000 bushels forced the price down and the value was \$452 469 000

only 22 2 more than the preceding five year average

Potatoes - The 1911 crop of potatoes was about 200 000 000 bu (349 000 000 in 1910 376 500 000 in 1909) but the farm price was nearly one half greater than in 1910 and the farm value \$233 800 000 was far greater than the five year average or than in any preceding year In 1912 the production was much larger 420 647 000 bu -29 above the five of record vear average the farm value was \$212 550 000

Barley —The barley crop of 1911 160 000 000 bu was much less than for any one of the

years 1908 1909 1910 but the price was high and the total farm value about \$139 000 000 was a third greater than that of the 1910 crop The 1912 crop was the largest on record 223 820 000 bu 35 7 % more than the five year average but the price declined and the total

value was \$112 957 000 much less than that of the small crop of 1911

Tobacco —The tobacco crop of 1911 not merely was short but commanded a price only a little higher a pound than in 1910 and considerably less than in any year between 1906 and 1909 inclusive The crop grown on 1 013 000 acres (in 1910 1 366 000) was 905 109 000 lbs (1 103 415 000 lbs in 1910) valued at \$85 210 000 -nearly one sixth less than in 1910 In 1912 the crop was 962 855 000 lbs -7 I o more than the five year average the average price per pound also increased so that the gain in value will be greater

Flax -The most valuable of the smaller crops was flaxseed with an acreage in 1911 of 2 757 900 (about two thirds in the Dakotas most of the remainder in Montana and Iowa) —which is more than in any preceding year except 1902 1903 and 1907—a production of 19 370 000 bu —which was more than in 1910 but less than in any other year in the preceding decade The value \$35 272 000 was exceeded only by that of the record crop of 1909 and the average farm price was greater than in any year except 1910 when the short crop made it phenomenally high. In 1912 the crop was much larger 28 073 000 bu (or 44 1 or above the five-year average) valued at \$32 202 000 (about 32 4 above)

Rye - The rye crop of 1911 was 33 119 000 bu (34 897 000 in 1910) from 2 127 000 acres being smaller than in 1902 1906 or 1910 but the farm price pur bushel 83 2 cents was greater than in any year except 1867 1868 and 1881 and the total farm value \$27 557 000 was the highest known The 1912 crop was 35 664 000 bushels the largest on record being 10% above the five year average Prices fell and the total value was only \$23 636 000

Sugar —The sugar beet crop of 1911 was 599 500 tons worth more than \$24,000,000 both in quantity and value it was nearly one fourth greater than the five year average. In 1912 the crop was nearly 700 000 tons. Of cane sugar the crop in 1912 was small because of

floods in the Mississippi Valley

Hops -The crop of hops in 1911 was small only 40 000 000 lbs compared with 49 634 000 in 1910 and 57 510 000 in 1907 but the average price a pound was nearly twice the aver age of preceding years and the crop value \$15,500,000 was much more than twice as great as the average for the preceding five years In 1912 the crop increased to 44 500 000 lbs but prices fell and the total value was only about \$11 000 000

Rice—Rice was grown in 1911 on 696 600 acrts (720 600 in 1909 and 723 600 in 1910) and the trop 22 934 600 but though less than that of 1910 or 1909 was considerably above the five year average. The farm value of the crop \$18 274 600 was more than in any other year except 1909 when the price per bushel was higher. In 1912 the crop suffered from floods but was peopletly larger than in any year except 1900.

but was probably larger than in any year except 1909 its value was \$23,423 000

Buckuheat --The buckwheat crop of 1911 17 549 000 bu was a little less than that for 1910 17 598 000 bu (grown on \$60 000 \$\text{A}\$ 1911 acreage \$83,000) but much larger than for any other year in the last decade The average farm price a bushcl was \$72.6 c exceeded only in 1908 (75.6 c) and the farm value of the crop much above the five year average

In 1912 the crop was even larger —about 19 124 000 bu value about \$12 000 000

Animals — The total value of animal products in 1912 was about \$3 395 000 000 being more than in 1911 but less than in 1910 — The number of horses on January I 1912 20 509 000 was larger than in 1911 or in any other year except 1909 and 1910 and the average value and the total value (\$... 172 694 000) larger than in any year except 1910 and 1911 The number of mules 4 352 000 was greater than in any preceding year and average value (\$120 51) and aggregate farm value (\$525 657 000) were exceeded in 1911 only. The number of milch cows 20 699 000 was the smallest since 1906 the average value (\$39 39) and the total (\$815 414 000) were exceeded only in 1911. Other neat cattle numbered 37 .60 000 -much less than for any year in the decade but the average vilue \$21 20 was higher the total value was less than for any year since 1906. The number 52 362 000 and total value \$181 170 000 of sheep also were less than since 1906 and the average value \$3 46 was far below the five year average —that for 1909 alone was lower Swine numbered 65 410 000 a little less than in 1910 but far more than in any other year the average farm

price was exceeded in 1910 and in 1911 and the aggregate value only in 1911

Plan Industry —The US department of agriculture established about twelve years ago its bureau of plant industry whose work has consisted largely of searching the world for gruin fruits grasses etc and ascertaining by experiments which of them might be useful in the United States. Recently a force of 25 trained explorers have been busy in this work and some 34 000 varieties of plants have been imported and experimented with their seeds and progeny being sent out to private breeders and experimenters. Mr. F. H. Wilson of the Arnold Arboretum Boston. Mass. who has distinguished himself in similar work and is said to have introduced into America more new plants than any other. man, in 1912, received from the Peaul Horself heavets. of Creat Britan the Vectoria Medal of Horself. ceived from the Royal Horticultural Society of Creat Britain the Victoria Medal of Honour

never before conferred on any one outside of the British Isles

The other activities of the Federal department of agriculture are manifold—the forest service and the weather bureau are subdivisions meat inspection and the enforcement of the Federal food and drugs act are quasi police functions of the department carried on by a bureau of animal industry which besides investigates and eradicates diseases of animals experiments in breeding and feeding and works for the improvement of the dairy industry and the department has experiment stations and co operates with state agricultural experi ment stations and through its bureau of soils makes soil surveys-cometimes with the aid Other bureaus in the department are those of chemistry entomology of state organisations About 2 000 publications of the department appear each year in these and biological survey

different fields and the total number distributed in the year 1910-11 was 27 595 000

MINERAL PRODUCTS—Total value 1911 \$1 918 326 253 This was 3 65 less than in 1910 and 7 4% less than in 1907 the only year when mineral products were valued at more than \$2 000 000 000 But the value in 1911 was greater than in 1908 (following the panic

of 1907) or 1909 The decrease as compared with 1910 was \$72 584 882 and this was more than covered by the decrease in pig iron, which was \$84 827 862 The same item explains the decrease (\$75 611 118) in the value of all metals from \$747 790 718 in 1910 to \$67. 1,9
600 In other words apart from pig iron there was an actual increase from 1910 to 1911 of \$12 278 980 in the value of all other mineral products and of \$9 216 744 in the value of all other metals. The difference between these two increases about \$3 050 000 is the increase in the value of non metals in the vear and it is to be noted that this increase was in spite of a decrease of \$18 104,235 in the value of bituminous coal so that apart from bituminous coal, there was in the year an increase of \$21 155 000 approximately

Metals -Of pig iron the output in 1911 was 23 257 288 tons (one eighth less than in 1910) valued at \$3,7,334,624 (one fifth less). The average price per ton was \$14,07 in 1911 \$15,57 in 1910 \$16.25 in 1909 \$20,50 in 1907. Even greater was the decrease in iron ore marketed in 1911 40,989,808 tons (nearly one fourth less than in 1910) valued at \$86,419,850 (more than three eighths less)—the decrease in average price per ton being marked

Second in value of the metals was copper 1 097 23. 749 lbs valued at \$137 154 092 (quantity 1 58 more value 0 02 % less than in 1910 about one seventh more in quantity and one eleventh less in value than the average for the five years 1905-09) In copper and in iron the United States outranked any other country

The output of gold was 4 687 05, oz valued at \$90 890 000 (a cf 1 more than in 1910) The value of silver \$3.2 615 700 was 5.71 more than in 1910 but was nearly 2 the average for the five years 1905-09

Ranking immediat ly above and below silver in value among the metals were lead and zinc re pictively with 406 148 tons (\$36 55.3 320—one minth more than in 1910) and _71 6_1 tons (\$30 964 794—nearly one seventh increase). This is exclusive of antimonial lead 14 078 tons valued at \$1 380 556 (3° increase). The only other metals of importance were adurating metals of the other than 18 080 (and the constant) at 1.5 000 lbs.

thirtieth less than in 1910) valued at \$8 084 000 (nearly one-tenth le s) quicksilver valued at \$977.989 (2 increase) tin \$50.635 (two and a half times as much as in 1910) and plats num \$40.890 (three fifths increase)

Fuels —Of the non metals - and of all the minerals—by far the most valuable was coal with an output of 496 2-1 168 ton (501 590 578 tons in 1910) valued at \$626 566 876 (86 9 557 0-1 in 1910). The U.S. Ceslogical Survey divides this total between Pennsylvania an 55, 0.1 in 1910) The U.S. (e)logical Survey divides this total between Pennsylvania and thracite and bituminous coal (including brown coal lighte and anthracite mined in other tates than Pennsylvania). Using bituminous coal to include all this the value was \$451.1,7.484 (3.56) le 5 than in 1910. See above) and the output 405.757.101 tons (2.72 le 5). There was in increase (7.08) in quantity and 9.31 in value) in the output of Pennsylvania anthracite. 50.7,1.488 tons. \$175.139.392. Not so large was the increase (5.2.0 in quantity and 4.8 in value) in petroleum the output was 220.449.391 bbls. valued at \$154.044.75. Other fuels were coke 35.551.489 ton. valued at \$54.130.549 (nearly one sixth less than in 1910) natural gas. \$7,4.127.534 (4.76) increase) and peat. \$272.114.

Sincetural Materials — Third in Julia — to coal and from — are clay products. \$166.2.6

Structural Materials —Third in value —to coal and iron —were clav products \$162 2.36

INI (463) less than in 1910 but considerably more than the average for 1905—09). The more valuable building materials were stone \$77 108 567 (0.77) more than in 1910 but about one seventh more than the five year average) and cement 79 547 958 bbl. (2) more than in 1910) valued at \$66 705 136 (nearly 3) less than in 1910). Almost all of this (78 5.8 6.7) bbl. value \$66 248 817) wa. Portland cement. Natural element was valued at \$378 533 and puzzolan at \$77.766. Minor building material were sand and gravel \$19 614 850 lime 3.392 \$87 tons valued at \$13 688 9.0 (2.83) less than in 1910 but nearly one eighth more than the five year average) gypsum \$6.462 0.55 (a very little less than in 1910) slate \$5.728 0.19 (one twelfth less than in 1910) slate \$5.728 0.19 (one twelfth less than in 1910) and sand lime brick. \$897 664 (nearly one quarter less than in 1910) than in 1910) and sand lime brick \$897 664 (nearly one quarter less than in 1910)

Chemical Materials — The output of phosphate rock wa 3 053 279 tons (15 more than in 1910) valued at \$11 900 693 (9 increase). The value of salt was \$8 345 69_ (5 64 % increa e over 1910) of sulphur \$4,787 049 (4 increase) of sulphur card \$2,733 696 — first reported in 1911 from fumes of copper and zinc smilters of pyrite \$1 164 8/1 (nearly one fifth increase) of borax \$1 569 151 (three tenths increase) of fluorspar \$611 447 (two-fifths increase) of calcium chloride \$91_15 (two ninths increase) of bromine \$110 902 (more than thrice that of 1910) and of arsenious oxide \$7, 408 (two fifths more than in 1910 yallie more than throe as great). The Geological Survey is making an elaborate search for value more than twice as great) The Geological Survey is making an elaborate search for potash salty drilling for saline residues at great depths and examining brines alunites and igneous rocks The Soils Bureau of the department of agriculture is studying the kelps of the Pacific Coast for the same purpose and is making a field survey of arid lands

Pigments - Mineral paints were valued at \$7 842 583 (31/2 times as much as in 1910)

¹ Pig iron and not iron ore is the basis of valuation adopted by the United States Geolog ical Survey and the value of fron ore is not included in the total value of minerals given here

² Exact figures are not given because the Geological Survey does not make metals and non metals' the only classes but adds unspecified products mostly rare metals

This excludes zinc oxide not separately reported in 1911 but valued at \$5 238 945 in 1910 Crude barytes was valued at \$122 792 a little more than in 1910 and \$6,196 755 in 1909 Crude barytes was valued at \$122 792 a little more than in 1910 Abrasites —Artificial abrasives were valued at \$1,493 040 about one fourteenth less than Grandstones were worth \$907 316 about one seventh less than in 1910 oilstones 010f nt

and whetstones, \$214,991 less than in 1910 or than the average for the five year period and abrasive garnet \$121,748

Miscellaneous—The output of asphalt (including bitumens and hydrocarbons not class) fied as petroleum) was 360 004 tons (almost two-fifths more than in 1910) valued at \$3,828 one as performed was 300 004 cost (amoust two-mans have than in 1910) values at \$3,000 of the fourth more than in 1910 and over double the amoust average in 1905-09). Other products valued at \$500 000 or more were mineral waters \$5 837 888 (7% increase) talc and soapstone \$1 032 732 (one fifth increase) and fibrous talc \$613 286 (about 16 /0 decrease) bauxite, \$750,649 (4 8% increase), and felspar \$579 008 (15% increase)

Manufactures -In "continental" United States (excluding Alaska) there were in 1909 268 491 manufacturing establishments (29 4% more than in 1899) which employed 7 678 578 persons, of whom 6 615 046 were wage earners (40 4% increase) had a capital of \$18,428 270,000 (105 3% increase), and manufactured products with a gross value of \$20,672,052 000 (81 2% increase) and a net value (gross less cost of materials) of \$8 530 261 000 (76 6% increase) The increase in value gross or net must be interpreted with the increase of prices in view, or its meaning will be ex aggerated

The ten leading manufacturing states ranked according to the gross value of products and with the percentage of the total contributed by each were New York 16 3, Pennsylvania 12 7 Illinois, 9 3 Massachusetts, 7 2 Ohio, 7, New Jersey 5 5 Michigan 3.3 Wisconsin 29 Indiana 28 and Missouri, 28 (See the separate state articles) The three Middle Atlantic states reported more than one third (34.5%) the East North Central states about one fourth (25 200) and the New England states more than one eighth (12 9%) a total of nearly three fourths (72 6%) of the total gross value of the country Ranked on the same basis the ten leading cities in 1909 were New York Chicago Philadelphia, St Louis Cleveland, Detroit, Pittsburg, Boston Buffalo and Milwaukee The total gross value of manufactures from these ten cities was more than \$5,800,000,000,—nearly three tenths of the total for the nation. In 50 cities which had 100 000 or more inhabitants the value of manufactures was more than two fifths (42 3%) of the total and the 603 cities over 10,000 contributed nearly seven tenths of the total product value employed nearly two-thirds of the wage-earners in manufactories and contained more than half the establishments, although their com bined population was only three-eighths that of the entire country

Chief Industries - The largest single industry according to the census classification and judged by gross product was slaughtering and meat packing with one fifteenth of the total product value and more than one half increase in the decade. Second of the single industries product value and more than one half increase in the decade. Second of the single industries is that of foundries and machine shops with nearly 6 % of the total product value in 1909 with this industry should be mentioned iron and steel from steel works and rolling mills (4.8% of the total) and iron and steel from blast furnaces (19%). Third in value was lumber and timber (5.6% of the total) with a product more than one half greater than in 1899 Flour and grist mill products were valued at one wenty fourth of the total product value. The more important textile products were cotton goods (3 / of the total) woollen worsted and lelt goods (2 1 %) hosiery and knit goods (1 %) and silk goods (1 %). The value of men sclothing was 2.7% and of women's clothing 1.9% of the total of all industries that of boots and shoes 2.5% that of tobacco 2% that of cars and shop construction by steam railway companies 2 %, and by other manufacturers 0.6%. A metallurgical group of industries includes copper smelting and refining (1.8%) lead smelting and refining (0.8%) copper tin and sheet iron products (1.7%) and brass and bronze products (0.7%). Malt liquors are reported as 1.8% and distilled liquors as 1.% of the total but a Federal revenue tax included in the reported value makes it misleading. Other items all valued at more than \$100.000 ooo with the per cent of the total for each were leather (1.6%) and leather goods (0.5%) sugar and molasses not including beet sugar (1.4%) butter cheese and condensed milk (1.3%) paper and wood pulp (1.3%) automobiles (1.2%) and wagons and carriages (0.8%) furniture (1.2%) refined petroleum (1.1%) electrical machinery (1.1%) illuminating and heating gas (0.8%) canning and preserving (0.7%) cottonseed oil and cake (0.7%) and agricultural implements (0.7%).

Of the manufactures specifically named in the preceding paragraph only one, smelting and refining of lead, showed a decrease (9.9%) in the gross value between 1904 and 1909 and only two others sugar and molasses and wagons and carriages a decrease in the value added

by manufacture in the same five years—and these decreases were small 27 / and much less than the increase 77 5 and 9.6 ° in the years 1899–1904. The gross value of automobiles increased 532 6 % from 1899 to 1904 and 729 7 ° in 1904–09. Other high percentages of increase in gross value during the years 1904–09 were 68 8 %, iron and steel from blast fernaces; 66 6 copper tin and sheet iron products 63 2 % butter cheese and condensed mik 57 3 ° ° , copper smelting and refining 57 2 ° electrical machinery and apparatus 55 9 ° distilled liquors 55 4 %, women s clothing 53 4 % cottonseed oil and cake Ownership—In 1909 of 268 491 manufacturing establishments 69 501 (25.9 % in 1904 22 6 ° d) were operated by corporations and these establishments reported nearly four-fifths

Comes in p — In 1909 of 208 491 manufacturing establishments 69 501 [25,9]? in 1904 23 6%) were operated by corporations and these establishments reported nearly four-fifths (in 1904 not three fourths) of the total product value. In the Mountain Group of states 90 2% of the product value was from establishments owned by corporations largely smelters, in the East North Central group the percentage was 85 1 in the West North Central 83 9 in the Pacific states 82 4 in New England and in the West South Central group 81 4 for each in the East South Central 78 5 in the South Atlantic 76 7 and in the Middle Atlantic 71 9. The highest per cent in any state was 96 1 in Arizona. More than twice as many establishments were operated by individuals as by corporations but their product value was less than one-eighth as large Establishments operated by firms numbered about four fifths as many as by corporations and had a product value a little more than one-eighth as large In 1904 establishments operated by individuals reported 11 5 of the total value in 1909 9 9 % In 1904 establishments operated by firms reported 14 4 on 1909 10 6 o The advance of in 1909 106° The advance of corporation control is marked

Establishments - Establishments with an output of more than \$1 000 000 each numbered 1900 (0.9 /) in 1904 and 3 of 1 (1.1) in 1909 in the former year their product value was 38% in the latter 43.8% of the total for all establishments in 1904 they employed 25.6% in 1909 30.5 of all wage-earners in manufacturing. In 1909 67.2 % of all establishments had each an output less than \$20 000 in value but these establishments produced only 5.5 of the total product value and employed only 9.3% of the wage earners.

It will be surmised that the increase of large establishments is accompanied by greater efficiency because the ratio of wage earners to product is smaller in the large establishments efficiency because the ratio of wage earners to product is smaller in the large establishments but it is more probable that this difference is due to the presence of more labour saving machinery (and machinery that saves more labour) in the large establishments. And it should be noted that the million dollar establishments producing 43.8° of the gross value produced only 35.7° of the net value (gross less value of raw material) but that the establishments producing less than \$0.000 each and contributing 5.5% of the gross product produced 7.7° of the value added by manufacture. Even from this however no generalisation may safely be drawn since many establishments with large gross outputs are in industries which from the nature of the raw material add comparatively little by manufacture. This is which from the nature of the raw material add comparatively little by manufacture shown in a striking way by the slaughtering and meet packing industry which ranks first in the country in gross products (\$1 370 568 000) but twelfth in "value added by manufacture (\$168 740 000) or by flouring and grist mills with a gross value of \$883 584 000 (5th of all industries) and a net value of \$116 008 000 (18th)

Both these industries have a large proportion of large establishments in the former 166 out of 1 641 had each an output of more than \$1 000 000. There were even larger percentages of million dollar establishments in copper smelting and refining (84 2 with 99% of product value) steel works and rolling mills (417 with 91%) blast furnaces (413 with 858%) refining petroleum (238 with 88%) and steam railway car construction and repairs (227 with 807%)

In Rhode Island 35 ' of all establishments produced each more than a million dollars worth a year with a total value nearly half the entire product value for the state. In Arizona 84 I ' of the entire product value was from such establishments in Montana 68 I ' and in Utah 53.4%—almost all these being smelters in Nortana 68.1% and in Utah 53.4%—almost all these being smelters in Nebraska 68.9% and in Kansas, 62.9% mostly slaughter houses and meat packing establishments in Illinois 56.2% meat packing and iron and steel in Pennsylvania 50.7% largely iron and steel and in New Jersey 56.7% from copper smelters and petroleum refineries. New York, the first manufacturing state in the Union reported only 37 of all product values from million dollar factories this is partly due to the diverse character of manufacturing industries in that state and partly to the large number of distribute actablishments, mostly ware small.

this is partly due to the diverse character of manufacturing industries in that state and partly to the large number of clothing establishments mostly very small

Of the total population of 'continental' United States 7 678 578 about 1 in 12 were engaged in manufacturing 487 173 being proprietors and officials 576 359 clerks, and 6 615 046 wage earners. Of wage earners about 1 out of 5 were females, and about 1 out of 40 (162 246 in all) were under 16—by official reports the actual number was probably greater. In dairy industries flour milling and baking the percentage of proprietors and officials was unusually high (33 3 28 4 and 20 2 respectively) the dairy establishments being largely co-operative and in flour milling much labour saving machinery is used which requires comparatively few wage earners. Absolutely the largest number of wage-earners in any one industry was 695 019 (more than one tenth of the total) in the manufacture of fumber and timber. Other industries employing more than 200 000 wage-earners were foundaries and machine shops 531 011 cotton factories 378 880 steam railway companies car construction 282 1747 parating and publishing 258 434 steel works and rolling mils, 240 076 and men s clothing 239 696. The percentage of children under 16 to all wage-earners is largest.

Value of Imports and Exports by States and Districts for the Year ending June 1912—continued DISTRICT PORTS OF ENTRY IMPORTS EXPORTS Richmond V irginia Richmond 926 516 Washington (See Oregon and Washington) Mılwaukee Wisconsin Milwaukee 4 646,399 Porto Rico Porto Rico San Juan 6 832 012 4 501 928

FINANCE —The balance in the general fund on June 30, 1911 was \$140 176 926 and on June 30 1912 \$167,152 479 (and on Nov 11, 1912, \$147 982,307) For the fiscal year the receipts were ordinary \$691 778 463 (preceding year \$701,372 375) Panama Canal bonds sold, \$33 189,104 (in 1911 \$18,102 1/0) and public debt, \$20 537 645 (in 1911, \$40,232,555) The disbursements were -ordinary, \$654 553 963 (1911, \$654 137 998), Panama Canal, \$35 327 371 (1911 \$37,063,515) and public debt \$28 648 327 (1911, \$35 273 336) The principal items in ordinary" receipts were customs \$311,321 672, ordinary internal revenue, \$203 028,896, corporation tax, \$28,583 303, and of ordinary disbursements pensions, \$153,590,456 war \$148, 795 422 navy \$135 591,956 interest on public debt, \$22,616,300, Indians, \$20,134-840, civil and miscellaneous, \$1,3,824,989

The appropriations by annual acts (exclusive of postal payable from postal revenues) tine appropriations by annual acts (exclusive of postal payaoic from postal revenues) were \$634,549,561 for 1912 and \$617,382,178 for 1913 (permanent appropriations for 1912 \$68,575,924 and for 1913 \$72,556,424). The Democratic Congress cut down the appropriations for public defence army from \$93,374,756 for 1912 to \$90,958,713 navy from \$126,495,509 for 1912 to \$123,151,539 for 1913 fortifications from \$5,473,707 to \$4,036,235 and Military Academy from \$1,163,424 to \$1,064,668. It is true that the total of annual appropriations for 1913 compared with that for 1912 showed retrenchment and an apparent effort for economy but the decrease in the items just named and the cut of 25 in the Sundry Civil act from \$132,241,032 to \$103,548,041, went if they were entirely laudable economies

for economy but the decrease in the items just named and the cut of 25 in the Sundry Civil act (from \$135,241,935 to \$102,5,8,9,4) even if they were entirely laudable economies do not hide although they overbalance the enormous increases in the Rivers and Harbors acts (almost one third from \$30,883,419 to \$40,559,620) and in the Pension Act (nearly one twelfth from \$153,682,000 to \$165,146,146) — both items notoriously for political purposes On June 30, 1912 the outstanding debt was \$2,849,373,874 (June 30, 1911,\$2,765,600,607) but more than half of this (\$1,524,535,369) was in certificates and treasury notes off set by an equal amount of cash in the Treasury, so that the difference \$1,343,838,505, is a less misleading figure. This sum is made up of the following items, interest bearing debt \$963,776,770 (including \$646,250,150 in 2 consols of 1930,\$134,631,980 in Panama Canal loans of 1906 and 1908—both ...—and of 1911,\$50,000,000 at 3 \$118,489,900 of the 4° loan of 1925,\$63,945,460 of the 3% loan of 1908—18 and two issues of postal savings bonds at 2½% the first 1911—31 for \$41,900 and the second 1912—32 for \$417,380, debt on which interest has ceased since maturity \$1,760,450 and debt bearing no interest \$378,301,285—not including the certificates and treasury notes mentioned above.

A system of postal savings banks was put in operation January 3, 1911 and at the begin

A system of postal savings banks was put in operation January 3 1911 and at the beginning of November 1912 there were banks in 12 773 post offices (out of a total of 58 133 in the country) including 644 branch offices and sub stations in every state of the Union the num

ber of depositors was 290 000 and the total deposits were \$28 000 000

On June 27 1912 President Taft sent to Congress a report of the president s commission on economy and efficiency entitled The Need for a National Budget (submitted June 19 printed as 62nd Congress 2nd Session House Document Vo 854) with a message approving the commission of the president of the commission of the president of the commission of the president of the president of the commission of the president the commission s recommendation that a budget be submitted to Congress by the President and that appropriations not based on this budget be acted upon in a separate bill On July 10 heads of departments and establishments were instructed by the President to prepare for the year 1914 estimates and summaries not only in the form previously used but in the uniform manner suggested by his commission. A letter from the President to the Secretary of the Treasury (Sept 19) supplemented this order Congress seemed prone to consider that the President was encroaching on its powers and in this letter the President said that he ques-

tioned not the constitutional right to Congress to prescribe the manner in which reports
be submitted but the practical wisdom of continuing to operate the Government
under 90 different statutes passed at 90 different times which prescribe 200 different forms

¹ This commission was organised March 8 1911 and took over work begun under Charles D Norton secretary to the President Its chairman was Frederick A Cleveland formerly director of the New York City bureau of municipal research See his paper in Vol 3 No 2 (1912) of Proceedings of the Academy of Political Science and for other activities of the commission Hearings before the House Sub-committee in charge of the Sundry Civil Appropria tion Bill for 1913 (Washington 1912) The distribution of all departmental documents by the Superintendent of Documents instead of by the separate departments is an accomplished reform proposed by the Committee and improved and uniform filing is another

Not only did Congress object to the work of the committee but in the legislative executive and judicial bill (which President Taft twice vetoed) it required estimates to be submitted in the same way as before and in another way Hence the President's letter of September 19

The problem of rural credit has attracted much attention and in October 1912 the Federal government published a Preliminary Report on Land and Agricultural Credit in Europe with a letter to governors of the states by President Tast recommending the introduction of co operative credit on the lines of the Raiffeisen banks of Germany 1

The National Monetary Commission (which terminated March 31, 1912) presented in October 1911 and on January 8 1912 its recommendations 2 notably for a National Reserve Association, formed of 15 district reserve associations each made up of local associations of 10 banks or more, each local association with a combined capitalisation of \$5,000,000 To secure membership banks must subscribe for 20% of their capital in stock of the National Reserve Association and must fulfill certain requirements regarding capital surplus, reserves and examination which put state banks and trust companies under supervision similar to that now in force for national banks of the association are to be divided between the stockholders and the United States a certain part however going to a surplus reserve for the association. No more national bank notes would be issued, their place being taken by notes of the association based on bonds, and by additional circulating notes based on bankable commercial paper etc The association would be required to make weekly public reports to the comptroller of the currency and full reports five times a year Its advocates think that the plan would be of particular value in financing crops and argue that as fiscal agent for the treasury the association would effect a more satisfactory relation between the treasury and the banks In general opposition to the plan was partisan arising partly from the unpopularity of the reactionary or stand pat wing of the Republican party with which Senator Nelson W Aldrich the chairman of the commission was affiliateda party group which was inextricably connected in the popular mind with tariff in iquities and favouritism to "Wall Street" the 'interests" and the 'Trusts or based on economic or political theory which distrusted the management of a central institu tion and Federal interference in banking. The popular aversion to Wall Street im mediately urged that the association could not fail to be under the control of this interest in spite of the large size of the board of directors (4,) and of the probable effect of the association to minimise the influence of the stock exchange on business conditions The plan has practically the undivided opposition of the Democratic party and the incoming administration will almost certainly not adopt it or any part of it

The attitude of the Democratic party towards financial questions is hinted at by the 'Money Trust investigation carried on by the Pujo committee' on banking and cur rency² of the Federal House of Representatives (resolutions of February 24 and April 25, 1912), although it was charged that this was prompted not merely by hostility to organised finance but largely by a desire to make political capital to be used in the presidential campaign. Besides prominent bankers including J P Morgan, the com mittee called before it Mr Roosevelt who testified on the action he had taken in the panic of 1907 (see E B xxvii, 734d), much of the testimony before the committee was of great interest and importance

In 1912 Professor Irving Fisher of Yales suggested a gold seigniorage adjusted by reference to price index numbers as a means of reducing the cost of living through restoration to the gold dollar of its purchasing value Woodrow Wilson had previously

Chairman Arsène Pujo (b. 1861) representative from Louisiana since 1903 In a paper before the International Chambers of Commerce at Boston printed in the Independent (New York) of September 26 1912

¹ See O R Hobson Agricultural Credit Banks (Washington 1912)

² See Ludwig Bendix The Aldrich Plan in the Light of Modern Banking (New York 1912 and in German) J L Laughlin, Banking Reform (Chicago 1912) a defence of the plan of the monetary commission and the unfavourable criticism of Albert A Bowles in North American Review March 1912 vol 195, pp 340-318 on the ground that the system is too complicated and tries to secure the maximum of profit Victor Morawetz, The Banking and Currency Problem and els Solution (New York, 1911) opposes the note issue plan

suggested an actual increase in the bulk of the coined dollar Professor Fisher's plan would increase the bulk of the uncoined dollar without changing the coin dollar once or repeatedly and would substitute for the present uncoined dollar of fixed weight an uncoined dollar of variable weight but would make the coined dollar of fixed instead of variable value

Army -At the close of 1912 the regular army limited by law to a maximum enlisted strength of 100 000 included 4 781 active commissioned officers (including 244 detached line officers 127 first lieutenants of the Medical Reserve Corps and 60 dental surgeons) and officers 127 first fleutenants of the Medical Reserve Corps and 60 dental surgeons) and \$1547 enlisted men excluding provisional force and hospital corps. The branches of the force were cavalry 15 regiments with 765 officers and 13823 men field artillery 6 regiments with 252 officers and 5417 men (oast artillery corps, 170 companies with 715 officers and 18471 men infantry 30 regiments 1530 officers and 30340 men Porto Rico infantry 1 regiment 32 officers and 591 men Indian scouts recruits, etc. 7 officers and 812 men native Filipino scouts 52 companies 180 officers and 5732 men and engineers 3 battalions 1,942 men. The estimated strength of the organised state militia for the same year was 9,437 commissioned officers, and 112040 men. commissioned officers and 112 940 men

The army is organised in four divisions Eastern including departments of the East and of the Gulf Central including departments of the Lakes of the Missouri and of Texas Western including departments of California of the Columbia (with Alaska) and of Hawaii and Philippines including departments of Luzon and Mindanao There were 154 garrisoned posts and sub posts including two military pri ons (Ft Leavenworth Kansas and Alcatraz California) and the Walter Reed General Hospital at Washington D.C.

By Act of Congress of August 24 1912 the term of enlistment after November 1 1912 was increased from three years to seven of which the active service is four years and the other three years are in the Army Reserve (thus e tablished) on furlough without pay other three years are in the Army Reserve (thus e tablished) on furfough without pay After four years service an enlisted man may re enlist for seven years with higher pay and after three years service he may upon request be furfoughed and put on the Reserve After two years service enlisted men unmarried and under 30 years of age may take examinations for promotion to second lieutenant Enlisted men retired after 30 years service receive three fourths pay and \$15.75 a month. The Army Appropriation Bill carrying a clause aimed at Major General Leonard Wood Chief of Staff and making him ineligible for this office was vetoed by the President on June 17, 1912, and an appropriation measure without this clause was finally passed. There was a strong effort in the House which did not succeed to reduct the number of cavalry regiments from 15 to 10. On February 15, 1012, Adultant General the number of cavalry regiments from 15 to 10 On February 15 1912 Adjutant General Fred C Ainsworth was removed from office by the President's order pending trial for in subordination on the 16th he was placed upon the retired list on his own application. Gen Amsworth opposed the reorganisation scheme suggested by Major General Leonard Wood Chief of Staff. The opponents of the chief of staff in Congress and the friends of the adjutant The opponents of the chief of staff in Congress and the friends of the adjutant general demanded an investigation and the committee on military affairs of the House of Representatives (House resolution 415 Feb 23 1912) asked the Secretary of War for all records in the case. In sending these records to the House the Secretary said that he had been directed by the President that their transmittal was not to be construed a a recogni tion of the authority or jurisdiction of the House to require of the Chief Executive a statement of the reasons of his official action in such matters or of a disclosure of the evidence upon which such official action is based. The majority report of the Committee (Report No 508 62nd Congress 2nd Session) objected to the attitude of the Executive and declared that the Secretary of War had flagrantly abused his official authority a minority report (Part 2 of same document) defended the President the Secretary of War and the Chief of

Staff and criticised the adjutant general

The movement especially strong in 1911 and 1912 to pay state militia from Federal funds is blocked by a technicality—the constitutional provision that militia shall not be required to serve beyond the limits of the United States A bill has been prepared authorising the president to transfer to the army state militias in time of war or when war threatens and providing for their payment.

providing for their payment.

In 1912 the principal administrative officers of the army were. Henry Lewis Stimson secretary of war. Robert Shaw Oliver assistant secretary of war. Major General Leonard Wood chief of the general staff Brigather General George Andrews adjutant general successor to F. C. Answorth in 1912. Brigadier General E. A. Garlington inspector-general Brigadier General E. H. Crowder judge advocate general Brigadier General J. B. Aleshire quartermaster general. Brigadier General H. G. Sharpe commissary general Brigadier General Brigadier General George R. Smith pay master general, succeeding C. H. Whipple in 1912. Brigadier General William H. Bixby chief of engineers. Brigadier-General William Crozier chief of ordnance. Brigadier General James Allen chief signal officer. Brigadier General Frank McIntvre. Chief of bureau of insular affairs. Succeeding C. R. Edwards in 1912.

Navy.—The principal vessels of the American navy. In service under construction and

NAVY —The principal vessels of the American navy in service under construction and authorised may be classified as follows first class battleships 38 armoured cruisers 12,

protected crussers, 22 unprotected crussers 3 scout crussers 3 single turret harbour defence monitors 4 double-turret monitors 6 gunboats 13 light draught gunboats 3 composite gunboats 8, torpedo boat destroyers 56 steel torpedo boats 28 submarine torpedo boats 49 (8 authorised) tugs 45 auxiliary crussers 5 converted yachts 17 colliers 25 transports and sepply ships 15 For technical details see under Ships and Shipping and The World's Navies There are three fleets Atlantic with four divisions, Assatic with four divisions and Pacific In 1912 there was a naval militia in each of 22 states and in the Dis trict of Columbia with a total of 558 commissioned officers 29 warrant officers I 361 petty officers and 5 372 men Thirty two vessels of the U.S. Navy are assigned to state naval militias The navy active list of officers includes 2 796 commissioned 273 warrant officers and 768 at the Naval Academy
In Congress there was a long struggle over an appropriation for battleships on May 28

1912 the House passed an appropriation bill with no provision for battleships the Senate voted for two on July 5 and the conference report for one battleship was adopted by the

Senate August 19 1012

The secretary of the navy since March 6 1909 was George von Lengerke Meyer (b 1858) of Massachusetts

In 1912 Admiral George Dewey was president of the general board and the administrative bureaus with their heads were navigation Rear Admiral Philip Andrews yards and docks Civil Engineer Homer R Stanford ordnance Rear Admiral Philip Andrews yards and docks Civil Engineer Homer R Stanford ordnance Rear Admiral Nathan C Twining construction and repair Chief Constructor Richard M Watt steam engineering Engineer in Chief Hutchinson I Cone supplies and accounts Paymaster General Thomas J Cowie medicine and surgery Surgeon General Charles F Stokes marine corps Major General William Phillip Biddle

EDUCATION

At the close of the first decade of the 20th century there were in the United States about 25 000 000 children of school age and about 20 000 000 enrolled in public and private schools, with an average daily attendance of about 14 000 000 school year was about 8 months of 20 days each. In the decade 1900-10 the school population increased at a much smaller rate than the entire population, as the birth rate has continually decreased But this decrease has been much larger in the North than in the South or West, and, in general in the older parts of the country than in the newer It is equally true that all averages for the entire country are misleading be cause there is so great a variation between different states and even between different parts of the same state Less than two-thirds of the school population was enrolled in 1910 in ten states, and in the same year less than two thirds of the enrolled number was in average daily attendance in 17 states. With an average of 160 days for the country's school term, 26 states fell below the average and several had only about 100 days of school a year The average attendance of the total school population was less than 100 days in 42 states, less than 75 days in 19 of these less than 50 in 5 states and not more than 114 in any state of the total enrollment it was less than 100 days in 19 states and less than 75 in 5 states

For similar comparisons in regard to illiteracy see Population above But it must be borne in mind that even if such averages are misleading in many respects they are approxi mately correct for purposes of comparison with previous years. The percentage of enroll ment to total school population was 68 6 % in 1900 and 72 5% in 1909. The length of the average school term increased from 144 3 to 155 3 days in the same period and the average attendance of each pupil from 99 to 112 6 days. In spite of a steady tendency during the ast part of the decade to consolidate small country districts the number of public school ast part of the decade to consolidate small country districts the number of public school houses increased from 248 279 to 257 851 and the value of public school property increased from \$550 531.217 to \$667 775 587 The cost of public schools increased from \$214 964 618 to \$401 397 747 or 86% and the cost per pupil increased from \$20 21 to \$31 65 The per centage of the total cost expended for teachers salaries was 64% at the beginning and only 59 2% at the end of the decade. The average monthly salary of men teachers increased about 35% and of women teachers about 25%. Because the school year is longer the average yearly salary shows an even greater increase Even thus the increase is probably less than the average increased in cost of living and scale of prices during the decade. This is no doubt one reason for the decreased proportion of men teachers in 1900 they were about 30% and one reason for the decreased proportion of men teachers in 1900 they were about 30 % and in 1909 about 21% of the total. What effect the growing tendency to pay women teachers as much as men will have upon the proportion of men to women is a question on which experts disagree and which the next decade may decide

The public school system has been growing up and down. In the decade the number of children in public kindergartens increased 40% (from 131 657 to 185 471) in cities with

4 000 inhabitants or more and not merely have the large cities extended their kindergarten work but smaller cities and country districts have adopted the methods of the kindergarten. the number of pupils from 519 251 to 915,061 (76°) and that of high-school teachers from 20 372 to 41 667 Private secondary schools decreased in number and the number of teachers from gamed in efficiency absolutely and relatively to the private schools have gamed in efficiency absolutely and relatively to the private schools. Indeed it is a common place among university and college teachers that a majority of the best students come from

the public schools and not as a generation ago from the private secondary schools. During the decade the universities have done increasingly much for the secondary schools. The increasing growth and importance of the state universities and normal schools in almost every instance under the same control (state board of education) as the public high schools the dependence in a greater degree of higher institutions of learning upon the public secondary the dependence are a greater degree of higher institutions of tearning upon the public secondary schools for the best part qualitatively and quantitatively of their clientiel, and above all the new and wider study of education as a science and of the interesting special psychology of adolescence—have been notable factors in this change. The unsettled problem of college entrance examinations is not the only one that is being carefully studied by the faculties of the higher schools—it is rather a part of the great question of curriculum.

Even more striking is the independent attitude toward the college of the secondary school which considers itself more and more as a school preparatory for business and the trades rather than for college Although the number of pupils in secondary schools increased 200 rather than for college Although the number of pupils in secondary schools increased 200 between 1890 and 1910 (when the total population increased 50°) only one fifteenth of the pupils in secondary schools now go to college First the commercial high-school or the commercial course in a general high school and manual training high schools and now agricultural high schools mark the progress of this movement toward satisfying the practical needs of the present American population. To a large degree this has been effected by the work of the Morrill land grant agricultural and mechanical arts colleges to a rapproche ment between state departments of agriculture and education, which wa promoted by the mere existence of these agricultural colleges and to such movements in the schools as the Boys Corn Clubs and Girls Tomato Clubs and the Farmers Cooperative Demonstration Work which began in the early part of the decade under Dr. Seaman Asahel Knapp and which at the close of the decade was symbolised in the establishment in connection with Pea which at the close of the decade was symbolised in the establishment in connection with Peabody College for Teachers at Nashville of the Seaman A. Knapp School of Country Life (see TENNESSEE Education) The spread during the last two years of agricultural and vocational education in primary and secondary-public schools and the provisions for courses in agriculture and domestic science in public normal schools is shown in the articles on the different states 2 It may be noted here that the General Education Board (Rockefeller Fund) in October 1912 appropriated money for agricultural schools in northern New York and in Maine and that in 1911 and 1912 Senator Carroll S Page of Vermont introduced a bill in Congress for Federal aid to secondary schools teaching agriculture home economics trades and industries and for training teachers in state normal schools for these vocational subjects. Similar measures were introduced by C R Davis Representative from Minnesota William B Wilson Representative from Pennsylvania and Senator L S Overman of North Carolina In 1911 12 states required instruction in agriculture in the common schools 4 in rural schools and 3 in rural high schools 16 gave aid to special agricultural schools and 12 to departments of agriculture in high schools and 31 had agricultural colleges maintaining secondary courses (or schools) in agriculture New York Ohio Massachusetts Connecticut New Jersey and Wisconsin had definite systems of vocational education—all but the first two the direct result of reports by state commissions on the subject. In Indiana and in Illinois the legislature of 1913 will be called to act upon reports from similar commissions

Especially during the latter half of the decade state laws have been stricter in regard to compulsory schooling and to such limitations of child labour as literacy requirements for children's certificates to work. Closely related to the movement for agricultural education is the greater attention paid to rural schools state aid granted to weak school districts to assure full school terms and a fair teacher's wage and the consolidation of small rural

districts often accompanied by free transportation of remoter pupils

Urban schools are being more efficiently organised school boards being reduced in size and removed from political control and the appropriations and expenditures are more nearly adequate Especially in the city public schools have experiments in testing efficiency of the educational plant been made and provisions made for sub normal or defective children '

¹ The increase of teachers proportionally to pupils or rather the decrease of numbers in classes in all branches of education—even in the face in large cities of enormous increases in

ciasses in an dranches of education—even in the face in large cities of enormous increases in population and lack of class room—is a significant and promising phenomenon.

and for the physical welfare of all children-notably in physical training and examination abolition of common drinking cups and towels better cleaning and ventilating apparatus and A movement for holding city schools the year round seems In 1911-12 investigations of the school systems of Baltimore more hygienic school furniture to be gradually gaining favour and New York City were made by experts outside the municipal system

Upon the colleges the utilitarian tendencies of secondary schools—and of other agencies—have had their effect which may be seen negatively in the rapid minimisation in the college have had their effect which may be seen negatively in the rapid minimisation in the conege (as in the secondary school) of the humanities particularly Greek and positively in the establishment of schools of finance and of journalism in addition to the previous profes sional schools. The improvement of the professional schools especially of law and med icine though hampered by the licensing of lawyers and physicians under different requirements in different states has still advanced. The requirements are being raised (and thus approximately standardised) by the legislatures of the different states The wretched condi tions in some medical schools and the wasteful multiplication of these institutions was pointed out in 1910 by Abraham Flexner in a report to the Carnegie Foundation for the Advancement of Teaching This report and the standards of efficiency required by the Carnegie Foundation for the Carnegie Foundation for the Advancement of Teaching This report and the standards of efficiency required by the Carnegie Foundation for the Advancement of Teaching This report and the standards of efficiency required by the Carnegie Foundation for the Advancement of Teaching This report and the Standards of the Carnegie Foundation for the Advancement of Teaching This report and the Standards of the Carnegie Foundation for the Advancement of Teaching This report and the Standards of the Carnegie Foundation for the Advancement of Teaching This report and the Standards of the Carnegie Foundation for the Advancement of Teaching This report and the Standards of the Carnegie Foundation for the Advancement of Teaching This report and the Standards of the Carnegie Foundation for the Advancement of Teaching This report and the Standards of the Carnegie Foundation for the Advancement of Teaching This report and the Standards of the Carnegie Foundation for the Advancement of Teaching This report and the Standards of the Carnegie Foundation for the Advancement of Teaching This report and the Standards of the Carnegie Foundation for the Advancement of Teaching This report and the Standards of the Carnegie Foundation for the Carnegie tion in institutions to whose teachers it grants pensions have promoted the cause of higher education both special and general by putting a premium on the best 1

The principal change in recent years in the matter of college entrance requirements was a scheme adapted at Harvard in 1911 to be tested with the former scheme it requires the satisfactory completion of an approved (but not a university ruled or supervised) course of secondary studies and examination in four subjects. English Latin (arts course) or French or German (science course) mathematics or science (physics or chemistry), and one of Greek French German history mathematics physics or chemistry not chosen from the preceding three classes This method had been proposed in 1910 at a meeting of the Association of New England Colleges when it was summed up as a certificate for quantity and an examina tion in a limited number of substantial subjects for the quality of school work. Vocational subjects may be offered for entrance to the University of Wisconsin and the University of Chicago but both universities (and the University of California) limit a student taking entrance examinations in such subjects and require him to combine them with more abstract and disciplinary subjects and the University of Chicago announced as an offset to this

increased freedom that students would no longer be admitted with conditions.

The growth of the large colleges and universities has made the problem of the small college and especially of the rural college a difficult one. Amherst College definitely decided to adhere to a liberal arts curriculum. Hamilton College. Clinton. New York in much the same difficulty seriously considered the opposite course dropping. Greek from the require ments for the degree of Bachelor of Arts and building up a literary scientific curriculum but in 1912 no very radical action was taken. In February and April 1911 representatives of several denominational boards of education decided to co operate in the founding of colleges

The most interesting and important new institutions opened during the years 1911-12 re Rice Institute (see Fexas) and Reed College (see Oregon)

CHURCHES AND DENOMINATIONAL STATISTICS

The most marked contemporary tendency among the religious bodies in the United States particularly those ranking as Evangelical Christian, is that toward co-operation, federation and unity. Churches of similar faith are drawing closer to one another, and while they do not surrender that which is peculiar to each in doctrine polity discipline and method, they do emphasise their points of agreement and insist above all that they are engaged in a common task that this common task is immense in extent and importance and that it cannot be accomplished except by most strenuous and united effort. The field of this effort is not only the United States and its colomes, but the entire world to the leaders it is one and all embracing. But for convenience we may distinguish between the work at home or home missions and the work in the rest of the world, or foreign missions

The conditions in the foreign field present a problem so stupendous that the effort of individual denominations appears utterly inadequate and inefficient and the logic of the situation drives the missionary societies to co operation and combination. The work has gradually broadened in scope so that while evangelistic effort has increased educational The work has publication hospital and industrial institutions have multiplied in number and importance. The demands from Asia for a western system of education and other adjuncts of Christian civilisation bear heavily and persistently upon the minds and hearts alike of the missionaries and of the directors at home the hundreds of millions of non Christian peoples appear to be drifting from the moorings of their ancient religions and immediate urgency everywhere faces society and worker. Therefore universities and colleges publishing houses tospitals etc. have become union organisations with from two to half a dozen different denominations supporting and conducting each. Moreover by common agreement the native Church when it shall become autonomous and independent of the societies is not to reproduce all the denominational divisions of America and Lurone, but is to have for its ideal complete. the denominational divisions of America and Furope but is to have for its ideal complete Christian unity So following the example in Japan half a dozen Presbyterian and Re formed bodies have united their mission churches into one organisation in India and China and the three branches of the Anglican Communion operating in China have done likewise In West China bodies as diverse as Baptists Friends and Methodists have come to an agree ment to create an undivided comprehensive native Christian Church — The World Mission ary Conference at Edinburgh in 1910 representing all Protestant bodies became the mount of vision so to speak for an exhaustive survey of conditions in the non Christian world for the purpose of sounding an advance for the missionary forces of all Protestantism A Continuation Commission serving for all is studying the problem with the view of securing a more perfect county co-operation and unity and a more adequate occupancy of the whole field and of strategic centres. A considerable saving in means and effort has resulted and combination has increased efficiency and power many fold. This economy in expenditure has not reacted in smaller contributions by the American home churches for foreign missions but the aggregate becomes constantly larger reaching in 1912 nearly \$15 000 000 for the United States and Canada alone about a half of the entire income from all countries

The missionary problem in the United States appears from the evangelical point of view to be quite as important and urgent as that in the rest of the countries of the world. The coming to America of a vast stream of immigration approximating a million souls a year of whom probably a minority only may be regarded as professing any form of the Christian faith makes a moving demand upon all the denominations—the Jewish to care for those of their own religion the Roman Catholic and Eastern Orthodox to meet the needs of the multitudes of the Latin and Greek rites and the Lutheran and Reformed to provide for those adhering to the Augsburg and Heidelberg Confessions—Great numbers of immigrants have practically no religion and Protestant missionaries are endeavouring to reach these in particular. While most of the newcomers are drawn to the cities vast numbers of Italians. Poles Hungarians—Slavs and Greeks find their way into the smaller cities and towns and even into villages—The service to be given therefore—is extensive as to territory and numbers and comprehensive as to language—Add to this foreign speaking conglomerate the pioneers in newly settled sections the negroes and the Indians and the inhabitants of those older rural parishes which are weakened by the migration to cities and the Churches feel that an extraordinary task confronts them—Combination of Protestant home missionary societies in a Council for conference co-operation and united action as far as possible is the

outcome. The principle of comity the prevention of waste by doing away with rivalry' overlapping over-churching small communities and the joint study of difficult problems' are some of the achievements aimed at

The missionary spirit thus dominates all Protestantism as well as the relations of one denomination to another. It has made possible the Federal Council of the Churches of Christ, the second quadrennual session of which was held in Chicago early in December 1912. The Council is a consulting and advisory body composed of official delegates appointed by the chief judicatories of the various evangelical churches including Baptist Congregational Disciples of Christ Friends Lutheran Mennonite Methodist Presbyterian Protestant Episcopal and Reformed bodies The purpose of the Council is to express the common consciousness of the united churches upon matters of mutual and public interest and to render such service in their behalf as may be possible to co-ordinate and correlate the work of the churches so as to secure a more perfect distribution of effort and prevent duplication, to bring about the formation of state city town or other local federations of Churches and to co-ordinate their work.

The affairs of the Council are directed in the interval of its quadrennial sessions by a large Executive Committee Important commissions and committees deal with such subjects as evangelism social service peace and arbitration temperance Sabbath observance family life and divorce and theological and primary education. The Social Service Commis sion covers a wide field of activity and has a broad policy for the moral and spiritual uplifting of the working people of the vicious criminal unfortunate and depressed classes for the improvement of industrial conditions for men and women and for the abatement of poverty better housing etc. In other words by careful investigations and surveys and the thorough study of unsatisfactory conditions the commission seeks to find effective measures for the alleviation of unnecessary human suffering and human misery and to apply the Gospel of Christ in the Spirit of Christ for salvation in the largest sense. Social service has also been done by the Men and Religion Forward Movement the aim of which is to interest men in the Church and the Church in men. It has endeavoured by a series of conventions to arouse the church and the Church in men. It has endeavoured by a series of conventions to arouse the churches particularly in the cities to the necessity of organised effort to secure social justice and civic reforms to make Bible study interesting and profitable to surround boys with good influences etc. The Federal Council meeting at Chucago was very successful and showed no signs of denominational cleavage. The new president is Prof Shailer Matthews a Baptist succeeding Bishop Eugene R Hendrix a Methodist. The general feeling was that this Council which represents 16 000 000 communicants or more is no longer. an experiment and that its province is to secure a wider and more complete practical unity

Another movement among to bring about as far as possible the corporate union of Evangelical and Orthodox Christian Churches has been started under the auspices of the General Convention (1910) of the Protestant Episcopal Church. A large commission of which Bishop Charles P Anderson of Chicago is president was appointed to invite all Christian Churches which confess our Lord Jesus Christ as God and Saviour to unite in arranging for and conducting a Conference for the consideration of questions of faith and order with the reunion of Christian to the invitation and have appointed confusions to other conferences. bodies have responded cordially to the invitation and have appointed commissions to conter with the Episcopalian Commission the Church of England and the Episcopal Churches of Scotland, Ireland and Canada have agreed to co-operate. It is expected that individuals of the Roman Catholic and Oriental Orthodox Churches will assist in the arrangements for the conference and some of these bodies may participate officially in the conference itself. A circular issued late in 1912 in the name of the commission says that important preliminar, questions such as the basis of representation, the time and place of meeting the method of

procedure, may require years of discussion

Reumon of bodies of similar faith order and history has not made much progress in recent The Northern and Cumberland Presbyterian bodies voted in 1996 to consolidate but only a minority of the ministers churches and communicants of the latter entered the Umted Church Much property litigation and consequent bitterness of feeling have resulted Some important projects of union are pending (I) Between the Methodist Episcopal Methodist Episcopal South and Methodist Protestant Churches A plan in outline has been prepared proposing that the three churches unite in one body with three or four territorial divisions each to have a quadrennial conference for jurisdiction over its local affairs and all to have a general conference with jurisdiction over the general affairs of the United Church The plan contemplates the possibility of the union of the negro constituents of the Methodist Episcopal and Methodist Protestant bodies with the Colored Methodist Episcopal Church and other colored Methodists under a quadrennial Conference The new Church would have from 5 900 000 to 5 500 000 communicants. The plan has received little general discussion so far (2) Between the Church of the United Brethren in Christ and the Methodist Protestant Church bodies similar in doctrine discipline polity and usage (3) Between the Free Methodist and American Wesleyan Churches small bodies not far apart (4) Between the Evangelical Association and the United Evangelical Church Methodistic bodies which separated about twenty years ago (5) The Presbyterian (Northern) and the Reformed Church in the United States (German) (6) The Presbyterian (Southern) and the United Presbyterian Church (7) Between the Northern Baptists and the Free Baptists long separated by their Calvimstic and Arminian Confessions the two bodies have consolidated their denominational missionary publication and educational boards but the merging

The Roman Catholic Church is steadily growing in America having a population of over 15 000 000 not including Porto Rico the Philippines and the Panama Canal Zone. Thi population embracing representatives of many of the peoples races and languages of the world stands for a communicant membership of about 12 750 000 (end of 1911) eliminating unconfirmed baptised children this indicates a net gain of about 675 000 communicants in the last five years. The Pope, appreciating the freedom loyalty and prosperity of the Church in the United States gave it in 1908 a complete ecclesiastical status. Before that church in the United States gave it in 1900 a complete excuessastical status. Define that year it had been treated as a missionary organisation under the general supervision of the Congregation de Propaganda Fide in Rome. Now it has the same measure of autonomy as is enjoyed by the Roman Catholic Church in England or Germany. The pope has appointed three new cardinals for the Church in the United States—Archbishop Farley of New York Archbishop O Connell of Boston and Monsignor Falconio Apostolic Delegate at The Papal decree of September 1910 prescribing rigorous measures to prevent Washington Modernism from getting a footing in the Church evoked no protest in the United States

and the oath required of the clergy was lovally given

The group of Eastern Orthodox Churches having congregations in the United States has increased in number by immigration

In addition to the Russian Greek Armenian Servian and Syrian bodies the Bulgarian and Rumanian Churches have organisations the seven re

porting an aggregate of about 434 000 communicants

The Church of Christ Scientist or Christian Science appears to be gaining in number of branches or churches in readers and in practitioners. For some years no returns have been given of members. The death of the founder and director of the movement. Mrs. Mary Baker Eddy in 1910 left the Board of five directors, which had been appointed by her as the governing body of the denomination. Her fortune amounting to \$2 500 000 was left for the benefit of the organisation. The withdrawal of a few branches and the organisation of a Reformed Christian Science Church is one of the events of 1912

The fourth decennal Ecumenical Methodist Conference for the discussion of problems amon to Methodism was held in October 1911 in Toronto There were present about 500 common to Methodism was held in October 1911 in Toronto delegates 200 from the Methodist Churches of Great Britain Ireland France South Africa and Australa ia and 300 from the many branches of Methodism in the United States and Canada. The questions treated in papers and discussions took a wide range the newer phases of Church life and Church work including missionary endeavour social service train ing and care of the young evangelism international peace receiving much attention. Higher hiblical criticism evoked expressions of acquiescence in ascertained results although there was an undercurrent of dissent. Delegates from Great Britain and Australasia had enthu stastic reports to make of the results of the consolidation of a number of branches. An Expressional Methodist Commission to act for the Methodism of the world in the interval of Ecumenical Methodist Commission to act for the Methodism of the world in the interval of the decennial Conferences and especially to cultivate a more intimate fellowship between the various branches was created. Reports from the Eastern and Western Sections showed that various branches was created. Reports from the Eastern and Western Sections showed that Methodism in America has entered a period in which the rate of increase is lessening while the British branches are encountering net losses. The larger bodies of the United States have all gained in communicants since 1906, the Methodist Episcopal reporting 3 293 526 in 1912, the Methodist Episcopal Church. South 1 919, 873 in 1912, the Methodist Protestam 183, 318, the African Methodist Episcopal 620, 234, the African Methodist Protestam. Colored M. E. 234, 721. In all, the 17 bodies have a total of about 6, 905, 900.

The Baptist World Alliance held its second Congress in Pluladelphia in June 1911. Delegate of the Morther, Southern, Colored and Free Baptist bodies of the United States.

Delegates of the Northern Southern Colored and Free Baptist bodies of the United States and from the Baptist Churches of Canada Great Britain Rus ia and other countries of Europe and from Africa Australia and countries of Asia were present. The sessions were crowded and great enthusiasm was evoked by the Russian delegation who told of persecution and progress and great opportunities. The Congress raised over \$60 000 for a theolog crowded and great entitusiamit was evoked by the kussian delegation who tollo of persection and progress and great opportunities. The Congress raised over \$60.000 for a theological seminary in St. Petersburg and the American Baptists agreed to increase the fund to \$125.000. The Rev. R. S. MacArthur. D.D. of New York, was elected President and he subsequently visited Russia dedicated a Baptist Tabernacle in St. Petersburg and bought ground for the Seminary. The larger Baptist bodies of the United States are growing steading. The Northern Baptists number about 1.176.000 the Southern 2.475.600 and the Colored over 1.912.000. A dozen other Baptist bodies bring the total up to about 5.894,000. The Congregational Churches have under consideration a plan for the co-ordination of

The Congregational Churches have under consideration a plan for the co-ordination of their benevolent societies and for changes in their national triennal Council which would give it administrative functions with a permanent Secretary The denomination is growing

moderately having at the close of 1912 742 000 communicants.

The Disciples of Christ notwithstanding the division of some years ago into two bodies show a healthy growth. In this denomination at the close of 1912 there were about 1 340,000 communicants besides the 157 000 or more belonging to the conservative branch known as the Churches of Christ

The Evangelical Association and the United Evangelical Church have 184,866 members. the Friends (4 bodies) 124 216 the German Evangeheal Synod 258 911, the United Brethren in Christ (2 bodies) 320,960 the Reformed (4 bodies) 459 106.

The Protestant Episcopal Church which as a new feature for large city dioceses has

suffragan hishops grows steadily At the end of 1912 it had 970,451 communicants.

The Presby terian bodies show a steady growth in numbers and in finances. The Northern Church has 1,368 150 communicants the Southern 292 845 the United 139 617 and the Cumberland 120 000 The twelve bodies returned in 1912 1 982 000 communicants. Jewish immigration adds about 70,000 to 75 000 annually to the Jewish population in the United States, now about 2 000 000 Great activity in the organisation of societies and in the prosecution of various lines of work characterises the denomination

The Lutheran Communion has an encouraging annual growth Independently of the The Lutheran Communion has an encouraging annual growth and process and encouraging annual growth and process and encouraging annual growth and process and process and expressed of the general bodies (68 500) it has an aggregate of 2 353 702 communicants it is developing steadily its missionary and other interests of the general bodies the Synodical Conference has 807 693 communicants the General Council 473,295 the General Synod 309 702 and the United Synod South 50 669

The grand total for all denominations in the United States chiefly on the basis of the returns for 1912 rises above 36 675 000 members including Christians and

POLITICAL HISTORY 1909-12

During the administration of President Taft which began in the spring of 1909 the tariff assumed a place of first importance in the work of Congress and in public

Called into special session for the purpose of revising the Payne tariff Congress passed in August the Payne Aldrich act. It was by no Aidrich means a radical measure. There were some reductions in duties as in Taritt 1909 the case of iron and steel wood pulp and printing paper and manufactures of leather hides were placed on the free list. But there were also increases notably in the finer grades of cotton and silk goods and the woollen and sugar schedules which had been the subjects of general criticism remained virtually unchanged such readjustments of the duties the act had several notable features for free trade between the United States and the Philippines (q v) with the exception that certain imports from the islands were to be limited in quantity if erected a customs court of appeals to review the findings of the Board of General Appraisers it established a minimum and maximum system under which the President was empowered to impose an additional 25% ad valorem upon imports from countries which should discriminate against American imports, and it levied an excise tax of one per cent upon the net income of corporations The constitutionality of this tax was upheld by the Supreme Court in 1911 Its imposition marks an advance in Federal control of corporations entailing as it does supervision over annual accounts and business transactions. Con gress also initiated an amendment to the Constitution which would permit the govern ment to levy an income tax without apportioning it among the states according to Thirty seven states had ratified the amendment up to February 1913 population It was officially proclaimed on February 25th

The tariff act also empowered the President to "employ such persons as may be required' in securing the information necessary to the execution of the maximum and minimum provisions. Under this vague authority he appointed a tariff The Tariff board for the purpose among other things of investigating the difference Board. in the cost of production in the United States and abroad, since the Re publican platform of 1908 had promised tariff revision on the basis of equalising this cost (see E B xxvii 735a) He urged Congress to make the board permanent and to adopt the policy of revising the tariff schedule by schedule in accordance with the find ings of the board. He did manage to secure annual appropriations for the board until 1912, but though the board made exhaustive reports upon the paper, wool, and cotton schedules, Congress gave httle heed to them in framing its tariff measures

The amendment becomes Article XVI of the Amendments to the Constitution and reads: The Congress shall have power to lay and collect taxes on incomes, from whatever source derived without apportionment among the several States, and without regard to any census or enumeration

The passage of the Payne Aldrich act marked a turning point in the fortunes of the Republican party Nineteen Republicans had opposed this party measure in the House seven in the Senate, and it was soon evident that their course was Diasatiafac widely approved by the people especially in the Middle West - It did not tion with Tatt a policy appear that any real attempt had been made to ravise the tariff in accord ance with the pledges of the party platform The President failed to understand the temper of the country He declared on signing the bill, that it was a sincere effort to make a downward revision, and again somewhat later that it was "the best customs law that has ever been passed' His attitude separated him from the progressive wing of the party creating the impression that he had become dominated by reactionary influences. The breach became still wider when he laid before Congress on January 26 1911 a Reciprocity Agreement with Canada Canadian which required legislative adoption by both countries The agreement Reciprocity provided for the free exchange of all primary food products and a reduction of duties upon secondary food products and certain manufactured articles progressives denounced it as a discrimination against the farmer he would receive no real relief from the extortions of American trusts while having to meet the competition of Canadian food stuffs Opposed by the progressives for one reason and by the high tariff Republicans for another the Tariff bill failed in the Senate and though the President carried it through the Sixty second Congress in the spring of 1911 he had to rely mainly on the Democrats His measure for reciprocity with Canada with which he had expected to recover the prestige lost in 1909 still further irritated the Northern farmers As a climax to this bitter disappointment the Canadian Parliament withheld its consent as a result of the election of 1911 (see CANADA) the ever present

When the Sixty second Congress convened in 1911 popular disapproval of the Taft administration was written large in the altered composition of the houses. The Democrats had a majority of sixty seven in the House of Representatives and

fear of absorption by a powerful neighbour weighing heavily in the decision

The Democrats and the tariff

They had also wrested seven states from the Republicans electing the governor in Maine for the first time in thirty years and in New York for the first time in eighteen. Since their campaign had been conducted on the tariff issue they clearly had received a mandate to proceed with the work of revision. Led by Oscar W. Under wood chairman of the committee of Ways and Means and combining with the progressive Republicans in the Senate they carried through Congress in the special session of 1911 a 'farmers free list bill' (August 1) which removed the duties from certain manufactures and food products a bill which made considerable reductions in the duties on wool and woollens and a bill cutting in half the duties on cotton goods. All three the President vetoed condemning them as empirical and haphazard and holding that Congress should not touch the wool schedule until it received the report of the tariff board. In 1912 he followed the same course vetoing reductions in the wool cotton and metal schedules, and the Democrats could not command the neces

were only eleven votes below the majority in the Senate For the first

time in fourteen years they had broken Republican control of Congress

issue to present to the electorate in the presidential campaign. All through his administration President Taft vigorously enforced the Sherman anti trust act which was passed in 1890 to protect interstate commerce from restraint.

sary majority of two thirds in the Senate to override the veto. The Senate, in fact, rejected House bills revising the chemical schedule and placing sugar on the free list. Though protesting indignantly, the Democrats were not sorry to have so definite an

I Underwood (b 1862) a native of Kentucky and educated at the University of Virgima had represented the 9th Alabama district in Congress since 1895. He was chairman of the state Democratic campaign committee which drafted the constitution of Alabama adopted in 1901. In 1911 W. Bryan in his weekly The Commoner charged that Underwood prevented the revision of the steel and iron tariff schedules because he was interested in the non-industry in Alabama. Underwood demed this, and in spite of the public break with Bryan retained the party leadership in the House which he had assumed that year

and monopoly (see E B xiv, 713a) On May 15, 1911, the Supreme Court gave a new interpretation to this act, distinguishing for the first time in a majority opinion between reasonable and unreasonable restraint Chief Justice Edward D The trust White 1 asserted the doctrine that combinations were illegal only when ex estion. ercising an unreasonable restraint upon trade or when their necessary effect ' was to stude competition. Although Justice John M Harlan sharply dissented from the opinion, pointing out that the court had expressly rejected the ' rule of reason" fifteen years before, yet he joined his eight colleagues in decreeing the dissolution within 6 months of the Standard Oil Company (May 15) and the American Tobacco Company (May 20) Shortly afterwards these great corporations dissolved into their component parts But the belief widely prevailed that their obedience which the government brought against the Standard Oil Companies of New Jersev and New York, August 29, 1912, charging conspiracy to ruin the business of the Pierce Fordyce Oil Association of Texas and in the proof adduced by proceedings in the state of Missouri, that control over the Waters Pierce Company still rested with John D Rockefeller and his associates of the Standard Oil Among Republicans there now began to appear a definite cleavage of opinion as to the best methods of dealing with the trusts President Taft wished to secure competition without monopoly expressed satisfaction with the Sherman act suggesting that amendments be adopted defining improper acts of restraint or monopoly as criminal offences Mr Roosevelt on the other hand, regarded as chimerical the attempt to regulate trusts by means of a succession of lawsuits He wished to have an administrative commission which would supervise other interstate corporations very much as was already being done in the case of railroads This would preserve the advantages of large-scale production and give certainty to business. In the presidential campaign this question though over shadowed by the tariff issue was much discussed The Democrats with their laisse. faire notions, differed radically from Mr Roosevelt denouncing his scheme for a commission as state regulation of monopolies and emphasizing the function of the states in dealing with the problem They also differed from Mr Taft in wishing to reverse the interpretation which the court had placed upon the Sherman act

During 1910-12 important questions came to the front with respect to the control of railroads. In 1911 the conflict between national and local authority became acute By court decisions severe restrictions were placed upon the states The Control of Supreme Court held that the equipment of a railroad which conducts an rattroads. interstate business comes exclusively under the jurisdiction of the Inter state Commerce Commission, even in the case of cars moving entirely within the boundaries of a single state The circuit court at St Paul held invalid (April 21, 1911) a Minnesota law fixing the passenger rate at two cents a mile, the ground being that, while the law applied only within the state it nevertheless discriminated against inter state passengers who had to pay a higher rate Against this decision, as an encroach ment upon state rights the state governors protested on the occasion of their annual conference at Spring Lake New Jersey, on September 12, 1911 In April, 1912, when the case came before the Supreme Court on appeal, three of the governors presented briefs The decision, which will have far reaching effects, had not been handed down in February 1913 In 1910 Congress adopted an amendment to the Interstate Com merce act This extended the purisdiction of the Interstate Commerce Commission to telegraph and telephone companies increased its powers in fixing rates created a com merce court to review its orders and authorised the President to create a board to investigate railroad capitalisation. The new Commerce Court proceeded in a series of decisions, to override the Commission, only to have several of the decisions reversed in 1912 by the Supreme Court which criticised it for exceeding its powers. Public

¹ Edward Douglass White (b 1845) a native of Louisiana, a Democrat and a former Confederate soldier, had become a justice of the Suprema Court in 1894 and in Dec 1910 was appointed Chief-Justice. He had served in the U.S. Senate in 1891-94.

suspecion of the court was reflected in the refusal of Congress to authorise any grant for its maintenance until the President had twice returned the general appropriation bill for 1913 without his signature. Against one of the judges, Robert W. Archbald who was charged with having used his position to secure favours from litigants impeach ment proceedings were brought (see below). The Railroad Securities. Commission reported in December 1911 that it would be impracticable to place the issue of railroad securities under Federal control, it recommended full publicity under the supervision of the Interstate Commerce Commission, with power to make physical valuations.

Almost from the beginning of the Taft administration its attitude toward the conservation of natural resources was bitterly assailed. This was one of the chief circum

The Con servation Movement. stances which alienated the progressive wing of the Republican party from the President—In 1909 the Chief Forester Gifford Pinchot 1 attacked the good faith of Mr Ballinger 2 Secretary of the Interior, accusing him of being opposed to conservation and of supporting fraudulent claims to Alaskan

coal lands The charges were investigated by a Congressional committee. The majority report, laid before Congress in December 1010, completely exonetated Mr Ballinger as "a faithful and efficient public officer—but being dictated apparently by partisan motives the report had no substantial effect upon public opinion—On March 6 1911 Mr Ballinger resigned the victim the President said of "one of the most unscrupulous conspiracies for the defamation of character that history can show—He was succeeded by Walter L. Fisher 3 a pronounced conservationist. Nevertheless criticism of the land policy of the administration continued in one case taking the form of unjustified imputations against the President and his brother in connection with the sale of land on Controller Bay, Alaska to a coal mining syndicate—See Alaska

The principle of conservation may apply not only to natural resources but also to the people themselves and to the processes of government The phenomenal increase of labour legislation shows that men have come to realise the social peril of the old larssez faire attitude Down to 1911 only three states had enacted legislation workmen's insurance or compensation laws and in two of these cases (Montana and New York) the courts adhering to an ancient doctrine held the acts unconstitutional as taking property without due process of law. In the past two years on the other hand fourteen states have taken action. Similarly with reference to child labour, laws were passed in 1911 by thirty of the forty-one legislatures then in session and the next year by eleven out of twenty Among the other subjects covered in 10124 were the reporting of industrial accidents and diseases woman's labour wages. and hours of labour In Massachusetts a commission was established with power to establish wage boards in any industry in which it may appear that the wages received by women are insufficient to supply them with necessaries and maintain them in health but the boards may simply recommend a minimum wage and publish the names of

¹ Pinchot (b 1865) graduated at Yale in 1889 and after studying forestry in Europe devoted himself to this subject, doing the first systematic forestry work in the United States at Biltmore North Carolina in 1892. He was Chief of the bureau of forestry. U. S. Department of Agriculture in 1898-1910 and then became president of the National Conservation Association. In 1903 he became professor of forestry at Yale. He and his brother Amos were deeply interested in radical reform movements and in the 1912 presidential campaign supported La Follette and then Roosevelt. He wrote much on forestry including the article. Forests and Forestry in the 11th edition of the E. B.

adential campaign supported La Follette and then Roosevelt. He wrote much on forestry including the article. Forests and Forestry in the 11th edition of the E.B. Richard Achilles Ballinger (b. 1858) a native of Iowa graduated at Williams College in 1884 practised law in Kankakee Illinois. New Decatur Alabama and Port Townsend and (after 1897) Seattle Washington was mayor of Seattle 1904-06, and Commissioner of the Federal General Land Office. 1907-09 and became Secretary of the Interior in President Taft's cabinet March 4, 1909. He wrote on Community Property (1895) and edited and annotated the Codes and Statutes of Washington (1897).

**Fisher was born in Wheeling West Virginia in 1862 studied at Marcetta College Ohio.

*Fisher was born in Wheeling West Virginia in 1862 studied at Marietta College Ohio and Hanover College, Indiana was admitted to the bar in 1888 practised law in Chicago where he was special traction counsel in 1906-11 and was an officer of the Conservation League of America, of the National Conservation Association etc

See separate state articles under Legislation and Government

employers who refuse to adopt it. Federal legislation is notably increasing in volume. In 1912 the manufacture of poisonous phosphorus matches was prohibited (April 9) by an exercise of the taxing power, a commission established to examine into the relations between capital and labour, and the scope of the eight hour and accident compensation laws applying to government employees enlarged. The welfare of wage earners received unusual attention in the presidential campaign on account of the position accorded it in the platform of the Progressive party.

The sentiment against intemperance has been growing rapidly in the United States. A systematic agatation has given wide publicity to the economic waste and the social

The Probibilion movements evils which it entails At this time, by state or local action, the sale of liquor is prohibited in two thirds of the whole country and among nearly half of the population. That the prohibition movement made no great progress and suffered no reverses in rorz may be set down to the fact that

it was a presidential year and that the people were occupied with other questions as may be seen from the losses of the Prohibition party in the 1912 campaign partly to the Progressives In New York the members of the legislature fearing to compromise themselves, made no concessions either to the liquor interests or to their opponents In the November elections however, the state of West Virginia went 'dry" by a large majority (92 342) It is also worthy of mention that several railroads in Pennsyl vania urged by the anti saloon league of that state discontinued serving drinks on their dining cars that in Illinois (q v) certain railways did the same thing because of local prohibition and that the Southern Pacific Railroad began the construction of recreation houses along its lines with the idea of keeping its employees away from the The new movement in politics which looks to the elimination of the boss and his corrupt affiliations will help the p-ohibition cause Hitherto the control which the bosses have exercised over the government, and the liquor men over the bosses has resulted in a general defiance of the law and a popular saying that ' prohibition does not prohibit ' It is also true that under Federal law liquor may be shipped from wet states into 'dry' states and that the state authority may assume jurisdiction over it only when the original package (see E B xx, 273) has been broken or its contents have left the hands of the consignee In February 1913 a bill to do away with this immunity was vetoed by President Taft but was immediately passed over his veto

Health laws are another phase of conservation. Not only have the states been seriously backward in legislation but enforcement has been still more lax. Unfortu-

Protection of public health. nately the great hope which was placed in the Federal Pure Food and Drugs act of 1906 has not been altogether realised. By a decision of the Supreme Court May 29 1911 (US v Johnson), it was held that extravagant claims might be made for worthless patent medicines without any contravention Apparently the Secretary of Agriculture was not in sympathy with its

of the act Apparently the Secretary of Agriculture was not in sympathy with its strict enforcement. The intrigues against Dr. H. W. Wiley ¹ chief of the bureau of chemistry, attracted public attention in 1911. When he resigned (March 15, 1912), he announced that conditions in the department made it impossible for him to remain. There was a general feeling that the President should have intervened to eliminate the influences which drove Dr. Wiley out

¹ Harvev Washington Wiley was born in Kent Indiana in 1844 graduated at Hanover College in 1867 Indiana Medical College in 1871 and Harvard in 1873. He taught Latin and Greek in Butler College Indianapolis in 1868-70 from 1874 to 1883 was state chemist of Indiana and professor of chemistry in Purdue University and from 1883 to 1912 was chief chemist of the U.S. Department of Agriculture. His opposition to the use of benzoate of soda as a food preservative aroused the hostility of certain food packers and a chemistry board (of experts) was appointed which disagreed with him in regard to the injurious effects of this preservative. On July 13 1911 the Attorney General recommended Wiley's dismissal on the ground that he had employed at a rate higher than the legal per diem a consulting expert H. H. Rusby. President Talt sustained Dr. Wiley in a letter of Sept. 15, 1911. An impression prevailed that the incident was the outgrowth of a personal quarrel between Dr. Wiley and G. P. McCabe, solicitor and member of the personnel board of the Dept. Dr. Wiley was succeeded in December 1912 by Dr. Carl I. Alsberg.

The public conscience has also been much exercised over the prevaience of prostrution. In a number of cities careful investigations have been made, notably in Chicago where a commission has reported that there are more than a thousand houses of ill fame with an income of \$16,000,000. Congress, in 1910, passed a law which makes the transportation of women for immoral purposes a felony. Half the states have passed laws to combat the "White Slave" traffic.

Conservation in government is efficiency This has been notoriously lacking in the For example, it was stated by Senator Aldrich that the loose methods United States of the Federal government wasted \$300 000 000 every year To remedy Ooyernment this President Taft appointed in December 1910 an Economy and efficiency Efficiency Commission which investigated the organisation and accounting systems of the departments One of their recommendations that the President should submit an annual budget to Congress met with anything but a kindly reception among those numerous Congressmen who profit politically by the wasteful diversion of public Accordingly in 1912 they reduced the salaries of the commissioners and moneys provided in another bill that only the usual departmental estimates should be sub-President Taft however, took a different view of his powers and he made known his intention of sending his budget to Congress at the opening of the regular (See Finance above) He showed the same commendable zeal in the improve ment of the civil service. In several messages he urged that practically the entire Federal service with the exception of the cabinet officers and their assistants, should be placed in the competitive classified list and in October 1012 he classified all unclassified fourth class post masters and in December many skilled labourers in navy yards By courageous use of the veto he prevented Congress from limiting the civil service tenure to seven years Throughout the country there were marked advances in civil service reform during 1012 not only in the adoption of the merit system but in the recognition of the importance of taking higher administrative officers out of politics Not less worthy of notice is the founding of numerous legislative reterence bureaus and bureaus of municipal research. In New York Philadelphia Cincinnati and other large cities the methods of public accounting have been transformed and the most modern business practices have been introduced into the departments

The increased efficiency of the Federal government is illustrated by the fact that the chronic deficit in the post office department 1 has been stopped and that Congress has been willing to entrust new functions to it. In 1910 a system of Changes in postal savings banks was established (see E B xxii 196), such post-offices the Post as a board of trustees may indicate paying two per cent on deposits of Office Department from \$1 to \$500 or giving in exchange for the deposits government bonds which bear two and a half per cent interest. The trustees may place moneys in state and national banks under guarantee of certain prescribed securities. Put gradually into operation the system has worked splendidly. In May 191 a limited parcel post for rural and city delivery routes was established effective January 1 1013 maximum weight is eleven pounds and the charges beginning with five cents for the first and one cent for each additional pound vary with the distance A large discretion in modifying the original regulations is left with the Postmaster-General acting under the control of the Interstate Commerce Commission Agitation for the parcel post has been largely due to the excessive charges made by the express companies July 1012 however the Interstate Commerce Commission ordered a reduction of about fifteen per cent particularly affecting parcels under twelve pounds

A few phases of American foreign relations deserve attention In August 1911, as

¹ Many improvements in this department were due to the postmaster general Frank Harris Hitchcock (b. 1867) who graduated at Harvard in 1891 was admitted to the bar in 1894, and was 1st assistant postmaster general in 1905–08. He managed Taft's presiden tail campaign in 1908 and was chairman of the Republican National Committee in 1908–09. Hitchcocks efforts to increase postal rates on periodicals brought on him and on the administration the sharp criticism of many pipular and influential periodicals. The introduction of the parcel post system was opposed by the powerful express companies.

the result of suggestions made by President Taft, general arbitration treaties between the United States on the one side and Great Britain and France on the other were signed at Washington. Questions of national honour were brought with-Arbitration in the scope of the treaties, all rusticiable' disputes which could not be treates. settled by diplomacy were to be submitted to the Hague Tribunal or some other body. In some quarters the treaties were regarded as heralding the dawn of universal peace, in others as a dangerous step in advance of public opinion, likely to breed friction and misunderstandings Mr Roosevelt opposed them The Senate committee on Foreign Relations asserted that they would rouse into making and dangerous activity a series of disputes now happily set at rest Amendments were adopted in 1012 which left the Senate free in each case to determine whether the matter were justiciable or not and which altogether excluded from arbitration under the treaty the alleged indebtedness of the states and other questions. Thus devitalised, the treaties remained unratified

In the autumn of 1912 a controversy arose with England which remained unsettled at the end of the year but seemed hkely to raise the question of arbitration in a concrete The matter at issue depended upon the interpretation of the Hay Pauncefote treaty Congress passed on August 16, 1912, a bill providing for the government and regulating the use of the Panama Canal bull empowered the President to fix and alter tolls admitted free of tolls American ships engaged in the coastwise trade gave the Interstate Commerce Commission author ity to exclude ship lines financially affiliated with railroads, and admitted to free registry under the American flag foreign built ships owned exclusively by Americans English government protested while the bill was before Congress urging that a subsidy calculated especially with reference to the use of the canal would not be in accordance with treaty obligations and that it would be impossible to frame regulations for the exemption of ships in the coast wise trade which would not constitute a preference to American shipping and therefore an infraction of the Hay Pauncefore treaty President Taft however signed the bill. Opinion in the United States was sharply divided both on the question itself and on the procedure adopted but without doubt a large part of the American people held either that, as the President believed the terms of the treaty were being observed or that the circumstances attending the construction of the canal were so different from those contemplated in the treaty that the treaty itself should be regarded as having practically lapsed

American relations with the Latin American Republics have been complicated by revolutionary movements in Mexico Nicaragua, Cuba, and elsewhere So serious did the disturbances become in Mexico during the early part of 1911 that an

Latia-American republics.

army of 20 000 was for a time mobilised on the frontier to prevent viola tion of neutrality and protect American interests should occasion arise Again a year later, several regiments had to be despatched to patrol the border and in September 1912, when armed bands of revolutionists came into conflict with the troops on American soil the situation became exceedingly critical. Only the forbearance of President Taft saved the country from the perils of intervention May 1012 several hundred marmes were hurned to Cuba, where a negro insurrection had assumed serious proportions But again intervention proved unnecessary, President Gomez showing himself able to suppress the rebels. In October marines were landed in Santo Domingo to protect the customs houses, some of which had been seized The collection of the customs revenue on that island has been super by revolutionists yised by agents of the United States Government for the past five years In order to restore the finances of Honduras and Nicaragua in the same way President Taft negofiated treaties with them in 1911, under which the United States would make arrangements for a loan, supervise the customs service, and apply a certain part of the receipts to the payment of the foreign debt. Although the Senate refused to ratify the treaties some of their provisions were carried out informally, an American being placed in charge of the Nicaraguan customs and a considerable loan being made by American bankers.

During the summer of 1912, 2 500 marines were sent to Nicaragua to protect the lives and property of Americans, they took part in several engagements

In December 1911 the treat; of 18,2 with Russia was abrogated because of the refusal to give proper recognition to the passports of American Jews in Russia.

The high cost of living has naturally led to demands for increased wages and to labour disturbances throughout the country Acts of violence attended many of the

Labour disturb ances

strikes. Early in 1912 some 25 000 operatives employed in the mills of Lawrence Massachusetts left work on account of a reduction in wages following the passage of a state law which hmited the hours of labour

The strike ended with the concession of higher wages but not before the militia had been ordered out and some bloodshed had occurred. In this struggle the operatives were led by a new organisation known as the Industrial Workers of the This organisation though it has been in the public eye little except in 1911-12, dates further back Its prototypes were the Knights of Labor, the Western Federation of Miners which struck in Idaho in 1899, the American Railway Union, which carried through the great railway strike of 1894 and, in form the United Mine Workers Each of these attempted to unite all the workmen skilled and unskilled in an industry As a result of a conference of six active labour leaders in the autumn of 1904 the Industrial Workers of the World with Debs of the American Railway Union and Haywood of the Western Federation of Miners attempted to organise the workers of all industries and in January 1005 published an Industrial Union Manifesto There was a serious split in the Industrial Workers of the World in 1906, when the radicals broke with the officials whom they accused of too great conservatism but who kept control of the organisation The Goldfield strike of 1907-08 (see E B xn 210) centered about the IWW In 1909 there was another schism Daniel De I eon (b. 1852), a member of the Knights of Labor in 1888-95 and a leader in the Socialist Trade and Labor Alliance from 1895 to its fusion (1905) with the I W W founded an indirect ' (or political)

Industrial Workers

action branch with headquarters at Detroit which is very different from the direct action policy of the Chicago School There is the bitterest of the World feeling between the two branches,—almost as strong as their enmity to the trades unions The Detroit branch nearly coincides with the Socialist

Labor party of which also De Leon is the leader The Chicago branch would probably have amounted to little had not William D Havwood been disowned early in 1908 (after his acquittal on the charge of murdering Governor Steunenberg) by the West ern Federation of Miners He thereupon devoted himself to the I W W the organisation engineered the Mckees Rocks (Penn) strike of the workers of the Pressed Steel Car Company including 16 nationalities where success was largely due as in 1912 in Lawrence Massachusetts (q v) to the arousal of public sympathy partly because of gross errors of the authorities in dealing with the trouble 1011-12 the workers campaigned for 'free speech in Oregon and California (qv)

There are two national unions the Textile and the Lumber afhiated with the I W W and its appeal has been to the lower paid and more unskilled workman the newer immigrant and-in its free speech propaganda on the Pacific Coast-to the The basic principles of the I W W are that the working class and the employing class have nothing in common' and that between them a struggle must go on through the organisation of all the members of all industries if necessary until capitalism is overthrown and the wage system abolished. It considers a strike a mere incident in a prolonged warfare to be followed when strikers return to work by sabotage '1e idling at work the British 'ca' canny" and various ingenious methods of spoiling the machinery business market, etc of the capitalist employer The question of right and wrong is not to be considered No agreements with an employer are sought and none are final

The dynamiting work of the McNamaras and their associates (see California and INDIANA) was done not by members of the I W W . but by officials of unions affiliated with the American Federation of Labor which the I W W has always opposed

In the American Socialist party, the leaders Debs and Haywood were founders of the I W W Besides Haywood, two other members of the Executive Committee were in sympathy with the I W W, but the other four Victor Berger (former Congressman from Wisconsin), John Spargo, the author, Morris Hillquit, the historian of Socialism, and Job Harriman late candidate for mayor of Los Angeles, were opposed to it

In the 1912 convention of the American Federation of Labor at Toledo Ohio, on November 20, delegates from the United Mine Workers introduced, and those from the Western Federation of Miners supported, a resolution approving industrial organisation, the scheme of the I W W The resolution was defeated two to one, but it is important to note that there is a movement of some strength in this craft organisation for a general industrial organisation of the I W W type, which the Federation has always opposed The I W W has six publications at the present time It has "National administrations" in Hawau Australia New Zealand and South Africa.

Dissatisfaction with the economic conditions in the country and with the failure of the great political parties to face them seriously has greatly strengthened the Socialists

Secialism and labor unions. In 1910 they cast 605 000 votes, a gain of nearly 200 000 over 1908 and in 1912 the Socialist vote for president was large (about 896 000), although the new Progressive party made its appeal on a somewhat so

cialistic programme. In 1911 they had 392 elected officials including the first socialist Congressman Victor Berger (defeated in 1912) 18 legislators in five states 32 mayors (including Emil Seidel of Milwaukee and G. B. Lunn of Schenectady) and 341 minor officials. On the other hand the Socialist Labor party with much more radical principles has steadily dimmished in popular strength. The trade unions have been increasing in number and in membership. The American Federation of Labor had at the end of 1912 an unrollment of 1841 268 and, during the year 260 certificates of affiliation had been issued to unions. Injury was done to the labour cause in 1911 however, by the discovery that numerous dynamiting outrages had been planned and executed by men connected with the International Association of Bridge and Structural Ironworkers (see California Indiana)

These outrages, extending over two years culminated in the loss of 21 lives by the destruction of the Los Angeles Times building in October 1010 Their purpose was to discourage the use of non union materials and the employment of nonunion labour Ortic McManigal, who turned states evidence James B McNamara McNamara, and J J McNamara secretary of the Association were CASO. The American Federation of Labor warmly espousing their indicted cause collected a large sum of money for the defence and placed a committee in charge In December 1911 before the tedious process of selecting the jury had been completed the McNamaras confessed They were sentenced to imprisonment for life and for fifteen years respectively Their attorney Clarence Darrow was afterwards brought to trial for attempting to bribe a prospective juror but acquitted at the end of 1912 he was awaiting trial on another similar charge. As a sequel to the McNamara case forty five officials or former officials of the Association were brought to trial at Indianap olis in October 1012, upon the charge of conspiracy to transport explosives from state to state upon passenger trains. One of the defendants pleaded guilty advanced there was unfolded a remarkable story of criminal machinations and event ually a verdict was returned for the prosecution

During the past two or three years the growing alertness of public opinion has been illustrated by the exposure of political corruption in all parts of the country and in the electorate as well as in the government service. One of the most disturbing revelutions occurred in Adams county, Ohio, where, largely on the testimony of political workers who turned state's evidence, more than a quarter of the electorate were convicted of selling their votes. They were sentenced to a fine and disfranchisement for five years. Judge Blair who conducted 17the vote for Reimer Socialist Labor candidate for president in 1912 was less than 40,000.

the inquiry declared that similar conditions prevailed in other parts of Ohio and in neighbouring states. In the same year 1911, detectives employed by a citizens committee found evidence which led to the indictment of nineteen members of the Ohio legislature on charges of accepting bribes and up to the end of 1912 the sergeant at arms and one senator had been convicted. In Illinois (q v) the confession of several members of the legislature indicated that William Lorimer had been elected to the United States Senate in 1900 by the use of bribery and for over two years progressives of both the leading parties made a determined effort to have the election invalidated The Senate first decided in March 1911 that there was no evidence to connect Lonmer with the bribery and that even without the votes known to be tainted he had been elected by the proper majority This decision was generally regarded as a set back for the cause of clean government In deterence to public protests and in view of the dis closure of new evidence the case was reopened. In May 1912 the investigating com mittee reported once more in tayour of Lorimer but two months later the Senate voted to unseat him Senator Stephenson of Wisconsin (q v) who admitted spending more than \$100 000 in his primary campaign was allowed to keep his place Instances of municipal corruption have been revealed in Detroit Pittsburg New York and other In New York (see New York) the murder of a gambler who was about to expose the system of police graft led to the indictment of four gunmen for the actual shooting and of a police lieutenant named Charles Becker as the instigator of the crime In trials which were remarkable for the absence of the usual delays and technical rulings Becker was convicted in October 191 and the tour gunmen in November An investigation of the police administration conducted by the board of aldermen disclosed some facts of a disquieting nature and the mayor I v way of a counterblast charged members of the board with corruption in the granting of licences

While the probity of judges is not often impugned in the American press it is well enough known that they sometimes pav large sums for their nomination and

Corruption and obscurantism in the courts that their decisions sometimes show a tender regard for corporations Recently the courts have been criticised with unusual freedom. Mr Roosevelt has been chiefly instrumental in directing public sentiment against the corrupt or merely obscurantist action of certain courts in erecting constitutional barriers to the enactment of necessary social legislation. Surely it is

pertinent to ask why the court of appeals in New York should be allowed to prevent the legislature from enacting an employers liability law such as the Supreme Court of the United States has declared valid under the due process of law clause of the Federal Constitution In 1912 two Federal judges were involved in scandals House of Representatives presented to the Senate in July articles of impeachment against Judge Robert W. Archbald (b. 1848) of the commerce court the charges relating generally to business transactions with railroad companies at times when the companies were litigants before his court or the Interstate Commerce Commission The trial before the Senate began in December 1912 and he was found guilty early in 1913 House also investigated the conduct of Cornelius Hantord a district judge in the state of Washington who was charged with a long series of corrupt and unlawful decisions? and with being guilty of intemperance Threatened with impeachment he resigned The public are also showing increasing impatience with the delays of justice and the technicalities of procedure. The widespread recognition of this evil will undoubtedly bring substantial reforms within the next few years Congress however, has as yet made no response to the demands which the President has frequently made for legisla tion upon this subject Late in 1912 the Federal Supreme Court made important thanges in its rules of procedure

The existence of corruption is coming to be recognised as one of the chief obstacles to social and political advancement. The men who have felt this most strongly believing that the sinister alliance between business and politics must be terminated and that the people must resume control of the government have been styled progressives. There have been progressives within both the Republican and Democratic parties,

but the movement within the Republican party is more interesting because it led to a definite political schism in 1912 and the formation, under Mr Roosevelt's leadership of a new National Progressive party. The creed of the insurgent or progressive Republicans was not well understood at first, even by themselves. But early in 1911, Senator Jonathan Bourne Jr., of Oregon (see Oregon) with Senator Robert M. LaFoliette (b. 1855) of Wisconsin (see Wisconsin) and various radical members of both Houses of Congress, formed the National Progressive Republican League. It formulated a definite programme and gave coherence to the aims of the progressives. The essential feature of that programme was popular control of the government and this it designed to establish by various methods

It advocated the direct primary Eather by mandatory or by optional laws or else by party rule the system has, in some form, made its way into all but half a dozen of the states sweeping away the old nominating conventions and substitut ing an election within each party The object is to eliminate the boss to primary bring the plain citizen into participation and to let the voice of the majority govern in the choice of candidates. Names are placed upon the primary ballots by petition although in some states (as New York) the party committees may make designations and have them appear under the party emblem. It cannot be said that experience has demonstrated the superiority of this plan over the simpler arrangements which prevail in Canada and England The number of signatures required for the petition and the limited time allowed for circulating it sometimes handicap poorer men or men who are not backed by an active organisation. It is also true that where a man must make a declaration of party affiliation in order to enter the primary the secrecy of the ballot is impaired, and where no test is exacted, the primaries may be flooded by voters from other parties But whatever the defects it has at least met with popular approval, and it has enabled the people in striking instances to drive out the disrepu table element and assume control

The selection of the presidential candidate of the party has come within the scope of the direct primary. In 1910 Oregon took the lead in prescribing the choice of delegates to the national convention by that method A considerable Presidential number of the other states followed suit and in their platform of 1912 the areference Democrats arranged for the holding of primaries for the choice of delegates primaries and national committeemen even where there were no state laws providing for them It was in Oregon also that voters were first permitted to express their choice for President directly So keen was the interest in the primary campaign of 1012 within the Republican party that thirteen other states—all but one of them in the North-provided for the presidential preference vote legislation which had a de cisive effect upon the future of the Republican party. There are objections to this The delegates would be morally bound to vote as a unit in accordance with the expressed will of the majority in the state, and the unit rule in national conventions promotes deadlocks and boss control Senator Albert Baird Cummins of Iowa (see Iowa) therefore introduced into Congress a bill establishing a national presidential preference primary, but it met with scanty support. As the new practice spreads na tional conventions will do little more than register the popular verdict

The Progressives also advocated the direct election of United States senators as against the present system of choice by the state legislatures. This would improve the personnel of the Senate and save the legislatures from prolonged deadlocks but it would also have the disadvantage of strengthening the Senate and thus accentuating the dispersion of power in the American system of government. The reluctance of Congress to initiate the necessary amend ment to the Constitution has led to the adoption under state law of practices which actually violate the spirit of the Constitution. By the rules of the Democratic party throughout the South, and by statute in eight Northern states, a moral obligation rests upon the members of each party in the legislature to vote for the party candidate success

ful in the primaries. Ten Northern states have adopted the 'Oregon plan,' under which each candidate for the state legislature must stipulate whether he will follow implicitly the popular choice for senator expressed in the general election. Thus in 1909 the Republican legislature in Oregon felt constrained to choose a Democrat In response to the general demand a resolution providing for the popular election of Senators was brought into the Senate in July 1911. Apparently in the hope that the measure thus amended would be beaten by Democratic votes an amendment was adopted giving the national government supervision over such elections. The Southern ers took alarm, fearing the enfranchisement of the negro. But though they managed to defeat the resolution twice in 1911, they accepted it in 1912 believing that the Federal government would not assert its right to control the elections. This proposed 17th amendment was ratified by Massachusetts May 22, Arizona, June 3, and Min nesota June 12 1912 and by several states early in 1913.

A determined effort is also being made to prevent the lavish use of money in the elections, especially the money of corporations which not infrequently subsidise both

Corrupt Practices acts. the leading parties in order to make doubly sure of favourable consideration afterwards. The legislation on the subject is for the most part, very recent. The Federal law of 1907 prohibits all corporations from assisting candidates for national office and all corporations chartered by the United States from

making any campaign contribution whatever, the law of 1910 requires publicity in the case of expenditures made by individuals and organisations which take part in the Federal election campaign in two or more states and the law of 1911 requires publication of the accounts of candidates for Federal office before and after the primaries and elections and limits to \$10 000 and \$5 000 respectively the amounts which candidates for the Senate and the House may spend personally More than three quarters of the states have passed campaign publicity laws. Of these 21 prohibit corporations from contributing and require the publication of accounts after the primaries as well as after the election About the same number of states limit the amount of expen ditures, either by fixing a definite maximum for each office or a percentage of the first year's salary or a sum varying with the number of votes cast for the office in the last election The Wisconsin law of 1911 is considered very complete. In conformity with the most approved tendency it enumerates the purposes for which expenses may be incurred instead of merely forbidding as state laws used to do certain specified acts such as intimidation and bribery Candidates and their agents must both file itemised An interesting feature is the publicity pamphlet published by the state and sent to all voters in which candidates may print their biographies and indicate the policies for which they stand

None of the reform ideas promise more for the improvement of American politics than the Short Ballot principle The multiplication of elective offices which took place

toward the middle of the nineteenth century has overburdened and con The short fused the voter, making him accept the straight party ticket without conballot sidering the merits of the candidates Some of the primary ballots in New York in 1912 were fourteen feet long It is now proposed to strike at the power of the political boss and the political machine by placing in the hands of the voter a ballot which he can mark more simply and intelligently. In state government the tendency is to bring the administrative officers directly under the control of the gov ernor thus centring executive responsibility and power California has eliminated two officers from the elective list Illinois Ohio and New York are expected to follow suit A beginning has also been made toward the reform of county government along the same lines The short ballot idea was endorsed by the three leading candidates The idea has won its chief success however in the adoption of for president in 1912 what is known as commission government. Up to the end of 1912 more than 200 cities in thirty four states had substituted for the mayor and council a small board elected on a general ticket and wielding both executive and legislative power Recently two large cities New Orleans and St Paul, have adopted this form of government

Whether or not the small board will be permanently retained, respect for two cherished American theories has been seriously impaired—the election of both political and administrative officers and the separation of executive from legislative power

In view of the attitude taken toward the question in the campaign of 1912, woman suffrage may be regarded as another of the Progressive principles. Presumably it has a bearing upon the movement for the uplifting of politics. Down to 1912 women enjoyed a limited suffrage, chiefly in relation to the schools, in twenty three states, and full suffrage in Colorado, Idaho, California Utah, Washington, and Wyoming. In that year proposed constitutional amendments conferring the privilege were defeated in Ohio Michigan and Wisconsin but ratified in Arizona, Kansas and Oregon. The nine suffrage states cover about a quarter of the entire Union and contain nearly three million women of voting age. During the presidential campaign the National Progressive party incorporated a woman suffrage plank in its platform, in five states all the parties did so

The direct primary, the corrupt practices acts and other reforms are calculated to improve the quality of public officers. A process of rehabilitation is going forward. But meanwhile state legislatures and even executive officers far from the initiative enjoying prestige, are viewed popularly with a profound distrust. This is shown not only in the marked tendency to restrict their powers but

also in the assumption by the people of a more immediate share in govern ment No political phenomenon of the time is more significant than the spread of the Initiative Referendum and Recall Under the Initiative measures may be submitted to popular vote on the petition of a varying proportion of the voters (usually eight or ten per cent) under the Referendum statutes passed by the legislature may be sub sected to a popular vote upon the petition of a smaller proportion of the voters, under the Recall, the plebiscite may be invoked to determine if the people wish to remove a particular official and to effect such removal In 1912 the Initiative and Referendum were adopted in Ohio Mississippi Nebraska and Washington thus making a total of fifteen states which employ this method of direct legislation. Three other states have partial systems, Wisconsin and North Dakota will vote upon the question in 1914 The Recall has not spread so widely Oregon adopted it in 1908 California in 1911, Arizona and Washington in 1912 North Dakota and Wisconsin will decide in 1914 whether or not to adopt it. In Oregon California, and Arizona the recall extends even to judges Conservative men have denounced this as a fatal impairment of judicial independence When, in 1911 Arizona (q v) applied for admission to statehood the veto of President Taft forced the provision for the recall of judges out of the constitu tion but, on acquiring statehood Arizona took the first opportunity to restore it. In view of the reactionary decisions which the courts have so often given and of the political power which they wield in interpreting general clauses of the constitution the demand for a popular check upon them has increased Mr Roosevelt suggested in 1912 the recall of judicial decisions' instead of the recall of judges, the people being allowed by plebiscite to determine whether a statute, pronounced invalid should nevertheless become law under the state police power This proposal appears to many to preserve judicial independence and open the way for social legislation

The rapid progress in the adoption of the Initiative, Referendum, and Recall illustrates the growing impatience with constitutional restrictions and with 'the check

and balance system " There is no country in the world of Western civilisa tion where so many obstacles are raised as in the United States to the enact ment of social legislation. Not only must executive and legislature agree, but the courts must consent to an interpretation of the supreme law which

will recognise the validity of an Act Now, although the votaries of popular government will not admit it, their proposals are destined to work a fundamental change in American institutions. Not that the legislature will be supplanted, experience in

¹ In 1912 Colorado adopted a constitutional amendment for a popular recall of decisions by the state supreme court that laws were unconstitutional.

Oregon has shown that the radicals are really bent on rehabilitating the legislature. But the distinction between constitutional and statutory law, which is a unique feature of the American system, is bound to break down. Already state constitutions have lost in substance, in many states, the character of constitutional law, they have become little more than bundles of statutes distinguished from other statutes only in name. The distinction in method of adoption is also breaking down, under the Initiative and Referendum in several states precisely the same method may be followed in amending the constitution or in passing ordinary laws. Will the judges care to say, especially with the Recall looming ahead, that a statute adopted directly by the people yesterday must give way to some vague provisions of the so-called fundamental law adopted a generation ago?

The effect of the popular propaganda was abundantly seen in the primary campaign for the presidential nomination As delegates to the convention were to be chosen by direct vote in a considerable number of states and as a presidential pref The pre erence primary had been established in twelve of them the various aspirants convention cam paign of both parties showed a deference to public oninion oute unusual at such of 1912 an early stage in the campaign. To an unprecedented extent they travelled about the country making speeches enormous quantities of literature were circulated money was spent with as much profusion as in the regular election campaigns. This was mainly due to the contest for control of the parties by conservatives and progressives Senator LaFollette had come forward in December 1011 as the progressive candidate against President Tatt but following his temporary collapse in February the governors of seven states united successfully in urging Mr Roosevelt to accept the progres sive leadership. It was felt that he alone could have good prospect of defeating the President for the nomination and of saving the party from disaster in the election By the Democrats and by the conservative Republicans he was assailed for ignoring the tradition that the presidency should not be held by any man for more than two terms and he was charged with ignoring a specific pledge (differently interpreted by Mr Roosevelt and his opponents) made by Mr Roosevelt in 1904, upon being elected to the presidency that he would under no circumstances accept a renominationmeaning according to his followers that he would not accept a nomination in 1008 That these attacks curried little weight with the people was evident from the fact that Roosevelt secured the great majority of those delegates who were elected directly, and completely outdistanced Taft in the preference vote. The latter denounced the progressives as emotionalists and neurotics who would hurry us into a condition which would find no parallel except in the French Revolution' With Mr Roosevelt he had a bitter exchange of personalities and some thought that his participation in the campaign had impaired the dignity of the presidential office Within the Democratic party the prominent candidates were Oscar W Underwood leader of his party in the House of Representatives Speaker Champ Clark a man of great popularity rather than of intellectual distinction Governo Judson Harmon of Ohio and Governor

¹ But see Oregon for the proposed (but defeated) constitutional amendment for a one chamber legislature

² Champ Clark was born in Anderson county Kentucky March 7 1850 studied at Kentucky University Bethany College and Cincinnati Law School was president of Marshall College West Virginia in 1875,-74 and was admitted to the bar in 1875 practising after 1880 in Bowling Green Missouri. He was a Democratic representative in Congress in 1889-91 1893-95 and since 1897 being minority leader in 1907-11 and becoming speaker in 1911. In 1904 he was permanent chairman of the Democratic National Convention.

⁴ Harmon was born near Cincinnati on February 3 1846 the son of a Baptist minister of New England descent. He graduated at Denison University Granville in 1866 and at the Cincinnati Law School in 1869. He was judge of the superior court of Cincinnati in 1878-88 attorney-general in Cleveland's cabinet from June 8 1859 to March 5 1897 and governor of Ohio since 1909. In October 1896 he argued the first great anti trust case the Irans Vissouri freight case (see E. B. xiv 713d) and secured a reversal by the U. S. Supremic Court of a decision for the railway in the lower courts. Attorney General Moody retained him as special counsel in the Santa Fe case.

Woodrow Wilson Pof New Jersey, formerly president of Princeton University whose political administration had been characterised by great vigour and independence, and whose reputation as a publicist stood very high Mr Bryan (see E B iv, 607) announced that he would not offer himself as a candidate, but his attitude toward the various aspirants was felt to be important. In a series of speeches he denounced Governor Harmon as " a reactionary and the choice of the predatory interests ' saying that either Speaker Clark or Governor Wilson would meet with his approval

As the primary campaign proceeded the public utterances of President Taft and Mr Roosevelt were marked by increasing bitterness and the irreconcilable differences

zomlaztia<u>z</u> conventions and Progres-

between these leaders spread to the rank and file of the party When the Republican convention met at Chicago on June 18 1912, it was evident that everything depended upon the decision of more than two hundred and Republicus fifty contests Mr Roosevelt denounced as theft the action of the national committee in placing only 19 of his contestants upon the temporary roll But an appeal to the convention was lost by more than fifty votes and it

was by about the same margin that the selection of Senator Elihu Root (see E B xxiii 711) as temporary chairman was made When the committee on credentials decided against the seating of his contesting delegates. Mr Roosevelt denounced their conduct as fraudulent and advised his followers to take no active part in the proceed Accordingly most of them sat in silent protest while the platform was adopted and the nominations made President Taft received 561 votes on the first ballot or twenty-one more than the necessary majority Vice President Sherman (see Obituary below) who was also renominated died a few days before the general election 2

The disruption of the Republican convention led to the birth of a new party which took the name of National Progressive and appealed for the support of Democrats and

The new Progressive oasty

Progressives ahke Its convention was held in Chicago early in August There Mr Roosevelt made a declaration of his political views which were received with enthusiasm and embodied in the platform. He was nomi nated for president, and Governor Hiram Johnson of California (see CALIFORNIA) for vice president The convention was remarkable for several things the absence of professional politicians the prominent part taken by women and social workers, and the quasi religious fervor which pervaded it

Woodrow Wilson was born in Staunton Virginia on December 28 1856 the son of Joseph R. Wilson a Presbyterian clergyman and professor of theology He graduated at Princeton in 1879 studied law at the University of Virginia and practised in Atlanta Georgia in 1882-83 and in 1886 received the degree of doctor of philosophy at Johns Hopkins University He was associate professor of history and political economy in 1885-88 at Bryn Mawr and in 1889-90 at Wesleyan University where he acted for a time as foot ball coach From and in 1869-0 at Wesleyan University where he acted to a fine as took ball coach. From 1890 to 1902 he was professor of jurisprudence and politics at Princeton of which he became president on August 1 1902. This position he resigned on October 20 1910 and in Novem ber he was elected governor of New Jersey (by 233 682 to 184 626 votes for Lewis Republican). As president of Princeton he attempted to democratise the University and aroused the opposition of many wealthy alumni by his criticism of the upper class clubs. In a controversy over the site and plan of a graduate school he argued for buildings on the present campus, and the faculty and alumni were divided between him and Andrew Fleming. present campus and the faculty and alumni were divided between him and Andrew Fleming West (b 1853) dean of the graduate school, who wished a separate campus for the elaborate graduate school he planned. At the age of twenty three Wilson had published in the International Review (August 1879) the outline of his Congressional Government which appeared in 1885. His The State (1889) has become a standard work. He wrote besides Division and Review (1892-1886 (1893)) a short volume in a series on U.S. history two volumes of essays. An Old Master and Mere Literature (1893) a life of Washington (1896) and a popular History of the American People (1902). As governor of New Jersey (qv) his administration was marked by legislative reforms and by the defeat of the machine element in the Democratic party. In 1912 he favoured the Initiative and Referendum which he had for merly opposed. See the biography (1912) by W. B. Hale: H. E. Hosford's Woodrow Wilson and New Jersey Mede Over (1912). A. L. P. Dennis in Contemporary Review. Dec. 1912 and W. G. McAdoo and Bliss Perry in The Century Mar. 1913.

**The electoral votes of Utah and Vermont were formally cast for Taft for president and for Nicholas Murray Butler of New York (president of Columbia University) for vice president.

The cleavage between the conservative and radical wings of the Democratic party was clearly exposed when the national convention met at Baltimore on June 25 Al though a conservative Alton Brooks Parker (b 1852, chief justice of the New York court of appeals in 1898-1904, Democratic candidate for the nominating ceaventies presidency in 1904) was chosen temporary chairman over Mr Bryan the Democratic latter's influence proved decisive in the choice of the permanent chairman and in the passage of a resolution attacking members of the party connected with Wall Moreover the unit rule under which state delegations deliver a solid vote was modified so as not to apply to delegates elected by districts under state primary The permanent chairman was Ollie M James of Kentucky (senator elect rep resentative in Congress since 1903), who was a heutenant of Mr Bryan quired forty six ballots to select the presidential candidate. On the first, Clark had 4402 Wilson 324 Harmon 148, Underwood 1172 Marshall 31, Bryan 1 When on the tenth ballot the Tammany controlled New York delegation transferred its ninety votes from Harmon to Clark Bryan declared that as long as that situation lasted he would withhold his vote from Clark That declaration had much to do with the final success (on the 46th ballot) of Governor Woodrow Wilson Governor Mar shall of Indiana was nominated for the Vice Presidency Among the minor parties neither the Independence League nor the Populists put a national ticket in the field. The Prohibition party nominated Eugene W Chafin (b 1852) of Arizona its candidate in 1008 and Aaron S Watkins (b. 1863) of Ohio candidate for governor in 1905 and for vice president in 1908 the Socialist Labor party, Arthur E Reimer of Massachu setts and August Gilhaus of New York the party's candidate for president in 1008 the Socialist party Eugene V Debs (b 1855) of Indiana, candidate of the Social Democrats in 1900 and of the Socialists in 1904 and 1908 and Emil Seidel (b. 1864) of Wisconsin, Socialist candidate for governor in 1902 and mayor of Milwaukee in 1010-12

The platforms of the three leading parties held similar views upon a number of points such as the reform of legal procedure the establishment of a parcel post and

the maintenance of an adequate navy But they had, of course distinctive National The Republican platform, both by what it omitted and by abs/forms what it contained exhibited a conservative spirit. Silent upon the subject Republican of social legislation and the methods of bringing government nearer to the people it laid emphasis upon the necessity of preserving the integrity and authority of the courts as the protectors of individual and property rights. It reaffirmed belief in a protective tariff high enough to furnish a revenue and give protection to American industries readjustments to be made in accordance with the findings of an expert com With respect to the anti trust law supplementary legislation should define as criminal offences those specific acts which uniformly mark attempts to monopolise In his speech of acceptance President Taft made it appear that there were two issues in the campaign the preservation of representative government supported by an independent judiciary, and the encouragement of business expansion through the free use of capital

The Democrats and Progressives agreed on a number of points the physical valuation of railroads, a regular Territorial government for Alaska, trial by jury for indirect

Thomas Riley Marshall was born at North Manchester Indiana on March 14 1854 a grandnephew of John Marshall chief justice of the United States and on his mother's side a descendant of Charles Carroll of Maryland signer of the Declaration of Independence He graduated at Wabash College Crawfordsville in 1873 was admitted to the bar in 1874 was prominent in local politics but ran for office only once in 1880 when he was defeated for prosecuting attorney before his nomination in 1908 for governor of Indiana. He was elected by 14 800 plurality over James E Watson Republican As governor his principal work was the proposed state constitution which the Indiana supreme court decided could not be submitted to the voters of the state in 1912 see Indiana. He enforced local laws against race-track gambling. He favoured the direct election of U.S. Senators and opposed ship subsidies protective tariff and a Federal inheritance tax. For his views of reform by legislation and of the curse of over legislation see his. Automatic Citizen.

contempt of your Emitation upon the use of injunctions, the spread of the direct primary and other instruments of popular rule etc. But the Democratic programme was much less comprehensive and, except for the tariff, much less radical timested upon the old doctrine of state rights, a single term for the President dent the aboution of protective duties (but by legislation which "will not injure or destroy legitimate business"), and supplementary legislation to give the anti-trust act more definiteness and override the court's interpretation

The most characteristic feature of the Progressive platform was the attention which it gave to the subject of social welfare and industrial justice. As a means to this end it advocated a more expeditious method of amending the Federal Constitution, the recall of judicial decisions the right of appeal to the Supreme Court in cases where the highest state court should hold laws invalid under the Federal Constitution, and the bringing under effective national jurisdiction of those problems which have expanded beyond the reach of the states. The proposals with respect to the labouring class included minimum safety and health standards, prohibition of child labour and night work for women minimum wage standards for women and much else. On the tariff, the Progressives differed from the Republicans only in demanding the immediate downward revision of excessive duties. They did however take a very different position with respect to the trusts, wishing to place their regulation under an administrative commission. They advocated woman suffrage

The campaign presented peculiar features from the fact that it was a three cornered contest Each party had to fight the other two The Republican cause for which there seemed little hope was badly managed, its appeal was addressed to The cam the conservative class who were told that Mr Roosevelt and his party oniga and the elections. menaced the time-honoured institutions of the country The Democrats emphasised the evils of the protective tariff holding it responsible for the high cost of living and the corrupt alliance between business and politics issue the other two parties opposed them while with respect to the trusts Democrats and Republicans held to fairly similar positions as against the Progressives latter directed attention to the need of a constructive social policy Their desire to break the Solid South" and to attract Democratic voters was shown by Mr Roose velt's attitude towards the negro. He announced that the new party could not be built up in the South "by relying on and appealing to the negroes and in the settlement of contests between Southern delegates the national convention acted upon this principle Although Mr Roosevelt was received with enthusiasm during a speaking tour through the South, he managed to divert very few Democratic votes in the election The concern expressed through the country when he was shot by a fanatic at Milwaukee on October 24 evidenced his great personal popularity He addressed a mass meeting for an hour and a half after being wounded Democratic success in the elections though foreshadowed by the disruption of the Republican party was more complete than had been generally expected Taft won only two states, Utah and Vermont with 8 elec toral votes Roosevelt won California (11 of 13 votes), Michigan, Minnesota Pennsylvama South Dakota, and Washington with 88 electoral votes. All the other states went for Wilson, who received 435 electoral votes Sweeping though the victory was it seems to have been mainly due to the split in the Republican party Wilson had a phyrality of more than two millions over Roosevelt, but he did not have a majority of the popular vote The new Congress is Democratic in both branches In the House almost exactly two-thirds of the members are Democrats, and the capture of state legislatures which had previously been Republican insured a small Democratic majority in the Senate Out of 28 governors elected all but ten were Democrats Mr Wilson was formally inaugurated March 4, 1913 His cabinet is W J Bryan, State, W G McAdoo, Treasury, Lindley M Garrison, War, J C McReynolds, Attorney General, A S Burleson, Postmaster-General, Josephus Daniels, Navy, F K Lane Interior, D. F. Houston, Agriculture; W C Redfield, Commerce, W B Wilson, Labor (E M SAIT)

AMERICAN OBITUARY

The following persons, separately noticed in the Encyclopaedia Britannica, died between the publication of that work and the end of 1912

Thomas Ball (b 1819 see E B m 263) sculptor on December 11, 1911
Clara Barton (b 1821 see E B m 452) philanthropist on April 12 1912
John Bigelow (b 1817 see E B m 922) diplomat and journalist in New York City, on

December 19 1911

Cornelius Newton Bliss (b 1833 see E B iv 72) merchant and politician on October

9 1911
Robert Collyer (b 1823 see E B v1 694) Unitarian preacher and author in New York

City on November 30 1912

Mary Baker (Glover) Eddy (b 1822 see E B vi 291a and 830c) founder of Christian Science at Boston on December 4 1910

George Cary Eggleston (b 1839 sec E B 1x 16b) writer on April 14 1911

Horace Howard Furness (b 1834 see E B x 36.) Shakespearean scholar at Walling
ford Pa on August 13 1912 He edited Anthony and Cleopaira in the Variorum Shaks peare in 1907

He was educated in the high schools of Richmond Indiana and Dayton Ohio. He and his brother Orville, were early interested in problems of flying and

Dayton Ohio He and his brother Orville, were early interested in problems of flying and about 1900 began experiments on the coast of North Carolina in gliding from some high points. In 1903 they ventured to fit a petrol motor to their machine and at the end of the year accomplished a flight of 260 yds. The first successful experiment of the kind with a motor propelled aeroplane On October 5, 1905, they established a record by flying 24½ miles at a speed of 38 miles an hour They unsuccessfully tried to sell their patents to some one who would develop them without any public exhibition. They were therefore obliged to come out into the open and Wilbur went to France where his great flight of 56 miles on September 21, 1908, established his fame. He set up a school at Pau and trained published. On December 31st of that year he flew 77 miles remaining 2 hrs 20 min in the air. After that his advice and his machines were in great demand. He visited Italy and England in 1909 and on his return to America devoted himself to tests which resulted in the sale to the War Department of a machine for \$30 000 From then till his death he worked mainly on the mechanical side of the business

Walter Wyman, physician died November 21 1911 He was born at St. Louis Mo August 17 1848 and graduated at Amherst College (1870) and the St Louis Medical College (1873) He entered the Marine Hospital Service in 1876 His career was one of great activity in promoting better sanitary conditions among seamen and the prevention of epidemics and he established the first government sanatorium for consumptives at Fort Stanton N M After 1902 he was surgeon general of the US public health and marine He was instrumental in securing the government regulation of serums hospital service toxins etc and the establishment of a leprosy investigation station in Hawan

ALABAMA 1

Population (1910), 2 138 093 (16 9% more than m 1900) average number per sq m 41 7 (35 7 in 1900) Of the total 56 6% were native whites (15% native whites of foreign parentage) 09% foreign born whites and 425% negroes (452% in 1900) In 11 counties running from East to West across the central part of the state (the black belt ") negroes made up 75% or more of the population and in 10 others 50% or more Negroes constituted 42 5% of the urban population (45 3% in 1900) and 42 5% (45 2° o in 1900) of the rural including towns of less than 2 500 The ' rural " population was 827% of the total The cities with 2 500 inhabitants or over were Birmingham 132 685 Mobile 51 521, Montgomery 38 136 Selma, 13 649, Anniston

Birmingnam 132 085 M00116 51 521, Montgomery 38 130 Selma, 13 649, Anniston 12 794, Bessemer, 10 864 Gadsden, 10,557 Tuscaloosa, 8 407 Huntsville (town), 7,611, Dothan 7 016 Florence, 6 689 New Decatur 6 118 Talladega 5 854

Agriculture—In 1900-1910 the number of farms increased 17 8% and the acreage of improved land 12% although the total area of farm land increased only 0.2%. The average number of acres in a farm was 92 7 in 1900 and only 78 9 in 1910. The value of farm property increased from \$179 399 882 to \$370 138 429 (\$216 944 175 land \$71 309 416 buildings, \$16 290 004 implements and \$65 594 834 domestic animals). In 1910 the average value of farm land per acre was \$10 46 and 60 2% (in 1890 48 6) of the farms were operated by tenants.

were operated by tenants

In 1912 (preliminary estimates) the state ranked below Texas and Georgia in production 11 1912 (prenninary estimates) the state sames below 1 can and Georgia in production of cotton—1,330 coo bales (173 lbs per A) Other crops were Indian corn 54 180 000 bu (3 150 000 A) wheat 318 000 bu (30 000 A) oats 5 200,000 bu (260 000 A) rye 12 000 bu (10 000 A) rice 9 000 bu (300 A) potatoes 1 215 000 bu (15 000 A) hay 261 000 tons (200 000 A) and tobacco 225 000 ibs (300 A) in 1909 (U S Census) the value of all contractions (200 000 A) and tobacco 225 000 ibs (300 A) and contraction of the contra vegetables (excluding potatoes) was \$5 379 577 (69,468 A) and of orchard fruits \$1 818 508

¹ See E B 1 459 et seq

(peaches and nectarmes \$1 055,971 apples \$620 745) On January 1, 1912 there were on farms £43,000 horses, 265 000 mules 396 000 milch cows 540 000 other neat cattle £40 000 sheep and I 533,000 swine.
Besides the stable fruit crops especially peaches the Alabama farmers have recently

Besides the staple fruit crops especially peaches the Alabama farmers have recently experimented with pecans Japanese persiminons Satsuma oranges (usually planted with pecan trees) etc. and many cotton farmers are turning to horticulture or truck raising because of the advance of the boil weevil. The same cause tends to promote the selection of hardier cotton and more scientific methods of custivation. The Alabama experiment station at Tuskegee in 1911 and 1912 carried on important studies in feeding beef cattle and swine it has bred two new varieties of cotton notably. Carver's hybrid and had experimented with Indian corn to produce a breed which will resist we'vil. There is a state department of agriculture and industries and a board of agriculture (established in 1911) supervises appropriations for farm demonstration work. County commissioners are authorised to appropriate funds for farm demonstration work or farm life clubs in counties where such work has been undertaken by Federal or state authorities.

Minerals—Natural gas and petroleum were discovered at Fayette in the W part of the Warrior coal field early in 1909 when gas was found 475 ft below the surface. Wells drilled early in 1910—some 2,200 ft deep—had varying success. The field is undeveloped and the find has not yet been of commercial importance. In 1911 the total value of mineral products was \$28,005,278. The largest items were coal 15,021,421 tons valued at \$19,079,949 nearly 10% less than in 1910 but ranking Alabama 5th in the Union and iron 1617,150 tons (pig) worth \$17,379,171 (not included in total given above) more than a quarter less than the value in 1910 and 3,955,582 tons of ore (\$4,876,106,3d in the United States). The Woodward mine with 502,471 tons of ore ranked 17th of the iron mines of the country. Clay products \$1,947,102—a slight increase over 1910. Mineral waters were reported sold from 10 springs (3 in Mobile country) and a little mica is found.

Manufactures —In 1909 the number of establishments was 3 998 (in 1904 I 882 the in crease being largely in saw mills and timber plants) the number of persons engaged in manufacturing was 81 972 of whom 72 148 were wage earners the invested capital was \$173 180 000 and the value of products, \$145 962 000 Among the more important manufactures were lumber and timber products (mostly yellow pine) including the output of planing mills and wooden packing boxes \$26 058 000 cotton goods including small wares \$22 212 000 cotton-seed oil and cake \$9 178 000 ranking the state 6th in this industry iron and steel blast furnaces \$21 236 000 foundry and machine shop products \$11 550 000 and iron and steel not separately reported coke \$8 843 000 steam railway cars and shop construction \$7 528 000 fertilisers \$6 423 000 (\$2 159 000) —Alabama ranking 7th in fertilisers flour and grist mill products, \$2 779 000 printing and publishing \$2 768 000 and tur

pentine and rosin \$2 472 000—Alabama ranking 3rd in this industry

The principal manufacturing cities were Birmingham (\$24 128 000 nearly \$\frac{1}{6}\$ of the state s total and including 45 of the state s foundry and machine shop products) Bessemer (\$6 106 000) Montgomery (\$5 442 000) Mobile (\$5 429 000) and Anniston (\$4 333 000) Transportation—Railway mileage January I 1912 5 295 II m Under the Federal River and Harbor Act of 1910 work was begun on making a 4 ft depth in the Alabama and Coosa rivers to Wetumpka and on the 27 ft channel (200-300 ft wide) in Mobile harbour to be finished about 1914 on the Warrior and Tombigbee rivers three locks in addition to 13 formerly built in a series of 17 were practically completed in 1911-12 The legislature has created a state highway commission authorised to administer for good roads an annual appropriation of \$154 000 which may be increased at the option of the governor by not

more than \$4000 a year for each county appropriating an equal amount

Government —The quadrennial regular session of the legislature was held January to April 1911 A state court of appeals of three members (salary \$5,000) elected for six years was created, to reheve the supreme court and to have final jurisdiction in certain minor cases A constitutional amendment prohibiting the sale or possession of liquor was defeated at a special election. November 29, 1910 The strict prohibitionist legislation of 1907 and 1908 (in effect January 1, 1909) was replaced by the Parks local (county) option bill (Feb 21, 1911), which provides that counties may vote not only for or against the sale of liquor but whether liquor shall be sold by dispensary, and prohibits the sale of intoxicating liquor except within the corporate limits of cities or towns which continually employ at least one policeman This law was held constitu tional by the state courts in 1912, when it was attacked by the Anti Saloon League Under this law 15 counties voted in 1911 and 2 in 1912 of for no licence 7 for licence and 1 for a county dispensary The Smith Bill (1911) regulates strictly the licensed sale of honor, forbidding it between IIPM and 6 A.M and limiting the number of saloons in incorporated places according to population.

Commission government was made mandatory for cities of 100 000 or over (only Birming ham in 1910) and for cities between 25 000 and 50 000 (only Montgomery in 1910) and permissive for all other cities above 1 000 on petition and favourable vote. The recall of a commissioner is provided for Cordova, Hartzell Huntsville Talladega Tuscaloosa and Sheffield (Aug 19 1912 in effect Oct 5) have adopted commission government—also Mobile the only city in Class. B' legislation not being mandatory for this class. Civil service regulations were provided for police in cities of 25 000 or more. In November 1912 the people adopted an amendment abolishing the fee system in Jefferson county.

Primary elections are taken under state control—although the party state committees.

Primary elections are taken under state control—although the party state committees still have much power and may fix assessments on candidates—and must be held through out the state on the same day (four months or more before the regular November election) for state and county elective officers representatives in Congress and presidential electors

Corporations are forbidden to contribute for or against nominations

Among important labour measures is one requiring the appointment by the governor of an inspector of coal mines for each 2 500 000 tons of coal mined the inspectors must investigate accidents prompth and they may close mines and must oversee the re opening of old mines the law minutely prescribes measures for insuring safety sanitation and ventilation and forbids women and boys under 14 to work in mines. A state board of mediation and applications are supported and similar local boards are authorized.

mediation and arbitration was created and similar local boards were authorised. On January 3, 1911 (219 U.S. 219 Bailey v. Alabama) the United States supreme court (Justices Lurton and Holmes dissenting) declared the Alabama. Contract of Service for pionage) Law counter to the 13th Amendment to the Federal Constitution and uncon stitutional because the state rule of evidence gave the accused no opportunity to prove or testify to his uncommunicated motives purpose or intention and the law made breaking a contract on which a cash payment had been advanced prima facie evidence of intent to defraud. The legislature on March 9, 1911, provided for the conviction and punishment of anyone entering into a written contract for service or rent of land with intent to defraud and with like intent obtaining money or property thereon, the new act omits the provision making breach of contract prima facie evidence of intent to defraud and a provision which gave one half of the fine to the injured party.

The salary of the governor was increased from \$5000 to \$7500 A mansion for the governor was purchased in 1911 and the legislature appropriated \$100 000 (available in 1912-13) for the improvement of the state capitol at Montgomery The capitol wing has been completed on this appropriation. An oyster commission was created to preserve and develop oveter shrimp terrapin and turtle fisheries and to control canneries of sea food

Columbus Day (12 October) and Mardi Gras were made legal holidays

Fit ance—The bonded debt on September 30 1912 was \$9 057 000 the balance in the treasury September 30 1911 \$7 071 thereceipts for the following year \$6 261 2,7 the year \$ disbursements \$0 341 852 An act of 1911 taxes telephone and telegraph companies on the basis of mileage of lines operated express companies doing intrastate business sleeping ear companies \$5,500 a year—basides a municipal privilege tax insurance companies $1\frac{1}{2}-2^{\circ}$ 0 of gross premium less cancelled premiums—besides municipal taxes brewers automobile owners corporations (franchise) bottlers rectifiers theatres ball parks travelling salesmen peddlers lawyers doctors brokers freight lines etc. A state banking department was created in 1911

Charites and Penal Institutions—In 1911 the legislature provided for the Alabama home of refuge at East Lake (Birmingham) for way ward and delinquent white females between 1- and 18 and for a reform school at Mount Meigs for juvenile negro law breakers taking over the reformatory formerly managed by the State Federation of Colored Women's Clubs The office of state prison inspector was created and a juvenile court of Jefferson county (including Birmingham) was established Liberal provision was made for pensioning

Confederate soldiers and sailors

Education —For public schools the state appropriated for the vear ending September 30 1911 \$1 933 861 county appropriations amounted to \$389 164 and city appropriations to \$495 108 In addition \$17 600 was available from general property taxes loans bond sales etc. The total income for the nine district agricultural schools was \$56 365 and for the normal schools \$433 396 —\$102 761 for the six schools for whites (at Daphne Florence Jacksonville Livingston Moundville and Troy) and \$380 635 largely from non-official sources for the three negro schools (at Montgomers Normal and Tuskegee). In 1911 \$100 for each county was appropriated for public school libraries in towns of 1 000 inhabit ants or less. Connected with the work of the rural schools is the Boys Corn Club (first organised in Alabama in 1910) for interesting boys in scientific agriculture. In 1911 the Girls Industrial School became the Girls Technical Institute. In 1911 the legislature established the North East Alabama Agricultural and Industrial Institute at Lineville for whites over the age of seven years and the Alabama School of Trades and Industry for Boys and Young Men (white) at Ragland (to be opened in 1913). In illiteracy the state spercentage 22 9° of all 10) cars of age and more in 1910 (34 in 1900) was exceeded only by that of Louisiana (29°) and of South Carolina (25 7°). Among whites the rate was 9 9% in 1910 (14 7% in 1900) and among negroes 40 1° in 1910 (5° 4° in 1900)

ARIZONA 268

The school population in 1912 was 727,297 (399,273 white 328 024 negro) the enroll ment 445 ro5 (298 648 white 146 457 negro) and the percentage of full time attendance 61 for whites and 59 for negroes. The average school term was 132 days for whites and 96 The receipts for schools were \$3 703 711 and the expenditures \$3 547 955 for negroes

History —For several years preceding 1912 the most prominent question in local politics was that of the prohibition of the sale of intoxicating liquors The administra tion which came into office in January 1911, and especially Governor Emmet O'Neal (b 1853 his father Edward A O'Neal was governor in 1882-86) was opposed to state wide prohibition and enacted the Parks county option law In February 1911 a negro who had accosted a white woman was lynched after being taken from officers on the way to the Eufaula pail and on April 2, 1911 a negro accused of rape was taken from the sheriff of Bullock county and was lynched near Union Springs Governor O Neal preferred charges against the sheriff who had said that he was kidnapped in daylight removed from office (May 25 1911) In 1912 a negro was lynched at Bessemer (Jan 28th) one at Hale's Station (Aug 5th), one near Gadsden (Aug 28th) one at Wetumpka (Nov 18th) and one at Butler (Dec. 7th) -- all for murder An international conference on the negro was held at Tuskegee, April 17-19 1912 There was no state election in 1911 the election in November 1912 resulted in a large majority for Woodrow Wilson for pres ident (82 440 votes to 22 680 for Roosevelt, 9 730 for Taft and 3 029 for Debs, who re ceived 1 399 in 1908) and in the choice of the regular Democratic nominees for members of the Federal House of Representatives, 10 under the new apportionment instead of q as formerly In the Democratic National Convention the state delegates had supported for the presidential nomination Oscar W Underwood (b 1862) one of the congressmen from Alabama, who had won national prominence as the leader of the Democrats in the House of Representatives John Hollis Bankhead (b. 1842) who had succeeded John T. Morgan as United States senator in 1907 was re elected in January 1911 for the term 1913-19

potatoes 125 000 bu (1 000 A) hay 384 000 tons (113 000 A) In 1909 (U S Census) the potatoes 125 000 bu (1 000 A) hay 384 000 tons (113 000 A) In 1909 (U S Census) the total value of vegetables other than potatoes was \$379 293 of orchard fruits \$241 I10 (apples \$109 395) of grapes \$25 371 of tropical fruits \$63 632 (oranges, \$52 341) On Jan 1 1912 there were on farms 104 000 horses 32 000 milch cows 741 000 other neat cattle, 1 510 000 sheep, and 22 000 swine. Dry-farm experiments are being carried on near Prescott and Snowflake and in Sulphur Springs Valley and experiments in raising date palms (and in artificial ripening) at Tempe and intensive farming at Yuma where acclimatised Egyptian cotton has been successfully grown Tunis sheep and ostriches have been bred Mineral Products—Total value 1911 \$44 104,731 The state ranked as for several years first in copper 303 202 532 lbs (more than one quarter the country's output of bhster copper) valued at \$37 900 317 In the Globe district and in Mineral Creek district there were new companies producing copper in 1012. The yield in gold and silver ner top of

copper) valued at \$37,900,317 In the Globe district and in Mineral Creek district there were new companies producing copper in 1912. The yield in gold and silver per ton of copper ore was \$0.51 and the total value of all gold \$3.521,400 and of all silver from the tate \$1.743,600. Of zinc the total output was 2.476 tons (\$2.82.264) and of lead 3.450 tons (by smelter reports 5.137 by mine reports) much more than in 1910. In 1911 asbestos deposits at Bass Camp Grand Canyon were being developed.

Manufactures—The total value of factory products for 1909 was \$50.257,000,700 more than in 1904.

than in 1904 capital invested in manufacturing \$32 873 000 (128 3) more than in 1904) the number of establishments 311 and the number of persons engaged in manufacturing The value of the copper smelting and refining products was \$41,059 000 (81 7 0 of all) of the wage earners 48 6 were employed in this industry. Tucson's factory the total) of the wage earners 486 product was valued at \$2 037 000 that of Phoenix at \$1 467 000

Transportation — Railway mileage Jan I 1912 2 100 19 In required the raising by tax annually of \$250 000 for the state road fund In 1912 the legislature

Government — A convention at Phoenix (October 15th-December 9th 1910) adopted a constitution ratified by the people at a special election February 9 1911 tion of President Taft to its provision for the 'recall of judges led to the passage of Public Resolution 8 (6 Cong) which required the people of Arizona to adopt an amendment omitting judicial officers from the clause providing for recall ment was adopted at the general election held December 12 1911 but an amendment restoring the original clause by which the recall is applicable to all elective officers was adopted by popular vote (16 272 to 3 401) November 5 1912 Flections for recall follow a recall petition giving the reason for removing the official (in 200 words or less) signed by at least -5°_{0} of the voters at the last election in the electoral district which elected the official, and not circulated until an officer has been six months in office an official is re elected at a recall election no second recall petition against him may be hled during his term of office until the petitioners pay into the treasury all expenses of the first recall election At the general election in 1012 an amendment wis adopted (14 928 to 3 60°) giving the state and all municipal corporations—the right to engage in The constitution reserves to the people the initiative (petition industrial pursuits for legislation by a minimum of 1000 of the total number of electors voting for governor at the preceding election and for a constitutional amendment by at least 1,00 and the referendum the legislature or 500 of the qualified electors may require the submission to the people of any law or any part of a law, unless immediately necessary and except emergency measures no law goes into effect within 90 days The governor may not veto an initiative or referendum measure approved by a majority of the voters constitution provides for initiative and referendum in municipal and local elections

The house of representatives consists of 35 members and the senate of 19 all must be at least 25 years old and residents of Arizona for 3 years and of the county from which elected for one. They are paid \$7 00 a day (for no more than 60 days in a session) and 20 cents a mile for mileage. The legislature meets biennially. At special sessions no business may be transacted not described in the governor's call for the session. Bills may be passed only by a majority vote of all members elected. Measures or items in appropriation bills may be passed over the governor's veto by two-thirds vote of all elected members measures not returned with the governor's approval in 5 days (excepting Sundays) become low. The returned with the governor's approval in 5 days (excepting Sundays) become law. The executive officers elected for 2 years must be at least 25 years old and citizens of the United States for 10 years and of Anzona for 5 they are governor (\$4 000 a year) secretary of tate (\$2,500) and they are the control of the control state (\$3 500) auditor and treasurer (\$3 000 each) attorney general and superintendent of public instruction There is no heutenant governor

The supreme court is made up of three justices with a six year term one being elected at each general election The names of candidates for judicial office must be in alphabetical

order on the ballots without partisan or other designation

Suffwage except in school elections was originally limited by the constitution to male catazens of the United States 21 years of age, resident in the state one year and not under guardianship non compos mentis insane, or convicted of treason or felony (unless restored to civil rights) but in November 1912 an amendment (proposed by initiative petition) for woman suffrage was adopted by 13 452 votes to 6 202. The legislature following the instructions of the constitution in 1912 provided for an advisory popular vote for United States senator (and for United States district judges the returns of the popular vote being submitted to the president) and enacted a direct primary law providing for nominations for elective state county and city officers and candidates for United States senator and representatives in Congress a registration law (at the special session) making ability to read the constitution in English a requisite for suffrage and a law for general publicity before and after election of all campaign contributions——and expenditures—The legislature ratified the proposed 16th and 17th amendments to the Federal Constitution (April 8th and June 3–1912)

Constitutional amendments may be proposed in either house of the legislature or by a 15% initiative petition they may be voted on by the people at special or general election after due publication. The legislature may not call a constitutional convention without

the approval of the people on a referendum vote

The constitution prohibits plural or polygamous marriages and the sale or gift of intox

icating liquors to Indians

Municipal corporations must be by general statute but any city of 3 500 inhabitants or more may frame its own charter to be approved by the governor who may withhold approval only if the charter is in conflict with the constitution and the laws

There is a strict article in the constitution governing non municipal corporations and forbidding monopolies and trusts. A state corporation commission supervises public service corporations except those in incorporated cities and towns and issues certificates of incorporation and (to foreign corporations) licenses to do business in the state. The legislature in 1912 passed an elaborate Public Service Corporation Act.

The constitution makes of hours a leaviful data would an all amplies much by the state of

The constitution makes 8 hours a lawful day s work in all employment by the state or any political division thereof forbids the employment of children under 14 during school hours and of children under 16 in mines in an injurious or hazardous occupation at night or more than 8 hours a day makes it illegal for employers to stipulate in a contract that employes give up claims against employers for personal injuries at work abrogates the common law doctrine of fellow servant as affecting the hability of a master f r injuries to a ervant and makes the defence of contributory negligence or assumption of risk a question of fact to be left to the jury. By a provision of the constitution alien labour may not be employed by the state by counties or by municipalities.

The legislature as required by the constitution passed an employers hability act applying to dangerous occupations and adding 12 interest per annum to original damages granted for the time consumed in appealing a case. Compon ation (not more than \$4,000) for temporary incapacity is one half of average earnings for incomplete disability one half the difference between earnings before and those after the accident for death 1 200 times average daily wages or if there are no dependents medical and burial expenses. Companies and corporations are required to pay their employes twice a month. Blacklisting is forbidden. Women are not to be employed in an occupation which requires constant stand

ing or in any mine quarry or coal breaker

An eight hour law was passed for mines and smelters and similar establishments and for electric light and power plant. Other laws provide in various ways for the safety of railway passengers and employes, and specify minutely requirements for the safety of mine workers. Suits against the state were authorised the penal code was amended and descrition of wife or failure to provide for wife or minor child was made a felony. Columbus Day was made a legal holiday.

Pandering was made pirnishable by a fine of \$1 000 and imprisonment from one to ten

years A state laboratory for the analysis of food and drugs was established

Finance—The constitution provides for a state board of equalisation and for county boards of supervisors to act as boards of equalisation, but a substitute clause was ratified (15 967 to 2 83) by the people in November 1912 allowing the legislature to prescribe a method of assessment equalisation and levy. A state tax commission was created in 1912 and laws were passed for the taxation of private car companies, at the rate of 7° of the gross receipts of express companies at the rate of 5°, of the gross receipts and of all railways telegraph and telephone companies county by county. In 1912 a graduated collateral inheritance tax law was passed. The corporation commission is allowed to exempt at its discretion any railroad from the three cent minimum fare law. The constitutional limit on municipal indebtedness was increased by a constitutional amendment adopted November 5 1912 by 15 357 votes to 2 682

The report of the state treasurer for the year ending June 20 1912 shows receipts of

² As there is a large Spanish-speaking (Mexican) element in the population, the constitutionality of this requirement may be tested in the courts

\$1 192 350 expenditures of \$1 300,858 and a balance of \$411 441. The net state debt was \$946 972 exclusive of a funded county and city indebtedness of \$2,098 303.

Education - The constitution leaves educational administration mostly to legislative provision and a school code was adopted in 1912 but the constitution vests general conduct and supervision of public schools in a state board of education. The governor appoints regents of the university and the governing boards of other state educational institutions. A permanent school fund is derived from the sale of public lands from escheated estates and from unclaimed shares and dividends of corporations incorporated in the state of 1912 give state aid for vocational education in high schools (and in normal schools) and provide for free text books in public schools for county scholarships in the state university and for the retirement on a pension of \$600 a year of any teacher who has served in the public schools for 25 years or more

In 1911-1912 the school population was 42 381 the enrollment 32 749 the average daily endance 22 812 and the length of the average school year 8 months. The total revenue attendance 22 812 and the length of the average school year 8 months

was \$1 517 64, and the expenditures \$1 321 595

Of the total population 10 years and over in 1910 20 9° were illiterate (29% in 1900) Charitable Institutions -In 1910 a pioneers home was opened

History — The proposed new state constitution was ratified by the people on February 9, 1911 by a vote of 12 000 to 3 500 The first state election on December 12 1011 resulted in the success of the Democratic ticket headed by George Willie Paul Hunt (b 1859) who had been president of the constitutional convention and whose four year term of office began on December 31 1911 The proclamation admitting Arizona as a state to the Union was signed on February 14 1912 On March 7th the legislature (15 Democrats and 4 Republicans in senate 30 Democrats and 5 Republicans in house) chose as United States senators two Democrats Marcus Aurelius Smith (b 18,) who had been a delegate to Congress from the Territory and Henry F Ashurst (b 1875), who was speaker of the Territorial legislature in 1899 There was no election for state officers in 1912. In June the Republican state convention chose delegates pledged to President Taft but there was a contesting Roosevelt delegation the national convention decided against the latter At the November election the state was carried by the Democrats with 10 324 for Wilson, 6 049 for Roosevelt 3 163 for Debs and 3 0 1 for Taft the Congressman chosen was a Democrat and the people approved several railway bills passed by the legislature but referred on petitions which were easily ecured by the railways -by far the largest employers of labour in the state

On November 8 1912 Phoenix adopted a new charter with a commission of three and with provisions for initiative and referendum but this charter was not approved by the governor

Population (1910) 1 5/4 449 (one fifth greater than in 1900) 28 1% negroes (28%) in 1900) 68 400 native whites of native parentage and 2 3 0 of foreign parentage 1 1 0 foreign born Density of population 30 per sq m In 1910 the 28 incorporated places with 2500 or more each contained 1 9 of the total in 1900 the 15 such places contained 85% In 1910, 2/3 cities and towns with less than 2 500 each contained one minth of the total population in 1900 173 contained 8.6%. The strictly rural population not in cities and towns decreased from 82 900 in 1900 to 76 1 0 in 1910. The largest cities in 1910 were Little Rock 45 941 Fort Smith 3 975 Pine Bluff 15 102 Hot Springs 14 434 Argenta (Pulaski county incorporated from part of Little Rock in 1904, Baring Cross consolidated with it in 1903), 11 138 Helena 8 772, Jonesboro, 7,123 Texar kana 5 655 and Paragould, 5 248

Agriculture —In 1910 51 8% of the state s area was in farms 8 076 254 out of 17 416 075 acres were improved (one sixth more than in 1900). The average number of acres in each farm was 81 I average value per farm \$1 864. The total value of farm property increased in 1900—10 from \$181 416 001 to \$400 089 303 (land \$246 021 450 buildings \$63 145,363 implements and machinery \$16 864 198 and domestic animals \$74 058 292). Of the farms 107 412 were operated (1910) by owners and managers and 107 266 by tenants In 1909

¹ See E B n 551 et seg

232 farms (27,753 acres) were irrigated for rice growing of cotton increased about 30% and that of hay about 80% but that of cereals decreased The farmers co-operative demonstration associations and the agricultural college have organised boys corn clubs. In 1912 (preliminary estimates) the crops were cotton 854 000 bales (190 lbs per A). Indian corn, 50 490 000 bu (2,475 000 A) wheat 940 000 bu (94 000 A) oats 3 482 000 bu (175 000 A) rye 10 000 bu (1000 A) rice 3 495 000 bu (90 800 A) potatoes 1 750 000 bu (25 000 A) hay 352 000 tons (286 000 A) tohacco 520 000 lbs. (800 A). In 1909 (U.S. Census) the value of vegetables other than potatoes was \$4 843 442 of small fruits \$601 722 of orchard fruits \$3 011 377 (apples \$1 322 785 peaches and nectarines \$1,502 996). On January 1 1912 there were 265 000 horses 228 000 mules 404 000 milch cows 538,000 other neat cartle. 124 000 seep and 1 728 000 swipe

ooo mules 404 000 milch cows 538,000 other neat cattle 134 000 sheep and 1 738 000 swine

Mineral Products — Total value 1911 \$5 829 606 Coal was the most important
2 106 789 tons (\$3 396 849) Zinc from northern Arkansas amounted to 385 tons (\$43 890)
and 15 tons (\$1 350) of lead were reported In Sebastian and Scott counties there is a little
natural gas Mineral waters bottled at 8 springs were valued at \$118 994 The state is
the foremost producer in the country of bauxite and of oistones (novaculites and Ouachita
or Arkansas stone) Phosphate rock in 1911 was mined near Batesville Diamonds con
tinue to be found in Pike county in 1911 one weighed 8½ carats another 3½ carats

Manufactures —In 1904—09 the number of establishments increased from 1 907 to 2 925 and that of persons engaged in manufacturing from 37 557 (33 089 wage earners) to 51 730 (44 982 wage earners) capital invested from \$46 306 000 to \$704 000 and the value of products from \$53 865 000 to \$74 916 000 The value of lumber and timber products was \$40 640 000 more than half the state s total and in their manufacture nearly three fourths of the wage earners were employed. The state produced in 1909 28 4° of the red gum lumber 20 5 of the cottonwood 11.4° of the ash and 13 5' of the hickory cut in the United States and in each it ranked first in the country except in hickory in which it was second. The largest cut—five eighths of the state s total—was yellow pine. Other important manufactures were cottonseed oil and cake \$7 789 000 ranking the state 6th in this industry flour and grist mill products \$5 615 000 steam railway cars construction and repairs \$4 154 000 printing and publishing \$2 082 000 carriages and wagons \$1 664 000 (115 5 6 more than in 1904) and foundry and machine shop products \$1 051 000. The following five cities produced together about one quarter in value of the state s total. Little Rock \$6 882 000. Argenta \$4 842 000 Fort Smith \$3 739 250. Pine Bluff \$2 387 000 and Hot Springs \$844 570.

Transportation—Railway mileage. Jan. I. 1912, 5 190 72 m. In 1911 and 1912 the

Transportation —Railway mileage Jan 1 1912 5 19072 m In 1911 and 1912 the Federal government was building locks and dams on the Ouachita river was removing obstructions on the upper part of that river and on the Saline and was dredging the Arkansa

(under the River and Harbor Act of 1910)

Legislation —A constitutional amendment, declared in effect in January 1911 reserves to the people the legislative powers of initiative—by petition of 8% of the legal voters (for governor at the preceding election) filed at least 4 months before the general election at which the measure is to be voted upon—and of referendum which may be ordered except in case of emergency measures by the legislature or by a petition signed by 5% of the legal voters (as above) filed within 90 days after the final adjournment of the legislature which passed the Act in question — The governor may not veto a measure adopted by the people on referendum vote

The legislature met in regular session from January 9 to May 13, 1911 and in special session from May 22 to June 10 1911. The income tax amendment to the Federal Constitution was ratified on April 22nd. Acts were passed for a franchise tax on corporations doing business in the state. Railways and other public service corporations including pipe lines are to be assessed for their franchises as for other prop

erty An elaborate act is to reduce the rate of taxation

For 1911 and 1912 \$1 250 000 was appropriated for Confederate pensions provision made for a census of Confederate veterans in the state and \$10 000 was voted for a monument to the women of the Confederacy on the new capital grounds at Little Rock

monument to the women of the Confederacy on the new capitol grounds at Little Rock.

The sale of intoxicating liquor without a county license the giving or selling of it to an intoxicated person and free lunches in saloons were prohibited. There may be a second primary election if no candidate received a majority at the first and a statute provides for the contest of primary elections. General election days the birthday of Jefferson Dayis and October 12 (Columbus Day) were made legal holidays. Concubinage of whites and negroes was made a felony and the birth of a mulatto child prima facue evidence of guilt justifying the conviction of the mother.

An act of 1911 regulates hability of common carriers for injuries to their employes Contributory negligence does not bar recovery if the employers disregard of the law has

contributed to the injury No contract of indemnity constitutes a bar to action for damages but any sum contributed for insurance relief benefit or indemnity by the employer may be set off in trial of such an action Contributory negligence of a person injured by a railway

set off in trial of such an action Contributory negligence of a person injured by a railway train is not to be considered if the railway fails to have proper lookout the burden of proof devolving on the railway. The state law requiring full train crews has been declared valid by the Federal Supreme Court (31 S C R 275)

Finance—The state debt is \$1,250 500 in 3° thirty year bonds maturing in 1929 held by permanent school fund and University of Arkansas endowment funds. The total receipts for the two years ending September 30 1912 were \$6 902 386 disbursements \$6 812 486 (principally for general expenses common schools and Confederate soldiers pensions). The balance in the treasury on September 30 1912 was \$800 771

Education—The legislature of 1911 created a state board of education and provided for state and to high schools and for compulsory attendance at school for one half the whool

state and to high schools and for compulsory attendance at school for one half the school year of children between 8 and 16 (unless the family is destitute) and of children between 16 and 20 if they are not regularly employed—but this applies to only half the counties of the state The Medical Department of Arkansas Industrial University in Little Rock was made part of the state university. A proposed constitutional amendment providing for uniform text books was defeated in September 1912 by 64 898 votes to 73 701. A commission of twenty appointed by the governor and with the state superintendent of public instruction as chairman works with funds from the Southern Education Board it made its instruction as chairman works with funds from the Southern Education Board it made its first report in 1911 In 1912 work began on an educational building at the state university for which the Peabody Board gave \$40 000 Four district agricultural schools at Jonesboro Russellville Magnolia and Monticello created by an act of 1910 were opened in 1912 of the total population 10 years old and more 12 6 was illuterate in 1910 (20 4 in 1900) Of whites over 10 ? was illuterate (11 5 in 1900) of negroes 26 4 (43 in 1900) In the year ending June 30 1912 the total school population was 603 226 the enroll ment 409 746 the average daily attendance 261 747 the average length of school year 117 9 days the number of teachers employed 10 175 the total number of school houses 6 338 (282 erected during the year) and the total value of school property \$10 131 828. The balance on hand at the beginning of the year was \$1 208 600, the property strong thang the year.

The balance on hand at the beginning of the year was \$1 398 699 the income during the year \$, 876 954 and the expenditures \$3 837 549 leaving a balance of \$1 438 104

Charities and Corrections—The legislature of 1911 established juvenile courts in the several counties of the state. Governor Donaghey's recommendation in his call for a special session that the convict labour system be abolished and that provision be made for the proper management and control of the state penttentiary had no legislative result On December 17 1912 Governor Donaghey as a protest against the lease system pardoned 360 convicts.

History —Governor George W Donaghey (b. 1856), re elected by the Democrats for 1910-11 (by 101 646 votes to 39 5/0 for the Republican candidate) did not secure a renomination in 1912 his successor in 1913 being Joseph Taylor Robinson (b. 1872) Democratic member of the Federal House of Representatives from 1903 to 1913 elected on the 9th of September 1912 The people at this state election voted against state wide prohibition of the liquor traffic (85 358 to 69 390) and against the 'grandfather' clause or negro disfranchising amendment to the state constitution (74 950 to 51 334) but adopted the recall" of elective officers (71 234 to 57 860) and limited sessions of the state legislature to 60 days (10, 246 to 33 307) In November the state was carried for Woodrow Wilson (68 838 votes, Roosevelt 21 673 Taft 24 467, Debs 8 153 -- in 1908 5 842) and seven Democratic congressmen were elected—the complete delega tion as the number was not increased by the new apportionment. The election practical ly eliminated from the control of Federal patronage in the state Powell Clayton (b 1833) governor in 1868-71 United States senator in 1871-77 and long member from Arkansas of the Republican National Committee

The new legislature is strongly Democratic (the only Republicans are four in the lower house), it chose (January 29, 1913) Joseph Taylor Robinson, the newly elected governor who had been maugurated on the 14th to succeed U S senator Jeff Davis (b 1862, governor 1901-07), who died January 3, 1913 and who had been opposed by

ing liquors Donaghey favoured prohibition Rodinson local option 2 Upon Robinson's entering the U S Senate the lieutenant governor W C Rodgers be-

¹ The issue in the Democratic primaries was state wide prohibition of the sale of intoxicat

³ A circuit, judge has ruled that the recall amendment was not adopted because it did not receive a majority of the votes cast for state officers at the same election and that it was illegally proposed being the fifth amendment submitted whereas only three amendments may be submitted at a time

Stephen Brandidge Jr (b 1857), member of Congress 1897-1909 On January 6, 1913, the governor had appointed ad interim J N Heiskell, editor of the 4rkansas Gazette of Little Rock but on January 30 he was succeeded by Judge W M Lava naugh to serve until March 4 In the spring of 1912 the Socialist party elected a mayor in Hartford Sebastian county (pop 1910, 1780)

There were several lynchings in the state in 1911-12. In 1911 a negro was killed at Benton in a race war growing out of an attack on a ministrel troupe, one was lynched at Augusta (Sept 9) for rape and murder two mulattoes were killed at Dumas (Sept 27) in a fight in which they and their white father resisted arrest a negro was lynched at Forest City (Oct 16) charged with rape and another at Hope (Oct 20) for using abusive language. On March 23, 1912 an apparently innocent negro was lynched at Fort Smith by a mob excited at the shooting of a constable. The police made no effort to defend him and the chief three officers and six patrolinen were removed from office. On May 2 twenty three indictments were returned by the grand jury for participation in the lynching but no convictions have been secured. On the 4th of July a negro was lynched at Plummersville for killing a deputy and on the 19th of August another at Russellville for assault on a white woman

The state suffered severely from the Mississippi flood in 191? The levee at three places where it was 1 to 3 ft below standard grade broke early in April and flooded a large part of the lower St Francis basin in NF Arkansas, about 2 500 sq m where people were cut off for days

Agriculture —In 1910 the farm acreage was 27,931 444 (11 389 894 improved) and the average acreage of each farm was 316 7—all these being a little less than in 1900 —In the decade the total value of farm property increased from \$796 527 985 to \$1 614 694 584 (land decade the total varies of farm property increased room \$795 \$27 955 to \$10.14 094 584 (land \$1.317 105 448) buildings \$133 496 040 implements \$30 493 158 and domestic animals \$127 599 938) and the average value of a farm from \$10 980 to \$18 308 and of farm land per acre from \$21 87 to \$47 16 In 1910 about four fifths of all farms were operated by owners or managers and only one fifth by tenants The most striking change in crop acreage was in wheat of which in 1899 2 683 405 acres (less than in 1889) were harvested, but in 1909 only 478 217 In 1909 39 352 farms (out of 88 197) were irrigated in 24 of the 58 counties more than half the farms were irrigated and of the total irrigated acreage (2 664 counties more than half the farms were irrigated and of the total irrigated acreage (2.664 to 4.961 136 acres were individual or partnership enterprises 779 020 acres co-operative 746 265 commercial 173 793 in irrigation districts 3 490 under the Indian service and 400 under the United States Reclamation Service In its first season 1911 the (Federal) Orland project (begun 1906 85° finished in November 1912) irrigated 2 600 acres and preliminary examinations for the Needles (Colorado river) project are not completed. The cost of irrigation up to 1910 was \$72 580 000 (\$20 05 an acre) and the estimated final cost of enterprises begun is \$84,392,344

of entriprises begin is \$84,392,344.*

In 1912 (preliminary estimates) the principal crops excluding fruits were. Indian com 1 924,000 bu (52,000 A) wheat 6 290,000 bu (370,000 A) oats 7,800,000 bu (200,000 A) barley 41,700,000 bu —about one-fifth of the country's crop—(1 392,000 A) rve 141,000 bu (8 000 A) potatoes 10 140,000 bu (78 000 A) hav 3,825,000 tons (2 500,000 A) cotton 9,000 bales rice 70,000 bu (1 400 A) sugar beets 1 037,283 tons (99,545 A). In 1909 (U.S. Censu.) the value of tropical fruits was \$16,752 101 (oranges...\$12,951,505 kmon...\$2,96,571 olives...\$401,277 figs...\$260,153 pomeloes (grapefruit). \$143,180) of hemp 339,000 (300 A.) of vegetables other than potatoes. \$6.86,885 of flowers and plants. 81 388 513 of nursery products \$2 212 788 of small fruit \$1 789 214 (strawberries \$1 149 475 raspberries and loganberries \$304 169 blackberries and dewberries \$282 385) of orchard fruits \$18 355 897 (apples \$2 901 662 peaches and nectarines \$4 573 775 plums and prunes \$1 660 963 cherries \$5 473 539 apricots \$-768 921) of nuts \$2 959 845 and of grapes \$10 846.812 On January 1 1912 there were on farms 493 ooo horses 72 000 mules 505 000 milch cows 1 515 000 other neat cattle 2 656 000 sheep and 830 000 swine In December 1911 an act was passed for the promotion of horticulture and to prevent the introduction of insects or di eases injurious to fruit trees etc. it provide for the inspec

tion of nur ery stock etc brought into the state

The University of California received an appropriation of \$30,000 to enable it to hold farmers institutes \$15,000 every two years for research work in viticulture the same sum tor the improvement of cereal crops and the same for the study of plant diseases not already arranged for by the Southern California Pathological Laboratory Experiments in rice culture point toward the possibility of large crops of this cereal important investigations have been made of orange thrips and scale insects and it has been proved that the bubbine

plague was carried by wood rats and ground squirrels. In 1911 a new bird reservation was established at the Clear Lake reservoir S.E. of Lake Klamath.

Mineral Products—Total value 1911 890 517 566. The state ranked fir t in petroleum with an output of 81 134 391 bbls (\$38 719 080) in asphalt mostly oil asphalt \$_104 421 (50) more than in 1910) and in gold \$19 928 500 (a little more than Colorado's output in 1911 or California's for 1910). The North Star mine near Grass Valley and the Kennedy of Acade City, rounded the and 44th respectively, among the largest gold mines, in the at Amador City ranked 9th and 14th respectively among the largest gold mines in the ar Amador City ranked 9ff and 14th respectively among the largest gold findes in the country. There was an increase in placer production and quartz mining, but a decrease in deep mining due to the decrea e in mining copper and lead. In silver \$686 300, there was a decrease of nearly one-third compared with the preceding year. The output of Lopper was 35 835 651 lbs (20) less than in 1910 of lead 615 tons (less than half that of 1910) and of zinc 1 404 tons (mine reports 959 tons smelter reports none reported in 1910). The state produced in 1911 about nine tenths (\$887 749) of all quicksilver more than one expent to all the magnesis (including that from a new deposit at Rissell, kern seventh of all pyrites all the magnesite (including that from a new deposit at Bissell, Kern county) most of the crude platinum (511 oz) practically all the borax (\$1 569 151) and all the chromic iron ore (\$1 629 from Shasta Siskiyou and Tehama counties) produced in the country Important absolutely were salt 1 062 813 bbls. (\$543 917) clay products (\$4 915 866 mostly brick and tile) Portland cement (\$8 737 150 ranking next to Penn silvania) stone (\$4,676,902 ranking fifth) the larger items being granite, \$1,738,094 and trap rock \$2,055,9,00 sand and gravel \$416,980 and hime \$564,175 Natural gas was valued at \$800 714 much more than in any previous year and about 12 times as much as in Mineral waters bottled at 40 springs including 18 resorts were valued at \$578 439, a half more than in 1910 Brine in Searles Lake, San Bernardino county has 6 78 % almost a half more than in 1910

of potash and may furmsh a supply for fertiliser

Manufactures —Between 1904 and 1909 the number of establishments increased from 6 839 to 7 659 the number of persons engaged in manufacturing from 120,040 (100 355 wage-

 $^1\mathrm{Sec}\ F\ W\ \mathrm{Roeding}\ \mathit{Irrigation}\ \mathit{in}\ \mathsf{California}\ \mathrm{and}\ \mathsf{Victor}\ \mathsf{M}\ \mathsf{Cone}\ \mathsf{Irrigation}\ \mathit{in}\ \mathit{tht}\ \mathsf{San}\ \mathit{Joaquin}\ \mathit{Valley}\ (\mathsf{both}\ \mathsf{Washington}\ 1911)$

earners) to 141 576 (115 296 wage-earners) the invested capital from \$282 647 600 to \$537 134 000 and the value of products from \$367,218 000 to \$529 761 000. The principal products were lumber and timber products \$45,000 000 slaughtering and meat packing products \$34 280 000 (116 7% more than in 1899) canned and preserved fruits vegetables hish etc localised largely in Fresno Oakland Pomona and Redlands \$32 915 000 (more than one-fifth the total for the United States and far more than for any other state) foundry and machine shop products \$26,731 000 flour and grist mill products \$25 188 000 (93 more than in 1899) printing and publishing \$25 032 000 steam railway cars and construction \$18 719,000 refined petroleum \$17 878 000 about 25 times as much as in 1899 butter cheese and condensed milk \$12 761 000 (256 2% more than in 1899) tanned curried and finished leather \$9 367 000 malt luques, \$9 319,000, vinous liquors \$8 937 000 (68 1% of the total for the United States) illuminating and heating gas \$8 927 000 copper tin and sheet iron \$6 804 000 cement \$6 504,000 manufactured principally in Solano Santa Cruz and San Bernardino counties roast and ground coffee and spice \$6 492 000 food prepara tions \$5 508 000 distilled liquors, \$5,353 000 and men s clofting \$5 121 000

tions \$5,508 000 distilled liquors, \$5,353 000 and men a clothing \$5,121 000
In 1909 557, of the total value was reported from the 21 cities each with 10 000
inhabitants or more San Francisco was still the first manufacturing city, and the decrease
in the value of manufactures from \$137,788 000 in 1904 to \$133 041 000 in 1909 was due
partly to the fire of 1906. Los Angeles (\$68,586,000), the second city showed an increase
of 353 2, between 1899 and 1909 and Oakland (\$22,343,000) third an increase of 316 2
Other important manufacturing cities were Sacramento \$13,977,000. Stockton \$11,849,000
Fresno \$11,090,000 San Jose \$5,610,000 San Diego \$4,741,000 and Berkeley \$4,435,000
Transportation—Railway mileage January I 1912 7,511,78. The department of
engineering was reorganised in 1911 and now appoints a highway engineer. Many separate
octs were passed for establish state highway so notably in Alting counts, which has long been

Transportation—Railway mileage January I 1912 7 511 78 The department of engineering was reorganised in 1911 and now appoints a highway engineer. Many separate acts were passed to establish state highways, notably in Alpine county which has long been without any westward outlet the only roads leading E into Nevada. Much has been done to improve roads for motoring especially near Los Angeles. The state contributed towards the improvement of the Sacramento and Feather rivers and the Federal government appropriated (March 4 1911) \$15 000 for the state débris commission and in 1911—12 was dredging the harbour of Los Angeles and building a breakwater there improving San Francisco harbour by rock removal, digging a 30 ft channel in San Diego harbour and another in Oak land and improving the entrance channel at San Lius Obispo

Legislation —The 39th session of the legislature met from January 2 to March 27 1911, and on February 3 ratified the proposed 16th amendment to the Federal Constitution At an extra session, November 27 to December 24 the state was redistricted, into senatorial assembly and congressional districts and by joint resolution an amendment to the Federal Constitution to provide for a nation wide direct vote for president and vice president was urged

A conservation commission was appointed by the governor to report laws and make regulations in regard to forestry, water, the use of water water power electricity mines mineral lands, etc., and \$100,000 was appropriated for this work although no salary was allowed to the commissioners.

Provision was made for a presidential primary election to be held on the second Tuesday in May in the years of presidential elections. A primary law adopted the Oregon plan of pledging legislators to the people's choice for United States senator as shown in the primary or of having a legislator sign an alternative pledge that he would consider the primary choice merely as a recommendation. Nominations other than by primary must be made by petition with a certificate for each signer. A law providing for a registrar of voters was referred to the people and defeated (255 051 to 145 924) in Nov. 1912.

The law in regard to voting machines was revised, no machine may be used which makes

The law in regard to voting machines was revised no machine may be used which makes it possible for a straight ticket to be voted without the separate motion of lever or button for each separate candidate. A ballot law provides for the office group form with names arranged in rotation—but alphabetically for local offices—with the party name or the word independent following the name of the office and with a blank space in each party group for the addition of the name by the elector. A sample ballot and a card containing instructions must be mailed to each voter. Pamphlets containing arguments for or against referendum measures must be distributed to voters—until there is legislative action for budding this—and pamphlets on proposed constitutional amendments must be distributed to public schools.

Twenty three constitutional amendments were adopted by popular vote on October 1911 the most important being for the initiative and referendium providing for initiation directly to the people if the petition is signed by 8% of the voters or more but through the legislature if the petition is signed by more than 5% and less than 8 and giving the governor as in Oklahoma the power to call a special election for initiative measures an amendment providing for woman suffrage one for the recall of all elected officers (178 115

votes to 53 755) one prohibiting the reversal of verdicts in criminal cases on mere technical ities and one limiting biennial sessions of the legislature to 30 days with a recess of 30 days before re assembling no bill then to be introduced except with the consent of three fourths of the members of the house and no member to be allowed to introduce more than two bills, Before the adoption of these amendments the legislature had granted to voters of munic ipalities the right of initiative and referendum on municipal questions providing for initiative on a petition of 15 % of the qualified electors—in this case the measure must come before a general election but if the petition is signed by 30 % it must either be passed by the city council or must be brought up at a special election only emergency measures passed by a four fifths vote by the city legislative body are exempt from the referendum appropriation measures do not go into effect for 30 days and they may be suspended by a petition signed by 25° of the voters until they are acted on by a special or general election. The provi sion for a recall was that a vote for the recall of any city official might be called by a petition of 25° of the voters at the last city election after he had been in office for four months A similar law provides for the initiative referendum and recall in counties but the initiative petition must be signed by 20% of the qualified electors to secure the calling of a special election and a vote for the recall of an officer after he has been in office six months can be secured by petition of 20 of the voters at the last congressional election

A law for local option in incorporated towns and cities and in supervisorial districts out side of a city or town requires a local option election on a petation of 25° of the qualified voters. This law has been held constitutional and there were to the end of 1912 about 160 elections under the constitutional and there were to the end of 1912 about 160 elections. elections under the act of about 60 cities two thirds voted for licence and of about 100 supervisorial districts 3 out of 5 voted for licence. Two measures in regard to local officers and one (initiated) providing for consolidated city and county governments were defeated

at the November 1912 election—each by about 7 to 4.

The municipalities of the state were re-classified and a law authorises the municipal

ownership construction and operation of public utilities

ownership construction and operation of public utilities

The commission form of government was extended in 1911-12 to the following cities
Oakland (election Dec 8 1910 in effect July 1 1911) Modesto (election bept. 14 1910
in effect July 1 1911 Vallejo (election Feb 21 1911 in effect July 1 1911) Pomona (elec
tion Feb 16 1911 in effect May 8 1911) San Luis Obispo (election Sept. 12 1910 in effect
May 15 1911) Monterey (election Dec 12 1910 in effect July 1 1911) Santa Cruz (elec
tion Jan 31 1911 in effect July 3 1911) Petalluma (election Feb 14 1911 in effect 4pril
17 1911 not a pure commission) Sacramento (election Nov 7 1911 in effect July 1 1912)
and Stockton (election Oct 17 1911 in effect Jan 6 1913) In every case the new charter
was drawn by the board of freeholders or city council. San Mateo also has commission
government not a freeholder charter and San Bernardino adopted it in 1912 Los Angeles
rejected it December 3 1912 by nearly 2 to 1 and Eureka by 1 0.48 to 12.4 rejected it December 3 1912 by nearly 2 to 1 and Eureka by 1 048 to 124

At a special election in San Francisco on November 15, 1910, 18 out of 35 amendments proposed to the charter were adopted one for initiative and referendum and recall one for direct nominations with no party name to appear on the ballot, but not less than ten or more than twenty sponsors must appear before the registrar to certify under eath to the qualifications of any candidate for office and one for the minimum wage of \$500 a day for municipal employees in San Francisco Of 37 amendments submitted December 10 1912 that for local option by city districts was defeated but one extending the power of the civil service commission and one authorising the purchase of land for a civic centre were adopted On December 20 five propo itions for bond issues were voted upon and all were rejected

except one for \$1,700,000 to complete the county hospital

Fourteen amendments to the charter of Los Angeles were adopted on March 6 1911 at a special election. They provide for the initiative referendum and recall for primary nominations for the regulation of expenses of candidates for the creation of a commission on a city plan for the establishment of a department of public utilities a harbour depart ment a department of public service playground department and a municipal art commission and for the creation of pension funds for firemen and policemen. On December 5 1911 the people voted (58 134 to 43 937) for a municipal newspaper but against (88 395 to 32 283) a measure prohibiting saloons and on May 28 1912 voted for an aqueduct investigating board (16 564 to 15 697) and against the improvement of a harbour boulevard (40 415 to 11 412)—it is to be remarked that the vote on these initiated measures was much smaller in 1912 than in 1911 In the latter year there were two referendum votes (May 28) one against (18 883 to 13 899) an ordinance requiring the testing of milk for tuberculin and one for (21 085 to 11 662) an ordinance regulating franchises

1 Cities over 400 000 are in the first class and those between 250 000 and 400 000 in the first and one half class cities between 100 000 and 250 000 in the second class those between 23 000 and 100 000 in the third those between 20 000 and 23 000 in the fourth those between 6 000 and 20 000 in the fifth and those under 6 000 in the sixth but cities already organised are not to be classified and municipal corporations are not to be reclassified on the basis of the Federal census without action of the state legislature Another law classified the counties of the state and adopted a new county code. Laws provide for the recall of elective officers

and for initiative and referendum in counties and in subdivisions of counties

A railway commission (later changed to a public utilities commission) was organised and by constitutional amendments and statutes received important powers—among others (by the Eshelman Stetson law) to fix absolute (and not minimum) rates and to make physical valuations of railways \$210 000 was appropriated for the work of the commission. A high way engineer is to be appointed by the department of engineering reorganised in 1911

The state bureau of labour was re organised The term of the commissioner is no longer limited to four years but he holds office at the pleasure of the governor In 1911 the state passed the first law in the United States requiring all physicians to report occupational diseases to the state board of health the report to be transmitted to the commissioner of labour The penalty for failure to report is not more than \$10. One of the constitutional amendments adopted in October 1911 enabled the legislature to make compulsory the elective compensation laws for workmen and an act of 1911 applying to all employments but not to casual employees is compulsory for state or municipality as employer pensation provided for is in case of death three years earnings not less than \$1 000 or more than \$5,000 if there are no dependents \$100 For total di ability the compensation is 65 weekly of 1-52 of the average yearly earnings (if a nurse is required 100 6) with \$333 33 the minimum and \$1666 66 the maximum yearly earnings the limit to be 3 times the yearly earnings or 15 years and for partial disability 65° of the weekly wage loss with the same limits as for total disability. Child labour laws forbid any minor under 18 (for the same limits as for total disability Child labour laws forbid any minor under 18 (for merly 16) to work between 10 P.M. and 5 A.M. (formerly 6 A.M.) or more than mine hours a day but children between 15 and 18 may appear on the stage. Fifteen years in the age, limit for most employment and 16 the limit for employment during school hours. Children over 12 may work on sperial permit from a judge of the juvenile courts. The law making 8 hours a maximum working day for women in factories stores hotels restaurants public utility companies etc (but not canneries of vegetables and fruits) was held to be constitutional by the supreme court on May 27 1912 in a test case brought by a hotel keeper in Riverside who was imprisoned for making a woman in his employ work nine hours a day All employers must pay their employees monthly or offener Employees discharged must be paid immediately and those that resign within five days

Accident Board were enlarged Employers were required to keep records of accidents Hours on railways must be no more than 16 in succession followed by 6 hours off A new law provides for full train crews and sets qualifications for engineers conductors and brakemen A law in regard to convict labour requires goods manufactured in state prisons to be marked with the name of the prison and not be sold but only be for public use.

The law for general vaccination passed in 1889 was amended by a clause exempting those

The law for general vaccination passed in 1889 was amended by a clause exempting those that sign a statement they are conscientiously opposed to vaccination but unvaccinated children may not attend school in a district where there is smallpox. The practice of medicine surgery osteopathy and other treatments of cure was regulated by two new acts. The state board of health received an appropriation of \$5,000 to spread a knowledge of tuberculosis through the state. Giving or selling tobacco to minor is made a misdemeanor Dairy products must not be manufactured from unhealthy cattle and the sale of impure or adulterated products is forbidden. The United States Department of Agriculture standard of purity for condensed and evaporated milk is proclaimed for the state. Cold storage eggs or butter kept for three months must have marked on the package the date of storage and any place in which they are sold must display a sign. Cold Storage Eggs or Butter Sold Here. It is made unlawful to damp garbage in navigable waters of the state or in the Pacific within 20 miles of land. The secretary of state is to keep standard weights and measures and counties cities and towns are to appoint sealers of weights and measures.

A tenement code was passed for buildings in incorporated places

The laws against pimping and pandering were made more severe than before and a wife s

testimony against her husband in such a case is competent

The law against pool selling and book making on races was amended but an initiative measure for a state horse racing commission was defeated in November 1912 by 353 070 to 149 864. A new section added to the Penal Code prohibited gambling by use of slot machines and of dice having more than six faces.

A state flag was adopted showing a grizzly bear in dark brown on a white field with a red stripe at the bottom of the flag and a red star in the upper left hand corner and on the flag

the legend California Republic

Finance —A state board of control was created in 1911 to be composed of three members appointed by the governor to hold office during his pleasure at a salary of \$4,000. This board is to examine the books of every state institution and visit institutions to investigate school land funds to supervise the state s financial policy to pass on contracts for supplies to supervise a new department of public accounting and to institute a uniform system of accounting. The board of examiners was abolished. In accordance with a constitutional amendment of 1910 public service corporations are taxed on their gross earnings for a state tax only and the state and local taxes were separated. Public service corporations were taxed from 2 % to 4 % on gross earnings insurance companies 1 % on their gross premiums and banks 1 % on their capital, surplus and undivided profits. These rates may be changed by a two thirds vote of the legislature. The state banking law was revised in 1911. An

amendment (1911) to the law in regard to non resident taxation taxes anything left by the will of a resident of the state or by the will of a non resident bequeathing property within the state or on a transfer without valuable consideration and makes the tax a lien on the property. There is a scale for the meanness of kin to the legated under \$25,000 the rate is if of those nearest of kin and 5 for those more remote for sums between \$100,000 and \$500,000 the corresponding rates are 5 and 25 lies in 1912 the controller published the first annual report of the finances of municipalities and counties in the state authorised by a law of April 21 1911. An initiated amendment for local taxation was defeated in Novem ber 1912 by 243,959 to 160,321 but one changing the system of depositing public funds was adopted 307,199 to 128,411.

The cash in the state treasury July 1 1910 was \$7 201 220 The receipts for the fiscal year ending June 1911 were \$18 843 854 and for the year ending June 30 1912 \$27 395 144
The expenditures for these years were respectively \$18 591 471 and \$24 945 213 leaving a

balance on hand June 30 1912 of \$9 903 534

Education —A new compulsory education law of 1917 sets the age for school attendance from 8 to 15 but there are many exceptions. In accordance with a constitutional amend ment of 1910 the fund for the University of California is to be increased by 7? a year from 1911 until 1915. In November 1911 the people approved (343 443 to 171 486) an amend ment to the constitution giving free text books to pupils in day and evening schools. A state normal school at Fresho was opened for instruction in September 1911. One high school in every first class city must teach French. Italian Spanish and German and such a school i to be called a cosmopolitan school. Athletics and military drill may be included in the high school curriculum and high school cadet companies may be organised with target practice under the supervision of an officer of the National Guard.

For the school year ending in the summer of 1912 the total enrollment was 423 824 the average daily attendance 32, 657 and the length of the average school year 172 days. The total school revenue (excluding that of the University of California) was \$32 265 791

and the expenditures \$24 534 266

Illiteracy in the population 10 years old and over was 37° in 1910 against 48 m 1900. The University of Cabifornia in 1912 received a gift of \$100,000 for the endowment of scholarships for men. Late in the same year Prof. Merriam of the University began the excavation of remarkably preserved skeletons of prehistoric animals mixed in tar pools on Rancho La Brea near Los Angeles. In April 1912 the University Medical school was re-organised in three departments gynecology and obstetrics medicine and surgery Charitable and Penal Institutions—The state board of charities and correction received

Charitable and Penal Institutions—The state board of charities and correction received new powers in 1911 and a state reformators for first offenders between 16 and 30 was estab lished it is to be erected near Yountville Napa county. Inchriates and tho e with drug habits may be committed to a state hospital for the insane. The juvenile court law was twice amended in minor details in 1911. On November 6, 1911, the Federal Supreme Court (Finley to California) held that there was no unconstitutional discrimination in a law making death the penalty for assault with intent to kill on the part of a convict serving a life term. In 1912 an effort was made to propose by initiative a constitutional amend ment abolishing capital punishment.

History —Hiram W Johnson (b. 1866) was elected in November 1910 governor for the term 1911-15 by 1 , 101 votes to 1 4 835 for Beil (Democra) 4, 819 for Will on (Socialist) and 5 807 for Meads (Prohibitionist). This was the result of a campaign in which Johnson foured the state in an automobile attacking 'special interests and particularly the Southern Pacific Railroad whose counsel (and vice president since March 1910). William F. Herrin (b. 1854), he accused of having an undue and improper in fluence upon legislation and nominations for state office. Johnson's nomination and election gave the Lincoln Roosevelt League and the progressives generally control of the Republican partisan machiners.

The Eshelman Stetson law (see above) had for its object the lessening of the power of the Southern Pacific the amendment for municipal home rule resulting in the adoption of several free holder charters with commission government put the cities of the state on a better government base than those of any other state and Colonel Roosevelt said that Governor Johnson and the legislature put through "the most comprehensive program of constructive legislation ever enacted at a single session of any American legislature" An attempt was made to 'side track' the governor by electing him United States senator but the choice fell (Jan 11) on John Downey Works (b 1847), one of Johnson's aides in the campaign justice of the state supreme court in 1888-01 an authority on water rights and a prominent Christian Scientist. In the election of delegates to the National Convention the state law stipulated that the vote for district

delegates should be by the state at large, the rules of the Republican National Commit tee that they should be by districts There resulted a bitter contest in the Convention in the case of two seats which the Convention awarded to Taft Johnson's primary law was one factor his name on the Progressive ticket and the votes of women were others in the victory of Roosevelt in the Republican presidential primary he received 70 000 votes more than Taft and 25,000 more than Taft and LaFollette combined Champ Clark defeated Woodrow Wilson in the Democratic primary—William Randolph Hearst was one of Clark's strongest supporters and a power in the Democratic party in the state On October 3 the state supreme court barred from the Republican ticket the electors pledged to Taft at the same time calling the primary law a very bad one because it would practically disfranchise one third of the voters of the state. This made it necessary for Tast electors to be nominated by petition with signatures of 11 000 voters who had not taken part in the primaries The state was carried for Roose velt by 174 plurality for the highest Republican elector (283 610 for Roosevelt and 283 436 for Wilson) Of the 13 presidential electors 11 were for Roosevelt and 2 for Wilson The Socialist vote was 79,201 (in 1908, 28,659, in 1910 for governor 47 819) and the vote for Taft was only 3 914 The Congressional delegation 11 instead of 8 as for the last decade, contains 3 Democrats 4 Republicans and 4 Progressives The new state legislature contains enough Democrats and Taft Republicans to make difficulties for Governor Johnson One Socialist was elected to the lower house from Los Angeles

The municipal election in San Francisco in 1911—the first under the new non partisan plan-resulted for the first time in the victory of the anti Union Labour party at the primary James Rolph Jr received a majority of all votes cast (Sept 26th) defeating Mayor McCarthy who had the backing of the Union Labor party and becoming mayor-elect without a general election. In the spring of 1911 a Socialist mayor city commissioner, and member of the board of education were elected in Berkeley —an educational and residential rather than an industrial city and in April 101° in Daly City a suburb of San Francisco with 3 000 inhabitants the Socialists elected a city clerk and three (out of five) members of the board of trustees including the mayor—that is gained the control of the city government. In Oakland the Indus trial Workers of the World secured a petition (March 1919) for the "recall" of the may or and two commissioners on the ground that they protected vice but the recall election resulted in favour of the incumbents In San Francisco a municipally owned and oper ated street railway to Golden Gate Park (bonds issued in 1000) was opened December An extension to Ocean Beach is planned A municipal opera house in San Francisco seems assured Los Angeles has a municipal cement mill built in 1908

The trial beginning October 9 1911 in Los Angeles of John J and James B McNamara (arrested in Indianapolis April 22) for dynamiting the Los Angeles Times Building (Oct 1, 1910) and the Llewellyn Iron Works was one of the most important events in the state's recent history (see United States § History). The Los Angeles election of December 5 1911 was marked by the first participation of women voters and by a contest between the Socialists whose candidate Job Harriman one of the counsel for the McNamaras suffered from their cause being discredited and the Good Government party, which re elected Mayor Alexander (83 9,8 to 52 93 for Harriman). Late in November 1912 a recall petition against the mayor was circulated—apparently for political purposes

The experiences of Los Angeles with organised labour aroused opposition in San Diego to the Industrial Workers of the World and other radicals who in April 1912 made the place a centre for their propaganda and flocked thither from the whole Pacific Coast In December 1911 the city council had abolished street meetings in a district where they had formerly been held. After the arrest of speakers at meetings called by a Free Speech League, a meeting, not in the forbidden quarter, was broken up by the

¹ The demonstrations were nominally to test the right of free speech as were meetings in February 1911 in Portland (Oregon) and Spokane (Washington) and in Fresno (California) where 40 were convicted and put to breaking stone

police March 17 1912 On May ,th two policemen watching a lodging house fre quented by radicals were shot from ambush. Camps outside the city were established to turn back Industrial Workers and a vigilance system was organised. Dr. Ben Reitman an aide of Emma Goldman, was tarred and feathered and driven out of the city on May 15. Mrs. Goldman left the city immediately afterwards without lecturing on free speech as she intended and there were riots in the city on the 27th. Six leaders of the Industrial Workers were convicted of felony on August 1. In the mean time a special commissioner reported to Covernor Johnson that the city authorities were blameworthy for arbitrary treatment of the speakers and the governor instructed the attorney general to restore law and order. He threatened to declare military law and began an action against the vigilantes but the grand jury adjourned without finding an indictment. A negro was lynched at Bakersfield September 12, 1912, for an alleged assault on a white woman.

A civil service system was established in Oakland in 1912 with the assistance of two members of the Chicago civil service board. In 1911 an efficiency department was established in Pasadena

COLORADO 1

Population in 1910 799 024 (48% more than in 1900) The greatest relative in crease since 1900 was 6.559° m Chevenne county on the E boundary. In 14 counties in the central part of the state and near the SW corner there were actual decreases (199% in Hinsdale county). In 1910 82 2 0 of the population were native whites and 14% negroes, 159% were whites of foreign birth and 22.7% were whites of foreign parentage. The average density of population was 7, to the sq. m. There were 7 cities and towns with more than 2500 inhabitants each, and these contained 50.7% of the total (in 1900 20 with 48.3%). The purely rural population increased more than 4% in the decade but was only 37.2% of the total. There were 11 cities with more than 5000 each. Denver 15.381 (1.3859 in 1900). Pueblo 44.395 (815, in 1900). Colorado springs 29.078 Trimidad 10.204 (5.345 in 1900). Agriculture — The acreage in farms increased from 9 474 588 to 13 532 113 between 1900 and 1910 and the improved land in farms from 2 273 968 to 4 302 101 the average farm acrease fell from 393 6 to 293 1 and the value of farm property increased from \$161 045 101 to \$491 471 806 (\$362 822 205 land \$45 696 656 buildings \$12 791 601 implements and \$70 161 344 domestic animals). In 1910 one fifth of the land area was in farms 36 993 farms were operated by owners 787 by managers and 8 390 by tenants. The average value of farm land per acre (exclusive of buildings) was \$26 81. The total acreage irrigated in 1909 was 2792 032 173 3° more than in 1899) of this total 2 758 283 were supplied from streams. The total cost of irrigation enterprises to July 1 1910 was \$56 636 443 and the estimated final cost of improvements begun was \$76 443 239. Of cereals 42 6% by acreage in 1909 was grown on irrigated land and of oats 69 7° of barley 68 3% of hay and forage crop 74 8% and of alfalfa 94 4% wild salt or prairie grasses 75 9% of sugar beets 99 and of potatoes 69°. There is an irrigation demonstration farm at Eads Kiowa county. The Gunnison tunnel of the (Federal) Uncompangre Valley project (see E B vi 720b) was completed for present use in June 1910 and in November 1912 the entire project was 562 completed. Preliminary work is being done on the Grand Valley project (Mesa county) to irrigate 53 000 acres by tunnels from the Grand river. In 1912 (preliminary estimates) the principal crops were Indian corn 8 736,000 bu (420 000 Å) wheat 10 968 000 bu (453 000 Å) oats 12 412 000 bu (290 000 Å) barley 2 964 000 bu (76 000 Å) rye

¹ See L B vi 717 et seg

488 000 bu (25,000 Å) potatoes, 8 075 000 bu (85 000 Å) hay 1 905 000 tons (870 000 Å) flaxseed 96 000 bu (12 000 Å) and sugar beets 9,57 1.12 tons (86 437 Å) In 1909 the value of vegetables other than potatoes was \$2 349 6,4 of flowers and plants \$468 085 of nursery products \$72 090 of small fruits \$398 836 (strawberries \$156 059 raspberries \$156 068) of orchard fruits \$4 651 792 (apples \$3 405 442 peaches and nectarrines \$764 561) On January 1 1912 there were on farms 321 000 horses 167,000 mulch cows 921 000 other neat cattle 17,000 mulcs 1 579 000 sheep and 211 000 swine.

Carriage horses were other neat cattle 17,000 mules 1 579 000 sheep and 211 000 swine. successfully bred in 1911-12 at the Agricultural Experiment Station

The legislature of 1911 amended previous irrigation laws created the office of state dairy commissioner and passed an elaborate act for dairy sanitation and for the brand ing of dairy products it gave to the state board of agriculture authority over forestry and for cattle over six months old brought into the state and a law requiring a health certificate for cattle over six months old brought into the state and a law requiring railways to build fences to protect herds. A school of horticulture and forestry was established in 1911 at the Grand Junction Indian School and a School of Agriculture and Mechanical Arts at the Fort

Lewis School which was thereby put on a par with the Fort Collins School

Mineral Products — Total value 1911 \$51 958 239 In gold the state ranked second with

19 138 500 less than that of California in 1911 and less than Colorado s output in 1910

when the state ranked first There was a smular decrease in the value of silver in which the state ranked fifth in 1911 with \$3 958 800 in 1910 it ranked fourth a position held by Idaho state ranked nith in 1911 with \$3,958 800 in 1910 it ranked fourth a position held in 1911. Teller county with the Cripple Creek district was the principal gold producer and Lake county (Leadville) the principal producer of silver. Other metals were copper 9,791 861 lbs. zinc. 42,233 tons, and lead 30,621 tons. Second in value to gold was coal 10,157,383 tons. (\$14,747,764 less than in 1910). The value of petroleum was \$228,104 (226,926 bbls.) A little natural gas was used commercially in Boulder and Fremont counties. Clay products were valued at \$1,606,709 stone at \$1,514,827 (mostly marble and including small output of marble from several other states) and sand and gravel at \$63,366. Portland cement was manufactured at two plants. From the Boulder field 730 tons of tungsten were taken in 1911. Vanadium was found in San Miguel and Montrose counties. Sulphur deposits in Mineral county, have not yet been worked commercially. Mineral waters Mica fluorspar graphite bottled at 14 springs including 5 resorts were valued at \$104 763 and grandstones were minor mineral products

Manufactures - From 1904 to 1909 the number of establishments increased from 1 606 to Manufactures — From 1904 to 1909 the number of establishments increased from 1 606 to 2 334 the number of persons engaged in manufacturing from 25 888 (21 813 w 1₆e earners) to 34 115 (28 067 wage earners) the invested capital from \$107 664 000 to \$162 668 000 (51 1% increase) and the value of products from \$100 144 000 to \$130 044 000 The principal manufactures in 1909 were smelting products (value not shown separately) slaughtering and meat-packing products \$9 657 000 (190 5 ° more than in 1904) flour and grist mill products \$7 868,000 printing and publishing \$6 962 000 steam railway carconstruction and repairs \$6 559 000 foundry and machine shop products \$5 907 000 The

principal manufacturing cities with the value of their products were Denver \$51 538 000 Pueblo \$3 345 000 and Colorado Springs \$1 7.33 000 Communications — Railway mileage January 1 1912 5 728 30 m Beginning with 1911 Communications —Railway mileage January 1 1912 5 728 30 m Beginning with 1911 the second Friday in May became a state holiday under the name of Good Roads Day An act of 1911 provided for a tunnel through James Peak to be used but not exclusively for fifty years by the Denver Northwestern & Pacific Railroad with the option to purcha e but under the necessity of completing a through line to Salt Lake City this was referred to the people in November 1912 and was defeated

Legislation — The legislature met from January 4 to May 6 1911 On February 20 it ratified the proposed Federal income tax amendment. Amendments to the state constitution were proposed, making smelters public utility works and providing for a state tax commission An initiated amendment for prohibition was defeated in November 1912, this was the first measure of great importance brought before the peo ple under the constitutional amendment (like that of Oregon) for initiative and referendum, passed in special session September 10 1910, adopted at the November 1910 election by 89 141 votes to 28 698 declared invalid by the district court August 3 1912, but held constitutional by the state supreme court on September 23 portant amendments and measures voted on in 1912 were for recall of officials adopted by 53 620 to 39 564 for popular recall of decisions of the state supreme court that laws are unconstitutional, adopted by 55 416 to 40,891 a new ballot law adopted by 43,390 to 30 504, and a measure for state compensation to deserted or widowed mothers of dependent children, adopted 82,337 to 31,870

Two new counties were created in 1911 Crowley from Otero (temporary county seat, Ordway), and Moffat from Routt (temporary county seat Craig)

Voters except for school elections must register ten days or more before the election The legislature established a court of appeals for four years to be composed of five judges appointed by the governor and to supplement the overworked supreme court which may transfer cases to it

Among labour laws passed were one establishing a workmen's compensation commission and one providing for employers liability. A department of factory inspection was created, and mining and working in smelters stamp mills reduction works coke ovens etc are classed as injurious and dangerous occupations eight hours (except in emergencies) is made a legal day in such work A child labour law forbids any child under 14 being employed in a theatre or in a place of amusement where into vicating liquors are sold mercantile institution hotel laundry factory bowling alley or elevator or as a messenger or driver a child of this age must have a permit to work on a farm or in an orchard. No child under 14 is to be employed during school terms or before 7 a m or after 8 P m and eight hours is the maximum day for child labour. The age limit is set at 16 vears (formerly 14) for hazardous and immoral occupations, and children may not be employed at all in the manufacture of paint white lead etc Girls under 10 may not sell newspapers or engage in any street trade. An anti coercion act forbids an employer discharging an employee for membership in a lawful organisation or society or preventing an employee from joining such a society. For the use of armed guards in labour disputes written permission must be secured from the governor For the Several labour laws especially in regard to working hours were referred to the people in November 1912 and all were ratified

The 1909 law in regard to prostitution was revised and made more severe and there is a special clause making a husband or a wife a competent witness against the other nity hospitals must be licensed by the state board of health and by the bureau of child and animal protection Public drinking cups are forbidden unless they are properly sterifised The sale of cocaine and similar drugs is forbidden except by druggists on prescription or by

manufacturers (to registered physicians denti tor veterinarians)

Among interesting miscellaneous laws are those making false statements about newspaper

and periodical circulation a misdemeanor making non upport a felony and adopting a state flag of three horizontal stripes with a red C on the gold design in the field Municipal Government—On September 19 1911 Pueblo adopted a commission form of government with a provi ion like that of the charter of Grand Junction for preferential voting (on ballots for commissioners First Choice Second Choice and Third Choice are to be entered if the candidates are more than twice and less than thrice as many as the number of offices to be filled) and provisions for initiative referendum and recall. A similar charter was adopted by Durango in September 1912. The validity of the Pueblo charter was taken to the courts the district court decided that the commission form was valid the

upreme court in December 1912 had not yet handed down a decision. In May 1911 the state supreme court reversed its previous decision that the merger under the charter of 1904 of the city and county of Denver was unconstitutional so that the merger is now in force. Early in 1910 the people of Denver voted not to renew the franchise of a private water company and created the public utilities commission of the city and county of Denver and on August 6 1910 they voted a bond issue of \$8 000 000 for a municipal water plant. The New York Trust Company a holder of the bonds of the private company ecured an injunction against the issue of the new bonds first in the U.S. District Court and then in the U.S. Circuit Court of Appeals. The Trust Company argued that the franchise of 1890 required the city to renew in 1910 or else to purchase the plant the utilities commis sion that there was nothing mandatory in the terms of the franchise 1 On May 21 1912 Denver adopted two charter amendments one for a half mill tax for five years for the pur chase and improvement of mountain land for parks and one for the trial of violators of the excise law in the county court but voted against a mill tax for playgrounds and for a playground commission. An election on a commission charter for Denver was postponed from November 1912 to the spring of 1913

Finance — The legislature of 1911 created a state auditing board and a tax commission revised the revenue laws of 1908 and 1902 created the office of state bank commissioner and prescribed the amount of paid up cash capital (varying according to the size of the place) for banks to be organised. On February 19, 1912 the United States Supreme Court (Atchison Topeka & Santa Fe t O Connor, 223 U.S. 280) decided that the state tax of 2c per \$1,000

of capital stock of a foreign railway was invalid—the Santa Fe was a kansas corporation

Education—An act of 1911 establishing 6 summer normal schools (instead of 13 as for
merly) was defeated by the people at the November election in 1912

The normal school at Greeley was renamed in 1911 the State Teachers College of Colorado Appropriations were made for a normal school at Gunnison opened in September 1911 and for a State Home and Training School for Mental Defectives opened for patients in July 1912 and for school work The state made an interesting experiment in appropriating money to ın September 1912

1 See C L King The History of the Government of Denver (Denver 1911) wn ch harshly criticises public utility corporations

employ a state teacher of the adult blind The General Education Board in October 1912 gave \$100 000 to the University of Deriver In 1910 the percentage of illiteracy in the population 10 years of age and over was 3.7 (4 2 in 1900) For the year ending June 30 1912 the school population was 227 142 the enrollment 173 229 the average daily attendance 118 245 and the length of the average school year 162 days The total revenue was \$7 089 36 and the expenditures \$6 158 664

Charties and Penal Institutions—Under an act of 1911 the state soldiers and sailors

Charities and Penal Institutions—Under an act of 1911 the state soldiers and sailors home may admit Confederate veterans. The legislature provided for the parole of prisoners in county jails for good conduct and work and for employment of prisoners in jails half of any prisoners earnings to go to his dependent wife and children. The State Home and Training School for Mental Defectives at Arvada (10 m NE of Denver) authorised in 1909 was practically completed in 1912 the opening being planned for May 1913

History —There was an unbroken deadlock in the 1911 legislature over the election of a United States senator to succeed Charles James Hughes Jr (18,3-1910) Demo crat, elected for the term ending 1915 Senator Simon Guggenheim (b. 1867) Republi can the state's only representative in the Federal Senate in 1911 and 1912 announced that for personal reasons only he would not be a candidate for re election in 1013 There was a bitter struggle in the Democratic party also, for control the platform or radical Democrats were led by John Franklin Shafroth (b. 1854) governor since 1909 and Alva Adams (b 1850) governor in 1887-89 and the 'City Hall" wing was led by Robert Walter Speer (b 1855) mayor of Denver in 1904-12 The Republican state convention (April 1912) was for Taft The Progressive party was well organised in the state with nominations for governor (E B Costigan) and Congressmen but the Republican nominees (C C Parks for governor) ran better—the fact that the Roose velt nominees were supported by three 'parties' the Bull Moose Roosevelt and Progressive, was no advantage since the ballot is not of the party column form. In the November election the state went for Woodrow Wilson (114,232 votes to 72 306 for Roosevelt, 58,386 for Taft and 16,418 for Debs) Ehas M Ammons Democrat was elected governor (receiving 101 293 votes to 63 035 for Costigan and 54 720 for Parks) and the remainder of the Democratic ticket was successful including James B Pearce Secretary of State, who ran behind the ticket because of criticism of his personal morality by a part of the press and of the clergy of the state—in this particular the campaign was singularly venomous On January 14 1913 two Democrats were chosen as U S sena tors, ex governor Shafroth for the full term and for the short term Charles Spalding Thomas (b 1849), governor in 1899-1901 The legislature is Democratic by more than 40 on joint ballot The four congressmen (3 under the previous apportionment) are Democrats The municipal machine in Denver was defeated May 21 1912 by a "Citizens' Ticket on which Judge Ben I indsey of the Juvenile Court was the best known name and Henry J Arnold was the successful candidate for mayor with 40 8,1 votes to 16 898 for J B Hunter (Democrat), of Mayor R W Speer's wing of the party and 12 510 for United States Marshal D C Bailey (Rep.) whose candidacy suf fered from his connection with William G Evans the Denver Street Railway magnate, who sued the Denver Post for \$1,000 000 for libel In the campaign Mayor Speer bought the Evening Times so that he might have an organ with which to reply to the attacks of the Rocky Mountain News and of the Post

A cloudburst on Cherry Creek caused a flood in Denver, July 15, 1912, which did damage estimated at \$,000 000 and resulted in the loss of two lives

CONNECTICUT 2

Population (1910) I 114 756 (908,420 in 1900), Connecticut ranking 4th among the states in density of population with 231 3 per sq m (188 5 in 1900). The percentage of increase in 1900-10 was 22 7 greater than that for any decade since 1850-60. For eign born whites constituted 26 1% of the total in 1900 and 29 5% in 1910, native

¹B R. Montgomery, heutenant governor-elect, died December 29 1912 ² See E B vi 951 et seq

whites 72 1% in 1900 and only 69 1% in 1910 (of foreign parentage 31 1% in 1900 and 33 6% in 1910) and negroes 1 7% in 1900 and 1.4% in 1910 decreasing in actual num bers from 15,226 in 1900 to 15 174 in 1910 In 1910 89 7% (in 1900 87 2%) of the population was in places (72 in 1910 70 in 1900) of 2,500 or more The 18 cities with a population of over 5,000 contained together 57 6% of the total The following cities, boroughs, and towns, each had 10 000 or more New Haven, 133,605 Bridgeport, 102 034 Hartford, 98,915, Waterbury 73 141 New Britain (city and town since 1906), 43 916, Meriden (city), 27,26, Stamford (city) 25 138 Norwich (city) 20,367 Danbury (city), 20,234, New London, 19 659 Greenwich (town) 16 463 Torrington (borough and town), 15 483, Ansonia 15,152, Manchester (town) 13 641 Naugatuck (borough and town) 12 722 Windham (town), 12 604 Middletown (city), 11,851, Orange (town), 11.272, and Willimantic (city), 11,230

Agriculture —The acreage in farms decreased from 2 312 083 to 2 185 788 between 1900 and 1910 and the improved land in farms from 1 064 525 to 988 252 the average farm acreage fell from 85 8 to 815 and the value of farm property increased from \$113 305 580 to \$159 399 771 (\$72 206 058 land \$66 113 163 buildings \$6 916 648 implements and \$14 163 902 domestic animals) Of the land area 70 9° was in farms. The average value of farm land per acre was \$33 03. Farms were operated largely by owners (23 234 by owners 949 by managers and 2 632 by tenants). In 1912 (preliminary estimates) the principal crops were Indian corn 3 000 000 bu (60 000 Å) oats 338 000 bu (11 000 Å) rye 122 000 bu (7 000 Å) buckwheat 62 000 bu (3 000 Å) oats 338 000 bu (12 000 Å) and 4, 336 000 tons (379 000 Å) and tobacco 29 750 000 lbs (17 500 Å). In 1909 (U.S. Census) the value of vegetables other than potatoes was \$1 965 635 of flowers and plants \$1 047 431 of nursery products \$261 506 of small fruits \$316 752 (strawberries \$235 648) of orchard fruits \$132-7 074 (apples \$833 168 peaches and nectarines \$417 508) of grapes \$43 523. On January 1 1912 there were on farms 47 000 horses 120 000 milch cows 71 000 other neat cattle 21 000 sheep and 60 000 swine. The Storrs Agricultural Experiment Station published in 1912 important studies of the chestnut blight showing that it was not imported that its spread is due to weather conditions and that it will naturally die down and continued its important researches into nutrition. Agriculture - The acreage in farms decreased from 2 312 083 to 2 185 788 between 1900 important researches into nutrition

Minural Products — Total value 1911 \$3 151 588 The principal products of mines and quarries were stone (granite and traprock mostly) valued at \$1 215 462 lime \$328 904 felspar 16 497 tons (less than in 1910 but ranking the state third value \$73 557) clay products \$1 284 166 (entirely brick and tile) and mineral waters bottled at 28 springs

\$182 744 two thirds more than in 1910

*Manufactures —In 1909 the gross value of products was \$490 272 000 (\$369 082 000 in 1904 the increase being partly due to the increased price of raw material) there were 4 251 (stablishments (3 477 in 1904) and 210 792 wage earners 18 9 of the total population. More than 60 different industrics had each an output valued at more than \$1 000 000 Among the principal manufactures are brass and bronze products \$66 933 000 being four minths of the total for the United States foundry and machine shop products including hardware \$65 535 000 cotton goods \$24 2,32 000 silk goods \$21 063 000 firearms and ammunition \$19 948 000 (the output of ammunition being nearly four fifths of the total for the country and of firearms nearly one quarter) woollen worsted and felt goods \$19 363 000 and fur felt hats \$10 400,000 silverware and plated ware \$15 837 000 more than one third

and fur felt hats \$10,400,000 silverware and plated ware \$15,837,000 more than one third the total value for the country and for plated ware alone more than two thirds corsets \$12,815,000 more than one third the country's total automobiles \$11,668,000 —_341,3° more than in 1904 cutlery and tools \$10,717,000 electrical machinery \$9,824,000 and clocks and watches \$7,390,000

In 1909,681 of the state's product came from cities and boroughs 15 in all which had each a population of 10,000 or more. These were Bridgeport \$65,609,000 with 14,9° of the state's foundry and machine shop products 53,8 of the corsets 33,8 of the electrical machinery and more than half of the sewing machines and of the talking machines. New Haven \$85,071,000 of which more than one seventh was foundry and machine-shop products. Haven \$51 071 000 of which more than one seventh was foundry and maghine-shop products and other important items were clocks automobiles boots malt liquors. Waterbury \$50 350 000 of which five eighths was brass and bronze (21° of the total for the country) the next item being clocks and watches. Hartford \$40 680 000. New Britain \$22 021 000 52 9% of which was hardware, Ansoma \$20 088 000, chiefly brass and bronze products clocks and which was nardware, Ansonia \$20.000 cmerty brass and bronze products clocks amount watches Meriden \$16.317.000 chiefly silverware and plated ware Torrington \$12.550,000 mainly brass and bronze products Naugatuck \$11.033.000 mainly rubber goods Danbury \$10.318.000 about two thirds of which was fur felt bats (nearly a quarter of the country \$0.018.000 about two thirds of which was fur felt bats (nearly a quarter of the country \$0.018.000 Norwich \$9,389.000 mainly textiles Stamford \$8.740.000 Williamatic \$6.733,000 textiles and thread Middletown \$4,955.000 largely men s furnishing goods and New London \$4.000 mainly selected the selected selected the selected selected selected the selected s

don, \$4 483 000 largely textiles

Transportation—Railway mileage January 1 1912, 1,015 98 The Federal River

'and Harbor Act of February 1912 appropriated \$77,000 (and empowered the Secretary of War to expend \$100,000 more) for improvement of the Connecticut river below Hartford In 1911 the Federal improvements of the Bridgeport harbour and the 12 ft channel in the New Haven harbour were completed and in the latter harbour breakwaters were practically finished and a 12 ft anchorage basin more than half completed in 1912

Government — The regular session of the legislature was held in 1911 from January 4 to September 26 It rejected the proposed 16th (income tax) amendment to the Federal Constitution The house of representatives proposed, on January 20, a constitutional amendment providing for two thirds (instead of a plurality) vote in each house to pass a bill over the governor's veto this is to come before the legislature of Amendments adopted by popular vote in 1911 and 1912 provide for the lieuten ant governor s succession to the gubernatorial office if the governor is unable to serve (29,38 votes to 4,770) and that the legislature adjourn sine die by the first Wednesday after the first Monday in June (30 349 votes to 4 865) sessions thus being limited to The salary of the governor after the 1912 general election was increased to \$5,000 a year, and that of the heutenant governor to \$7,500 and that of the attorney general to \$5 000 after September 1, 1911 A board of state bank commissioners was to report to the legislature in 1913 Columbus Day was made a legal holiday

The corrupt practices act and the Australian ballot law of 1909 were amended political division of the state may vote for or against the merit system for all its officers and employees. The legislature created a public utilities commission. All public service employees companies must make return to the commission and immediately report all accidents to

It controls rates and service of public utilities

Commissions were created to report by April 1 1913 on the employment of women and children and to investigate employers liability and workmen's compensation. The eight hour day was made a maximum for mechanics in state institutions except in unavoidable emergencies If workmen work on Sunday they must have one other day off in seven but the act excepts commercial occupations and industrial processes by their nature

No mmor under 16 and no woman of any age 15 to be employed continuous in a mercantile establishment unless it is manufacturing or mechanical more than 58 hours a week but if the employer makes the hours 55 a week or less in June July and August the hours a week for the rest of the year may be 60 and the provision is not applicable between December 17th and December 25th if the employee gets seven holidaxs during the year with No child under 14 is to be employed in a mercantile mechanical or manufacturing establishment and no child under 16 unless he has a certificate of an elementary education No child under 16 may run or adjust certain dangerous machinery or be employed in the manufacture of dangerous drugs or explosives and none under 18 may run an elevator. An elaborate law was passed forbidding blackhsting. Damages for injuries resulting in death were limited to \$10 000 and suit must be brought within one year from the time of the neglect complained of Physicians are required to report to the state commissioner of labour cases of occupational disease An act of 1911, probably the first American state law dealing with aeronauts requires the registration of air ships and the licensing of aeronauts. An elaborate act for sanitation in tenements boarding and lodging houses and several acts safeguarding public health providing for purity of milk and other food and regulating the sale of liquor and drugs were passed. Tobacco must not be sold or given to minors under 16. Any combination to increase prices of necessities is punishable by a maximum fine of \$1 000 or by

imprisonment for 5 years or by both

The town of Bristol in August 1911 adopted a city charter (in effect Oct 1 1911) which contains some features usually found in the commission plan of government and provi ions

for the initiative and referendum

Finance —A commission appointed in 1911 to examine into the methods of taxation of railways and other taxable corporations was to report in 1913 The treasurer comptroller and tax commissioner constitute a board of equalisation of taxes Land planted with forest trees at least 1 200 to an acre if the planting is approved by the state forester is exempt from taxation but this exemption cannot hold after the tumber is cut nor in any case for more than 20 years

The state treasury had a balance on hand October I 1911 of \$376 576 The receipts for the year ending October I 1912 (including \$4,000,000 bonds sold) were \$9,915,418 and the expenditures (including \$1,450 000 temporary boats paid) \$8 105,750 leaving a balance in cash of \$2.186,244. The state debt in October 1912 was \$7.064,100 Education—For the school year 1911—12 the school population (between 4 and 16) was \$55,692 the total enrollment in public schools 197,852 the average length of the school year 184 tlays and the total revenue for schools \$6,040 132 and the expenditures \$6,122,307. The total indebtedness of towns and districts for school perposes was \$8,813,998 in 1912—as compared with \$3,110,210 in 1901 in the same

period the enumerated school population increased less than one-fourth. Of the towns 129 provide (39 do not) free text books. The work of consolidation of small schools is going on In Connecticut—as in no other state except New York—there was an increase of illuteracy in 1909—1910 from 5.9% to 6 'of the population 10 years of age and more. This rate was the highest in New England excepting that of Rhode Island. Morton F. Plant gave \$1.000 000 in June 1911 for the Connecticut College for Women. A site has been secured in New London but late in 1012 building had not begun. With the autumn term of 1912 Wesley an University (Middletown) ceased to be co-educational and received men only, in Jime it completed an endowment fund of \$1.000 000. In October 1912 J. Pierpont Morgan gave money for a new library and administration building at Trinity College. Hartford. To 1912 University M. C. D. Borden left \$250 000 in 1912 and the McPherson fund for indigent students will amount to \$400 000 or more.

Chartable and Pench Institutions—In 1911 the legislature created (over the governor s veto) an annual pension of \$50 to veterans of the Civil War their widows their widowed mothers etc but the act was declared uncoastitutional in April 1912 by the state supreme court. An act of 1911 provides for the transfer from the state prison to the newly completed reformatory at Cheshire (subject to the approval of the directors of these institutions) of male prisoners under 25 sentenced to less than 5 years. Contracts for convict labour may not be made for longer than 4 years. This law does not apply to immates of county institutions in farm domestic and casual service. A prisoner in the state prison sentenced for attempt

to murder by assault or attempt to poison may be paroled after two years

History —On January 4 1911, Simeon Eben Baldwin (b. 1840), professor of constitu tional and private international law in Yale University since 1872, and chief justice of the state supreme court of errors was maugurated governor —the first Democrat to hold the office since 1895 He had a Republican legislature (majority of 7 in senate of 60 in house) which blocked some of his proposed legislation, and the senate refused to ratify the governor's nominee for state highway commissioner although the Republican incumbent of that office had been much criticised On January 17, 1911 the legislature elected a Republican, George Payne McLean (b 1857, governor 1901-03), United States senator to succeed Morgan G Bulkley (b. 1838) also a Republican Opposition to the New Haven Radroad's political power exercised it was charged through the Republican party helped the growth of a Progressive party which was led in the guber natorial campaign of 1912 by Herbert Knox Smith (b. 1869) who resigned as federal commissioner of corporations to join the third party and received 31,020 votes to 67 531 for Judge John P Studley Republican and 78 264 for Baldwin With Baldwin the entire Democratic state ticket was elected including 5 congressmen (all from districts formerly 4 districts and 1 at large) Ebenezer J Hill (b 1845) Republican representa tive since 1895 and one of the "Old Guard' was defeated. The Democrats secured a majority of 7 (21 to 14) in the senate in the Assembly there are 130 Republicans 120 Democrats 6 Progressives and ? Progressive Republicans But the Republican majority on the joint ballot is comparatively unimportant as no United States senator had to The Democratic presidential electors received 74,614 votes, the be elected in 1013 Republican 68 099 the Progressive 34,143 and the Socialists 10 078, as compared with 5 113 in 1908 and 12 179 in 1910 (for Robert Hunter as governor) In the spring of 1912 Socialists got control of the borough government of Naugatuck in 1911 they cast a large vote in Bridgeport, where they elected one alderman

A short strike of Italian weavers in Middletown led by representatives of the Industrial Workers of the World began on June 5 1912 and was accompanied by so much disorder that the militia was called out

The Federal district court at Hartford on October 11 1912 handed down a verdict of \$80 000 and costs in favour of D E Loewe & Co hatters of Danbury, against the United Hatters Union of North America for boycott (see E. B iv, 353)

A city plan for New Haven, submitted by Cass Gilbert and F L Olmsted, has not been acted upon, but in 1912 the city was planning approaches to a new railway station and the commission made its fifth annual report. In Wallingford a private bureau of municipal research was established in February 1911

During the year 1912, 6 towns formerly 'no keence" voted for the sale of intoxicating liquor making 81 licence and 87 no keence towns in the state.

In Waterbury on the night of April 22, 1912 about a dozen fires were set by an incen

diary wire afterwards confessed to setting 30 fires in Connecticut and western Massachu-The state militia was called out to control the panic

DELAWARE!

Population (1910) 202,322 (9.5% more than in 1900) 76% were native whites, 12.8% whites of foreign parentage, 8.6% foreign born whites, and 15.4% negroes The average number to the sq m was 103 (94 in 1900), the state ranking 9th in density of popula tion 52% of the total lived in unincorporated territory or in incorporated places of less than 2,500 inhabitants. Wilmington, the only city with 5,000 or more, had 87,411

than 2,500 inhabitants. Wilmington, the only city with 5,000 or more, had 87,411 Dover the capital, 3 720, and New Castle, 3,351

Agriculture—The acreage in farms decreased from 1 066 228 to 1 038 866 between 1900 and 1910 the improved land in farms from 754 010 to 713 538 and the average farm acreage from 110 1 to 95 9

The value of farm property increased from \$40 697 654 in 1900 to \$63 179 201 in 1910 (\$34 938 161 land \$18 217 822 buildings \$3 206 095 implements and \$6 817 123 domestic animals)

About four fifths of the land area was in farms in 1910 The average value of farm land per acre was \$33 63 Farms were operated largely by owners (6 178 by owners 123 by managers and 4 535 by tenants) In 1912 (preliminary estimates) the principal crops were Indian corn 6 630 000 bu (195 000 A) wheat 1 942 000 bu (111 000 A) oats 122 000 bu (4 000 A) rye 14 000 bu (1 000 A) buckwheat 64 000 bu (4 000 A) potatoes 1 100 000 bu (11 000 A) and hay 90 000 tons (72 000 A) During 1912 the shipments of fruit etc. over the Delaware Railroad comprising most of that marketed were berries 18 626 793 qts apples 556 621 baskets (\$\frac{1}{2}\$ bu) peaches 336 037 1912 the supments of fruit etc over the Delaware Railroad comprising most of that marketed were berries 18 626 793 qts apples 556 621 baskets (\$\frac{1}{8}\$ bu) peaches 336 037 baskets (\$\frac{1}{8}\$ bu) pears 1 026,620 baskets grapes 3 225 876 lbs potatoes 303 601 bbls canteloupes 489 752 carriers watermelons 478 cars Except apples and peaches the crops were unusually large In 1909 (U S Census) the total value of vegetables other than potatoes was \$\frac{1}{3}\$ 102 620 of flowers and plants \$\frac{1}{3}\$ 71 429 of nursery products \$\frac{1}{3}\$ 39 057 of small fruits \$\frac{1}{3}\$ 649 732 (strawbernes, \$\frac{1}{3}\$ 659 354 blackbernes \$\frac{1}{3}\$ 1817 raspberne \$\frac{1}{3}\$ 700 of orchard fruits \$\frac{1}{3}\$ 195 766 (apples \$\frac{1}{3}\$ 137 and pears \$\frac{1}{3}\$ 202) of grapes \$\frac{1}{3}\$ 39 000 other neat cattle 8 000 sheep and 59 000 swine In 1912 a study by the state experiment station of the effect of various forms of lime in the soil indicated that ground limestone is as effective in promoting decomposition of organic matter as burned lime A study of effective in promoting decomposition of organic matter as burned lime Bordeaux injury to the apple was completed

Manufactures — The total value of factory products in 1909 was \$52 840 000 an increase of 284 % since 1904 capital invested in manufacturing \$60 906 000 the number of establishments 726 and the number of persons engaged in manufacturing 23 984 The value of leather tanned curried and finished was \$12 079 000 foundry and machine shop products \$4.781.000 cars steam railway not including operations of railway companies \$3.628.000 cars and general shop construction and repairs by steam railways \$3.251.000 paper and wood pulp \$2,292,000 products of canning and preserving \$2.106.000 and shipbuilding \$1.990.000 The factory products of Wilmington were valued at \$38.069.000 (72.00) of the

state s total)

Transportation — Railway mileage January 1 1912 388 17 During 1911 T Coleman du Pont offered \$1 500 000 to the state to build a state boulevard and the legislature au thorised the organisation of a boulevard corporation to build a boulevard from the northern thorsed the organisation of a boilevard corporation to blind a boilevard from the northern to the southern part of the state. The corporation (the Colemandu Pont Road Incorporated) under the law was permitted to build and maintain telegraph and telephone lines a street railway lighting heating and power plants. The constitutionality of the boulevard law was in question the state supreme court unanimously decided (July 17 1912) that it was valid but an appeal on a writ of error was taken to a Federal court by land owners who opposed the building of the road. No decision was handed down in 1912.

In 1911-12 the Federal government was improving the channels in several streams in the state—the Appoquinimiak Murderkill Mispillion St Jones Leipsic and Broadkill

Government — The regular bushnal session of the legislature was held from January 3 to March 30 1911 It proposed constitutional amendments (to come before the legislature in 1913 for ratification) giving the legislature the power of laying out such roads as are continuous highways through a part of the three counties of the state and making one superior court justice (instead of two) a quorum except in a court of over The law of negotiable instruments was made uniform and ground rents were extinguished For capital numshment life imprisonment may be substituted at the option of the court if the jury recommends to mercy

⁴ See E B vii 947 et seg

Commissions were appointed to report on child labour and on employer's liability to the legislature of 1913 The filling of prescriptions for intoxicating liquors for medi cal purposes was strictly regulated by law Cold storage food may be sold only if it is marked with the date of storage this act does not apply to fruit or fish. A state hve stock sanitary board was created Twenty acts of 1911 deal with fish, oysters and game and the provisions for the protection of fish birds and game are made more stringent A contract for a state armory in Dover was let in March 1912 A city charter for Wil mington proposed by the legislature was defeated June 1 1912 by 7,700 to 991 votes For Wilmington a public utilities commission was created in 1911 The 12th of October (Columbus Day) was made a state legal holiday

Findnee — The outstanding indebtedness on January I 1913 was \$826 785 in January 1912 the school fund was \$944 407 of which \$712 500 was the market value of shares of stock in the Farmers Bank of the State of Delaware in whose board of directors the state 15 represented A revenue and tax commission was to report in 1913 to the legislature New revenue laws require manufacturers to pay for an annual licence and to turn in an annual report require gypsies to take out a licence for which they must pay \$300 and require a licence (\$300 in large cities less in small cities) for travelling shows and other licences for

smaller concerns and a licence to carry dangerous weapons

The annual report of the treasurer shows a balance on January 1 1912 of \$49 987 receipts \$843 572 expenditures \$801 211 and balance on hand December 31 1912 \$92 348

Education —The legislature of 1911 abolished the old state board of education and provided for a new board (with increased powers) to be appointed by the governor and to receive no compensation. A special commission was created to report on the higher education of women in the state. Half an hour a week in public schools must be devoted to teaching morals and humanity, and experiments in public schools on live animals are prohibited the act does not apply to Wilmington A retirement fund is authorised for teachers hibited the act does not apply to Wilmington. A retirement tund is authorised for teachers in the public schools of Wilmington. A special appropriation was made for negro school houses. In Delaware college the State Chair of History, a pathological and bacteriological laboratory and a division of agriculture extension were established. Of the total population to vears and over 8 it were illiterate in 1910 (12°, in 1900) whites 5 (, in 1900) negroes 25.6°, (38 in 1900).

Charities and Corrections—In 1911 the legislature provided for the appointment by independ the current court for the whole state and for a universe.

judges of the superior court of a probation officer to act for the whole state and for a juvenile court in Wilmington The state commission for the blind reports (1912) that there are in the state 378 feeble minded (216 under 25) 277 blind (46 under 25 and 12 in special schools) and 154 deaf (77 under 20 and 16 in schools for the deaf)

History —There was delay in 1911 in the organisation of the legislature and then a deadlock over the choice of United States senator through the disaffection of state Senator Lewis A Drexler who complained that the party organisation had failed to keep a promise to make him president of the senate pro tem but on January 25th H Algernon du Pont (b. 1838) was re elected to the United States Senate - The Republican governor Simeon Selby Pennewill (b. 1867) came out for Colonel Roosevelt's candidacy ın March 1912 There was not merely a progressive schism from the Republican party but two Progressive parties were formed—one cathing itself the Original Progres was represented on the National Committee of the Progressive party and nominated a full state ticket and the other called the 'National Progressive 'party, had on its ticket the Roosevelt electors and the Republican state county and district nominations The Republican candidate for governor Charles R Miller, endorsed by one Progressive faction received 22,745 votes to 21 460 for Thomas M Monaghan (Dem) and 3 010 for George B Hynson (Prog) third but the Democratic candidates for other state offices were elected Woodrow Wilson carried the state with 22 631 votes to 15 997 for Taft and 8 886 for Roosevelt 556 for Debs (239 in 1908) A Democratic congressman was elected and as the state legislature is Democratic on joint ballot (senate, 9 Republicans and 8 Democrats house 14 Republicans and 21 Democrats), a Democrat was chosen in 1013 to succeed Harry Alden Richardson (b. 1853) Republican United States senator - namely Willard Saulsbury (b 1861) Democratic national committeeman from Delaware

DISTRICT OF COLUMBIA (WASHINGTON CITY)1

Population (1910) 331 069 distributed as follows in original limits of Washington City 230 630 (120 284 in Northwest '40,959 in Northeast '32 513 in South west and 36 8/4 in Southeast "), in Georgetown 16 046 and in former Washington county 84 303 Whites numbered 236 128 (,13% in 1900 68, %) and negroes 94 446 (28 5% in 1900, 313%) Native whites of native parentage constituted 50 4% of the total and those of foreign parentage, 13 6% and whites of foreign birth , 4% of all foreign born whites 21 9% were born in Ireland 21 3 in Germany 13 9 in Russia 11 3 in Italy 10 8 in Ligland 46 in Canada, % of in Scotland % I in France 19 in Austria 15 in Sweden 1.4 in Greece and 12 in Switzerland. The ratio of males to females 91 3 to 100, was a little higher than in 1900 (90 to 100). This comparatively low ratio is only partly due to the large number of female employees in government departments the ratio among whites is 940 among negroes 8.2. The death rate in 1911 was 17 8 per 1000 (whites 14 61, negroes 26 12) and the birth rate was 19 86

4 grundeure — The acreage in farms decreased from 8 489 to 6 063 between 1900 and 1910 the improved land in farm from 5,934 to 5 133 the average farm acreage from 31 6 to 27 9 and the value of farm property from \$11 535 376 to \$8 476 533 (\$7 193 950 land \$1 03, 393 buildings \$92 350 implements and \$152 840 domestic animals) The principal crops were hav and forage 2 148 tons (962 A) potatoes 32 028 bu (226 A) sweet potatoes and yams 19 662 bu (126 A) and Indian corn 12 667 bu (426 A)

Manufactures — Apart from establishments operated by the Federal government the

Manufactures — Apart from establishments operated by the Federal government the number of factories increased in 1899–1909 from 491 to 518 the number of wase earner from 6155 to 7 707 capital invested from \$17,960 000 to \$30,553,000 and the value of products from \$16,426,000 to \$25,289,000. The larger manufactures were printing and publishing \$4,899,000 malt liquors \$1,805,000, foundry and machine shop product \$1,175,000

Buildings —The most important changes in the city of Washington are the new buildings for the departments of state justice and commerce for which commissions were made in April 1911 and which are to be grouped between Pennsylvania avenue and the Mail and Fourteenth and Friteenth streets. All are to be of white marble The Commerce building (architects York and Sawyer) is to be tive storevs high is to stand between the other two (each three storevs) and is to cost \$3 050 000. The State building (architect Arnold W Brunner) will cost \$2 200 000 and the building of the department of justice (architect Donn Barber) \$1 900 000.

In 1911 Congress appropriated \$2,000,000 for a Lincoln Memorial and appointed the Lincoln Memorial Commission, with President Taft as chairman which cooperat ing with the Federal Fine Arts Commission appointed Henry Bacon to design a plan The Fine Arts Commission July 17 1011 recommended Potomac Park as the site of the memorial. Mr Bacon's plan, as completed in 1912, is for a hall of white marble resembling a Greek temple surrounded by 36 Doric columns representing the 36 states of Lincoln's time to be built in Potomac Park in the centre of a circular terrace 500 ft in diameter rising 16 ft above another terrace 1 000 ft in diameter and 11 ft above the present grade In the hall is to be placed a statue of Lincoln and on the interior walls are to be inscribed his Gettysburg speech and his second maugural memorial terminates the principal axis of the city and is intended to fit into the design for the revision and extension of the original plan of Washington which was undertal en by a commission appointed in 1901 Early in 1913 the memorial was adopted by Con Plans for a memorial to Christopher Columbus for which Congress appropriated \$100,000 and to which the Knights of Columbus contributed were drawn by the archi tect Daniel H Burnham and the sculptor Lorado Taft The memorial made of Georgia marble, consists of a semi-circular fountain, 70 ft wide and 65 ft deep adorned with a statue of Columbus behind which rises a stone shaft 45 ft high surmounted by a globe Figures typifying the new world an American Indian and the old world a Caucasian stand on either side of the shaft Columbus is represented as standing on the prow of a ship the figure head of which is a female statue typifying discovery. The memo rial was unveiled June \$, 1912 The Memorial Continental Hall (architect E P Casev)

¹ See E B xxviii 349 et seq The District and the city are coterminous

FLORIDA

was erected by the Daughters of the American Revolution Among new monuments as one by William W Bosworth at the tomb of Major Pierre Charles L Enfant who planned the city in Arlington Cemetery unveiled May 22 1911 On April 47 191 a statue of John Paul Jones was unveiled in Potomac Park The corner stone of Gibbons memorial hall of the Catholic University of America was laid October \$2, 1911

Appropriations were made for the establishment in 1013 of a park in the south eastern part of the city including Forts Davis and Dupont and to extend Rock Creek Drive from Massachusetts Avenue to Montrose Park Proposed parks for which no appropriations have vet been made are Klingle Ford Valley (28 5 acres), Mount Hamilton (81 acres) and Piney Branch

The Engineer Commissioner of the District of Columbia has urged an annual appropriation for permanent works of improvement beginning in 1913 with \$1 230 000 and increasing annually by not less than \$100 000 this work to include the reclamation of the Anacostia Flats and the converting of this section into a public park, extension of the improvements of Rock Creek Valley improvement of the harbour by means of public wharves and completion of the park system

Finance —On June 30 1912 the debt of the Federal District was \$10 240 500 of which \$8 258 550 was bonded. The cash balance at the beginning of the fiscal year was \$337 712, and at its end \$398 753 the receipt for the year were \$1,868 722 and the expenditures \$14 807 681. In the year an elaborate inventory of district property was begun. An Act of Congress dividing certain fees collected in the District between the District and the United States will probably reduce the District revenues about \$65,000 a year. The assessed valua tion of real property for 1912 was \$3,0 3,2 487 and for 1913 was \$339 198 990 and for the former year the real estate tax was \$4 954 987 and the personal tax levy \$1 131 946 The tax for national banks and trust companies is 6 % on gross earnings on (as companies on gross earnings on incorporated savings-tanks electric light companies telephone companie 4 on gross earnings and on street railways 4 on gross receipt

Education—For the school year ending June 30 1912 the school population (6-17 years) was 65 867 the enrollment \$7.781 (18 663 negroes) average daily attendance 46 231 average length of the school year 36 weeks the school revenue \$3 180 378 and expenditures \$3 050 031 In 1910 the percentage of illiteracy of the population over 10 years was 4 9 (in 1900 8 6) among negroes 13 5 foreign horn whites 8 2 native whites 0 5 The percent age of illiterates between 10 years and 20 was only 1

Charities -On February 15 1912 the penal farm at Occoquam Virginia the workhouse of the District of Columbia was formally placed under the upervision of the District board of charities taking the place of a workhouse in the city An institution for feeble minded negro children is projected

PLOBIDA 1

Population (1010) 152 619 41% negroes 34 3% native whites (48% of foreign parents) and 45% foreign born whites The average number per sq m was 137% In 1910 25 cities and towns each with 2500 or more made up 20 1% of the total in 1000 12 municipalities of the same class contained 0,0%. The semi urban population in 125 places in 1910 (79 in 1900) each with less than 2 500 made up 11 6°_{0} (10 1°_{0} in The rural population decreased from 69 600 of the total in 1000 to 59 500 in 1910 The rate of increase during the decade was 42 400 for the whole state, 73 500 for urban territory—1114% for cities having more than 2,000 and 5 4% for cities and towns between 2,500 and 5000 and 36% for the rural remainder. There were 10 cities each with more than 5000 Jacksonville 5, 600 (28 429 in 1900) Tampa 3, 18 (1, 839 in 1900) Pensacola 22 98. Key West 19 945 West Tampa 8 59 (2 355 in 1900), Gainesville 6 183 (3 633 in 1900) St Augustine 5 494 Miami 5 4/1 (1,681 in 1900), Lake City 5 03 and Tallahassee 5 018 (2 981 in 1900)

Agriculture—The acreage in farms increased from 4 363 891 to 5 253,538 between 1900 and 1910 and the improved land in farms from 1 511 653 to 1 805 408 the average farm acreage fell from 106 9 to 105 0 and the value of farm property increased from \$53 929 064 to \$143 183 (\$93 738 065 land \$24 407 924 buildings \$4 446 007 implements and \$20 591 187 domestic animals) Of the land area 15 0 was in farms The average value of farm land per acre was \$17 84. Farms were operated largely by owners (35 399 by owners and 13 342 by tenants) In 1912 (preliminary estimates) the principal crops were Indian corn, 8 515 000

1 See E B x 540

bu (655,000 A.) cats 740 000 bu (43 000 A), potatoes I 023 000 bu (11 000 A) hay 54 000 tons (43,000 A) cotton 68,000 bales (119 lbs. per A) tobacco 2,604 000 lbs (3 100 A) and rice 15,000 bu (600 A) In 1909 (U S Census) the value of vegetables other than potatoes was \$6 314 313 of nursery products \$478 174 of small fruit \$302,383 (strawbernes \$301 656) of orchard fruits \$232 203 (peaches and nectarines \$128,029) of tropical fruits \$7 002 150 (oranges \$4 304 987 pomeloes (grapefruit) \$1 907 816, pineapples \$734 069) On January I 1912 there were on farms 52,000 horses 25 000 mules 123 000 milch cows 758 000 other neat cattle 120 000 sheep and 954,000 swine

The legislature of 1911 required the appointment of an inspector of nursery stock and appropriated \$5 000 for farmers co-operative demonstration work. The shipment of imma

appropriated \$5 000 for farmers co-operative demonstration work. The shipment of imma ture citrus fruit was made unlawful. In 1911 successful experiments were made in growing rice without irrigation in prairie districts and in raising Rhodes grass for have and a representative of the Federal department of agriculture found in Saharapur India and brought

sentative of the receiral department of agriculture found in Sanarapur India and brought to the United States parasites and unsect enemies of the white fly pest in orange groves

Mineral Products — Total value 1911 \$10 250 228 The only important mineral product in the state is phosphate rock more than two thirds land pebble the output in 1911 was valued at \$9 473.638 about 9% more than in 1910 In this product and in fuller searth the state ranked first. The value of mineral waters from 9 springs including 5 resorts was \$19 330 — one third more than in 1910

Manufactures — From 1904 to 1909 the number of factories increased from 1 413 to 2 150 the number of persons engaged in manufacturing from 46.085 (of whom 42.00) were

Manufactures — From 1904 to 1909 the number of factories increased from 1 413 to 2 159 the number of persons engaged in manufacturing from 46 985 (of whom 42 091 were wage earners) to 64 810 (57 473 wage earners) the capital invested from \$32 972 000 to \$65,291 000 (98%) and the value of products from \$50 298 000 to \$72 890 000 In 1909 the most important single industry was the manufacture of tobacco (mostly cigars and cigarettes) valued at \$21 575 000 Florida ranking 3rd in Key West 93 7 of the total value of products (\$3 965 000) and in Tampa 82 7% of the much larger total (\$17 653 000) was the value of tobacco manufactures — Lumber and timber products (more than 90%, vellow pine) were valued at \$20 863 000 and turpentine and rosin at \$11 938 000 — The only other important distinctive industry was the manufacture of fertiliser \$3 878 000 (143 9% more than in 1904)

Transportation — Railway mileage January I 1912 4 467 09 m — On January 22 1912 the Florida East Coast Railway formally opened the last link 45 5 m from knights key to Key West completing its all rail route from Jacksonville to Key West 1 a car ferry is projected to run from Key West to Havana (90 m) — The Federal government began work in

pected to run from Key West to Havana (90 m.) The Federal government began work in 1911 on a channel 30 ft deep and 300 it wide from Jacksonville to the Ocean which makes it possible to ship naval stores to foreign ports direct from Jacksonville and in 1912 nearly completed deepening the St. Johns river channel at piers opposite Jacksonville the improvements across the bar and at West Pass channel in Apalachicola Bay and a channel 30 ft deep and 500 ft wide from the Gulf to the docks at Pensacola

Legislation —The legislature met from April 4 to June 2, 1011 It enacted that no judgment in a state court should be set aside and no new trial granted unless the error complained of actually resulted in a miscarriage of justice and that a judge should charge a jury only upon the law After January 1913 there are to be only 5 instead of 6 justices of the supreme court A constitutional amendment adopted in November 1912 (18 051 to 3,057) provides for an additional circuit judge in Duval county state building commission created in 1911 chose a site near the capitol for a building for the state supreme court the railroad commission and the state library which was begun in April 1912 \$100 000 was appropriated for this building An appropriation of \$50,000 was made for a Florida exhibit at the proposed National Historical Exposition in St Augustine in 1913 to celebrate the 400th anniversary of the discovery of Florida by Ponce de Leon \$6 000 was appropriated for work on the valuable state archives \$10 000 for a statue of Dr John Gorrie (1803-55 see E B 11 159a) the inven tor of a machine for making artificial ice in the National Statuary Hall in the Capitol at Washington, and \$5,000 for a monument to the Confederate women of Florida

A new pure food and drugs act was passed there are to be two inspectors and an assistant

¹ This great engineering triumph was the result of nearly seven years actual work con struction south of Homestead (128 m from Key West) began in April 1905. The railway leaves the mainland at Everglade station (on Manatee Creek) crosses Lake Surprise to Key leaves the maintain at Evergiade station (on Manatee Creek) crosses Lake Surpite to Key Largo goes by the two Matecumbes and on Long Key to Grassy Key by a viaduct 2½ m long and then by the 7 m Knights Key—Little Duck viaduct which is followed by about 13 m sometimes piers sometimes concrete arches and some embankment work protected by marl slopes to West Summerland Some piers were built on foundations 30 ft below tide level Forty nine miles of the road was constructed by submarine blasting of limestone and by dredges and traveling excavators. At Key West about 134 acres of land was filled in for a terminal and a concrete pier is building 1 700 ft long and 134 ft wide state chemiet, and the previous offices of pure food and drug inspector and commercial stock feed inspector were abolished. The work of inspection is put under the chemical

division of the state agricultural department

Heavy penalties are imposed for the sale of into ucating inquors in any prohibition county or precuret In any county on a petition by 25% of the qualified voters a special election must be held to decide whether or not liquor shall be sold in the county. A bill closing saloons between 9 PM and 6 AM one prohibiting the use of screens tables or chairs in saloons and one forbidding soliciting orders for intoxicating liquor in dry territory were vetoed by the governor separately and again together in a general revenue bill In 1912
11 counties in the state were licence territory

The board of railroad commissioners has power to regulate telephone business and tele graph rates and only with its permission may railways or canal companies be consolidated or lease or purchase other common carriers. Many game laws were passed mostly for separate counties and localities, and many of them forbidding the taking of food fish except

by hook and line

A large part of the legislation of the vear was local Ten new towns were incorporated, Pass-a Grille in Hillsborough county with a commission government and a provision for the recall of officials and a new charter providing a commission form of government was granted to Green Cove Springs. The charters of Jacksonville St. Augustine and Tampa (to which East Tampa was annexed) were amended. A new county Pinellas was created from Hillsborough county with Clearwater as its county seat. In 1912 Tampa adopted a

commission charter with provision for advisory voting

Finance — The tax levy for 1911 and 1912 was set at 2 mills for current expenses and for interest on the bonded debt and I mill for a school tax but the governor was authorised to reduce these rates. If the assessment of the state and other sources of revenue permitted the trustees of the internal improvement fund and the state board of education are required to retain a three fourths interest in phosphates, petroleum or other minerals found in any Building and loan associations were permitted to increase their capital lands sold by them stock to \$2 000 000 and a law was passed for the incorporation of trust and security com panies A constitutional amendment was adopted in November 1912 (16 348 to 4 014) empowering the legislature to provide for special tax districts and to issue bonds for free public schools therein There was in the state treasury January I 1912 a balance of \$858 440 Receipts for the year 1912 were \$3 0.3 698 and expenditures \$2 870 603 leaving a balance on December 31 1912 of \$1 011 535

a balance on December 31 1912 of \$1 011 535

Education—For the year ending June 30 1912 the school population was 225 000 the enrollment 157 161 the average daily attendance 110 364 and the length of the average school year 5½ months

The revenue for schools was \$2 539 679 and the expenditures were \$2 327 395

The board of commissioners of state institutions was made in 1911 a state school book commission to adopt uniform text books throughout the state—there had already been uniformity in each county for about ten years

School books are to be furnished free to any child under 15 whose parents are on the roll of the county poor or are indigent or are dead. The trustees of the Peabody Fund gave \$40,000 to the University of Florida for a school of education the new department was opened in the autumn of 1910 and a new building was begun. The principal appropriations for higher education were for the University of Florida \$177,000 for the State College for Women. \$136,500 for the School for the Deaf and Blind. \$82,500 and for the Agricultural and Mechanical College (1887) for Negroes. \$30,000 The first Friday in November is to be celebrated in the public schools each

Negroes \$30 000 The first Friday in November is to be celebrated in the public schools each vear as Mothers Day

The percentage of illiteracy in the population 10 years of age and over in 1910 was 13 8
(21 9 in 1900) Of whites it was 55 (8 9 in 1900) of negroes 25 5 (38 4 in 1900)

Penal and Charitable Institutions—The legislature of 1911 appropriated \$50 000 for the purchase of a state prison farm—about 17 000 acres were purchased but no buildings were erected in 1912—and authorised the state board of health to establish a hospital for the treatment of indigent children or to send them to established hospitals the latter course was still being pursued in 1912 The board of commissioners of state institutions was for was still being pursued in 1912. The board of commissioners of state institutions was no bedden to lease or release convict labour before July 1 1913 the present lease expires on December 31 1913. County judges are required to act as judges of juvenile courts and keep a separate juvenile record and the governor is to appoint a probation officer in each county for dependent and delinquent children Newspapers are forbidden to print the name of a woman criminally assaulted and 5 years imprisonment or a fine of \$1 000 or both 18 made the maximum penalty for enticing girls for immoral purposes

History —Two primary elections (May 9 and June 7, 1910) were necessary to secure a majority vote for a United States senator to succeed James Piper Tahaferro (b. 1847) whose term expired in 1911 but Napoleon B Broward (1857-1910, governor in 1905oo) who defeated Senator Taliaferro in the second primary died before he took office There was no majority for any one of the four candidates at the primary of January 10 1011, but on January 31 Nathan Philemon Bryan (b 1872) was chosen at the Demo

794 GEORGIA

cratic primary which was followed by his election by the legislature The Democratic primaries for delegates to the national convention elected men pledged to Oscar Under wood, Albert Waller Gilchrist (b 1858) governor since 1909 -- possibly because he opposed the submission to the people of the amendment for initiative and referendum did not secure a renomination from the Democrats, who nominated and in November elected Park M Trammell, then attorney general, with a full state ticket and carried the state for Woodrow Wilson, who received 36 417 votes to 4 535 for Roosevelt and 4 279 for Taft There was a Progressive state ticket in the field with 3 nominees for Congress and William C Hodges for governor and this cut heavily into the usually small Republi can vote and the opposition of the Progressives to the negro and the success of the party over the Republicans minimised the political importance of the negro. The four Democratic nominees for representatives in Congress were elected (1 at large) Socialists made gains in the state polling 4 806 votes for Debs (3 74, in 1908) —more than for Taft or for Roosevelt. The Socialist candidate for governor Thomas W Cox received 3 467 votes to 38 977 votes for Trammell (Dem), 2,646 for William R O Neal (Rep.) and 2,314 for William C. Hodges (Prog.)

Peonage in the state received a severe blow when President Taft refused to grant the request of the Florida legislature in 1911 to pardon five officers of a lumber company convicted by a United States circuit court in 1906 of conspiracy to arrest and return to a condition of peonage foreign-born labourers. There seem to have been fewer lynchings in 1912 than in 1911. In the former year a negro was lynched (March 4) at Cypress for attempting to shoot a marshal and seven negroes accused of murder were killed (May 21) at Lake City by men in three automobiles. In 1911 on April 15 a negro was lynched near Tampa for murder on July 4 another at Bradentown for alleged assault on a white woman on September 14 one at Alton for assault and two at Ocala (Nov. 14 and 19) for murder. The presence of militia in Jacksonville on March 7. 1912 prevented an attack on five negroes charged with murder and assault. In the first part of November 1912 there was a serious street car strike in Jacksonville with some violence, so that car lines were tied up and militia was called out

Agriculture—The acreage in farms increased from 26 392 057 to 26 953 413 between 1900 and 1910 and the improved land in farms from 10 615 644 to 12,298 017 the average farm acreage fell from 117 5 to 92 6 and the value of farm property increased from \$2.8,3,4 637 to \$580-546 381 (\$370 353 415 land \$108 850 917 buildings \$20 948 056 implements \$80 398,993 domestic animals) Of the land area 71 7% was in farms in 1910. The average value of farm land per acre was \$13.74. Farms were operated largely by tenants (98 628 by owners 1,419 by managers and 190,980 by tenants). In 1912 (preliminary estimates) the principal crops were Indian corn. 53 958 000 bu. (3 910 000 A.) wheat 1 228 000 bu (122 000 A.) oats, 7 \$77,000 bu. (364 000 A.) rye 101,000 bu. (11,000 A.) potatoes 936 000.

bu (12 000 Å) hay 316,000 tens (234 000 Å) corton 1 701 000 bales (163 lbs per Å) tobacco 1 162 000 lbs (1,400 Å) and rice 27 000 bu. (900 Å) In 1909 (U S Census) the value of vegetables (excluding potatoes) was \$5 580,368 of small fruits \$117 754 of orchard fruits \$2 930 793 (peaches and nectarrines \$2 182 613) On January 1 1912 there were on farms 124 000 horses 310 000 mules 406 000 milch cows 667 000 other neat

cattle 174,000 sheep and 2 098,000 swine.

Spraying with Bordeaux mixture was recently proved a specific for the scab which had seriously threatened the pecan groves. The great increase in recent years of the Indian corn crop is partly due to the work done by the Boys Corn Growing Clubs-in 1911 in the seventh

congressional district I 200 boys were engaged in this contest

The legislature of 1911 authorised the veterinary department of the agricultural college to manufacture serum for hog cholera and to instruct the public in its use and that of 1912 appropriated \$15,000 for the eradication of cattle tick. The appropriation for the hoard of entomology was increased in 1911 so that its work might be enlarged Upon petition of

50 producers of cotton any county must appoint (1912) a weigher and grader of cotton

In McDowell county 8 113 acres were taken over in 1912 by the United States for a
forest reservation under the Weeks Law (Mar I 1911) to preserve forests on upland water
sheds and 31 876 at res more (Fannin Union Gilmer and Lumphin counties) were approved
for purpless for the same purposes in the National Forest Responses for the same purposes. for purchase for the same purpose by the National Forest Reservation Commission

Mineral Products — Total value 1911 % 171 367 Of 1700 ore the output was 207 279 tons (\$315 704) and of coal 165 210 tons (\$246 208) — both less than in 1910 Clay products were valued at \$2 036 380 (almost entirely brick and tile) stone at \$1 90, 077 more than one half being the value of marble and sand and gravel at \$175 734 Most of the ochre in the United States came from Ceorgia value \$69 447 A little gold was still taken from placers and about half as much from whice our value \$35 070 The output of a bestos was about 60 more than in 1910 and that of bauvite was less although a new field was worked in Wulkingen country. field was worked in Wilkinson county

Manufactures -In 1909 there were 4 792 e tablishments (3 219 in 1904) the capital inve ted was \$20... 78 000 (50 more than in 1904) and the total value of products \$20... 86,000 (34 more than in 1904) 25 7 was the value of cotton good (\$48 037 000) hosiery knit goods mostly cotton (\$3 233 000) and woollen and worsted goods (\$871 000) The value of lumber and timber (about 39 yellow pinc) was \$24632 000 of cotton-seed oil and cake \$23 641 000 (an increase of 103 2 since 1899) of manufactured fertilisers \$16 800 000 (about one sixth of the total for the United States and about five times as much sto 800 000 (about one sixth of the total for the 1 filed States and about five times as fluch as in 1899) of flour and gri t mill products \$8 000 000 of turpentine and rosin \$6 9,9 000 steam railway cars and repairs \$6 535 000 printing and publishing \$6,400 000 and foundry and machine hop products \$,808 000 The principal manufacturing citie with the value of their product in 1909 are Atlanta \$5,038 000 Macon \$10,703 000 Augusta \$10 456 000 Columbus \$8,552 000 and Savannah \$6,734,000

Transportation—Railway mileage January 1 1912, 7,382 19 The Federal government in 1912 had more than half first hed increasing the channel depth of Savannah harbour

to 26 ft and clearing up the Savannah river below Augusta. Work on the river at Augusta

was begun in 1911 by the Federal government and the state together

Legislation — The legislature met in regular session in 1911 (June 28-Aug 17) and in 1912 (June 26-Aug 14) In 1912 constitutional amendments were adopted creating Blecklev county from a part of Pulaski (28, 1, to 6 886) and Wheeler county trom a part of Montgomery (68,6 7 to 1,5 00,5) increasing the governor's borrowing power for annual deficit from \$ 00 000 to \$500 000 (19 581 to 1 550) giving the legi la ture authority to require corporations to pay taxes on September 1 instead of December 20 (27 400 to 14 534) permitting counties to levy taxes for high schools (8 924 to 69,0) empowering the legislature to replace with municipal courts ju tice courts in all cities (except Savannah) with more than 25 000 inhabitants (4 11 to 10 193) exempt ing farm products from taxation while held for sale (75 836 to 10 5 7) and allowing judges of superior courts to grant charters in vacation (74 i19 to 8 084) Lobbying was prohibited (1911) by a law which requires agents for bills to register the name of their employers the purpose of their employment and ar itemised account of their expend tures Practice in courts of review was revised especially as regards review of judgment for lack of proof of venue and as regards service of bills of exception Provision was made for the investigation of the judicial system of the state and detects in penal laws

The state was divided into 12 Congressional districts in 1911 under the new apportion ment A department of game and fish was established and a department of commerce and labour Houss in cotton and woollen factories were reduced from 11 to 10 a day and from 66 to labour Hours in cotton and woollen factories were reduced from 11 to 10 a day and from 66 to 60 a week. In 1912 new laws were passed for calling out militia in time of riot and for declara tion of martial law and an insurance department; was created

The powers of the state inspector of drugs were enlarged (1911) An application for an internal revenue tax receipt or the possession of such a receipt is prima facie evidence of the violation of the state prohibition law A bill the Tippins law to close near beer saloons, was vetoed by the governor and could not be passed over the veto. Newspapers published in the state are forbidden to print the names of any victims of criminal assault.

A quasi commission charter for Atlanta provided by the 1911 legislature was defeated.

by the electors of the city on September 27 1911 In 1911 Summerville (pop. 4 361 in 1910) was annexed to Augusta a commission form of government was provided for Marietta Macon was authorised to own and operate water works and a civil service system for the

police and fire departments was added to its charter

The cities of Baxley Fayetteville Glennville and Lilly (August 1911) and Albany Lawrenceville Springfield Statesboro Stone Mountain Sycamore and Villa Rica (August 1912) received new charters and the cities of Blackshear Bostwick Folkston Odum and Woodville were incorporated in 1911 and Rex in 1912

The governor was authorised in 1912 to bring suit to test the state's claim to a part of Tallulah river Tallulah Falls and

adjacent country as unsurveyed and not legally granted by the state

Finance —A joint committee of the house and the senate was appointed in 1911 to codify the state banking laws and the state insurance laws but the bill which it drafted failed to pass in 1912 The maximum number of directors of any bank was increased from 15 to 25 pass in 1912. The maximum number of directors of any bank was increased from 15 to 25 (1912). The state debt (Jan I 1913) was \$6 734 202 and the annual appropriation for interest on the state debt was \$287 945 for 1912 and \$283 445 for 1913. The treasurer's report shows a balance on hand December 31 1911 of \$727 076 receipts of \$6 014 109 expenditures of \$5 627 668 leaving a balance on December 31 1912 of \$1 113 517.

Education—In 1911 the school law of the state was revised by a remarkably brief and

clear act which however does not apply to Atlanta to a few county districts or in most respects to especially incorporated local districts. The title of the chief executive officer has been changed from superintendent of schools to school commissioner The state board nas been changed from superintendent of schools to school commissioner. The state board of education is now professional rather than political in its character. An appropriation of \$25,000 a year and \$5,000 for equipment was made for the agricultural industrial normal school of South Georgia at Valdosta which was to open early in 1913 and one of \$25,000 (1912) for an industrial building for the North Georgia agricultural college at Dahlonega At Clarkston near Atlanta Lamar College under the auspices of the Christian Church will be opened early in 1913. The University of Georgia received in 1912 a gift of \$12,500 from the Phelps Stokes Fund to found a permanent fellowship for the study of the negro

For the year ending December 31 1911 the enrollment was 565 071 (222 942 of whom were negroes) the attendance 352 059 (130 678 negroes) and the average length of the free! school year was 118 days for whites and 107 for negroes. The number of teachers was 13 024 (4 070 negroes) and their average monthly salary ranged from \$118 70 for white male

teachers in cities to \$20 56 for negro female teachers in counties

The percentage of illiteracy in the white population 10 years of age and over in 1910 was

20 7 (30 5 in 1900) among whites 7 8 (11 9 in 1900) and among negroes 36 5 (52 4 in 1900)

Penal and Charitable Institutions—In January 1912 of the 2 708 convicts serving time in the state prison 1 487 had been convicted of crimes against life (812 for murder 365 for manslaughter 1 310 for attempted murder) Among the appropriations for 1912 and for 1913 each were \$530,000 for the Georgia state sanitarium \$20,000 for consumptive patients in the sanitarium \$515 000 to Confederate soldiers \$145 000 to the indigent widows of Confederate soldiers \$100 000 to widows of Confederate soldiers who died in action and \$300 000 to Confederate soldiers and their widows and \$30 000 for the soldiers home act of 1910 pensioning Confederate soldiers and their widows was amended in 1912 so as to make the requirements for pensions less difficult the pension of blind soldiers was increased from \$60 to \$100 a year

History — Hoke Smith (b. 1855) Secretary of the Interior in President Cleveland's cabinet in 1893-96 and governor in 1907-09 was again inaugurated governor July 1, On July 12th he was chosen United States senator to succeed Joseph Meriwether Terrell who was in bad health and who immediately resigned Governor Smith refused to accept Senator Terrell's resignation as he wished to remain governor for a time at least but Senator Terrell' refused to return to Washington and for the remainder of the session of the 61st Congress Georgia was represented in the United States Senate by

¹ In special systems where there was no local tax teachers were paid by patrons for addi tional teaching in some cases so that the average for these special systems was 170 days (175 for white and 164 for negro) making the average for all schools 140 days

*Terrell born in Greenville in 1861 died in Atlanta November 17 1912 He served in

the state legislature was attorney general 1892–1902, governor 1902–07 and after his political ally Joseph M Brown succeeded Hoke Smith his opponent as governor United States senator being appointed November 1910 by Governor Brown for the unexpired term of Senator Alexander Stephens Clay (1853–1910)

IDAHO 797

one senator only Augustus O Bacon In the 62nd session Hoke Smith took his seat as United States senator He was succeeded as governor by Joseph M Brown who had been governor in 1909-11 Brown's term ends July 1, 1913, and the Democratic primaries on August 21 1912 (by 104,857 votes against Hooper Alexander 39,037, Joe Hill Hall 24 856) named John M Slaton (elected in October) to be his successor and re nominated United States senator Bacon for the term 1913-19 Local politics centre around the liquor question which splits the Democratic party. The newly elected state legislature will be nine tenths (or more) Democratic. In November 1912, 12 Democratic congressmen were elected—formerly the Georgia delegation was 11 and the state was carried for Woodrow Wilson by 93 1,1 votes to 22,010 for Roosevelt, 5 190 for Taft, 1 028 for Debs (584 in 1908) and 147 for Chafin

On December 18 1912 the state protested (memorial of Aug 19) to Congress against the adoption by a two thirds vote of the quorum (and not of the total member ship) of each house of Congress of the measure to submit to the states the constitutional amendment for popular election of United States senators

In 1911 there were 20 lynchings in the state all negroes but one—a negro at Vera for murder (Jan 29) two for murder at Warrenton (Feb 25) three accused of murder (taken from jail) at Eliaville and one for rape at Lawrenceville (April 8), one for threaten ing to kill in Bullock county (April 22) one for murder (May 14) and one for killing an other (Mav 21) at Swainsboro one for murder at Crawfordsville (May 22) a white mar for rape at Monticello (June 18), a negro for rape at Social Circle and one for suspicious loitering at Monroe (June 27) one for murder at Baconton (July 11), one for rape at Dublin (Oct 5) one on no definite charge, at Vienna (Oct 7), one for attempted rape (taken from bailift) at Irwinton (Oct 11) one for murder at Washington (Oct 28) and one for murder at Donaldsonville (Dec 23) In 1912 three negroes and one negress were lynched at Hamilton (Jan 2) for murder a negro was lynched at Cordele (Jan 30) for rape, one was burned at Macon (Feb 4), one was lynched at Cochran (March 21) for murder one near Jackson (April 26), one for murder at Columbus (Aug 13) one on suspicion of aiding a murderer at Cumming (Sept 10) one for assaulting a white woman at Americus (Oct 5) one was taken from the court house at McRae and was lynched (Nov 30) for assaulting and shooting two white women and on the same day one was lynched at Cordele for murder Anti negro night riders terrorised northern Georgia in December 1912

Augusta was put under martial law in the last part of September 1912 when street railway employees noted and tied up car lines three were killed on the 27th and or October 1 about 30 soldiers were put on trial for murder. The strike ended October 17 when the company granted a wage increase of one-eighth and shorter hours. Or October 1, 1912 the Georgia Railroad was paralysed by a strike of conductors and trainmen, but on the 12th they returned to work agreeing to arbitration.

Agriculture:—In 1910 nearly one-tenth of the state s area was in farms (5 282 604 acres) but hardly more than half the farm acreage (2 778,740 A) was improved this was 96.6% more than in 1900. The average number of acres in a farm in 1910 was 171 5 m 1900 183 2. In the decade the value of farm property increased from \$67 271 202 to \$305,317 185 thand \$219 953 316 buildings \$25 112 509 implements and machinery, \$10,476 951 and domestic animals \$49 775.309) the average value of each farm from \$3 850 to \$9,911 and the average value of farms per acre from \$11 07 to \$41 63 More than half the farms (and more than one fourth the farm acreage) were irrigated in 1910 of the 1 430 848 acres irri more than one fourth the farm acreage) were irrigated in 1910 of the 1 430 848 acres irrigated 628 102 were by co-operative concerns 403 600 by individuals and partnerships 164 418 by Carey Act 'enterprises' and 47 300 by the U.S. Redlamation Service. The (Federal) Boisé project was 52% (excluding Boisé river storage, 98%) completed in Novem ber 1912 and was in 1911 irrigating 121 000 acres and the Minidoka project 90% completed irrigated in 1912 91 000 acres. In 1910 more than 90% of the alfalfa and nearly half the wheat acreage was irrigated. In 1912 (preliminary estimates) the following crops were reported. Indian corn. 394 000 bu. wheat, 14 566,000 bit. 0ats. 17 017 000 bit. barley 6916,000 bit. rye 66 000 bit. potatoes 6 475 000 bit. hay 1 938 000 tons and sugar beets. 206 367 tons. In 1909 (U.S. census) the value of vegetables other than potatoes was \$1 007 667 of small fruits. \$201 525 (strawberries. \$92 904) of orchard fruits. \$363 516 (apples. \$610 504 plums and prunes. \$132 804). On January 1 1912 there were 214 000 horses. 94 000 milch cows. 343 000 other neat cattle, 2 951 000 sheep and 212 000 swine. In 1911 agriculture was first taught systematically in the rural high schools of the state. The federal department of agriculture in 1911 established an experiment farm at Aberdeen for the study of cereals in dry lands in co-operation with the state experiment station. An

for the study of cereals in dry lands in co operation with the state experiment station. An irrigation demonstration farm at Gooding has done much to teach economic use of water. **Mineral Products.**—Total value 1911 \$17,588 340. The principal products were gold and silver of the former 65 688 fine oz valued at \$1,357,900 and of silver 8,184 900 oz valued at \$4,419 800 mostly from lead mines in the Cocur of Alene and Gilmore regions. The output of lead in which the state ranked second in 1911 was 117 159 tons (136 278 tons on mine reports) of zinc 3 180 tons and of copper 4 514 116 lbs (less than for any year since 1904) Less salt was produced than in 1910 A little phosphate rock was found in

since 1904) Less salt was produced than in 1910. A little phosphate rock was found in 1911 in the SE part of the state.

Manufactures—The total value of factory products for 1909 was \$22,400,000, 155,4 more than in 1904, the capital invested in manufacturing \$32,477,000 an increase of 2,52,2%, the number of establishments 725 and the number of persons engaged in manufacturing 9,909. Lumber and timber products valued at \$10,689,310 (240,2% more than in 1904) made up 477, of the total value followed by flour and gristmill products \$2,479,779 cars and general shop construction and repairs by steam railway companies \$1,366,000 and printing and publishing \$1,148,033. Boisé had factory products valued at \$1,660,497.

The levelstime met in regular session from Ianuary 2 to March 4.

Government - The legislature met in regular session from January 2 to March 4 911 and in special session January 11-31, 1912 It ratified the proposed 16th amend ment to the Federal Constitution January 20 1911, and submitted several constitutional amendments to popular vote at the 1912 general election These include one provid ing for the referendum (adopted 43 558 to 13 490), one providing for the recall of state officers except judicial officers (adopted 37,875 to 13 460) one for the initiative (adopted 38 918 to 15 195) one making the limit of state indebtedness for work on the capitol \$2,000 000 (adopted 31 712 to 18 083) one permitting convicts to work outside of prison grounds and on the other public works (adopted 33,908 to 1, 876) and one providing for an appointed board of education (adopted 33 045 to 14 796), in place of the present ex officio board

In 1011 four new counties were created Bonneville from the N L part of Bingham (county seat Idaho Falls) Clearwater from the N E part of Nez Perce (county seat Orofmo), Adams from the N part of Washington (temporary county seat, Council)

and Lewis from the central part of Nez Perce (temporary county-seat, Nez Perce)

The legislature passed a law revising and enforcing that of 1909 declaring saloons in
prohibition districts common nuisances, the discovery of liquid on the premises to be prima
facta evidence of guilt. In 1912 four counties which had been no-licence, for two years
voted for ficence. Saloons dance halls ett are not to be opened on Sanday

voted for needed. Saloons dance halfs ett are not to be opened of Sinday. The legislature enacted a commission charter for cities of 2 500 of more if they adopt the act at a special election. The charter provides for nomination by pertition, for initiative (on a 16% pertition), for referending (on a 25% pertition) and for the recall of any local officer after he has been in office, three months, at an election called by a 20% pertition. The charter may be abandored after 6 years by a vote are special election called by a pertition of 25% of the voters. Bone adopted the charter on February 23y 1912 in effect May 21. 1912 Lewiston has had a commission government since 1907.

COMO

The state appropriated \$750,000 for work on the capital building which was nearly completed in 1912 and \$12 000 to purchase about 12 000 acres for a state park to be called Heyburn Park in what was the Coeur d Alene Indian Reservation the land was bought im mediately A Game Preserve was created in Cassia, Twin Falls Oheida and Bear Lake counties

Among important labour laws was one making 8 hours a day's work on public works. The state insurance department was organised and an act was passed to protect commerce against monopoles and to prevent rebating. Sanitary laws provide for the inspection of hotels and for sanitation in dairies and in peddling of dairy products and forbid the sale. of adulterated misbranded or impure foods or drugs Lotteries are declared unlawful The white slave trade is forbidden and the penalty is imprisonment from 2 to 20 years fine of \$1 000 to \$5,000 or both unprisonment and fine. Other miscellaneous laws organise the militia make Columbia day (12th of October) a legal holiday and forbid advertising on

rocks or similar natural objects,
Finance — The taxes collected in 1911 were \$1 300 000 more than in any previous year and in 1912 the senate declared that the taxes had become oppressive and tirged economy on An ad valorem tax of \$900,000 was laid for 1911 and 1912 state officers In 1911 the legislature provided for the appointment of a state bank commissioner and for the control of bank organisations and in 1912 revised the tax laws. On January 1, 1911 the balance in the

bank organisations and in 1912 revised the tax laws. On January 1, 1911 the palance in entreasury was \$853,796 and on October 1, 1912 \$1,280,654 the receipts in the interval were \$6.023,947 the expenditures \$5,596,999. The debt (Oct 1, 1912) was \$2,364,750. Education—The legislature of 1911 passed an Glaborate educational code drafted by a commission. This was partly amended in 1912. Among the important changes are the following. The state board of education has larger powers and the superintendent smaller ones a new class of school districts is formed with enlarged powers and graduated scale for the length of the school term in the different parts of the state. The system of certification the length of the school term in the different parts of the state. The system of certification for teachers is improved. The state board is empowered to draft rules and regulations for building schoolhouses and there is an important change in the method of apportioning the school fund. This Idaho plan distributes two-thirds of the total fund among the different districts on the basis of the school population—except that each district is assumed to contain at least 20 children 5° of the remainder goes to rural high school districts in propor tion to the number of actual high school teachers not more than \$300 for each teacher one half of the 1 emainder goes to weak or poor school districts and the other half to the districts in proportion to their school population. The law forbids the employment of children under 14 in any employment (formerly only for certain stated employments) during school hours and before 6 A M or after 9 P M. There are the same limitations on the employment of children between 14 and 16 unless they have met certain educational requirements code makes education compulsory for children between 8 and 18 unless they are excused on a doctor's certificate or are over 14 years old and have passed through the 8th grade.

In 1912 the school population was 109 610 the total enrollment 82 38" the average daily attendance 57,359 and the average length of school year about 7 months. The revenues for the year ending in the summer of 191... were \$3 218 035, and the expenditures \$2 910 301. The percentage of linteracy in the population 10 years and over in 1910 was 2 2 (4 6 in 1900).

The college of agriculture of the state university supervises agricultural extension work including farmers institutes movable schools and demonstration trains

Charities and Corrections—In 1911 the legislature established the Idaho State Sani tarium for feeble minded and epileptics near Nampa, and created a prison labour commission to investigate the state penitentiary. The punishment for murder in the first degree was to investigate the state penitentiary made either death or life imprisonment.

History - James H Hawley (b 1841) Democratic governor in 1911-19, was re nominated but was defeated by John M Haines, Republican, formerly may or of Boise who received 35 056 votes to 33,002 for Hawley and 24,325 for G H Martin (Progres-The Republican nominees for Congress sive) and 11 094 for L A Coblantz (Socialist) (2 instead of 1 as under the previous apportionment) were elected and in the state legislature the Republicans have very large majorities (56 to 4 in the lower house) so that William Edgar Borah (b. 1865) was re-elected U. S. senator, January 14, 1013. The governor appointed November 18 1912, Judge Kntland I Perky, Republican, of Boise for the unexpired term (to March 4 1915) of Weldon Brinton Heyburn (1852-1912 U S senator since 1993) who died October 17th Senator Borah and Representative Burton L French (re elected 1912) had considered Tast's nomination fraudulent, but had not Although the Progressive cause received a set back when left the Republican party the Supreme Court of the state decided (October 1, 1912) that electors of the National

This decision was called "trickery and chicanery" by Col Roosevelt. The Bossé Capital News published this criticism and its editors were cited by the Supreme Court for contempt and were found guilty

Progressive party could not be nominated by petition, as other methods provided by law had not been used the Roosevelt ticket made a fair showing Woodrow Wilson carned the state, receiving 33,92x votes to 32,8xo for Taft, 25,527 for Roosevelt and 11 060 for Debs (6,400 in 1908)

ILLINOIS 1

Population -In 1910, as in 1890 and 1900, Illinois ranked third in population among the states The total in 1910 was 5,638,591, 16.9% more than in 1900 a smaller percentage of increase than in any previous decade Of this total 98% were whites (76.7% native born whites, 30.6% whites of foreign parentage 21.3% foreign born whites) and 19% negroes In density the state ranked 10th, in 1910, with 100 6 in habitants per sq m, the maximum density was 2,578 in Cook county (containing Chicago) and the minimum 25.0, in Henderson county

In 1910 there were 144 (in 1900, 114) incorporated places having more than 2 500 inhabitants and these contained 61 7 % (in 1900, 54 3 %) of the total In the 920 in corporated places having less than 2,500, there was only 12% in 1910. In rural territory there was not merely a relative decrease (from 33 2% in 1900 to 26 4% in 1910) but an actual decrease (from 1 598,385 in 1900 to 1,486,422 in 1910) Of the 144 municipalities with populations above 2,500, 71 were between 2,500 and 5,000 (total 239 887) and 41 between 5 000 and 10,000 (total 286,079) The 32 having over 10 000 were Chicago, 2,185 283 (in 1900, 1 698,575), Peoria, 66,950, East St Louis, 58,547 (29,655 in 1900) Springfield, 51,678 Rockford, 45,401, Quincy, 36 587, Johet 34 670 Decatur, 31,140 Aurora 29 807 Danville, 27,871, Elgin, 25 976 Bloomington 25,768 Evanston, 24,978 Rock Island 24,335, Mohne, 24,199 Galesburg, 22,089, Belleville 21 122 Oak Park (village) 19 444 (inc 1902), Freeport, 17 567 Alton, 17,528 Waukegan 16,069 Jackson ville 15 326 Cicero (town), 14,557, Cairo 14 548 Chicago Heights 14 525 (5 100 in 1900) Streator, 14 253 Kankakee, 13,086, Champaign, 12,421, La Salle, 11,537 Mattoon, 11 456, Lincoln 10,892, and Canton, 10,453

Agriculture — The acreage in farms decreased from 32 794 728 to 32 522 937 between 1900 and 1910 but the improved land in farms increased from 27 699 219 to 28 048 323 the average farm acreage increased from 124 2 to 129 1 and the value of farm property the average farm acreage increased from 124 2 to 129 I and the value of farm property from \$2 004 316 897 to \$3 905 321 075 (\$3 900 411 148 land \$432 381 422 buildings \$73 724 074 implements and \$308 804 431 domestic animals) Of the land area 90 7 % was in farms in 1910. The average value of farm land per acre was \$95 02. Farms were operated largely by owners (145 107 by owners 2 386 by managers and 104 379 by tenants). In 1912 (preliminary estimates) the principal crops were. Indian corn. 426 320 000 bu. (10 658 000 A.) wheat 9 819 000 bu. (1183 000 A.) oats 182 726 000 bu. (4 220 000 Å.) barley 1 796 000 bu. (57 000 Å.) rye. 768 000 bu. (48 000 Å.) buckwheat 88 000 bu. (4000 Å.) potatoes 13 837 000 bu. (137 000 Å.) hay 3 266,000 tons (2 512 000 Å.) and tobacco. 684,000 lbs. (900 Å.). In 1909 (U. S. Census) vegetables (except potatoes) were valued at \$9 392,296, flowers and plants \$3 694 801 small fruits. \$1 109 747 (strawberries. \$613 917) orchard fruits. \$3 857 743 (apples. \$2 111 866 peaches and necturines. \$999 516) and broom corn. \$1 457 172 (\$8,452 Å.). On January I. 1912 there were on farms. I. 497 000 horses. I51,000 mules, I 049,000 milch cows. I. 266 000 other neat cattle. I. 068 000 sheep and horses 151,000 mules, 1 049,000 mulch cows 1 266 000 other neat cattle 1 068 000 sheep and 4 640 000 swine The office of state inspector of apiaries was created in 1911 by a law which provides for the destruction of bees with foul brood or other contagious diseases \$60 000 was appropriated for county fairs \$4 000 for farmers institutes \$8 000 for demonstration work by the state entomologist and \$215 000 for buildings at the state fair. The second work by the state entomologist and \$215,000 for buildings at the state fair. The second special session of 1912 appropriated \$130,000 to the Agricultural Experiment Station for a soil survey. Much important work on soils had already been done, especially by Professor

Six

(3rd) zinc 4.219 tona (mine reports 2,884 tons on smelter reports) lead 964 tons (mine reports 308 tons on smelter reports). There are large deposits of tripoli. The value of fluorspar \$481635 was more than in any other state. Diamonds were found near Macomb and in Jefferson county—one of 7 carats. Mineral waters were valued at \$82,330.

Manufactures—Illinois in 1909 was the most important manufacturing state W of the Alleghary Mountains and ranked 3d in the Union, the gross value of products was \$340,38 per capita, and the total value one-eleventh that of the whole country. From 1904 to 1909 the number of establishments increased from 14,921 to 18,026 and that of persons engaged in manufacturing from 447,947 (379,436 wage-earners) to 351,044 (465,764 wage-earners) the capital invested from \$975,845,000 to \$1,548,171,000 (58,6%) and the value of products from \$1,410,342,000 to \$1,919,277,000. Of separate industries the census reported 95 with products valued at \$500,000 or more 8 more than \$50,000 ood. In slaughtering and meat packing (\$389,995,000) Illinois ranked 1st with 28,4% of the country's total. Nearly five sixths (\$325,062,000) of the state's output came from Chicago, and this was more than one sixths (\$325,062 000) of the state's output came from Chicago and this was more than one sixths (\$325,002 000) of the state's output came from Chicago and this was more than one fourth of that city's total (\$1281 171 000). The other industries which had each a product valued at \$25,000 000 or more were foundry and machine shops \$138 379 000 (Chicago \$89,669 000) men's clothing \$89,473 000 (Chicago \$85,296 000) printing and publishing \$87 247 000 ranking the state 2nd to New York only (Chicago \$74,211 000) iron and steel rolling mills \$86 608 000 ranking the state 3rd (Chicago \$45,984 000) agricultural implements \$57 268 000 ranking the state 1st with two-fifths of the country's output distilled liquors \$55 200 000 being 27% of the country's product and consisting principally of corn whisky flour and grist mill products \$51 111 000 lumber and timber, \$44,952 000 (Chicago \$32 709 000) iron and steel blast furnaces \$38 300 000 98% of the total of the (Chicago \$32 700 000) iron and steel blast furnaces \$38 300 000 9 8 % of the total of the country and ranking the state 3rd steam railway car construction and repairs \$32 229 000 and—not by railway companies—\$27 001 000 malt liquors, \$28,449 000 (Chicago \$19 512 000) furniture \$27 900 000 (Chicago \$20 512 000) and electrical machinery apparatus and supplies \$26 826 000 (Chicago \$20 669 000) Next to Chicago the most important manufacturing cities were Peoria \$63 061 000 (chiefly distillery products) Joliet \$38 816 500 (chiefly steel) Rockford \$22 265 700 Moline \$20 891 700 (chiefly agricultural implements) Waukegan \$19 984 000 East \$t Louis \$18 228 000 Quincy \$11 435 600 Elgin \$11 119 700 Aurora \$10 984 200 and Chicago Heights \$10 839 200

Transbortation—Railway mileage Ian I 1012 12 122 10 more than in any other state

Transportation -Railway mileage Jan 1 1912 12 132 10 more than in any other state save Texas. The law governing the railroad and warehouse commission was amended and the commissions powers were increased. To it was given jurisdiction over express companies which were declared common carriers. A uniform bills of lading act was passed in 1911 The governor appointed a rivers and lakes commission to survey the waters of the state to prevent pollution and to gather data in reference to navigability deep waterways reclamation and water power etc. In 1911 the Federal government completed the Black River pool (20 ft wide 7 ft deep) of the Illinois and Mississippi Canal and began work on turning basins in the Calumet river

Legislation — The legislature met in regular session from January 4 to June 1 1911 in special session from June 14 to November 14 1911 from March 26 to June The third special session was called after 5 1012 and from April 24 to June 5 1912 the beginning of the second and its proceedings were carried on on the same days (but not at the same time) as the second session. This was unprecedented in the state The legislature urged on Congress a constitutional amendment giving to Congress the power to prevent and suppress monopoles The state supreme court was authorised to appoint persons to aid the appellate judges. An amendment to the state constitution providing for initiative and referendum passed the senate but secured nine votes less than the necessary two-thirds in the lower house. A new ballot law provides that when two or more persons are to be chosen for any one office the names of party candi dates are to be arranged in a party column in order, according to the vote cast for each at primaries and the names of candidates nominated by petition in the order in which their names appear on the nominating petition. A direct primary law like that enacted in 1008 but omitting clauses held unconstitutional by the state supreme court was passed A presidential primary election law2 (approved 30 March 4912) provides that the vote of the state at large is to be considered advisory to convention delegates at large and the vote of each congressional distinct advisory to delegates of the district. and there is provision for advisory voting for candidates for United States senator

² Principally to secure such a law Governor Deneen called the special session

¹ The total value of the output of Chicago's factories exceeded that of any state of the Union except New York, Pennsylvania, Illinois Massachusetts and Ohio.

A commission for the study of public utilities to the state and the Illinois park commission, were created. The Starved Rock State Park was set aside (formally opened May 1 19713) Setween Ortawa and La Salle where m 1970 the Potawatomi besieged the Illinois as a sequel to the murder of Pontiar The legislature appropriated \$5 000 for a monument at Edwardsville to commemorate the tooth annaversary an 1912 of the beginning of republican government in the state and \$5,000 for a montiment at Equality to General Michael Kelly Lawler (c 1820-82) an early settler and a veterim of the Mexican and Civil wars

The law of 1897 regulating the practice of amhstecture was amended and commissions

were created to revise and codify the building laws and to investigate the coal mines of the state Provision was made for strict samilary inspection and sanitation of all places used for the preparation of foods the act to be enforced by the state food commissioner and the entire dairy and food products law was assended. Common drinking cups are prohibited in public places and on railway trains. Intoxicating liquor is not to be sold within two thirds of a mile of any soldiers on sailors home and the act forbids the drinking of intoxicat ing liquors on passenger cars or in railway stations or the boarding of a railway train by an intoxicated person. Under this law 14 railways operating in the state stopped the sale of intoxicants on passenger trains. An attempt to repeal in 1911 the municipal and township

local option law of 1907 was unsuccessful

A workmen a compensation law of the elective to pe applies to certain dangerous industries only and election by the employer is presumed in the absence of written notice from him to The law abrogates the defence of assumed risk (held constitutional by the state supreme court June 6 1912) and of fellow service and requires that compensation be diminished for contributory negligence if an employer intentionally fails to comply with the statute a suit for damages is permitted in heu of compensation. The employer may insure his employees or may maintain a benefit fund provided he does not reduce the liability fixed by law To be compensated, disability must continue more than six working days. The maximum compensation for death is \$3,500 or four years earnings and the minimum \$1,500. If there are no dependents compensation is limited to \$150. For total disability the compensation is 50% of weekly earnings for 8 years (not less than \$5 nor more than \$12 nor more than \$3,500 in all) and if complete disability still continues a compensation for life (not less than \$10 a month) equal to 8 , of the death benefit For partial disability the compensation is 50% of the wage decrease not more than \$12 and not longer than 8 years. The ten hour law for women was extended to public institutions public utilities place of amusement restaurants mercantile telegraph and telephone establishments and on June 21 1912 the state supreme court upheld the constitutionality of the law thus amended in a test case brought by a hotel proprietor Physicians are required to report cases of occupa tional diseases and employers must arrange for the examination once every calendar menth by a licensed physician of all employees in dangerous processes likely to result in such diseales Miners and mechanics institutes are established throughout the state to prevent by educational betterment accidents in mines and other industrial plants and \$30 000 was appropriated for the use of the mining rescue station commission in equipping reccue cars and stations and in carrying out educational work. A coal mining code provides for a state mining board of five (two owners two miners and one hoisting engineer). It contains elabor ite Pension funds were created for park police for employees of houses of correction and for municipal employees in cities with a population above 100 000 A law in effect July 1 1911 authorises county pensions to needy widows with dependent children.

The law for the commission form of government was slightly amended in 1911 and a new scale of salaries for officers under this form of government was adopted. The constitution ality of the law was sustained (December 27 1911) by the Illinois supreme court. To the close of 1912 the following cities had commission government. Braceville Carbondale (in effect May 8 1912) Clinton Decatur (election January 17 1911 in effect May 1 1911) Dixon Elgin (election January 21 1911 in effect May 1 1911) Forest Park (election Novem ber 7 1911 in effect April 30 1913) Hamilton Harvey Hillsboro Jacksonville (election January 31 1911 in effect May 1 1911) Kewange (election January 7 1911 in effect May 1 1911) Marseilles Moline (election January 3 1911 in effect May 1 1911) Marseilles Moline (election January 3 1911 in effect May 1 1911) Rochelle Rock Island Springfield (election February 7 1911 in effect May 1 1911) Rochelle Rock Island Springfield (election January 2 1911) Spring Valley and Wankegan (election February 14, 1911) Cities may vote to discontinue minority representation. For counties of 150 000 inhabitants or more (in 1912 Cook county only) the civil service law was extended to almost all country employees.

On September 27 1912 a decision of a Federal district court in an action brought by the receivers of the Cheago Peena & St. Louis Railway Co. involving the visidity of the 2-cent fare alts (in effect July 1 1909), held this law ineffective as to this railway since its enforcement would compet passengers to be carried at a loss. scale of salaries for officers under this form of government was adopted. The constitution

2-tent sare and compet passengers to be carried at a loss.

Finance—The general revenue fund for 1911 and 1912 was \$7 750 000 On October 1

This the balance in the treasury was \$1 424 630 the receipts for the two years following
\$26 957 188 the debursements, \$25 882 788 and the balance September 30 1912 \$5 499 210

Educations—The school fund was increased (1911) from \$1 000 000 to \$2 000 000 the

state educational commission had recommended its increase to \$4,500,000. The appropriation for the University of Illinois for the beanium was more than \$2,000,000 for main tenance and nearly \$850 000 for improvements The legislature provided for a one mill tax tenance and nearly \$550 000 for improvements. In legislature provided for a one multax thereafter for the university. Aniong the appropriations was one of \$125,000 for a training school building for the State Normal University on which work began in the summer of 1912 and which will accommodate 700 children. Boards of education were authorised to establish and maintain classes for the deaf dumb and blind and for delinquent children the state to pay the excess cost. In 1912 a constitution for the University of Illinois was being prepared. The board of education in any district having more than 1 000 and less than 1000 in the property of teachers when the property of the property 100 000 inhabitants may establish and maintain a fund for the retirement of teachers upon

100 000 inhabitants may establish and maintain a fund for the retirement of teachers upon an assessment basis. By a majority vote a district which does not maintain a pension fund may retire any teacher over 50 who has taught in the district for 25 years.

In 1910 the percentage of illiteracy in the population 10 years of age and over was 3.7 (4.2 in 1900). In 1911-12 the school population was 1.570 867 the total enrollment in public schools 987 379 the average daily attendance 865,000 the average school year 158 days the revenue for schools \$0.000 years 158 days and the expenditure \$34.869,457.

A municipal bureau was established at the University of Illinois in 1911. The medical school of Northwestern University received in 1910 1911 and 1912 large gifts from James A Patten of Evanston for a fund for medical research especially on tuberculosis and in 1912 Dr. A. I. Kendall was put in charge of this research. At the University of Chicago new buildings were begun in 1911 for the departments of geology and geography and of classics and for a women's symmasium. In 1912 economic conditions in Liberia were in classics and for a women's gymnasium. In 1912 economic conditions in Liberia were in vestigated by Frederick Starr of the University of Chicago. In December 1911 N. W. Harris

vestigated by Frederick Starr of the University of Chicago. In December 1911 N. W. Harris a Chicago banker gave \$250,000 for school extension work of the Field Museum. Penal and Charitable Institutions.—In the general appropriation act for charitable institutions in 1911. \$3,753,264 was appropriated besides special appropriations for the same institutions amounting to \$1,184,250. By separate acts \$10,000 was appropriated for the relief of the adult blind and \$75,000 for a building for the Illinois surgical institution for children.—If ground be donated—and \$600,000 for a new state hospital for the insane for which Alton was chosen as the site in 1912. In all courts having criminal gurisdiction the probation system was introduced in 1911 for first offence prisoners. A law approved June II 1912 shortens the official title of each charitable institution of the state and provides for the appointment by the governor of a board of administration (five members one an alienist) of a charities commission also of five members to investigate the state s charitable system and to establish a bureau of criminal statistics and of a board of visitors which inspects and reports to the charities commission. All private institutions for mental and nervous cases must be licensed by the board of administration. A law of 1911 authorised courts with juvenile jurisdiction to fix the amount which will enable poor parents of a dependent child to care for the child properly this amount is to be paid by the county board. A commission created by an act of 1907 which appropriated \$500 000 has recently bought 2 500 acres (quarry and farm) N W of Johet for a pententiary to replace that at Joliet condemned in 1906 plans had been drawn and accepted but building had not begun at the end of 1912

History — The principal political event of 1911 when there was no state election was the mayoralty campaign in Chicago Mayor Fred A Busse (b 1866, Republican) who went out of office that year appointed the Vice Commission whose report and recommendations were of great value. In the city primaries (Feb. 28, 1911) Charles Edward Merriam (b 1874) alderman in 1909-11, chairman of a commission on city expenditures and professor of political science in the University of Chicago (afterwards head of the Progressive Republican Club of Cook county), received the Republican nomination with more votes than both his more 'regular' opponents, and Carter Henry Harrison (b. 1860), mayor in 1897-1905 defeated Edward Fitzsimons Dunne (b 1853) mayor in 1907-09, for the Democratic nomination (about 55,120 votes to Harrison was elected (April 4 1911) receiving 1/7,900 votes to 161,000 for Merriam, whose promise to enforce laws about the sale of liquous lost him many votes the Socialist candidate W E Rodriguez received 24,825 votes Under Harrison the work of the Vice Commission was actively supplemented by the Civil Service Commis sion which investigated the building department and the police, effected the discharge of many policemen for mefficiency, and was actually invited to Oakland California where two of its members organised a civil service system. Harrison had campaigned for an ordinance making 70 cents the maximum price for 1,000 cu ft of gas, but experts who were to report on a fair price set 77 cents and 75 cents (with reductions until 65

Published as The Social Evil in Chicago 1911

cents for the fifth year under the new contract), and when the Council (July 17, 1911) set the rate at 75 70 and 58 cents (for first, for second and third, and for fourth and fifth years) the courts set 80 cents as a temporary rate. In O Fallon the Socialists on April 28, 1911, elected a mayor (281 votes to 274) and 2 of 3 aldermen.

The primaries of April 9, 1912 (provided for by an act passed at the special session called by Deneen) gave Roosevelt 266,917 votes to 127,481 for Taft and 40,692 for Senator La Follette, and Champ Clark 218,483 votes to 75,527 for Woodrow Wilson, chose Charles S Deneen again as Republican candidate and Edward F Dunne as Democratic candidate for governor, named Lawrence Y Sherman (b 1858) Rep as candidate for United States senator to succeed Shelby Moore Cullom (b 18 9) also Republican, and voted down woman's suffrage. The Progressive party nominated (Aug 3) Frank H. Funk, a state senator, for governor and a nearly complete state The opponents of Woodrow Wilson attempted to make political capital out of his failure to repudiate the state Democratic "boss," Roger C Sullivan (b 1861) the November election the vote in Cook county (including Chicago) was for Roosevelt (166 c61 votes to 130 702 for Wilson), and the state was first announced for him but the rural vote was overwhelmingly for Wilson who received in the state 405,048 votes to 386,478 for Roosevelt, 253,593 for Taft, and 81,278 for Debs (who had 34 711 in 1908) Wilson carried 64 counties, Roosevelt 28 and Taft to Republican Congressmen Joseph G Cannon, ex Speaker, and Wilham B McKinley, campaign manager for Presi dent Taft, were defeated, and 20 Democrats (including 2 at large) 5 Republicans and 2 Progressives were returned to the House of Representatives Dunne was elected governor (443 120 votes), with Deneen second (318,469) and Funk third (303 401) so that the Republican (and not the Progressive) party is the second major party with official recognition -- except in Chicago (Cook county) The Democratic nominees for state office were elected by smaller pluralities than for Dunne The 1913 legislature with 97 Democrats 76 Republicans 27 Progressives and 4 Socialists2 (the last two groups holding the balance of power), will elect United States senators to succeed Cullom (at the beginning of March 1913 it was in deadlock) and to take the place vacant by the Senate's declaration (July 13 1912) of the invalidity of the election of William Lorimer (b. 1861), Republican Lorimer had been in the Chicago water department in 1687-93 and was a member of the Federal Hous. of Representatives in 1895-1901 and in 1903-00 His election to the Senate in 1909 was attacked on the ground that he had bribed state legislators He was first exonerated but finally (July 13 1012) unseated by the Senate (see United States & History) The incident was of great importance in the state and national campaign, each party leader attempting to make capital out of the relations of his opponent with Lormer In December 1912 Deneen was prominent in an attempt to reorganise the Republican party in the state. The next legislature was instructed (by popular vote Nov 5 1912, on three ' questions of public policy in accordance with an Act of 1901) to submit an amendment for classification of property for taxation, to revise the primary law, and to create a commission for a short ballot

Cairo, with the low lands about it, ii sq m. in all, was inundated, the Mississippi breaking the levees, March 25, 1912

Chicago City Phin — The Chicago Commercial Club from 1907 to 1909 had a City Planning Committee which published in 1909 an exhaustive study called The Plan of Chicago I later a Chicago Plan Commission was created by the city Daniel H Burnham the architect was particularly interested in this work. The commission estimates that 50 to 75 years would be needed to carry out its plans. The most immediate off its projects is to improve 12th Street—an ordinance for widening this street (from 52 and m some places 50 ft to 108 ft) was passed by the city council on April 6 1911. Twelfth Street is the south side of a quadrangle planned by the commission. The South Shore Lake Front is to be improved, a Lakeshore Drive being planned from

In July Deneen announced that he would support Tafe instead of following Roosevelt into the third party

² Contests may slightly change these figures.

Grant to Jackson Park, and an Outer Island Park which will make lagoons along the front of the lake The work on the South Shore Lake Front is not in the hands of the commission but of a Board of South Park Commissioners, which in July 1911 obtained riparian rights from the Illinois Central Railroad East of the right of way of this railroad facing the north on Grant Park, the Field Columbian Museum is to be built The contract was let in 1912 A new station of the Illinois Central is to be built, west of its tracks and facing north on Twelfth street A third of the immediate plans of the commission is in regard to the Michigan Avenue connecting link, a two level street to join the South and North Parkway Plan 3 calling for this was adopted by the Com mission on July 6 1910 A Civic Beauty commission was appointed in September 1911 A city harbour and subway commission was created by the city council on December 4, 1911 and on December 17 1912 the city council committee on local transportation tentatively adopted a scheme for presentation to the council and (if approved) to the voters in April 1913 In 1912 a Bureau of Information and Publicity was established in Chicago, absorbing the Bureau of Statistics The Chicago drainage canal is proving madequate for the growing needs of the city and in 1911 a sewage purification plant waplanned by the engineer of the Sanitary District Land was bought for this in 1912 and the plant was expected to be built in 1913 Freight terminal improvements to cost \$ 00 000 000 were planned in September 191, including the purchase of the Chicago Union Transfer Company and the erection of a freight and passenger terminal between Polk Sixteenth Park and State streets In November 1912 Cook county voted \$3,750,000 for improvements \$1,750,000 to widen Twelfth Street, \$1,000,000 for alms houses and a pauper cemetery, and \$500,000 for a new detention hospital
